which, if less vigorous, at least propitiates the ear. It is evident from Emerson's criticisms in the *Dial*—as that on Ellery Channing's poems—that he had a horror of what he calls "French correctness," and could more easily pardon what was rough than what was tame. Perhaps he never stated his poetic creed with more delicate felicity than in a letter which he once wrote to a very young aspirant, who sent some juvenile verses to the *Dial* during its last year, and received the following terse and pregnant reply:

> "To ——. Perhaps I shall not print the 'Sunset Thoughts' in the *Dial*. They have truth and earnestness; and a happier hour may add that external perfection which can neither be commanded nor described. Yours,
> "R. W. Emerson."

"Neither commanded nor described"! Never was there a more delicate and suggestive characterization, yet with such a fine evasiveness of meaning that we can fancy the youth to whom it was addressed as meditating on it for months and years without exhausting its flavor. The whole four hundred and seventy-six lines of Horace's "De Arte Poetica" are summed up in those half-dozen words. When it came to passing judgment on the details of poetry, he was sometimes a whimsical critic; his personal favorites were apt to be swans. He undoubtedly felt some recoil from his first ardent praise of Whitman, for instance, and at any rate was wont to protest against his "priapism," as he tersely called it. On the other hand, there were whole classes of writers whom he scarcely recognized at all. This was true of Shelley, for example, about whom he wrote: "Though uniformly a poetic mind, he is never a poet." His estimate of prose authors seemed more definite and trustworthy than of poets, yet he probably never quite appreciated Hawthorne, and certainly discouraged young people from reading his books.

"Of all writers," says Sir Philip Sidney, "the poet is the least liar"; and we might almost say that of all poets Emerson is the most direct and unfaltering in his search for truth. To this must be added, as his highest gift, a nature so noble and so calm that he was never misled for one instant by temper, by antagonism, by controversy. The spirit in which he received and disarmed the criticisms of his colleague, Henry Ware, on the publication of his Divinity Hall address, was the spirit of his whole life; it was "first pure, then peaceable." The final verdict of posterity upon him must be essentially that epitaph which he himself placed upon the grave of the friend and brother-poet who but just preceded him. On his return from Mr. Longfellow's funeral he said to a friend—with that vague oblivion of names which alone beclouded his closing years—"That gentleman whose funeral we have been attending was a sweet and beautiful soul, but I forget his name." These high words of praise might fitly be applied to the speaker himself; and his is a name that will not easily be forgotten.

SUGGESTIONS FOR DEALING WITH THE IRISH PROBLEM.

London, April 13, 1882.

During the last eight months English statesmen have felt themselves in the position of a merchant who, while carrying on his ordinary business in his ordinary way, knows that he has risked his fortunes in an investment from which it is now impossible to escape, which he watches with breathless anxiety from day to day, and which may at any moment bring him, if it continues to sink, to the verge of insolvency. While our political struggles and recriminations go on as usual in England, we are always listening and, so to speak, looking round, to see what is happening in Ireland, doubting whether the great investment which was made in passing the Land Act may not turn out a failure after all. That Act was passed in August last, under a triple pressure—the pressure of the misery and bitterness which had produced a crop of agrarian outrages, the pressure of those outrages which it became necessary to render inexcusable, and the pressure of the Coercion Act, which had been meant to check them till remedial measures could be devised. It was passed in the hope that the peasantry of Ireland would receive it as a message of peace, and find in it a relief from their sufferings, a satisfaction of the claims they had so long urged. Violence, it was trusted, would abate when the justice that had been demanded in vain, and (as Englishmen thought) something more than that justice, was freely offered. When it came into operation, a vehement attempt was made by the irreconcilable section of the Irish Nationalist party to induce the people to have nothing to do with it, and to insist on getting the land at a merely nominal rent. This was met by throwing some of the leaders into prison. The Land Court which the Land Act created was set to work, and applications poured in from the tenants till more than seventy thousand had been received, a number which years would be needed to dispose of. It was assumed that the agrarian outrages would, therefore, begin to decrease. All through the autumn and the winter the returns of crime from Ireland were anxiously watched. For a time they declined, but afterward they rose again, and during the last two months they have been as bad, possibly worse, than they were in the winter of 1880, when the Coercion Bill was decided on. Two or three atrocious murders, and especially that of Mrs. Smythe, a lady killed by three men who, wishing to shoot her brother-in-law, fired recklessly into a carriage in which he was sitting with three friends, have quite recently excited the horror of the English public, and brought the question of what can be done to maintain order in Ireland to the front once more. The existing appliances have evidently failed. The Land Act, although one may hope with Mr. Gladstone that it will ultimately produce contentment, is not working fast enough in that direction. The Preservation of Person and Property Act has enabled the Irish Government

to throw into prison and keep there without trial more than six hundred persons. But it has not extinguished, it has not even diminished, the number of agrarian offences, and though one man may say that things would have been even worse without the terror which it has inspired, another may answer that they might have been better without the exasperation it has provoked.

Thus altogether the general sense of disquietude has ripened in these last weeks into a feeling that something must be done, that we can't go on longer in Ireland as we are doing now, keeping the ordinary law suspended and yet apparently gaining nothing thereby; in a word, that we must have a new departure. But if people are agreed on this, they are agreed on nothing else. The new departure may be in the direction of leniency and concession, or of increased severity. It may change the machinery of administration in Ireland, or it may merely change the men who direct that machinery, and in particular the official head among those men, the Chief Secretary for Ireland. It is such an obvious suggestion, when a campaign is not prospering, to put a new general in command, that no one has been surprised to hear voices raised against Mr. Forster. When he took the place of Chief Secretary just two years ago, every one thought the appointment a good one, and praised him for the public spirit which accepted an office lower in rank than he might have claimed. He has shown many fine qualities in it—industry, patience, honesty, earnestness, humanity, courage. He has worked so hard and been so grossly abused as to have gained much sympathy from Tories as well as Liberals. Even those who blame his methods speak tenderly of himself. But it is undeniable that he has not succeeded, either in Ireland or in the House of Commons. Some complain of his want of tact, others of a disposition to be led by his subordinates, others of an undue aversion to bloodshed; others of a tendency to resort to temporary expedients, instead of governing on fixed principles with an eye to the future. Some who can't indicate any distinct defect observe that he is too much of a commercially-trained Englishman to do for Ireland, and urge that at all hazards an Irishman should be chosen to replace him. Perfectly true; but where is the Irishman? It would be well, no doubt, that, pending the settlement of the Home-Rule question, everything possible should be done to let Ireland be managed, or even mismanaged, rather by her own children than by Englishmen. But no one can point out the man among members from Ireland who unites talents, energy, and high character to a safe seat. And the only persons whom rumor has put forward as possible successors to Mr. Forster are Englishmen—Mr. Chamberlain, Mr. Lefevre, Sir Charles Dilke.

Graver even than the question of bringing in new men is that of proposing new measures. Those who seek a cause for the recrudescence of agrarian outrage during the last month or two have mostly found it in the fact that a great part of the Irish peasantry are still hopelessly in arrears with their rent, unable to pay what the owners demand, and therefore driven to resist by shooting landlords and maltreating such tenants as have, by paying their rent, made it harder for others to refuse to pay. This load of arrears, itself due to the bad harvests of 1878 and 1879, prevents (it is said) the Land Act from having a fair chance, and disposes the people to listen to the no-rent doctrines of the Land League. One proposal, therefore, is to deal with these arrears, either by wiping off a part of them, or by giving time to the tenants, or by some contribution from public funds. The difficulties in the way of such a measure are obvious—one of the greatest being to distinguish between cases in which the tenant cannot, and others in which he merely will not, pay; and its insufficiency to deal with the whole evil appears also from the fact that the outrages are by no means confined to, are not even worst in, the districts where the people are worst off. Hence another scheme is put forward: that of extending and strengthening what are called the purchase clauses of the Land Act—those intended to help the tenant to buy his farm from the landlord. This plan finds support in two opposite quarters—among the Land Leaguers and among the Tories. The former desire it because it would bring Irish real estate into the hands of the peasantry; the latter because it would deliver the Irish landlords from their present wretched position, in which many of them can get no rents from the present tenants because they are either unable or unwilling to pay, and can find no new tenants for the farms from which they evict the present tenants, because the fear of violence or murder prevents new tenants from offering. Within the last week or two the Tories, who even last year were disposed to look favorably on this solution, have begun to throw themselves into it, and have thus given it an importance which the advocacy of the Land Leaguers (had they even been heartily in favor of any solution whatever short of Irish independence) would never have secured for it. Lord Salisbury, in a speech just made at Liverpool, has formally adopted it. The difficulty is to find the money. The peasantry cannot buy out the landlords by their own funds, for they have not enough. If the landlords are to get a fair price for their estates, the money must be either lent or given by, must at any rate come out of, the imperial treasury of the United Kingdom. This is a serious matter, for the sum required, if the operation is to be conducted on a large scale, would be enormous. Mr. Gladstone is known to entertain great objections to it. But we are sure to hear so much more about it before long that I need not stop now to point out the dangers involved in making the Government the creditor and mortgagee of the whole peasantry of the island.

Meanwhile, what is to be done to restore order, to put down outrage and assassination? Those who ask least ask for a strengthening reorganization of the administrative machinery in Ireland. Others demand the suspension of trial by jury for agrarian offences—a suggestion which would have more weight were it not that the difficulty of punishing agrarian crime lies not so much in the reluctance of juries to convict as in the reluctance of witnesses to appear. Even a judge sitting without a jury cannot convict in the absence of evidence. People say that evidence would be forthcoming if the criminals were sure to be convicted, but, unhappily, there is little ground for expecting this. Any witness in an agrarian case is regarded as an informer, and the informer is in Ireland more detested than any criminal: he is shunned, he is threatened; his life is not safe; nothing remains for him but to quit the country. Some Tory organs go so far as to call for the proclamation of martial law, but without showing how even so desperate an expedient would succeed in discovering the perpetrators of crimes which the whole population desires to conceal. Even now people can be arrested and detained on mere suspicion; yet murders continue and the murderers escape. Those who know Ireland best fear to give such an opportunity for the passions of race-hatred and class-hatred as martial law would open up.

Comparatively little sensation has been made in England by the reports of the New York mass-meeting and other American demonstrations on behalf of the imprisoned suspects who claim American citizenship. Many of us are indeed ashamed that the detention of prisoners without trial should furnish an apparent justification for remonstrances on the part of a friendly power, for we remember the *civis Romanus* doctrines of Lord Palmerston. But it is generally understood in this country that these demonstrations emanate, not from the Irish population in the United States, but from a section only of that population and those who seek to humor it, and that even a vote in Congress would not necessarily express the sentiments of the American people. No one thinks of allowing the good feeling which exists toward America to be disturbed by anything which Irish disaffection can do. It is bad enough that it should cause so much trouble at home, without suffering it to cause trouble abroad also. Y.

THE DEATH OF MR. DARWIN.

LONDON, April 22, 1882.

EUROPE has just lost her greatest man of science. Three days ago Mr. Darwin passed away suddenly, calmly, almost painlessly, in the quiet country village where the later years of his life had been spent. The impression produced in England by the extinction of so great a light, the brightest by far in our firmament, is perhaps less than might have been expected, and indeed not greater here than in Germany, where he was known and honored as no foreigner has been for generations past. To Englishmen Mr. Darwin was merely a name. Of those who knew that he was the author of the 'Origin of Species,' comparatively few could have told whether he was living or dead, or where he lived, or what were his occupations. No famous man has remained in such complete seclusion, rarely coming even to London, and then seen by few persons, engaging in no controversies, never putting himself before the public. This was due partly to his health, which had been weak for nearly his whole life, and was so uncertain even twelve years ago that he was then forbidden to come to Oxford to receive an honorary degree lest the excitement of an appearance in a crowd should prove too much for him. (A curious indication of the popular ignorance regarding his personality was afforded by one of our leading evening papers, which announced his death as that of "Professor" Darwin, though he had—so far as I recollect—never been a professor anywhere, and certainly not for many years before his death.) It was due, also, however, to the singular modesty and simplicity of his character. No one cared less for popular applause, or was more absolutely devoted to the pursuit of truth for its own sake. There was nothing morose or proud or ungenial about his seclusion. It was that of a man who knew where his duty and functions lay, and understood that stillness and concentration were necessary as well for the prosecution of his researches as for his own personal well-being; a man, too, whose pleasures were those best and simple pleasures which depend on the affection of family and friends and the enjoyment of nature.

Down, where he lived and died, is a hamlet, rather than a village, in Kent, some fifteen miles to the southeast of London, about half an hour's walk from the station of Orpington, on the South Eastern Railroad. The district is purely agricultural, thinly peopled, not unbeautiful in a quiet way. It is a plateau of chalk, some 400 feet above sea level, interrupted by those wavy hollows which characterize our chalk country, and with beech woods here and there on the slopes—a country eminently English in its scenery no less than in its people. His dwelling stands less than half a mile from the village, a plain but comfortable brick house in a few acres of pleasure-ground—a pleasantly old-fashioned

air about it, with a sense of peace and silence. A little way off are the greenhouses, where he kept the plants on which he experimented. Those who have read his book on insectivorous plants will remember its account of the sundews, with which so many experiments were tried; there were whole ranges of pots of them in these houses.

I saw him at his home in Down last January, and could not remember to have ever before seen him so bright, so cheerful, so full of talk. Feeble as his health had long been, he looked younger than his age, and had a freshness, an alertness of eye and mind, an interest in all passing affairs, which one seldom sees in men who are well past seventy. It was hard to believe that one was in the presence of so great and splendid a genius, for his manner was simple and natural as a child's. He did not speak with any air of authority, much less dogmatism, even on his own topics; and on other subjects, politics for instance, he talked as one who was only anxious to hear what others had to say and resolve his own doubts. One remark struck particularly the two friends who had come to see him. He mentioned that Mr. Gladstone had, some months before, while spending a Sunday in the neighborhood, walked over to call on him; and speaking with lively admiration of the Prime Minister's powers, he added: "It was delightful to see so great a man so simple and natural. He talked to us as one of ourselves: you would never have known what he was." We looked at one another, and thought that there were other great men of whom this was no less true, and in whom such self-forgetful simplicity was no less beautiful.

That self-forgetfulness shines through his books also, and was really one of the causes which have made them so influential. He had so little vanity, and so much sweetness, as never to care for a view merely because it was his own, and never to resent opposition as an attack upon himself. No one who had so surprising a talent for broad generalizations ever stated them more cautiously, or was so absolutely candid in modifying them when new facts showed their incompleteness. There is, therefore, little or nothing polemical in his writings: he does not suffer his scrutiny of nature to be interrupted by anything which involves controversy. It was largely for this reason that so little of that invective and obloquy which is apt to be poured on those who first propound doctrines inconsistent with the prevailing theological views, was directed against or incurred by him. The propositions advanced in his treatises on the 'Origin of Species' and the 'Descent of Man,' although now generally accepted, not only by the scientific world but by educated men generally, and not held to be opposed to revealed religion, excited much alarm and hostility when those books first appeared. Everybody saw that they could not be reconciled with the Mosaic cosmogony as heretofore understood: some people thought them dangerous to theism itself. But their author had so carefully abstained—if one can call what was natural to him by the name of abstention—from any attack on received theological opinions, his tone was so entirely impersonal, so obviously that of one who was seeking for truth, and truth only, that nobody attacked him, and his name was scarcely mentioned, except by the comic papers, when they humorously placed his striking head, caricatured, of course, on the body of an ape. It seems worth while to dwell upon this point, because it is an instance of the way in which a man's character may affect his scientific work and influence.

In purity, elevation, single-mindedness, Darwin was a worthy successor of Newton and Faraday. No more perfect scientific life, nor one which has done more to raise the respect of the outer world for science, has been lived in these later centuries. And it may be doubted whether any one since Newton has done work likely to have a more abiding influence. It is not only that he has shown how the methods of experiment may be applied far more exactly than was attempted before to the animal and vegetable kingdoms, he has given the world new ideas as to the causes which are at work in those kingdoms; he has displayed an unequalled gift for bringing into relation with one another vast masses of phenomena, large regions of research, which no one had previously thought of connecting. The fact that his death-day (the 19th of April) was the same as that on which Lord Beaconsfield died a year ago, suggests a curious comparison between the two men. The politician's departure produced a profound sensation in these islands: it was regarded as the great event of the year. His admirers have been commemorating him by appearing with bunches of primrose—his favorite flower—on the 19th of April. The death of Mr. Darwin has made scarcely a ripple outside the small circle of those who knew him personally, or who were occupied in the same researches. Yet the time may come when the nineteenth century will be remembered among men not least by this, that it was the century in which Darwin lived and wrote. Y.

RENAN'S ECCLESIASTES.

PARIS, April 14, 1882.

So much interest attaches to whatever comes from the pen of M. Renan, that his publisher offers sometimes to the public volumes which are mere chapters of a volume. The book Ecclesiastes is not very long, and its translation, printed in the largest characters and with as few lines as can be decently put on a page, with a long preface, only makes in all 150 pages. The publishers of old could not have conceived of an octavo volume with so few pages; but "nous avons changé tout cela," as Molière says.

The preface to this new version of Ecclesiastes is well worth reading; it is a study of the age and the character of the book. M. Renan has already translated the Song of Solomon, and written an analysis of it. He tried to examine and to solve some of the questions involved in it. The obscurities are not so great in Ecclesiastes as in Job and in the Song of Solomon, and it is easier to determine with some certainty the age of the work. It has on its title a singular word composed of four letters, QHLT, and is a series of speeches, a sort of confession, placed in the mouth of a certain QHLT, supposed to be a son of David and King of Jerusalem. This abbreviated name, says M. Renan, is a designation of Solomon. "There is no doubt that the author, who surely knew the Proverbs attributed to Solomon, wished to represent the successor of David. This celebrated king seemed to him a good personage for the object he had in view—that is, the demonstration of the vanity of all things."

M. Renan asks himself if Ecclesiastes is an apocryphal writing—one of the productions of that great pseudepigraphic literature which extends from Judas Maccabæus to Bar-Cokheba. It does not seem to him quite apocryphal. The author of such a composition is always a fanatic who forgets himself, and who writes in the interest of a certain cause; he has no literary pretension, he has a religious object. "When," says Renan, "a Jewish writer of the centuries which approach our era took, in order to inculcate some great thought to his contemporaries, the mantle of a celebrated man or of an ancient prophet, like Moses, Enoch, Baruch, Ezra, he really meant to have his work admitted as that of those ancient personages; and generally the fraud succeeded, for in those times there was no notion of literary criticism." The author of Ecclesiastes does not wish to deceive the reader; he does not really give himself out as Solomon, or the son of Solomon: he makes the son of Solomon speak, but he occasionally comes out himself, in his own person. He acts as Plato did when he placed in the mouth of Parmenides or of Timæus words which really expressed his own thought.

The abbreviated name given to the son of Solomon really means *Koheleth*, or preacher. M. Renan enters into a long philological explanation in order to justify this interpretation. The philosophy of the Koheleth is extremely simple: "All is vanity," is the continual thought expressed in it, in a series of small paragraphs. There is no progress; the present resembles the past, the future will resemble the present—they are all equally bad; all attempts to ameliorate the human destiny are frivolous. The author speaks like one who has gone the round of all human sensations and emotions; he has seen everything with his own eyes, and he gives the result of his sad experience.

"What is," says Renan, "true wisdom in the eyes of Koheleth? To enjoy quietly a fortune conquered by labor; to live happy with the woman beloved in our youth; to avoid all excesses; not to be overwise, and not to think that our efforts can alter fate; not to be too rich, as great wealth gives too much trouble, nor too poor, as the poor are despised; to accept the prejudices of the world as they are, without struggling against them, and without trying to reform anything—in one word, to live according to the rules of a moderate philosophy, without zeal, without mysticism. Our author is a gentleman, devoid of prejudices, good and generous of heart, but discouraged by the meanness of the times and the sad conditions of human life."

Such a doctrine, among the old Greeks, and even among ourselves, would seem almost impious. But Koheleth is not a materialist nor an atheist—he is a firm believer in the Divinity. But he seems to think that the Divinity cares little for man; he does not believe in a future life, and in this respect his ideas, according to Renan, do not differ from those of the enlightened Jews of his time. The author has a great sentiment of justice; he is often revolted by the contrast between the laws of morality and the accidents of human life; but he is resigned—he knows that life, after all, has its good hours, and why should we not enjoy them, though we know that we shall have to pay afterward for every joy? He paints old age and its sorrows, its consciousness of impotence, its disillusions, with the most admirable color. The author of Ecclesiastes, says Renan, is the author of Job prolonged some six or seven hundred years.

"The eloquent and terrible wailings of the old Hebrew book, the protests, which become almost blasphemous, of the old patriarch, are now the sadly resigned and clever remarks of a worldly literary man. Koheleth has not even the strength to get angry—it is so useless! Like Job, he bows before an unknown power whose acts do not depend on any appreciable reason. But he gets consoled; and if women were a little less deceitful, judges less corrupt, heirs a little less ungrateful, governors of mankind a little more serious, he would reconcile himself with life."

Ecclesiastes makes no allusion to any particular dogma, to any catechism, to any religious hierarchy. The Jews were, in reality, at the same time the most religious people and the people who had the simplest religion.

"It is," says Renan, "the glory of the people of Israel to have first perceived the vanity of superstition and of religious chimeras. . . . When a Jew saw Egypt, visited the σύριγγες of Thebes, the Memnonium, the ὑπόγεια of the Serapeum—all these houses of the dead rather than the houses of the living—the sentiment he expe-

rienced was that of the pity which is excited by the sight of absurdity. God appeared to him great, single, laughing at man and his follies. The first of these follies was, in his eyes, the pretension to immortality. 'God alone lasts,' was always the fundamental basis of Semitic and monotheistic theology. Man is a transient being, and the worst act of pride in him would be to make himself equal to God by attributing to himself immortality. The Pharaoh who built pyramids in view of an indefinite existence, instead of being considered by the wise Israelite as a religious man, seemed to him impious."

The people believed in sorcerers, in ghosts; but the wise, the doctors, rejected such a belief. Still, if there was no after-life, how could the doctors reconcile the justice of God with the sight of the injustice of human destiny? This terrible problem was the cause of all the revolutions which took place in Israel. The "day of Jehovah"—the day when this antinomy should cease to exist—became a favorite dream, a fixed idea; it is the germ of all the apocalyptic writings. Was not a special recompense a necessity for all the martyrs? Would there not be for them a millennium? If they could not hope for an eternity of happiness, could they not hope for some definite period of glorification? Christianity gave the solution: it promised eternity to the poor, the suffering, the martyrs, the victims of the transient tyranny and corruption of the world. But this simple and triumphant theory was not accepted by the great mass of Israel. Koheleth represents one of the moments of the struggle between the old Semitic and the new Christian ideas. He does not allude to Messianism, to the resurrection; he has no fanaticism of any kind, neither religious nor political. Renan boldly says that he was an unbeliever: "The Song of Songs and the Koheleth are like a love-song, or a little pamphlet by Voltaire, lost among the folios of a theological library." This seems a trifle too bold; to compare Ecclesiastes with a writing of Voltaire seems a little outside the truth. The Ecclesiastic cannot be said to be an infidel in the sense of Voltaire; he was a moralist, if you like—a man of the world, it is possible. He does not speak with the fervor of the prophets; he has a resignation which gives him a place apart.

At what date ought the publication of Ecclesiastes to be fixed? "It is as easy," says Renan, "to classify ideally the Koheleth—that is to say, to assign to it its place in the moral history of Israel—as it is difficult to fix absolutely the century in which it was composed." He tries to prove that it was written under the Achæmenidæ, or during the domination of the Ptolemies in Palestine; but his inductions are very vague, as he himself confesses. "The Koheleth is a work of decrepitude; and this sceptical book, at the same time elegant and mournful, was written a little while before the Gospel and the Talmud." The book entered into the Jewish Bible toward the year 100 of our era. It was translated into Greek about 135. Neither Justin, nor Irenæus, nor Tertullian, nor Clement of Alexandria ever cites the Ecclesiastes. The Greek version slowly made its way, and the book furnished eloquent quotations to Saint John Chrysostom and to Saint Jerome. In short, Renan looks upon the Koheleth as one of the best Jewish books, though it has no unity nor any clear philosophy. The author is at times a materialist, at other times a sublime spiritualist. He is a candid egotist. Renan says, with his usual habit of pronouncing on the most doubtful points, "He certainly was an amiable man." The Koheleth is in many respects a very modern book: the pessimism of our time is expressed in it. "The author," says Renan, "appears to us like a resigned Schopenhauer—much superior to the Schopenhauer whom his unhappy fate tied to German lodging-houses."

Our critic ends by a denunciation of the modern Jew, who has become an accomplished man of the world, who enters so easily into all the folds of our modern civilization, who makes himself so necessary everywhere, who is a pure epicurean. This anti-Semitic page is very eloquent; but why should Renan be anti-Semitic? His genius, his soul, all he has, seems to be derived partly from his Celtic nature, and partly from his profound study of Semitic history. His fit of anger will not last long; it is a mere caprice.

Correspondence.

DR. BOYLAND AND DR. LAMSON.

To the Editor of The Nation:

Sir: Your sense of right will, I am sure, allow me sufficient of your valuable space to say that the criticism of my contribution to the Lamson case, contained in your issue of the 13th instant, was at least unfair, omitting as it did all the more important points of the letter, which has since been, by special request, legally embodied in an affidavit and forwarded by steamer to Dr. Lamson's solicitor, London: first, ignoring that the semi-syncope was due to "anæmia of the brain," and passing over the words, "slightly inclined to melancholia"; second, making no mention of his challenge to fight him with pistols for an imaginary offence; and, third, not stating the opinion that George Lamson cannot "be guilty of such a crime and sane."

The particular kind of mental malady by which Lamson was and doubtless is still affected, although insidious, is recognized, by physicians who have had much experience with the insane, as cerebral anæmia. One of the many symptoms of the group characterizing this form of encephalic disease is a tendency to homicidal mania. This he undoubtedly had, as evidenced by his desire to shoot me in 1870. This tendency has now culminated in murder. Cases similar to his find a place in our text-books and official reports on diseases of the mind and brain.

As you neither gave the text of the letter nor made reference to its appearance in the *Herald* of the 8th instant, you will doubtless make the *amende honorable* in permitting me to state my side of the matter, and greatly oblige,

Yours very truly,

G. Halsted Boyland, M.D., M.A.

P.S.—Your leader was only called to attention a few days ago.

29 North Ave., Baltimore, April 26, 1882.

THE CONVERSION OF JESSE JAMES.

To the Editor of The Nation:

Sir: The Southern Baptists lately refused to send to China as missionaries two of their best men—Bell and Stout—because they had enjoyed and profited by the instructions of Professor Toy. Now, the religious community would be glad to be told if they regard as in good and regular standing that pastor in Austin whose letter you published last week. Here is a case of truly damnable heresy. It does not appear that he was ignorant of the history of Jesse James, and yet, although he is a minister in that sect which professes special loyalty to the dictionary definition of Christ's words, he did not insist upon any other evidence of conversion than a desire to be baptized and a few prayers in public. It is as scandalous as anything in Italy before the Reformation. The only gospel which a minister of Christ had any commission to preach to Jesse James was—Believe and be hanged. Whatever we may think of old Dr. Emmons's doctrine that the test of fitness to be saved was willingness to be damned, it is certainly true that the only "credible profession" Jesse James could have made would have been submission to the authorities. It rouses indignation to hear Mr. Moody adding to the terms of salvation the necessity of believing the story of Eve as he reads it from the English Bible, but one readily forgives him for that when he exercises the rare theological virtue of sending his converts to jail to atone for their crimes. The Gospel is emasculated not only in the land of border-ruffianism but all over the country, and even in some of the chairs of theological seminaries. The 'Systematic Theology' of Charles Hodge, venerated as a classic by half the orthodox ministers of America, has not a chapter, nor a part of a chapter, nor any equivalent, on repentance. The Missouri bottoms need some of the preaching of the original Baptist. If the clergy there will do their stern duty in preaching the gospel of repentance, the value of real estate may be increased, and the much-to-be-desired extermination of both parties to the James controversy secured by the voluntary surrender of a large number of sincere Christians and hopeful converts to the hangman's rope.

J. P. C.

COMPULSORY BOOK-BUYING.

To the Editor of The Nation:

Sir: I want to call attention to a method of doing business on the part of certain publishers that might be called sharp practice, and to exhort my professional brethren not to submit to the imposition on the weak ground that it is the quietest way out of the difficulty. I refer to the habit of sending expensive books that have not been ordered, accompanied by a bill, and with express charges to pay. It may be the easiest way to avoid personal annoyance to foot the bill and accept the volumes, but it would be better for all concerned to put a stop to the practice by refusing to pay for all unauthorized shipments. If one chooses to give *carte blanche* to his bookseller, and in a splendid manner order all the new books, that is another matter. College professors, for example, are not likely to do that in this age of the world. And one should strengthen his weak courage by reflecting that every time he submits to a small imposition he helps to bring it upon others.

Cloyne College, Cal.

THE PROTECTIONISTS IN THE SOUTH.

To the Editor of The Nation:

Sir: The opinions already expressed and which will be expressed by the Southern representatives in Congress during the discussion of the present Tariff Commission Bill will probably surprise many who are not thoroughly familiar with the course of affairs in this part of the country. No inconsiderable number will be found among the advocates of protection. Up to a very recent date the ideas of protection had secured no foothold whatever in the South, for the obvious reason that all the interests of the people were opposed to that system. The state of affairs is, however, somewhat different now. While the people are still mainly agricultural, new industries have sprung up in many localities, and with these have come new ideas.

Some of the newspapers have begun to remodel their views as to the tariff. They begin to see a little good in it, and are not nearly so firmly convinced that free trade is the wiser policy. Some, not yet prepared to "flop" unconditionally, are calling for "a tariff for revenue, with incidental protection." A few, having

carefully felt their way, support protection pure and simple. The cause of this is plain: we are beginning to produce certain commodities which the tariff protects. The Louisiana sugar-planters are the wealthiest and most influential class of that State. Alabama coal and iron mines and Georgia cotton mills are rapidly increasing in numbers and importance. Those interested in these industries are as rampant protectionists as are to be found in this country. They have already learned to use the sophistry so long used in the absence of arguments by protectionists elsewhere: they claim protection for the dear laborer from the competition of the paupers of England. These Louisiana planters are apparently very solicitous about the welfare of their negro "hands." It would be interesting to know what proportion of the sixty per cent. duty goes to the laborer.

Still another class of producers are supporters of the protectionist policy—the wool-growers of West Texas. Although proportionately few in number, they are as clamorous as any, and cry out loudly against any reduction in the duty on wool. Senator Coke, who, in view of the near approach of the expiration of his term and the election of his successor, wished to make some capital for the contest, has made the "greatest effort of his life" in a speech advocating free trade. This, while producing the effect intended with the majority of the people, called forth a howl from the sheep-men and their journals. They call it a "bitter pill," and say it ill becomes a representative to attack one of the growing industries of the State. They demand, in the new Congressional apportionment, a district to themselves, and purpose to elect a "representative who will represent" them.

Besides the classes already named who will oppose any reduction of the tariff, there are yet others who are equally opposed to free trade. These are the producers of articles taxed by the internal-revenue laws. Since the revenue receipts have so greatly exceeded the necessities of the Government, it has been evident that taxes could be safely reduced in the direction either of import duties or of internal revenue. Now the whiskey-distillers and tobacco-growers have become convinced that if the former taxes are reduced, the latter must produce the more revenue, and cannot be lessened. So they join the protectionists in opposing free trade. Thus it will be seen that a number of wealthy and influential classes are enlisted on the side of protection in the contest at present going on in Congress, and probably to be continued in the fall elections.

The result can be foreseen. The Southern delegation in the next Congress will have a larger proportion of protectionists. The people are ignorant of the merits of the question; they do not readily realize the oppression of the indirect taxation of the tariff on imports, but can all perceive and understand the tax on tobacco and whiskey. Protectionists and opposers of internal taxes will take a lively interest in elections, and will spend money and use influence to further their interests. At each recurring election their power will increase and their success become more complete, until a large majority of the Congressmen from the cotton States will be of the protectionist kind. When this is accomplished the Southern manufacturers will have occupied the markets of the South and driven out the Northern goods. These latter must, however, find some market to compensate for this loss, and they will seek to compete in foreign countries with England. Then will come the abolition of the tariff.

This is no mere speculation in regard to possibilities. The present labor troubles and depression among the manufacturing interests of New England show that our "infant industries" need more room than our markets present. The enormous increase in population, and consequent enlargement of home markets, have deferred the climax, but it cannot be delayed much longer.

B. W. Lockett.

Cleburne, Texas, April 20, 1882.

THE CHINESE QUESTION ONCE MORE.

To the Editor of The Nation:

Sir: I have read your paper carefully for some five years. Your views on general public questions have so frequently coincided with my own on subjects that I thought I understood, that I have been willing to accept with faith those which I did not understand. I must say, however, that my confidence in both the *Nation's* knowledge and want of prejudice has been very much shaken by the position it has taken upon the Chinese question.

You asserted on March 16 that the sole cause of the legislation against them (the Chinese) is the prejudice of the 1,009,390 whites of the Pacific Coast, or of about one-fiftieth of the American people. This is assertion and special pleading only, I take the liberty of thinking. The subject is discussed from one side only. There is not a *prejudice* on this coast against the Chinese, but a firmly-planted, now ineradicable, intelligent conviction, very slowly arrived at by the best class of people, that either Chinese immigration to this coast must be checked, or it will soon run out *all* classes of white people here, a few millionaires alone excepted. At first manufacturers here were inclined to welcome the Chinese, because they effected a saving by their use and thus for a while made larger profits. It was then only the laborers' and mechanics' time to cry out, and for some fifteen or twenty years, as you are probably aware, they alone did cry, and for a long time little attention was paid to them; but within the past five or seven years John has been gradually advancing to the front as an employer, and is, more slowly but just as inevitably, crowding out employers in the manufacturing line, particularly in the manufacture of clothing, shirts, boots and shoes, slippers, cigars, the cutting of lumber for fire-wood, laundry-work, the growth of fruit and vegetables, etc., etc. The manufacturers and better classes of people have for some seven years been convinced that, though the Chinese may be used to manufacture, they cannot be used to consume—that is, they cannot be counted upon to any appreciable degree as customers. To displace white labor by Chinese is, therefore, to make goods for which there will be no buyers. At first the wages of the Chinese were nearly on a par with those of the white laborer, but wherever a reduction was called for, or brought about by the change of times and reduced cost of living, the white laborer always found that he was still underbid, and finally now underbid so completely that he cannot possibly compete with the Chinaman at all, unless he gets down to his standard of clothing, living, and sleeping accommodations; and this is simply out of the question. The ordinary Chinese laborer wears a coarse cotton overshirt and pantaloons only, a pair of boots and no socks, or a pair of wooden-soled pattens with a cotton attachment. Rice, boiled in water, and fish or refuse pork or meat, constitute his board-bill, while fifty Chinamen will sleep in a space that would be overcrowded to suffocation to ten white men.

Add to this standard of living (which is, I think, below that which prevailed among the hinds or villains of the feudal barons of the twelfth or thirteenth century) the fact that the Chinaman is a machine not wielded by himself, but by six of the closest of corporations, possessing the power to exclude his return to China alive, or the exportation of his bones to his home if he dies here. Omission to secure this latter, in his religious belief, would result in his spirit wandering for ever in the darkness of this country of the "foreign devil." He has only one object here, and that is to grow wealthy and leave just as soon as he has made a competence. The Six Companies administer the only law which the Chinese here either fear or respect. The Chinaman may evade the white man's laws, but he knows better than to even attempt to override those of the Six Companies.

But though these are the objections to the Chinese which are most plainly seen and most keenly felt, they are not really the strongest which a legislator is bound to consider. The traditions and unwritten law of the United States are to welcome the poor and the oppressed from every country who come to better their condition and to *make their homes here;* and the fact that the Chinese do not, in *any* case whatever, come to do this latter, is the objection at which the statesman must most fully pause. It forms the objection which the most ardent advocate of Chinese immigration cannot explain away or defend. All other immigrants come to stay, to marry and give in marriage, to raise children, to make homes, to buy land, to dress, sleep, and eat as the average native does, and to fight for and stand by the United States as the best country for the self-reliant laboring man on the face of the earth. But the Chinaman knows nothing—nothing, nothing, absolutely nothing—and cares less, about American institutions or the American Government. He is a freebooter who comes strictly and only on an industrial predatory tour, and to return as speedily as possible to his own country, which he thinks, in its government, people, and religion, is as far above this country as the heavens are above the earth. If the Chinaman came here to marry and to stay—to come singly when he is poor, and to send for a wife and settle down when he has become comfortable or rich—then, still undesirable as his presence might be, the vital difference between his immigration and that of all Europeans would be removed. The advocate of the latter could not then consistently oppose the Mongolian's coming. But he does not marry here, and he carries or sends all his surplus earnings to his own country.

There are no Chinese *wives* in California, except among an exclusive few of the rulers. All the rest of the Chinese women here are prostitutes of the lowest and most pitiable class. A white prostitute is a pitiable object, but she is in a position of wealth and honor compared with her Mongolian sister. The latter is kidnapped generally, and purchased always, in China, to be used as a prostitute here by persons regularly engaged in that business. Nor is this all. To own a prostitute is a luxury among the Chinese here, and, as such, is reckoned among luxuries like chickens, opium, pork, and Chinese brandy. There is not, I believe, even of Chinese prostitutes, more than one woman here to every twenty or thirty men. Judge, then, of the morals of the remainder of the poorest class of males of a nationality not celebrated, to say the least of it, for purity of morals or freedom from those vices for which the people of Canaan were by divine sentence ordered to be exterminated.

For all these and very many more reasons the Chinese are a non-assimilable dose in any civilized country. They have proved to be so in the Australian colonies, and, as such, have by statute been excluded. The human system is as capable, I think, of assimilating and digesting a dose of white lead or red ochre as this country is of assimilating the Chinese. And the main

point is, that they are not going to let you try to assimilate them. They come to be of, for, and by themselves strictly, exclusively, and solely in their quarters, living, habits, religion, ideas, vices, amusements, laws, feelings, aspirations, and longings. Their number is constantly on the increase, too. I do not think that such an immigration was ever heard of before. It comes to prey upon a country and to return, and to transmit to an endless chain of successors the hold it has upon the country which suffers from its presence.

Your statement that the "prejudice," as you are pleased to call it, of the people of this coast is shared by only about one-fiftieth of the American people, seems to me to border upon the absurd. How can the other forty-nine-fiftieths of the people of this country share in, much less understand, this "prejudice," if they have never had Chinese in throngs among them? Practically, nothing is known of the Chinese east of the State of Nevada and of the Territory of Idaho. The presence of one Chinaman to every thousand white men is not a taste of the Chinese at all. When you have one Chinaman to every three adult white men, then you will understand this question. Let me tell you, it is the great, live, undying, all-important question of this coast. It must and will be settled, and against Chinese immigration, too. The talk of the Atlantic papers about the Democratic party being insincere in its attitude on this question is true, I doubt not. I do not as yet expect any settlement in this coast's favor of this question at Washington on any basis of conviction and principle, for none of you understand the matter; nor can you fully unless the white population East is overshadowed, as it is here, by an immigration as proportionately great as it is here. The overwhelming unanimity of public sentiment here—a unanimity never before expressed so fully on any public question in any intelligent community in the United States—is as completely ignored by the majority of newspapers and people East as though it did not exist at all. No newspaper has, I regret to say, gone further than the *Nation* in this respect. Votes and political policy only are what each party is considering, and I can very decidedly assure you, and all interested, that, whether the Democrats voted from conviction or policy, they *did* vote and formed the majority in our favor on this question, and for this reason they will carry every Pacific State at the next Presidential election. When a man is in danger of drowning, and a hand is reached out to him, he takes and blesses it, no matter whether the motive which impelled the offering was the highest or not. Thousands of life-long Republicans, myself included, who never cast a Democratic vote in their lives, will swallow the next Democratic candidate at the Presidential election.

In conclusion, I would state that I am a friend of the Chinese, and as such I cheerfully contribute to Chinese homes for women and children, and to Chinese missions. I also most cordially detest Kearneyism, and all attempts to abuse the Chinese, or do them injustice in any way. But their coming here must be checked, or the coast will have to be given up to them. White labor must go down if Chinese labor is to have an unchecked right to enter this field. The Chinese question is now *the* question on this coast. The people who alone suffer from the evil surely ought to be allowed to claim that they understand it. Whether the second Chinese bill now pending passes or fails to pass, these facts, grouped together, should be known to the people of the Atlantic States. I trust, therefore, you will not refuse them space in your columns.

THOMAS MAGEE.

SAN FRANCISCO, April 18, 1882.

Notes.

A. WILLIAMS & Co., Boston, announce for speedy publication an edition of Mr. A. Bronson Alcott's Sonnets, printed on large paper and bound in half-vellum, and illustrated with some thirty photographs, which, like the sonnets themselves, have reference to the author's personal friends. The gallery, especially if the portraits are early, should be one of unusual interest and value.

Dodd, Mead & Co. are about to make what they call "the first venture of an American publisher with a cheap edition of a copyright book," by issuing 100,000 copies of E. P. Roe's 'Barriers Burned Away,' at twenty cents each. In the meantime circumstances have compelled Houghton, Mifflin & Co., as our readers already know, to make a similar experiment with Longfellow's 'Hyperion' and 'Outre-Mer.'

It is thirteen years since the first English translation of Björnson's 'Fisher Maiden' was given to the American public. Professor R. B. Anderson's version has now appeared in the uniform edition of Houghton, Mifflin & Co. The same publishers send us 'Tales of the Argonauts, and Eastern Sketches,' in their handsome new edition of Bret Harte's works, and Miss Hodgdon's 'Whittier Leaflets,' "for home, libraries, and schools."

After an interval of eight years, a second edition of the 'Elementary History of Art,' by N. D'Anvers, has been put forth (Scribner & Welford). Some revision and enlargement this too comprehensive work has undergone, but errors or inadequate statements of considerable importance have been allowed to remain. Special stress is laid on the improvement of the musical section; but it could not be relieved of dryness, and the rule imposed upon himself by the author of excluding living artists is felt here perhaps more disastrously than elsewhere. The engravings have been increased by seventy-six, and the book is in all respects comely and pleasant to the eye.

Funk & Wagnalls have issued in a peculiarly neat and handy form—a booklike box containing a number of thin pamphlets, intended by turns for the pocket—Dr. R. S. Rosenthal's 'Meisterschaft System' for French and for German. The author does not claim originality for this system, which has been known for many years as Prendergast's, but professes to have developed it much more thoroughly and naturally. Its peculiarity is that it begins with the complex instead of with the simple, starting off at once with a "foundation sentence" consisting of two or more members, and ringing the changes upon that till, by a gradual process, a vocabulary of upward of 2,000 words has been acquired and mastered in a great variety of relations. We believe that in the hands of a competent teacher this system is the best yet devised for learning to speak a foreign tongue in a short time. Its utility for self-instruction will depend upon individual character.

A 'Treatise on the Theory of Determinants,' by Thomas Muir, Mathematical Master in the Glasgow High School (Macmillan & Co.), is a contribution of great practical value to a branch of mathematics which is attracting continually increasing attention. It contains an unusually large number of exercises, and for those who are commencing the study of determinants it seems to us superior to any work that has yet appeared in the English language. We observe with pleasure that on page 234 Mr. Muir renders a small measure of tardy, but none the less welcome, justice to Hoïne Wronski, a man alike remarkable for his learning, his genius, and his unrivalled faculty of rendering himself and his works repulsive to his contemporaries.

Many a writer upon homiletics would find nothing to complain of and much to make merry over in a little reprint (from the Portsmouth, England, *Monitor*), entitled, 'Who Was Old Mother Hubbard? A Modern Sermon,' just published by G. P. Putnam's Sons. The torture by inflation which the ministerial mind is too prone to inflict on even commonplace texts is here very amusingly hit off.

A circular informs us that on account of the unfinished state of the mausoleum destined to receive the statue of Gen. Robert E. Lee, and for other reasons, the proposed centennial celebration of the Washington and Lee University, Virginia, in June, has been postponed.

The current monthly issue of the *Californian* contains a paper, by Mr. Reardon, on Petrarch, which implies study of that author to a degree seldom observable among Eastern scholars. The bibliographical note at the end bristles with misprints, but is not without its value.

Part 3 of vol. i. (New Series) of the Proceedings of the American Antiquarian Society is fuller than ordinary of interesting papers. Most remarked would be Senator Hoar's account of the Massachusetts ancestors of the late President, beginning with the Edward Garfields, father and son, who "probably came over with Winthrop, and were among the first settlers of Watertown, in 1630." Two of the Garfield houses yet standing in Lincoln, Middlesex Co., and Westminster, Worcester Co., are pictured. The military tradition of the family is remarkable. An amusing and learned paper on Tithingmen, by Mr. Herbert B. Adams, of Johns Hopkins University, also deserves mention, as do the tributes to the memory of the late Mr. S. F. Haven, librarian of the Society since 1857.

In *Le Livre* for April, Champfleury celebrates a well-forgotten sensationalist of thirty years ago, Pétrus Borel, in order to prove that he deserved the oblivion that has overtaken him, and partly to revive a medallion portrait of him by Dusseigneur. The chief relish, however, is furnished by Eugène Forgues in what appears to be the first of a series on "The Book Illustrators of the Nineteenth Century." He leads off with the fertile and masterly Gavarni, whose life was such an unhappy anti-climax. Besides an interesting unpublished portrait of the artist, by himself, numerous samples of his work are given in the text, the 'Wandering Jew' furnishing not a few. Mr. Forgues remarks on the complete disappearance of certain Parisian types preserved for us by the pencil of Gavarni, such as the grisette, the student, the pupil of the Conservatoire.

The little English theatrical year-book called 'Dramatic Notes' (London: D. Bogue; New York: Scribner & Welford) has now appeared for the third time. The illustrations are still by Mr. T. W. Wilson, and are as effective as in the earlier volumes, and perhaps more abundant. The letter-press, formerly by Mr. C. E. Pascoe, and later by Mr. W. H. Rideing, is this time anonymous. Its critical quality is not very high, and at times its accuracy is at fault; but the arrangement of the pamphlet is convenient, it has a selection of "casts" of all the important productions, there is an index, and, in short, the book "fills a want." There are no less than five drawings of Mr. Henry Irving and three of Miss Ellen Terry. There is a sketch, also, of Mr. Edwin Booth as *Iago*.

We have received from B. Westermann & Co. parts 1–25 of the ornithological portion of A. E. Brehm's 'Thierleben,' now being published thus at Leipzig. Vols. iv.–vi. of this deservedly popular work are devoted to birds, and as the parts now in hand reach midway through vol. v., we presume about as many more will be required to complete this portion of the subject.

We have not been able to compare this edition directly with the original, which appeared several years ago, but the publisher's prospectus makes no mention of any textual modification, and we presume the text is a literal reprint. Aside from its appearance in successive parts, the feature of this "Chromo-Ausgabe" is the introduction of colored plates—the parts now in hand having each one or two, and 170 being the number advertised for the whole work. Owing to the absence of Dr. Brehm, the superintendence of the plates, which are executed by Winkler, devolves upon Dr. A. Girtanner, of St. Gall, as far as the parts of the work relating both to mammals and to birds are concerned, other collaborators being engaged for the lower vertebrates and the invertebrates. Great care has been taken to make the coloring true to nature, with a result far above the average of similar representations of natural-history objects in Germany—and, indeed, the interval needs be wide between even passably good pictures and the cheap, flashy prints we are accustomed to see from that quarter. The textual woodcut illustrations of the original are retained in the present edition, the form of which is substantially the same. The value of Brehm's text being notorious, and the position of this 'Thierleben,' as the best German popular-scientific treatise on the subject at large, being assured, the addition of colored plates cannot fail to render the work still more effectually instructive by making it more attractive; while the very reasonable price —about twenty-five cents per part—at which it is offered will further conduce to this end.

We receive from Amsterdam a new periodical entitled *Onze Volkstaal* (Our Native Language), of which the object is to do for Holland what the "Dialect Society" does for England—viz., to promote the systematic study of the various provincial dialects. In another Dutch periodical, *De Portefeuille*, we find an eloquent tribute to the memory of Longfellow.

Should the great disks of glass recently cast by M. Feil, of Paris, for the objective of the Lick telescope, prove to be optically perfect specimens, it is not impossible that the instrument may be ready for work on Mount Hamilton, California, as early as the autumn of 1884. The flint lens—a disk of thirty-eight inches diameter, which was four days in casting and a month in cooling—is said to have been found by optical tests "perfect in all its parts," and is now on its way to the establishment of the Messrs. Clark, of Cambridgeport, to whom was awarded by the Lick Trustees the contract for giving the lenses the proper figure. The crown lens was cast about the first of April.

—In the March issue of *Harper's Monthly*, Prof. Luigi Monti, after mention of well-known passages in "The Frogs" of Aristophanes, inquires: "Now, who could have supposed that our Mother Goose nursery-story of a cock-horse had such a venerable, classical, and archæological origin?" It would not, of course, have corroborated his proprietorship of the view therein implied if he had quoted from Liddell and Scott's Dictionary its definition of *hippalektruōn*, "a horse-cock (as we say cock-horse)," etc., latterly replaced by "a horse-cock or gryphon." As elements of our compound words, and also elsewhere, we find the names of divers animals, employed qualificatively, alluding to salient characteristics of those animals. Thus, in *bullfrog, bulrush, bull-trout, bull* stands for "large" or "sturdy"; and the provincial *bull-works* denotes "boisterous behavior." *Horse*, again, and for obvious reasons, is synonymous with *bull*, in *horse-ant, horse-chestnut, horse-laugh, horse-leech, horse-play*, and likewise in *horse-godmother*, a term not very unusual in literature. Similarly, our *cock-sure, cocky*, and *cock of the walk* (to go no further) refer to the *cock* in respect of his self-confident bearing. The *cock-horse* of infantine mythology is, then, most probably, a word devised to signify a lively or mettlesome horse. At all events, there is no proof whatever that it was suggested by the conception of a composite creature, half-cock and half-horse. Prof. Monti's "real cock-horse," as he designates a fantastic figure, a *horse-cock*, surviving ruinously on an ancient Etruscan vase, involves, from what Coleridge calls the factual point of view, a begging of the question. Our nursery *cock-horse*, if of "venerable, classical, and archæological origin" from the *hippalektruōn*, has sprung from its long-buried ashes in a manner so truly phenomenal that the metamorphosis which has transposed the horse and the cock may be counted as only a trifle. That a cock-horse should be utilized toward a new "tale of a cock and a bull" evinces, however, it must be admitted, a certain sense of congruity.

—While occupied in cataloguing the library of his deceased grandfather, once mayor of Plombières in France, the Abbé J. Parisot in 1879 found an anonymous manuscript written in a very small but quite legible hand. This manuscript proved to contain, on closer examination, a grammar, a vocabulary, and a rich collection of national songs of the Taensa language, once spoken on both sides of the Mississippi River, between Vicksburg and Natchez. M. Parisot's grandfather had previously translated the contents from a Spanish original, and on M. Parisot devolved the difficult task of combining the various grammatic notices into one systematic whole, of which he gave the first intimation, to those interested in linguistics, in the Paris *Revue de Linguistique* (vol. xiii., 1880). Encouraged by the favorable welcome accorded to this article, he and M. Lucien Adam set themselves about the publication of the whole treasure contained in the manuscript. From the volume now before us ('Grammaire et Vocabulaire de la Langue Taensa'), which forms the ninth in the "Bibliothèque linguistique américaine," it appears that this southern language, which seems to be extinct at the present epoch, was spoken in two dialects. The northern dialect was in use among the Taensa Indians inhabiting the woods, while the more euphonious southern dialect was the language spoken by the Taensas living on the banks of the "Great River." In colonial history the Taensas figure conspicuously, but we have no trace of any writings composed in their language except the material embodied in this volume, and the old French explorers erroneously considered the Taensas to be of the same race, kin, and language as the Natchez. This hitherto unknown language represents a new linguistic family by itself, and this is a fact of the highest importance for ethnology and linguistic topography, for it discloses to us a new racial subdivision among the numerous American nations.

—The eleven national songs appended to the grammar are provided with a French translation standing opposite and are highly valuable: it is very rare indeed that additions like these are found in works on aboriginal languages. They are not accompanied by the notes, which once served to express them in song, but they give us such a graphic idea of the sentiments, customs, and home life of the Taensa people, that ethnologists cannot afford to slight them. As to the structure of the language, it has many peculiarities which distinguish it from other tongues of the Gulf States. All nouns form a plural number; they divide themselves into two genders, which our grammarian calls male and female, but which from the description given of them ought to be called noble and ignoble. The verb is usually placed before the subject and the object, the direct object being, as a rule, introduced by the particle *me*. Adjectives in our sense of the term do not exist in Taensa: they are expressed either by an abstract noun connected with another standing in the possessive case, or by the participle of an attributive verb. Thus *a holy man* will be rendered: "the holiness of a man" or "a man holy-being." The words frequently end in consonants, and several sounds are peculiar to the language; it possesses the sounds *th, f*, and *r*, and pronounces the *w* as a flatus comparable to that of Algonkin and Iroquois. Other characteristics, which Taensa shares with all southern tongues, or a part of them, are the inflection of the verb by ten personal endings, the existence of numerous verbals, of three fundamental tenses, and of a passive voice (in *-i*); the inflection of the substantive by eight postpositions, and the vocalic ending of the syllable, which becomes consonantic only at the end of words. Laws of euphony exercise great sway in this language and render its study peculiarly difficult. The numeral series presents the decimal system of numeration; the simple numbers are mostly monosyllabic, and by their reduplication a distributive numeral is produced. In concluding this notice we call attention to the fact that to the collaborator of M. Parisot, Lucien Adam, scientists are indebted for no less than four linguistic publications within the short space of two years: on the Chiquito, on the Ba-ure, on the dialects of Guyana, and on the Taensa. The publishers, by the way, are Maisonneuve & Co.

—Probably never before has the republic of letters had so many representatives from among the crowned heads of Europe as in our time, when, to mention only the most prominent, the Queen of Rumania ("Carmen Sylva"), King Oscar II. of Sweden, and Prince George of Prussia may fairly be classed among professional authors, and scarcely ten years have elapsed since Queen Sophia of Holland, an accomplished linguist and essayist, King John of Saxony, the scholarly translator of Dante, and King Charles XV. of Sweden, an even more gifted poet than his brother and successor, were still among the living. King Louis II. of Bavaria and the Duke of Saxe-Meiningen continue to manifest a more than Medicean interest in music and the drama, respectively, and even science finds devoted disciples in princes of the blood. Thus Charles Theodore, Duke of Bavaria, and brother of the Empress of Austria, is a practising oculist of acknowledged ability, and his nephew, the Crown Prince Rudolph, who, under the guidance of the zoölogist Dr. Brehm, has pursued the study of the natural sciences, has published several interesting sketches of travels, besides various scientific papers. Another scion of the house of Austria, the Archduke Ludwig Salvator—son of the last Grand Duke of Tuscany—whose liking for the sea and literary aspirations recall his unfortunate kinsman Maximilian of Mexico, is the author of a series of works on the border lands of the Mediterranean, and has but lately returned from a tour around the world, an account of which he has published under the title 'Um die Welt, chne zu wollen.' Three of these books, intended only for private circulation, and sumptuously manufactured, are entitled: 'Der Golf von Buccari—Porto Ré,' 'Bilder und Skizzen, 1871,' 'Yacht-Reise in den Syrten, 1873,' 'Levkosia, die Haupstadt von Cypern, 1873.' The account of the visit to Lefkosha (Nicosia), if published by a less fortunately situated author, would be but a monograph of modest dimensions. As it is, it forms, like the two companion vol-

umes, a stately quarto. The numerous woodcuts of all three are reproductions of sketches by the author, who is certainly a clever draughtsman and, indeed, is in many ways well equipped for the life of a traveller and the profession of a writer. His love of nature is genuine, his scientific attainments appear to be considerable, and his knowledge of languages, like that of all Austrian princes, is very extensive. His style is clear and sober, generally almost matter-of-fact; reflections and generalizations are infrequent, and, perhaps for obvious reasons, never trench on political ground. The headings of the chapters of the work on Nicosia—"General Remarks on the City"; "The City Walls"; "Architecture, Gardens"; "Mosques, Tombs of Saints"; "Churches and Cloisters"; "Public Buildings, Baths, Khans, Bazaars"; "The People, their Customs and Amusements, Civil Authorities"; "Trade and Commerce"—will give an idea of the variety of subjects which the author's stay of two months in the capital of Cyprus enables him to treat of. His visit to the Croatian harbor Buccari (Porto Ré) was undertaken for the purpose of doing justice to a beautiful and neglected corner of Europe. The narrative of the Archduke's sail in the steam-yacht *Nixe* along the coasts of Tunis and Tripoli, consisting of extracts from his diary, occupies the 400 pages of the largest of these pleasant volumes.

—Of another work relating to the Levant, by the same author, an English translation was published last year by Chatto & Windus (London), with twenty-three full-page illustrations from the pencil of the Archduke, under the title of 'The Caravan Route between Egypt and Syria.' The opening of the Suez Canal has had the unexpected effect of destroying one of the oldest trade routes in the world. The traffic between Egypt and Syria, which had up to that time been carried on by caravans, is now almost entirely diverted to the vessels plying between Jaffa and Port Saïd. Only an occasional Bedouin and the Arabs having charge of the telegraph line are now to be seen on what was, from before the time of Abraham to our own days, a crowded thoroughfare for the people of two continents. This fact gives an interest to the unpretending account by the Archduke of his journey over the old caravan road, undertaken with the view of ascertaining "the feasibility of a railway connection round the coast." The starting point of the journey was El Kantara, where the road crosses the canal, and it ended at Gaza. The country passed through was an unbroken desert, with here and there a well and a few palm trees, but in places so destitute of water that the Bedouins themselves were perishing from thirst. El Harish, on the Egyptian frontier, once a place of considerable importance, but dependent entirely upon its carrying trade, is fast falling into decay. The same is true of Khanyunis, the first Syrian town, but this is owing to the frequent inroads of the Bedouins. The proposed railway was found to be "absolutely impracticable" on account of the shifting nature of the sands, which, after every violent storm, would completely bury it. The illustrations are spirited, and give a good idea of the monotonous scenery of the desert.

—Eduard von Hartmann, in an article in *Die Gegenwart* for April 1, proposes the total exclusion of art from the churches, or the complete separation of the æsthetic from the religious element in the ecclesiastic service. All the arts furnish their contingent to the complex emotion which goes by the name of religion: architecture, with its imposing structures, by evoking the feeling of the sublime; sculpture and painting, by a representation of subjects taken from sacred history; music, by means of chorals, hymns, masses, oratorios; dancing, in its higher dramatic forms, by processions and other observances. These last named mimic-symbolic representations have already completely disappeared from the Protestant service, and the fate of these most primitive observances foreshadows the fate which will attend all forms of religious art. Art has always been regarded as one of the strongest auxiliaries of religion. It puts the mind into a condition in which religious maxims are readily assimilated. Its influence is exemplified by the great impulse given to the Reformation by the Lutheran choral service; and it is evinced to-day by the fact that many of the conversions to Catholicism are due to the superior æsthetic attractiveness of its service. But nevertheless religion and art must be separated—not only because art distracts the attention from religious sentiments proper, but because a factitious or ideal emotion is allowed to take the place of a real emotion. Religion is a real emotion inspired by our aspirations and surroundings; but the emotion inspired by art relates to merely possible events and facts. To confound these emotions and allow the latter to take the place of the former is productive of mischief. But this is precisely the case in our modern churches. Many persons have become aware of the conflict between their religious and their scientific views of life, and, being unable to reconcile these conflicting views, take refuge in the mystic regions of religious art, mistaking the feelings aroused by it for true religious emotion. Thus not only a philosophic confusion arises, but the advent of the true monistic religion, as a substitute for Christianity, is retarded. This prevalence of art-culture in churches is always characteristic of a period of decay of a definite religion, whereas the creative periods of religious art always coincide with the periods of unshaken faith. To hasten the crisis, religious art should indeed be removed from the Church, but it should not be abandoned altogether. The proper place for religious pictures is in the museums, for oratorios and cantatas in the concert halls.

—The Norwegian popular tales collected by Asbjörnsen and Moe have become standard literature in well-nigh every tongue. Jörgen Ingebrektsen Moe, one of these Norse Grimms, died March 27, as Bishop of the diocese of Christiansand. He was born April 22, 1813, having reached his sixty-eighth year. Asbjörnsen and Moe became acquainted in their youth, and both had a peculiar fondness for popular literature. While spending their vacations in the country as private tutors, they began to collect nursery tales and ballads from the mouths of the peasants, and in 1842 they were able to announce the publication of the first collection. Besides the popular tales, Moe collected a large number of ballads and of the so-called "stevs," a kind of improvised dialogues in metric form, a characteristic element in the popular poetry of Norway. In 1853 Moe became a pastor in Sigdal, a rural parish in Norway, and from that time he transferred his interest in the popular tales to Asbjörnsen, giving him all his published manuscripts. The stories told by Asbjörnsen and Moe are so nearly alike in style that it is difficult to distinguish them, but on a more careful examination Asbjörnsen will be found to excel in plastic strength, while Moe's work is marked by a remarkable finish and elegance. From Moe's pen we also have several poems and a few original stories, both of which have been deservedly popular. His collected works appeared in two volumes in Christiania in 1877.

—Steinway Hall was well filled on Thursday by an audience eager to hear Mr. Joseffy's interpretation of two concertos and a number of other pieces which he had not previously played in this city. The solo pieces on the programme were Beethoven's Sonata op. 110, Allegretto vivace Sonata op. 31 No. 3, D flat major Nocturne by Chopin, and Liszt's twelfth Rhapsodie Hongroise. These pieces were all played in succession, but the insatiable and enthusiastic audience nevertheless insisted on an encore, and got it in the shape of a Chopin Polonaise. It was in the Chopin selections and in the concertos that Mr. Joseffy made the best impression. The concertos were by Mozart, in A major, and by Saint-Saëns, in G minor. To interpret correctly two such widely different works requires considerable versatility, but Mr. Joseffy proved himself equal to the emergency. In the Mozart concerto he had to contend not only against technical difficulties, but against the work itself, which, in its first movement, is bright and sprightly, but in the other movements so dreary and superannuated that neither his brilliant and smooth execution nor the delicate and finished phrasing of Mr. Thomas's orchestra could invest it with any charm. The Saint-Saëns concerto was more worthy of the occasion. It is full of dazzling effects and French *esprit*, and gave Mr. Joseffy every opportunity to display his thorough mastery of all the mechanical and most of the intellectual and emotional attributes we are accustomed to look for in a great pianist of this period. The orchestra alone played Gluck's immortal overture to "Iphigenia in Aulis" and Schumann's "Overture, Scherzo, and Finale." Mr. Thomas's musicians are not quite the same in these extra concerts that they are in the Philharmonic concerts. They seem to feel less put on their dignity, and play to some extent as if they were having a holiday. By this we do not at all mean that they play badly. On the contrary, although they are apt to pay a little less attention to shading than usual, there is a peculiar vigor, freshness, and *abandon* in their playing that inevitably affects the hearer and makes him feel equally fresh and happy.

THE ST. CLAIR PAPERS.

The Life and Public Services of Arthur St. Clair, with his Correspondence and other Papers, arranged and annotated by William Henry Smith. 2 vols., large 8vo, pp. 609 and 649. Cincinnati: Robert Clarke & Co. 1882.

THE existence in Kansas of a mass of papers in the handwriting of Arthur St. Clair, the first Governor of the Northwestern Territory, was made known to the State of Ohio in 1869 by a memorial presented to the Legislature by the Western Reserve Historical Society. At the special recommendation of Governor Hayes, the General Assembly voted an appropriation the following year for the purchase of the St. Clair manuscripts, which were finally secured for the State Library, where they were properly arranged. In order to make this mass of historical material available for research, and at the same time to remove all temptation from light-fingered antiquarians, autograph-stealers, and other kleptomaniacs, it was determined by the Library Commissioners to recommend publication, which was authorized in February, 1881. The papers were then entrusted to the editorial hands of William Henry Smith, formerly Secretary of the State of Ohio, who was known to have been engaged for several years in a special study of the life and times of Arthur St. Clair. The editor, after a critical collation of the purchased texts, with others existing in private collections (whereby first drafts were either corrected or eliminated), has, in a year's time, presented the public with a well-digested edition of the St.

Clair Papers, classified chronologically by subjects, and provided with a serviceable index. The first volume contains the editor's own study of the "Life and Public Services of Arthur St. Clair," occupying 256 pages, and more than one-third of the St. Clair Papers, this portion embracing St. Clair's correspondence during the period of the boundary troubles between Pennsylvania and Virginia, also during Lord Dunmore's Indian war and the entire Revolutionary struggle. The second volume is devoted entirely to papers touching the government and defence of the Northwestern Territory. Valuable as were St. Clair's military services in connection with the French and Indian wars and as an adviser of Washington during the Revolution, it is chiefly for his subsequent merits as the pioneer of law and institutions in the Northwest that he ought to be known; and it is perhaps the chief merit of Mr. Smith's work that he has laid special stress upon the above introduction of government by St. Clair under the Ordinance of 1787.

The origin of this famous Ordinance, which established free soil, land titles, townships, schools, civil and religious liberty, beyond the Ohio, and the idea of a growing system of federal States, gradually organized from the national domain under the sovereign control of Congress, is one of the most disputed questions of American constitutional history. Daniel Webster, in his speech against Hayne on the Western land question, took occasion to claim the authorship of the Ordinance for Nathan Dane, of Massachusetts, and said, moreover, that "it was carried by the North, and by the North alone." Hayne and Benton at once opposed this Northern view, and claimed for the South the chief credit in passing the Ordinance, and the honor of authorship for Thomas Jefferson (Benton, i., 133-6). Since that memorable debate, partisans of Massachusetts and Virginia, of the North and the South, have battled for the possession of historic ground, which in point of fact belongs to neither party, but to both. The side of Jefferson is best supported by Hon. Edward Coles, a Virginian, at one time Governor of Illinois, in a paper published in 1856 by the Historical Society of Pennsylvania, on the Ordinance of 1787. The Dane point of view is well presented, first, in Dane's own letter to Webster, printed in the Proceedings of the Massachusetts Historical Society, February, 1869, and, secondly, in Spencer's 'History of the United States' (ii.,202-9), which contains a letter of Dane to Rufus King, written shortly after the passage of the Ordinance. Broader than these partisan views are the judgments of Peter Force in the *National Intelligencer*, August 26, 1847 (reprinted in the St. Clair Papers); of W. F. Poole, in the *North American Review*, April, 1876; and of the editor of the St. Clair Papers, who follows Mr. Poole in the view that the Ordinance was passed at the instance of Dr. Manasseh Cutler, Ministerial Agent for the Ohio Company, composed of New England men, and with power from them and others to negotiate the purchase of 5,000,000 acres of land, but suggests that Mr. Poole "gives too little consideration to the influence of others." Mr. Smith mentions the influence of St. Clair, who, by virtue of his position as President of Congress, appointed a committee favorable to Dr. Cutler's scheme, and thus supplemented the efforts of that estimable divine, from Ipswich, Massachusetts, who, in these degenerate times, would perhaps be called a lobbyist. Mr. Poole, if we understand him, does not claim that Dr. Cutler actually framed the Ordinance, but that he influenced its revision and successful passage. Mr. Smith's view that there were "many authors" is sound. The Ordinance of 1787, like all products of wise legislation, was created not by one man or one section of country, but by the concurrent wisdom of many men and by the unanimous vote of Congress. Jefferson and Dane, Pickering and King, of Massachusetts, Carrington and Lee, of Virginia, Kean, of South Carolina, and Smith, of New York, the moral and educational interests of New England (represented by Dr. Cutler), the economic interests of the whole country (providing for its public debts by the sale of public lands), the "private speculation" of "many of the principal characters in America" (Cutler's Diary), the personal popularity of St. Clair with the Southern party, which wished to reimburse the General for his Revolutionary losses by making him Governor of the Northwest—all these influences, and many more besides, entered into the formation and adoption of the Ordinance of 1787.

The germ of this Magna Charta of the West lay in Jefferson's idea of "a charter of compact," the articles of which should "stand as fundamental constitutions ["conditions" Mr. Smith and Peter Force have it, *cf.* Journals of Congress, iv., 380] between the thirteen original States, and each of the several States now newly described," which Jefferson, according to the first draft which Peter Force copied, would have named Sylvania, Michigania, Cheronesus, Assenisipia (from Assenisipi or Rock River), Metropotamia, Illinoia, Saratoga, Washington, Polypotamia, and Pelisipia! The country has escaped some of Jefferson's fancies, but his idea of a federal compact between the East and the West was good, and it was adopted by Congress April 23, 1784, and readopted July 13, 1787, in the so-called "articles of compact," which, as Nathan Dane said to Webster, are the most important part of the Ordinance and were made "to endure forever." Federal unity with the great West was a Jeffersonian idea, and it was the main idea of the Ordinance. The anti-slavery clause, which Jefferson would have applied to the entire West without any Ohio or Missouri compromise, was only a corollary to his main proposition. The fugitive-slave clause, introduced by the consent of the North into the noble Ordinance of 1787, was perhaps another corollary; but it was not drawn by Jefferson. The original idea of a compact grew, according to principles of natural selection, from its Congressional environment. The representatives of Virginia introduced a saving clause in favor of the laws and customs of the French villagers beyond the Ohio, who had "professed themselves citizens of Virginia." Massachusetts, through the legal knowledge of Nathan Dane and the diplomacy of Dr. Cutler, provided for the welfare of her colonists by incorporating principles from her own Constitution of 1780, which, like all State governments in America at that time, was based upon old English institutions, the Bill of Rights, and the Common Law. Such was the origin of the Ordinance of 1787—not a sudden creation, but a slow, historic growth, the product of many minds and many interests working toward a common end.

The experience of St. Clair as a fighter of Indians, and as a pioneer of civil institutions in western Pennsylvania, fitted him most admirably for the governmental conquest of Ohio. He had filled various grades of civic office, from surveyor and justice of the peace to membership of a Governor's Council, and now, as Governor of the Northwestern Territory, he was to introduce the Ordinance of 1787. The settlement of Ohio by colonists from New England began on the 7th of April, 1788, at Marietta, under the shelter of a military post, Fort Harmar. On the 15th of July, his Excellency Governor St. Clair, accompanied by Secretary Sargent and the Judges appointed by Congress, made their official entry into the village of Marietta, the first capital of the Northwest. The Ordinance for the institution of government and the commissions of the Governor and Judges were read by the Secretary. St. Clair then made a speech to the people, emphasizing the importance of "good government," and saying that the Judges, with his assistance, were empowered "to select from the codes of the mother States such laws as may be thought proper." As by a prætorian edict, government was proclaimed in this Territorial province. It is interesting to note that the first law actually instituted in Ohio was for the creation of a militia. This reminds one of the very first law enacted in Plymouth town meeting "for the establishing of military orders" (Dexter's 'Mourt's Relation,' 80). Measures for the common defence are always first in the history of Saxon civic communities. By the Ordinance of 1787 the Governor was made commander-in-chief of the militia, and invested with power of appointing county magistrates and local officers. Two days after the institution of militia, St. Clair ordered "the county of Washington" to be laid out, and issued commissions to "Rufus Putnam and Benjamin Tupper, Esquires," justices of the peace. A Court of Quarter Sessions, a County Court of Common Pleas, a Sheriff, a Court of Probate, oaths of office, fines and penalties, laws regulating marriages, etc., were soon instituted. The formal inauguration of the judiciary is graphically described by the editor of the St. Clair Papers:

"On that memorable first Tuesday of September the citizens, Governor St. Clair, and other Territorial officers and military from Fort Harmar being assembled at the Point, a procession was formed, and, as became the occasion, with Colonel Ebenezer Sproat, Sheriff, with drawn sword and wand of office at the head, marched up a path that had been cut through the forest to the hall in the northwest blockhouse of Campus Martius, where the whole countermarched, and the Judges, Putnam and Tupper, took their seats on the high bench. Prayer was fittingly offered by our friend, the Rev. Manasseh Cutler, who was on a visit to the new colony, after which the commissions of the Judges, Clerk, and Sheriff were read, and the opening proclaimed in deep tones by Colonel Sproat, in these words: 'O yes! a court is opened for the administration of even-handed justice, to the poor and the rich, to the guilty and the innocent, without respect of persons; none to be punished without trial by their peers, and then in pursuance of the laws and evidence in the case.' . . . This was the opening of the Court of Common Pleas. The Indian chiefs, who had been invited by Governor St. Clair to attend a convention, were curious witnesses of this impressive scene" (i., 148-9).

St. Clair is perhaps best known, not as the founder and civic organizer of the Northwest, but as an unfortunate general under whom the Western army suffered a terrible defeat by Indian savages. The popular verdict as to St. Clair's criminal responsibility in this matter is based upon the current tradition of his condemnation by George Washington, who, upon the authority of his Secretary, Colonel Lear, and of his biographers, Custis, Rush, and Irving, is reputed to have indulged himself in the most terrible profanity after hearing the news from St. Clair's messenger, although the wrath of the Father of his Country was restrained until after dinner, and, indeed, for several hours, until the close of an evening party. Mr. Smith treats the above story in a very matter-of-fact way by saying that Major Denny, St. Clair's messenger, delivered his despatches not to Washington, but to General Knox, the Secretary of War. Major Denny describes his call upon the President: "The morning after my arrival here [Philadelphia] General Knox called at my quarters, and took me to the President's, where we breakfasted with the family, and afterward had much talk on the subject of the campaign and defeat." If this was really the first interview of Major Denny with Washington, it would seem to throw some dis-

credit upon the old story of an officer in full uniform dismounting in front of the Presidential mansion, at the close of a winter's day, and proceeding to sound the knocker, whereupon opens a drama lasting the entire evening, and moving with all the dreary solemnity of a Greek play to its final "scene." It is a well-known fact that George Washington sometimes swore, although Jared Sparks eliminated everything that was improper in Washington's writings, but it is somewhat doubtful whether, on this occasion, St. Clair was really cursed in the name of widows and orphans and of the country at large. Chief-Justice Marshall says the defeated general "still retained the undiminished esteem and good opinion of Washington." Congress investigated the whole matter, and reported that it was simple justice to St. Clair to acknowledge that "the failure of the late expedition can in no respect be imputed to his conduct, either at any time before or during the action." The plain facts appear to be that St. Clair was not adequately supported by the War Department; he had for the most part only raw militia, with poor guns, poor powder, and insufficient supplies. The men, on half rations and without pay, deserted in large numbers, and St. Clair found himself left in the wilderness with only 1,400 troops, which were surrounded by a host of savages, supplied with arms and ammunition from British posts, and incited to repel all further invasion of the Northwest. Congress learned wisdom by St. Clair's defeat, and gave his successor, General Wayne, a well-disciplined army of five thousand men.

St. Clair's military reverse occurred in the fall of the year 1791. His work of civic construction, defended by military power, went on for eleven years, until 1802, when he was deposed from office because he was too staunch a Federalist to suit the Republican party of Jefferson. St. Clair now returned to his old home in western Pennsylvania, where he endeavored to gather together what remained of his family and fortune. Before the Revolution St. Clair was a wealthy man. Returning from service under Wolfe in Canada, the gallant young Scotchman had married a Boston heiress, of Bayard and Bowdoin blood, with £14,000 for her dowry. Instead of remaining amid the refinements of Boston society, where he was a great favorite, the young man removed with his wife to the Ligonier Valley, where he settled upon a large estate granted him by the Government for his military services. Much of his personal property was, however, sacrificed during the Revolutionary war in maintaining the troops of the Pennsylvania line, a sacrifice which the Governorship of the Northwest never made good. He returned from beyond the Ohio, embarrassed by debts amounting to more than $9,000, which had been incurred in furnishing supplies for military purposes. The Government, moved by party considerations, ignored his claims, and St. Clair's entire property was in consequence swept away by his creditors. The impoverished old general and his devoted daughter took refuge in a log hut, upon a bit of waste land, on the old State road from Bedford to Pittsburg, and supported themselves by selling provender to wagoners and westward-moving immigrants. Major-General Arthur St. Clair, the friend of Washington, once President of Congress and the first Governor of the Northwestern Territory, reduced to this wretched plight, while orators like Henry Clay, Charles Mercer, and William Henry Harrison (St. Clair's successor in the Northwest) were vainly pleading his cause, is a spectacle for pessimistic contemplation more notable perhaps than that of Robert Morris, the financier who made the combination at Yorktown possible, sitting in a debtor's prison at Philadelphia for three and a half years. But Robert Morris had been a reckless land-speculator, and perhaps St. Clair was not altogether wise in his business relations and public career. Circumstances often mitigate the passing ingratitude of republics; moreover, in the end, some States pay their debts of honor —for example, Ohio to the memory of St. Clair.

RECENT NOVELS.

The Fixed Period A Novel. By Anthony Trollope. Harper's Franklin Square Libary.

Prudence. By Lucy C. Lillie. Harper & Bros.

A Tallahassee Girl. [Round-Robin Series.] Boston : James R. Osgood & Co.

In the Distance. By George Parsons Lathrop. Boston : James R. Osgood & Co.

Exchange No Robbery. By M. Betham Edwards. Harper & Bros.

Bits from Blinkbonny. By John Strathesk. Robert Carter & Bros.

The Freres. By Mrs. Alexander. [Leisure-Hour Series.] Henry Holt & Co.

The Lads and Lasses of Langley. By Charlotte M. Yonge. E. & J. B. Young & Co.

Beggar My Neighbor. By E. D. Gerard. Harper & Bros.

Spinoza. By Berthold Auerbach. Translated by E. Nicholson. [Leisure-Hour Series.] Henry Holt & Co.

Genji Monogatari. London : Trübner & Co.

WHY Mr. Trollope should have taken to satire at this late day it is difficult to guess, and not less difficult after than before reading his 'Fixed Period.' The story appears to be intended to satirize the belief, so far as it can be said to have any existence, in euthanasia. For this purpose we are taken to an island in the Pacific called Britannula, originally a colony of Great Britain, but long since practically independent, where an extremely stupid but very popular President, named Neverbend, has succeeded in getting a law enacted by which, to spare the aged the pains and troubles of old age, and to save the community the expense involved in the support of those who are no longer able to support themselves, all old people who have reached a limit of age fixed by statute are to be "deposited" for a year in a senile retreat, known as "The College," where, after spending their last twelvemonth surrounded by every luxury and comfort which legislation can supply, they are to be disposed of in a painless and classical manner, by having their veins opened in a bath. The act, though adopted with enthusiasm, leads to trouble. The first Britannulist who reaches the fixed period is a hale and hearty old man. He feels that he has in him the capacity for many more years of active life, and wishes to devote them to the quiet accumulation of wealth and the enjoyment of a serene and happy old age, surrounded by his family. He has no desire to be "deposited" or to die before his time comes. The reluctance of this old gentleman to comply with the terms of the law is the only really humorous thing in the book. There is a love affair between his daughter and the son of the President, and in the end the custom of "deposition" is broken up through their unwillingness to have Eva's father sent to the "College." The powerful English naval vessel, aptly named the *John Bright*, appears off the island, and, with a 250-ton gun, threatens it with destruction. Great Britain resumes her authority in Britannula, puts a new governor in charge, and Mr. Neverbend is sent to England.

If any reformer had ever seriously proposed to introduce euthanasia as an actual practice of dealing with the old, satire of it might be amusing; but as "removing" the old has never been in civilized life anything but a fanciful idea with which people amuse themselves in conversation, satire is out of place in connection with it. For satire there must be somewhere a serious foundation of belief to be ridiculed and made light of. Here there is just the opposite. The result is that this book is like an elaborate elephantine attempt at a joke by a person without any sense of humor. As admirers of Mr. Trollope we feel that we must beg him to stop and not be deluded into imagining that the 'Fixed Period' is a success. The satire involved in the general conception of the story is weighed down and rendered still more ponderous by some cyclopean specimens of incidental humor. Everybody travels on bicycles going at the rate of a railroad train, and lighted with electric lamps; cricket matches are played with steam bowlers and catapults; telephonic communication between sea and shore is maintained by means of "hair" telephones, etc. All this is rather labored than amusing.

The readers of 'Prudence,' when it appeared as a serial, must have been conscious that it was a little belated. Its theme is the "æsthetic craze" in London. In the treatment of such a subject for purposes of fiction, there are only two standpoints—the one of whole-hearted enthusiasm, the other of satire. If the first had ever been tenable, it was no longer possible from the moment that *Patience* and *Bunthorne* appeared, while after the cleverness of that caricature any attempt at purely literary satire falls flat. The mind which had not logic enough to perceive the existence of these inevitable difficulties could have neither the force nor the originality to make a brilliant book. Hence it need be no surprise that 'Prudence' is dull in style and very scanty in material. Æsthetic parlors and studies would be fertile and delightful fields for a *real* "realist," but the best that Mrs. Lillie can do is to say of a drawing-room : "Whatever of art and decoration there is, is of the best." No one has ever forgotten the beautiful, suggestive description of the studio by the Thames in 'The Village on the Cliff.' So far as situation and traditions go, it might be in the same rooms that Prudence sits for her portrait, but Mrs. Lillie contents herself with such tame indefiniteness as : "Within, everything that a really good instinct for color and arrangement could do, he had done for the room. I cannot hope to describe the means employed for this wonderfully harmonious end."

The story is as improbable as it is simple. Prudence is a young American girl of exquisite beauty, who has her head—such a head as it is—turned by the frivolity and flattery of a fashionable set in London. She marries "a prosperous New Yorker, with a flavor of good society and cheerfulness," and so goes near to break the heart of her first lover, Fielding, who is represented as the incarnation of all the supposed New England virtues in an exterior of (equally supposed) New England plainness and dulness. It is all nearly absurd enough to refute itself, but there are two especial contradictions which seem to us to call for remark. Young ladies of such position as to command an entrance into good society in London, and of fortune sufficient for costumes of "creamy satin and careless lace," do not come out of "sober, ugly-colored parlors" wherein "the dull existence of American women grows grayer year by year." But a graver matter is the inconsistency in the character of Prudence. She was the darling of a brother of great intellectual power, of devotion equal to self-sacrifice and death in the yellow-fever epidemic, and all her girlhood the companion of the studies and thoughts of Fielding, a man of the highest, noblest aims. That a girl brought up under such influences would be carried off her feet by a mere glimpse of the gay world is

as unlikely as that a man like Fielding could have for so many years delighted in the sympathy of an empty-headed doll, such as the Prudence of the end of the tale. Either supposition degrades the ideal of life and cheapens the value of early influence and association. The illustrations are by Du Maurier; but if he had never done anything better, neither Postlethwaite nor Oscar Wilde would be as notorious as he is.

'A Tallahassee Girl' abounds in crudities of thought and absurdities of expression at which it is impossible not to smile; yet, for all that, it is quite the best of the "Round-Robin Series." Its sketches are broken, but one catches from them the charm of the faded dignity, the drowsy afternoon calm of the old Southern capital. Lucie, the heroine, is a gracious figure, and it is in her portrait and in the conception of the relations of the three men of the story to her and to each other, that the marked merit of the book lies.

"We dropped in there like strange beings from another planet. She looked curiously and inquiringly at us; she enjoyed us as somewhat new and interesting; but she loved Vance before she ever saw us, and she was, like a true, sweet woman the world over, faithful and loyal to her lord. The thing has its touch of pathos, its pang, its irony, but it also has the dewy freshness and tenderness and joyfulness of the old, old story. It ended in a happy marriage. What could be added? Is it not a perfectly rounded poem?"

The delicacy and reserve of handling with which the main idea is developed, even in the extravagance of style, suggest a musician who can compose a sweet and tender harmony and yet knows not quite how to manage the pedals. The surmise is obvious that the book is a first effort. If so, it is either a chance hit of unusual felicity, or else it is the evident promise of something better. Predilections for finished writing compel us to say that "Ind." and "Ark." and "jun." are out of place in a novel, and to inquire for the proof-reader who could let pass "wrung in" for "rung in," or "wreaked" for "wrecked."

It is Monadnoc which is 'In the Distance,' dominating the lives of the personages of the story, though the author, aware that this is not the effect of mountains upon the immediate dwellers thereby, imports his dramatis personæ, the keepers of a summer holiday and the young new minister of the village. This novel is totally unlike Auerbach's 'On the Heights,' and yet the one suggests the other—not, we are sorry to say, to the advantage of the New England story. This is not uninteresting, and some of the situations are almost thrilling; but there was a subtlety in the original conception which only a stronger imaginative power could realize. The hero has a force and a nobility which compel belief in him; but we could wish that he had been left to himself to discover the folly and selfishness of his very self-denial. A typhoid fever is a potent argument, but there would be more respect for a man capable of reasoning himself into reasonableness. A tendency to far-fetched conceits and similes gives a labored effect to the style, while proofs of keen and delicate observation are still not wanting. Of such is the description of "people whose riches were greater than themselves"; or this: "His manner was charged with a tenderness that tried to conceal itself under the deference and respect of a man who discusses some mere business detail with a woman upon whom great suffering has unexpectedly fallen." The best picture is that of the Divinity Professor, the last of a clerical family: "He represented one of the few kinds of hereditary aristocracy that receive a careless, grudging recognition in America; and it was with something like the pride of a waning aristocracy that for many years he had written, taught, and preached, dreaming of the restoration of his Pilgrim forefathers' faith to its ancient power."

'Exchange No Robbery' is a very pretty and very improbable story, yet very *vraisemblable*. It is of the sort that tempts a critic to tell it; but it would be a pity to reveal the secret of the mystification, innocent at first, but growing to a portentous and hazardous state secret. Grand kinsfolk are elated that the ducal house, "so particularly unendowed in the female line, should produce such a paragon"; and, for once, confession becomes no duty, and, in the end, a pair of true lovers are happily "fated by a jest."

'Bits from Blinkbonny' is a story unpretending enough, but with the inimitable Scotch flavor. If heroine there be, it is Bell Cameron, a faithful servant-woman; but the chief incident is the leaving of manse and kirk by her master, the minister, at the "Disruption" of forty years ago. That secession, and the formation of the Free Church of Scotland, will seem now, we fear, an episode obscure as well as remote; but this book will to some readers bring back days when the name of Mary Lundie Duncan was familiar in the household, and when childish hearts thrilled with the story from their elders (to whom it was a present reality) of how the four hundred ministers rose up in St. Andrew's Church, and, leaving their all behind them, went out from the General Assembly to poverty and to freedom.

Mrs. Alexander has put less plot than ever into 'The Freres.' A succession of lovers appear, and there might as well have been six of them as three before the right one, for there seems no lack yet of the mildly-interesting incidents with which she is wont to fill her pages. Much of the scene is laid in Germany, and if to some readers it is (in more senses than one) not a little after 'The Initials,' Grace Frere, as the faithful daughter and the sister devoted to a ne'er-do-weel brother, is of a type always welcome in a novel. There is an amusing consciousness of "elegance" in clothes, and the speeches are not always in perfect good taste; but one would not be captious over a book in the main so sweet and wholesome as this.

'The Lads and Lasses of Langley' relates the adventures of a dozen village children of high and low degree. The "Wolf" is a pretty instance of a genuine sensation made up from very simple material. However one may differ from Miss Yonge, all will agree that her stories for girls and boys inculcate sound principles of truth and honor. The children are naughty, not in proportion to the inconvenience they give, but because of the real right and wrong of things.

It would seem to imply some special influence in the air, that four novels come at once to our hands in which the central figures are Jews. 'Beggar My Neighbor' deals with country life in Poland. It is cast in the somewhat fantastic mould of the game of cards of that name. The villain of the plot is Lucyan Bielinski, the lord of the manor; but the arch-knave is Aitzig Majulik, the Jew—"one of that nation who are at once the slaves and the masters of Poland. Drawing gain out of the indolence of Polish character, the Jews have, little by little, got the strings of the whole national life into their hands. They have crept into the machinery of public life, and have wound and wormed themselves in behind the very veil of privacy. They cannot be kept away or pushed back; for you cannot fight them with their own weapons—they do not push, they crawl." Lucyan wins the first hand, but loses the honor. In the end both lose the last trick, and perforce the analogy breaks down; for it is the non-player who wins. The story has nothing to do with politics, and the action is wholly within the traditional lines of Polish life and manners; but to lovers of puzzling plots and unexpected catastrophes it must be attractive. Two other novels are translations, one from the French, the other from the Spanish, but both turn upon the intermarriage of Jew and Christian. The first is only sensational after the usual fashion, and ends in a happy marriage at last. The Spanish book is a tale of sin, misery, and death, the very name of which it is best to suppress.

The translator of 'Spinoza' calls it a novel. Auerbach himself named it "Ein Denkerleben," and it is in fact one of those imaginative biographies which attempt rather to embody the spirit of a life than to narrate an exact sequence of real events. It is a book of thirty years since, and many who have read Auerbach's later works can never have heard of it. The oblivion that fell upon it is hardly deserved, though it has nothing to attract the usual novel-reader; on the other hand, while a life so lofty in aim and so absolute in its consecration to truth as Spinoza's can nowhere be viewed with indifference, readers who can appreciate his intellectual force will seek it in philosophy rather than in fiction. The story follows the well-known outlines, closing with the excommunication of Spinoza by the ten Rabbis, "since he would have naught but the good old right of free thought." The portrait of Spinoza is lifelike, although the dialogue often becomes only a disquisition in philosophy, but the other figures lack reality. Even Olympia, the young Roman Catholic whom he loves but will not marry because he cannot forsake the faith of his fathers, has no such charm as to justify his devotion. The translation is superior to most work of the kind. It never degrades the original, though the sentences often labor with the weight of the heavy inversions of the German. "This neck-risking setting of his formerly squandered life on a single cast," is not English. There is an unaccountable fondness for changing constructions: the literal "Am I to be a tradesman?" is surely better than "Must I go into trade?"

'Genji Monogatari' (The Story of Genji) is the standard classic of pure Japanese, written in that melodious language once spoken by the Nippon islanders, but now corrupted to a semi-Chinese jargon. The original work is everything in style and next to nothing in plot. It was written by a court lady of Kiōto about the year 1004 A. D., and the story of its composition is neatly told in the silver-stamped cover of the translation, on which the moonlight and waves rippling in silver sheen, the lone temple on the mountain-side, and the "moon-viewing chamber," appear in chaste design. Most Americans are already familiar with the picture on lacquered ware of a literary lady with the long tresses and spotted forehead of nobility, sitting, pen in hand, with ink-stone and manuscript, before a low table. This is the authoress, Murasaki Shikibu, while the numerous heroines and the one Don Juan of the tale, Hikaru Genji, are represented with all possible wealth and harmony of color, dress, and details of palace life in the crepe paper which of late has furnished our ladies with material or patterns for tidies and fancy needle-work. The so-called Greek fret or border is called in Japan Genji-gata, or Genji pattern. Only seventeen chapters of the original fifty-four have been put in almost too familiar English by Mr. Suyematsu Kenchio, a young Japanese at Cambridge, England, who, besides being a traveller in China and Corea, has fleshed his pen in English before in historical theses. The floral and artistic titles of the book take their names from the women be loved by the hero, and these in their turn from

blossoms and bric-à-brac. The book is highly interesting as an accurate picture of life in the old anti-feudal days of Japan, when no Tycoons obscured the splendor of the Mikado and his court. It will also serve as a valuable key to that background of two widely differing schools of Japanese art—in one of which the ancient painter wrought with reverence, and in the other the modern, but more original sketched with satire and laughter unconcealed. The Tosa-yé, or style, deals with court life and the pomp and circumstance of royalty; but Hokusai, while never daring to touch with caricature his contemporaries, the parvenu nobility of Yedo, makes merry with the decayed grandees of Kiōto. Murillo and Zamacoïs may perhaps suggest a not-too-misleading parallel. Nothing like the matter of this book has yet appeared in English, and apart from the philosophy of "love"—which might interest Ebers—as the Japanese conceive it, the bits of criticism and discussions on art and natural scenery scattered here and there are piquant and relishable. It is odd to find in this book of the hermit nation of near a millennium ago such *blasé* wit and opinions, and such an Endymion-like picture of human life. With rare courage and loyalty, the translator dedicates his work to the present head of the Tokugawa house, whose "princes" ruled in Yedo from 1603 until 1868, and whose assumption of the title "Tycoon" cost them such grievous overthrow.

A Manual of Historical Literature. Comprising Brief Descriptions of the most important Histories in English, French, and German; together with Practical Suggestions as to Methods and Courses of Historical Study. For the use of students, general readers, and collectors of books. By Charles Kendall Adams, LL.D., Professor of History in the University of Michigan. New York: Harper & Bros. 1882. 8vo, pp. 665.

THIS long title describes very fully the scope and character of Professor Adams's Manual. It is a book which has required an immense amount of labor, and presents a body of invaluable information which was before very hard to get at. It is not too much to say that it will prove indispensable to teachers and students of history and to public libraries. It consists of fourteen chapters of unequal length, the first being an admirable general introduction, the last being devoted to the history of the United States. In each chapter the most important works upon the subject of the chapter are named and briefly described and characterized, and at the end of the chapter are a few pages of "suggestions to students and readers." The chapters themselves, where it has seemed desirable, are divided into sections; for example, chapter x., "Histories of France," has three sections—"General Histories," "Histories of Limited Periods," and "Histories of Institutions and Civilization"—besides the closing section of "suggestions."

The descriptions are careful and judicious, and, in most of the chapters, bear the marks of having been made from personal examination and not hearsay. There is always room for difference of opinion, but we think there will be but little exception taken to these criticisms. (Prof. Adams's estimate of Bacon's 'Henry VII.,' by the way, hardly agrees with Mr. Spedding's.) One is surprised, too, at the completeness of the lists. Hardly any books that would be expected to stand in such a list are omitted. Preparing a manual for the use of American students, the author has of course given principally works in the English language; and where a foreign work has been translated into English, the translation is named rather than the original. A large number of works, nevertheless, in German, French, and other languages, are mentioned.

The book as a whole can hardly be praised too highly. There are, however, some less familiar departments of history in which Mr. Adams is evidently not at home, and where we find some serious deficiencies and even errors. This is especially the case in the north and east of Europe. The bibliography is here much less complete, and does not in all cases—as it should do—give the one best book upon the subject. We find the best book upon Denmark (Dahlmann), Sweden (Geijer), Russia (Rambaud—the best in English, at least), and Poland (Röpell and Caro. By the way, there appears to be a strange oversight about this work. It is said to be in three volumes, and to be better in the earlier portion, for the reason that "the partitions" are better understood now than when it was written. But the *fourth* volume, published in 1875, reaches only to the year 1455). Nothing is given for Hungary, Bohemia, or Portugal, where the best available works are Szalay or Fessler, Palacky or Schlesinger, and Schäfer (Schäfer's 'Spain' is mentioned); it would be well also to mention so high an authority as Bernhardy's 'Russia' and Dasent's 'Burnt Njal' for early Scandinavian history. Certainly Thorpe's 'Northern Mythology' (p. 428), although a larger work than Anderson's 'Norse Mythology,' is not "fuller" in the proper sense of the word, only one volume of about 200 pages being devoted to this mythology against about 350 of Anderson. The mention of Bowring's translation of the 'Eddas' (p. 432) must be from a confusion with his translations from Slavic and other literatures. Of American State histories Egle's 'Pennsylvania' and Moore's 'North Carolina' are omitted.

Apart from this, there are very few misprints or oversights. Still, it is impossible to keep such errors entirely out of a first edition, and we have noted a few. Mr. Toulmin Smith's name (p. 179) is given as *Tomlin*. We find *Lang* (pp. 425 and 432) for *Laing*. Geijer's ('History of Sweden') is given as *Geijger* (p. 424); Kitchin's ('History of France') as *Kitchen* (p. 301). In speaking of Sinding's 'History of Scandinavia,' the author laments "the dearth of works on the subject," forgetting the better work of Otte. Lindner's 'Geschichte des deutschen Reiches,' vol. iii., is mentioned (p. 251) as published in 1875; the second volume appeared in 1880, bringing the history down to the deposition of Wenceslas, in 1400. It would hardly be expected that all of Von Maurer's voluminous works should be mentioned (p. 278), but we should say that the two that are omitted—the 'Einleitung' and the 'Hofverfassung'—are perhaps the two most important of the whole. One is struck, in looking over these lists, with the poverty of the English language in good histories of these outlying countries. In many cases there appears to be nothing later and more complete than the excellent short histories by Dunham and others which appeared fifty years ago in Lardner's and the Edinburgh Cyclopædias. But there is nothing worthy to be compared with the Heeren, Ukert, and Giesebrecht series, to which Dahlmann, Geijer, and Schäfer belong.

We would direct special attention to one of the most valuable features of the book—the detailed advice to students given in the introductory chapter and in the "suggestions" appended to each following chapter. As the work of a practical teacher of great experience and an unusual degree of success, they speak with high authority. There is a very complete and remarkably good index.

The World's Foundations; or, Geology for Beginners. By Agnes Giberne. Robert Carter & Bros. 1882.

THE purpose of this little book is to set forth the general outlines of modern geological science in a manner adapted to the comprehension of youthful readers or other slightly advanced students. Its author has drawn much of its material from good sources, and has compiled a brief treatise which is pleasantly written and likely to interest and instruct many readers of the class for which it is designed. The subject is treated in three divisions, the first giving some general ideas of the crust of the earth and the nature of the igneous and sedimentary rocks; the second reviewing briefly the successive geological periods, with their development of life; and the third devoted to some account of the current operations of active geological forces, such as water in its various forms, volcanoes, earthquakes, and coral-reef builders. The book, though not intended especially as a religious work, has throughout a decidedly religious tone. In its first two divisions the writer is at considerable pains to harmonize the geological with the Mosaic record, or, at least, to convey to the reader some of the leading ideas of modern geologists without disturbing or unsettling any pre-existing opinions based upon religious teaching. This is especially true of the question of time involved in the development or "creation" of the earth and of the lower forms of life. Of the modern ideas of evolution there is scarcely more than a hint in the whole book. The "time of Adam" and the "creation of Adam" are referred to in a manner implying an unshaken belief in the Mosaic account of the origin of man on the earth. The book abounds in Scriptural quotations and allusions, and each chapter is preceded by a text from the Bible, in a manner somewhat suggestive of grains of scientific truth in Scripture-coated pills. The book is a safe one for Sunday-school libraries.

Birds'-Nesting: A Handbook of Instruction in Gathering and Preserving the Nests and Eggs of Birds for the Purposes of Study. By Ernest Ingersoll. Salem: George A. Bates. 1882. 1 vol. 12mo, pp. xiv.–110.

THIS treatise is an expansion of a series of articles published in early numbers of *Science News*, a periodical published for a short time by Mr. Ingersoll and Mr. W. C. Wyckoff. "In the course of their expansion the author has not felt himself bound by any hard and fast limits in the treatment of his subject, in respect either to the matter discussed or the manner of discussion. Intermixed with essential information, therefore, will be found a plentiful salting of facts and considerations which, if not important for their novelty or practical value, may prove suggestive, or at least entertaining." We trust that the salting of essential information with facts—not a bad thing in a handbook of instruction on scientific topics—suffices to make the book suggestive at least; for entertaining it can hardly fail to be to any one with the least sense of humor. Whether the author's acquaintance with practical oölogy enables him to draw upon his personal experiences for his "salting" or not, is beside the point; for if it does not, his familiarity with what leading authorities have had to say on the subject is manifested with the facile, not to say happy-go-lucky, pen of one who knows his own wherever found, and feels confident of his ability to utilize it to advantage; and this is doubtless one evidence of successful journalistic enterprise in scientific as in other fields of human inquiry. The subject is handled under the leading heads of field-work, preparation of specimens, the cabinet, list of birds whose

nidification is unknown, and bird architecture; and is illustrated with woodcuts of implements, etc., from Prof. Newton's Smithsonian article and from other sources, as well as by some of startling originality, like those on pp. 14, 15, for example.

Arctic Sunbeams; or, From Broadway to the Bosphorus by way of the North Cape. By S. S. Cox. Putnams. 8vo, pp. 347. 1882. Illustrated.

ACCORDING to the preface, this book has "the simple and harmless egotism of the author and not the pretension of an archæologist or discoverer. The external views are referable to the sensations of the writer." We believe, for a preface, that this is unusually accurate; more so, in fact, than some of the "sensations" recorded. "Driver and dragoman, camel and car . . . are only accessories" "in which the author is the actor." We have not been able to find any description, however, of the manner in which the author acted either in a dragoman or in a camel, nor of the effects upon those "accessories" of such internal action. "The elder world from the midnight sun to the isles gilded by eternal summer can never cease to be attractive. How this attraction may possibly be enhanced even by the insignificance of personal intrusion, the volume itself may show," says the author; but, after a careful perusal, we confess our inability to discover how this may be. The midnight sun at North Cape appears to have had an extraordinary effect upon our traveller. Embarrassed by riches, we make room for one gem, relating to sunset:

"Even a Norse poet—as Tennyson has translated it,—has pictured his preference for that glory, from when first the great sun-star of morning-tide—Lamp of the Lord God—glode over earth, till the glorious creature sunk to his setting" (p. 111).

After this it does not surprise us to learn that the author "commenced rhetoricating on the Fourth for Sunday Schools in Ohio when ten years of age" (p. 127). But we are not alone led persuasively amongst flowers of "rhetorication." Through the kaleidoscope which seems to have served him as a field-glass, our traveller occasionally discerns remarkable facts which it is entirely proper should be made widely known, since otherwise they might escape general recognition. Thus we are told that from Mt. Haparanda, in Sweden, "just on the circle," the midnight sun may be seen, and that this luminary in September "descends and rests on the rim of the sky and on the 22d goes out altogether till the 22d of March" (p. 115). Turning from astronomy to natural history, we learn, apropos of the St. Petersburg Museum, that the last home of the dodo was in Java, where it was exterminated by pigs eating up its eggs.

Feeling sure that nothing we might say of the entire work could approach in felicity of representation the author's inimitable preface, we take reluctant leave of both by a couple of extracts from the latter:

"This volume and its successor comprehend a travel in which some twelve different nationalities are involved. . . . The salient features of each of these races, as they now appear, may be transferred to the page, with out detracting from the high standard which literature exacts of its devotees."

"This circle [of travel] makes up the round in which I have set what random gems I found in the dust of dead empire—gems already polished by the attrition of time and the taste of accomplished writers."

Plain-Speaking. By the author of 'John Halifax, Gentleman.' Harper & Bros.

UNDER this title are grouped a half-dozen essays, mainly on subjects pertaining to the minor morals. Their genial wisdom is illustrated with equal good sense and [illegible]te from the abundant material of a long and interesting life. Could "On Novels and Novel-Makers" be duly read and reflected upon, the world would be spared much of the trash now inflicted upon it. Foremost in value is a biographical sketch of a remarkable blind man, the head of the Normal College for the Blind in London. One is proud to read that he is an American. "The difference between him and all other people I ever knew is this—*he makes use of all his opportunities.*" "An Island of the Blest" is Capri, the charm of which is most attractively set forth, both as an outright health-resort and as a place for rest. At Capri, too, "the student of any sort will find the one great requisite for brain-work—quiet mixed with amusement." The reader will be repaid to look up as a supplement to this little sketch the monograph of Gregorovius, 'Die Insel Capri,' with its beautiful engravings, which Mrs. Craik does not appear to have seen. It was translated two years ago by Miss Lilian Clarke, of Boston, whose publishers were Lee & Shepard.

BOOKS OF THE WEEK.

A Series of

TEN GEOLOGICAL PLATES,

27½ x 36 inches, containing Fifteen Diagrams designed for use in Schools and Colleges. Edited by A. S. Packard, Jr., Professor of Geology and Zoölogy, Brown University, and Editor of 'The American Naturalist,' author of 'Zoölogy,' etc.

The diagrams are to be accompanied by a Text-Book, FIRST LESSONS IN GEOLOGY, 128 pages, 8vo, by Prof. Packard.

The series of diagrams are arranged in the form of landscapes, and contain a number of original restorations of American, Silurian, and Devonian animals, especially Carboniferous, Jurassic, and Tertiary Vertebrate animals, by Prof. E. D. Cope, H. F. Osborn, and the Editor; with restorations in the text.

Price for the ten diagrams and book, postage paid, $6. Address all orders to THE PROVIDENCE LITHOGRAPH CO., Providence, R. I.

Thomas Carlyle.

History of the First Forty Years of his Life. By James Anthony Froude, M.A. Two volumes in one. 12mo, 650 pages, price only $1 50.

This is one of the most valuable additions to modern literature. Ask for Ogilvie & Co.'s edition, as all others cost from $4 upward. Sold by all booksellers, or mailed to any address on receipt of price by

The Nation.

NEW YORK, THURSDAY, MAY 11, 1882.

The Week.

THE debate on Mr. Gladstone's Irish policy did not come off on Monday night. The leaders on neither side were in a fit state to discuss anything. This is undoubtedly fortunate, because it will give the English people time for reflection, and give the House of Commons time to hear what the provinces and Scotland think about the crisis which the Irish assassinations have produced. As might have been expected, the Tory press, and probably nearly the whole of what is called "society" in London, are rampantly eager to fasten the guilt of the murders on the whole Irish people, and use them as an excuse for the abandonment of all healing measures and a return to the policy of coercion. The *Times* is the leader in this movement, and is publishing attacks of great brutality on Mr. Gladstone. In fact, the Tories evidently believe that their hour has come, and that they are going to have their revenge for all the mortifications and checks which the Minister has imposed on them during the last two years, and which they have thus far been only able to repay with impotent hatred. How Mr. Gladstone will meet the exigency, of course we can only conjecture; but his whole career leads us to believe that he will not waver.

The more is known about the assassinations the more reason there seems to be for believing that they were the work of the Fenians in this country—the desperate and degraded gang who furnished the materials for the Pennsylvanian Molly Maguires, to whom assassination seems the easiest way of getting almost anything they desire, and whose business would be ruined by a reconciliation between the Irish and the Government. The language of their organ here strengthens this suspicion. Now, neither the machinations of this class nor those of the ordinary Land League intimidators can be met by coercion simply. This has been demonstrated. The reason is that the bulk of the Irish people, however much they may disapprove of violence or outrage, will not help the officers of the law in bringing the perpetrators to justice. The problem of restoring order, therefore, in Ireland, is, emphatically, the winning over the people to the support of the law. The temper in which Mr. Gladstone's proffer of conciliation has been received, both by the Irish members in the House and by their constituents, and the expressions of horror and indignation which the assassinations have called forth, furnish an opportunity for this winning over such as has not been seen since the Union. If Mr. Gladstone has the strength and courage in this hour of supreme trial to avail himself of it, he may close forever this great fountain of bitterness. That he should take increased precautions for the arrest and punishment of villains who may be sent from this country on bloody errands, not even the Parnellites are disposed to deny; but whatever is done in that direction should be done after consultation with the Irish members, and should be accompanied by resolute persistence in his land policy. He is apparently determined to introduce a measure dealing with the arrears of rent, which is a good sign.

The appointment of Mr. Otto Trevelyan, Macaulay's nephew and biographer, as Chief Secretary for Ireland, has been made on the same principles as Lord Frederick Cavendish's. That is, he takes the office shorn of much of its power and dignity and without a seat in the Cabinet. Heretofore the Chief Secretary has been really the chief executive officer of the island, and the Lord-Lieutenant almost a mere ornament. This was particularly true during Mr. Forster's term. He was a real Viceroy, and armed with enormous powers. Now it seems that the Lord-Lieutenant, or more probably the Prime Minister himself, is to do the work of government, and the Chief Secretary is to receive rather than give instructions. But Mr. Trevelyan represents even more fully than Lord Frederick Cavendish the policy of conciliation. He is and always has been a radical reformer, and was very prominent in advocating the removal of one of the greatest of Irish abuses—the Church establishment—and will give no encouragement to any species of terrorism. The proposed increase of repressive machinery is said to consist in the trial of offenders in certain cases without a jury, which will probably meet with no opposition from the Parnellites, and will from all points of view be a great improvement on the Coercion Bill, under which all sorts of people were locked up on the mere suspicion of the police.

The only formal and deliberate revelation thus far touching the origin of the Dublin murders has come from the New York Assembly, which on Monday passed a resolution expressing its "belief" that they were the result of "private revenge," or, in other words, were committed by persons who bore Lord Frederick Cavendish or Mr. Burke a personal grudge. As all the known circumstances of the case suggest political motives for the crime, this resolution, which was introduced by Mr. Murphy, shows that the Assembly has come to the knowledge of facts not yet made public. We trust that it will, under these circumstances, not confine itself to a resolution, but will send Mr. Frelinghuysen, for transmission to London, such information as has reached it. O'Donovan Rossa, by the way, is apparently desirous of having it supposed that he planned the murders himself, and he would doubtless hint that he had personally assisted in committing them if he had not been so far away from the scene as to make this particular boast ridiculous.

Last Saturday the House of Representatives adopted the Tariff Commission Bill without amendment by a vote of 151 to 83. Of the majority, 119 were Republicans. Of the minority 73 were Democrats. As a measure of legislation and as a party movement, this bill is equally foolish and mischievous. The pretended object is the revision of the tariff. Congress made the tariff, and Congress is the only power that can revise it. Congress will have to act upon its own responsibility, and therefore upon its own judgment. It appeals to a Commission of outsiders to enlighten and guide that judgment. That Commission is to collect information and to express an opinion. All the information the Commission can possibly gather would also be at the disposal of any committee or member of Congress. And what authority will the opinions expressed by the Commission have to control the judgment of the Legislature? Of this we have already some premonitory symptoms. As is very credibly reported, the protectionists are extremely anxious that President Arthur should appoint as members of the Commission only men who are "safe"—that is to say, who can be depended upon to report strictly in favor of the protective system. In other words, in order to insure a certain report the President is to "pack" the Commission. What authority will the report of a "packed" Commission have? None at all. Its only effect will be to irritate the Opposition. On the other hand, if the President, in a spirit of fairness, composes the Commission of able men representing different views, what will be the result? The Commission will not furnish a united, harmonious opinion, but several conflicting ones, and Congress will be no nearer to an agreement of views and no more able to legislate than it is to-day. The reports and opinions of the Commission will only bring new fuel to the flame of the debate.

In the meanwhile precious time is lost. The reform of the tariff should be a gradual one. It should be conducted with a careful and fair consideration of existing interests. It should therefore be undertaken with a calm temper and at a time when the public mind is free from disturbing excitement—in a period of prosperity and contentment like the present. We all know that this period will inevitably be followed some time by another business crisis, probably not many years ahead of us. If the revision of the tariff is not undertaken now, it will be undertaken then, but then under the pressure of distress and dissatisfaction, and probably of a popular demand to change the whole system in a sudden and sweeping manner. To refer the work of revision first to an outside commission is just the way to squander the propitious hour. This Commission Bill ought therefore to be called "a bill to prevent the revision of the tariff for the present, and to refer it to a time of excitement and danger." The protectionists and the protected interests will have to thank themselves for the consequences.

The signing of the new Chinese Bill by the President seems likely to satisfy the Californians and take the question out of politics for three years at least. It suspends the Chinese

immigration for ten years, and provides certificates of identity for the Chinamen now here or who may hereafter lawfully come here, the forgery of which is to be severely punished; so that we shall have among us a considerable body of colored persons with passports, like the "free niggers" at the South in old times, who—to complete the resemblance—cannot be naturalized or become citizens. There are also punishments provided for the introduction of Chinamen by sea, but there appears to be no adequate defence against their coming in from Canada, or Vancouver's Island, or Mexico. Some troublesome questions are very likely to arise out of the arrival of British Chinamen, of whom there are large numbers. This may bother us as much as the arrival of British "nigger" crews in Southern ports used to do. Must we shut them up in jail here, during their stay, or force them to take certificates of identity? And if they refuse their certificates and still claim the right to stay, what are we to do? The more we examine the bill the less likely to be executed it seems, and we venture to predict that a vigorous attempt to execute it would in five years cover its authors with shame and confusion.

Recorder Smyth on Wednesday administered wholesome punishment to John Flanigan, who was convicted of an assault upon Wah Vuen, a Chinaman, and at the same time made some excellent remarks of a general nature. In sentencing the prisoner to pay a fine of $100 and go to prison for a year, the Judge said: "Chinamen, as well as other people, are entitled to the protection of the law. I have found them as a class quiet and orderly. . . . The roughs of this and other cities have made a business of molesting Chinamen without cause." This was really a rebuke to the majority in Congress as well as to John Flanigan. It is not necessary to assume that Senators and Representatives who voted to exclude the Mongolians would individually and physically attack them with force and arms. But the moral effect of the Anti-Chinese Bill is to encourage the roughs of San Francisco and New York to do precisely that. This unfriendly measure says substantially that Chinamen are not entitled, as other people are, to the protection of the law, or of the common rules of international comity; that they are not a quiet and orderly and desirable class of persons; and it molests them in a wholesale fashion without any reasonable cause. Congress, in spirit, if not in words, says to the John Flanigans: "You are quite right. These Chinese are entirely inferior to you, and you do well to treat them accordingly. Their mere existence in your presence is an intolerable offence, and you cannot be blamed for protesting against the nuisance with fists and feet. It is a shame that here and there a Recorder Smyth forgets himself so far as to call you to account for doing this. But a bill now pending will, it is hoped, gradually relieve you of the Chinese, so that you may exercise your emotions and your muscles upon equals of your own race."

The Supreme Court on Monday denied Sergeant Mason's application for a writ of habeas corpus. The main ground of the decision is that the offence for which Mason was tried was "largely one to the prejudice of good order and military discipline"; that, therefore, the court-martial had jurisdiction; that whether his attempt to kill Guiteau be punishable by the civil courts has no bearing on the present application, the military court having full jurisdiction. The Court might profitably have used some very strong language with regard to the argument that Mason's crime was not of a character to make him amenable to military discipline. If an attempt to murder a prisoner by a soldier charged with the duty of standing guard over him is not a military offence, it is hard to see what is. The somewhat thoughtless and vociferous sympathizers with Mason may think that this is just the kind of case that the writ of habeas corpus was invented for, much as Mr. Weller thought that an "alleybi" was the means provided by the common law for the defence of a breach of promise suit; but that the time of the Supreme Court should be taken up with it, and serious business sacrificed to it, is a little outrageous.

Congress, or at least some of its committees, seem determined to ride roughshod over the rights of the Indians in the Indian Territory in the establishment of railroad lines. The Senate Railroad Committee has made a report on a bill to incorporate the Cherokee Central Railroad and Telegraph Company, from which it appears that the Indians through whose lands the road is to run are not to be consulted at all. It "provides for the property and rights of the Indians" by "authorizing their own local authorities to have jurisdiction for the proper protection of their nations or citizens from loss or damage sustained by them in consequence of any unauthorized action or doings of the Company," and expresses the belief that, in view of this, "the authorities of none of the several nations of Indians through whose country said railroad may pass, can reasonably withhold, or will withhold, their approval of the right of way granted by the bill to said Company." But if the Indians do not look at the matter in that light, then, the Committee says, "their action could be regarded in no other light than an unreasonable obstruction to the imperative demands of the commerce of the country"; in other words, the road will be built through the Indian country, and the land necessary for that purpose will be taken, whether the Indians agree to it or not. The fact is, that the Indians, whenever properly approached and offered a fair compensation, to which they are entitled, have never refused to accommodate the "imperative demands of commerce." But it seems to be the object of the Senate Committee to demonstrate that in their opinion the Indians have no rights entitled to respect, and that the offer of proper compensation would be an act of entirely superfluous sentimentality.

Foreign exchange ruled during the week so that it was necessary to export $2,634,760 specie, of which about $2,000,000 was gold coin. This makes the total specie exports since January 1st, $17,141,113, or more than in the corresponding time of any year since 1876, when $20,491,246 was shipped. Although the gold shipment did not fully show in the bank figures, since it was made late in the week, and these figures represent the average condition of the banks for six days instead of the actual condition at the close of the week yet the banks lost, according to their weekly statement, $1,245,250 of their surplus reserve. The supply of loanable funds, however, continues excessive, and the rates for loans are down to 1½@3 per cent. per annum. The Treasury disbursements for bond redemptions keep a steady stream of money flowing into the market, as do also the domestic exchanges, which are all in favor of New York. At the Stock Exchange, U. S. bonds advanced for the 4's and 4½'s and declined for the 5's; when the $46,000,000 of extended 6's now outstanding are called for redemption, then the 5's will be called, in the order of the highest numbers first. Railroad securities—bonds and shares—were strong, and prices advanced until late in the week, when there was a downward reaction. Although East-bound freights over the trunk-line roads are light, the West-bound business is fully up to the average of late years, and the general traffic of all the roads is larger than last year. The far-Western roads are doing a very flourishing business, and the roads running through the territory where the winter wheat is raised are assured of a large traffic for the coming year, this crop being larger than a year ago, and too far advanced to be seriously injured by anything that could now happen to it. The foreign money markets continue easy. The foreign demand for American securities is, however, small.

There has not been for some time much hope that Lieutenant De Long and his ten companions would be found alive, but whatever there was has been dispelled by the discovery of their bodies by Engineer Melville, who has been conducting the search in a corner of the swampy delta through which the Lena finds its way to the sea. If it were not for the doubts thrown on the seaworthiness of the *Jeannette*, in spite of the munificence of Mr. Bennett, the promoter of the enterprise, and for the delays which are either unaccountable or have not yet been explained in prosecuting the search for the De Long party after the Danenhower party had been saved, this fresh tale of Arctic heroism would excite no other feelings than sorrow and admiration, at all events, among those whom Arctic exploration interests. The inevitable dangers of such expeditions, which are great enough in all conscience, should not have been increased by neglected precautions or lack of zeal on the part of anybody concerned. It is now twenty-five years since the country was thrilled by a similar but less tragic tale of suffering and heroism in the Arctic regions. Kane's expedition was the first well-organized American attempt to penetrate the great northern mystery, and he, having the literary gift, was able to tell his story in a way that made the young women at the North weep, and the men thank God that the age of chivalry was not yet gone, and the world was not yet wholly in possession of the economists and calculators. In the winter of 1856–57, when the confidence of moralists in the

future of this community was perhaps at its lowest point—before the war had revealed the springs of devotion and self-sacrifice on which a great cause could draw, in spite of the apparent submissiveness to the slave power, and the prevailing devotion to money-making—Dr. Kane's book was a wonderful comfort to doubting hearts. People were so charmed by the spectacle it presented of dogged endurance under appalling surroundings, that in many pulpits it was treated as possibly a trumpet-call which might stir in the veins of many an American youth the pulses of a better life. Few or none asked themselves whether the end was worth the sacrifice, and whether all the high qualities which the Polar winters revealed in Dr. Kane and his followers might not have been turned to better account than searching for the North Pole.

The question, however, would doubtless have been asked, and asked with somewhat benumbing force, if other expeditions of a similar character, under trial, had been projected. The late revival of Arctic exploration in this country and in England has been mainly due to the improvements in steam navigation, which have made it seem possible to push much farther north than ever before, with much less risk and more comfort. The Austrians, the Swedes, the English, and ourselves have been seduced into making another dash at the Arctic wilderness by the compound engines and the later inventions in preserving and cooking food and in furnishing light and heat. But we have, after all, failed. We have got within about four hundred miles of the Pole, but have every reason to believe that those four hundred miles are practically impassable, or that if any one succeeded in traversing them he could hardly return except by a miracle, and that when he got to the Pole he would find nothing but a waste of primeval ice buried in darkness. Whether anything has been done by it for our knowledge of the earth for the last ten years, except enabling us to put a little more coast-line on our maps, is very questionable. If anything, it is certainly very little, and nothing which in the smallest degree tends to make the earth a more comfortable abode. Nevertheless, there is no likelihood that the attempts to reach the North Pole will ever cease, no matter with how many tragedies like the fate of Franklin and De Long they may be attended, and however clearly it may be demonstrated that the habitable portion of the globe can gain nothing from having the uninhabitable portion more fully known. The motive which sends men generation after generation to fight for life in those icy wastes, amid the appalling darkness and storms of Arctic winter, is precisely the same as that to which we owe the most fruitful scientific investigations, and many of the most valuable additions to the resources of modern civilization. It is, in short, neither more nor less than that passionate hatred of mystery which may be said more than anything else to distinguish the modern from the ancient world, and before which so many gorgons and chimeras dire have vanished from popular belief, and so many happy islands and impenetrable seas and sacred mountains have disappeared from the map.

The Blaine papers cannot get over the Blaine-Belmont affair. For some days they swore at Belmont and called him foul names, evidently supposing that this would settle the matter. But they now seem to be satisfied that it did not settle it, and that the quiet reading of the testimony by the public has not helped their man out of his troubles, but on the contrary has plunged him in deeper. They are accordingly now writing articles to show by reasoning that Mr. Belmont really got the worst of it. The *Tribune* had on Thursday a long and elaborate one, which seeks to convince him that any expressions of sympathy which come to him, through either the press or private correspondence, really mean nothing, and that he ought not to be proud of what he has done to Mr. Blaine; that for the true view of the matter he must look not to the "anti-Blaine press," which was "shut up by preëxisting conditions to the anti-Blaine view," but we presume to the Blaine press, which looked at it calmly and impartially, and expressed "the Blaine view" about it the day after in a quiet, gentlemanly, and judicial way, by which no young man who read its articles could fail to profit. We must all feel thankful, indeed, that when such a disgusting brawl occurred in a Congressional committee room, we had such a nice, well-mannered, and decorous body of persons as the Blaine editors, ready to show hot-headed youths like Belmont how to behave.

The Rev. Dr. Bevan, who has made some complaints lately of the comments of the press on his reasons for going back to England, is, however, polite enough as regards "the secular press," while, touching "the religious press," he throws off all restraint. "Words," he says, "cannot express the treatment I have received at the hands of the editors of the religious press," and he even goes so far as to call the religious editor "the Polyphemus of the literary world." This want of appreciation is due in the main to the highly polemical character of the religious press. It hardly ever hits lightly, but, when it attacks any one, puts forth its full strength. It is so emotional that there is nothing moderate about it. When it loves anybody, it loves him passionately; when it hates, it talks as if the object of its reprobation was hardly fit to live. It has no purgatory in which the middling people, who are neither very bad nor very good, can prepare themselves for the very best company.

The French appear to be seriously entertaining one of the greatest engineering projects of modern times—the creation, or rather recreation, of a vast inland sea, south of Algeria and Tunis, by the admission of the waters of the Mediterranean into a great basin of the Desert by means of a canal about two hundred miles long. The Minister of Foreign Affairs, M. de Freycinet, has reported in its favor, and the President has appointed a commission of forty-eight to examine the scheme at once. The advantages anticipated from its execution are: a defence for the settled region against the invasion of the Desert tribes; a considerable improvement of the climate in the immediate neighborhood, and the restoration to agriculture of considerable tracts of land surrounding the new sea; an easy means of closer communication with central Africa, and the diversion to Algeria of a large part of the trade which now goes to Tripoli; and, finally, the provision of an impregnable retreat for the French Navy in case, for any reason, it became unable to hold the sea in the Mediterranean.

A curious political movement has been going on for some weeks in Hungary. Some years ago, the assimilation of Transylvania to the main parts of the Kingdom, pursuant to the restoration in 1867 of the constitutional basis of 1848, gave rise to loud complaints on the part of the Transylvanian Germans—or Saxons, as they call themselves—about the disregard of their autonomous privileges and national organizations, some dating from as early a period as the twelfth century. These complaints found a strong echo in Germany, but, in spite of the cordial relations existing between the leading Magyar statesmen, Andrássy and Tisza, and Prince Bismarck—and partly, perhaps, on account of that favorable international juncture—the Magyars proceeded unhesitatingly in their work of reorganization in favor of complete unity and of their own nationality. Similar measures of less scope, chiefly intended to extend the use of the Magyar language in the public schools, but affecting no historical rights, were subsequently carried through in Hungary proper. The Germans of the latter country, who, unlike the Transylvanian Saxons, form no national agglomeration, living sporadically without special organization of their own, made no opposition whatever; but a portion of the press of Germany took up the defence of the German interests against the Hungarians with great zeal and in a very aggressive tone; a politico-historical pamphlet entitled 'Hungarica,' by a South-German professor, chiefly serving as text in the denunciation of the attempts of the Government of Buda-Pesth to Magyarize the young generation of the German-Hungarians. The agitation in Germany culminated in the formation of a "School Union" for the support of German institutions in Hungary. The Hungarian Government, annoyed by this pother, appealed for an answer to the German populations concerned, and the result has been a long series of public meetings in all parts of the country largely inhabited by Germans, such as the Banat and the county of Zips, in which the German citizens most emphatically declare against all interference in their behalf from without, asserting their political aspirations, in spite of their descent and intellectual bond with Germany, to be purely and exclusively Hungarian, their relations with the Magyars those of friendly co-citizenship, and the intentions of the Government not oppressive, but patriotic. The German press of the country, the *Pesther-Lloyd* at its head, is unanimous in seconding this popular declaration of sentiment, and as the Magyars, the most trusted future allies in a struggle with Russia, are now again rising in favor in Germany, their so-called *Deutschenhetze* will probably soon cease to be a disturbing element in the relations of the Austro-Hungarian and German Empires.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

THE cross-examination of Senator Blair was begun by the investigating committee of the House on Thursday. Mr. Blair said he had been more influenced by interest in the South American policy of the United States than by any pecuniary considerations, to take up the Shipherd claim. He said he looked upon the possession and control of Peru as of vast importance to the United States; in fact, Senator Blair's views, as set forth in this examination, on the South American policy of the United States, surpassed in breadth and grandeur those of Mr. Blaine, for Senator Blair seems to have wished not only to prevent the British bondholders from getting possession of Peru, but also to facilitate matters, by means of the Cochet and Landreau claims, so that the United States might use Peru as a basis for defensive purposes in case of a foreign war. Senator Blair told about his meetings with Shipherd. The Senator's duties as counsel for the company were to examine Mr. Shipherd's papers and case, and to ascertain the attitude which the United States Government occupied toward Chili and Peru, and the policy which it intended to pursue. Nothing of importance was elicited from the witness on Friday or Saturday except a further exposition of his views on the effect of European influence in the South American States, and on the policy which he thought the United States should have pursued. On Monday Mr. Blair said that the certificate of stock in the Peruvian Company which he had received from Shipherd as a retainer was for 1,000 shares, the par value being either $10 or $100, but that he would have regarded a cash fee of $3,000 or $5,000 as preferable. The witness firmly refused to produce his correspondence with Shipherd, and the examination was then closed. In short, it may be said that in so far as the objects of the investigation are concerned, Senator Blair's examination has been productive of very little. The hearing in the case is to be resumed by the Sub-Committee in New York on May 10.

On Wednesday, a letter from Lord Granville to Minister West, which formed part of the correspondence regarding the Irish-American suspects, was furnished to the press by the Department of State at Washington. In this letter Lord Granville says that the English Government can make no distinction in favor of aliens in enforcing the Protection of Person and Property Act in Ireland, and makes use of Mr. Seward's admissions respecting the treatment of British subjects arrested during the American civil war to prove that the ground taken by the Government of the United States at that time coincides with that now taken by the British Government. In concluding, Lord Granville says that the "imprisonment of suspects under the act is not a measure of punishment, but of prevention," and that the British Government will release "any citizen of the United States now detained who may be willing to engage forthwith to leave the United Kingdom."

The President has signed the Chinese Bill. It was drawn with special reference to the reasons which the President gave for vetoing the first bill, and is in substance as follows: The immigration of Chinese laborers, whether skilled or unskilled, is suspended for ten years; provision is made for a system of certificates, to be issued to the Chinese persons now living in this country, or who may hereafter arrive here. The naturalization of all Chinese is forbidden, and various fines and penalties are imposed upon the masters of vessels who shall bring unauthorized Chinese persons to this country, and upon any person who shall forge, alter, or make fraudulent use of the certificates to be issued to Chinese who are allowed residence in the United States.

The President has issued an order granting to General Fitz-John Porter the full remission of that part of his sentence which disqualified him from holding office.

In the Senate on Thursday the bill repealing the disqualification for Army service imposed upon ex-Confederates was committed to the Judiciary Committee by a party vote—yeas 29, nays 28; Messrs. Davis, of Illinois, and Mahone voting yea with the Republicans.

Mr. Windom's resolution calling for the appointment of a committee of five to inquire whether money was raised, by contribution or otherwise, from persons in interest to promote the passage or defeat of the House bill to extend the bonded period for distilled spirits, was passed by the Senate on Friday.

A resolution has been reported from the Senate Committee on Civil-Service Reform, proposing an appropriation of $25,000 to enable the President to promote efficiency in the different branches of the civil service.

After a debate lasting for many days, the Tariff Commission Bill was passed by the House on Saturday. The bill provides for the creation of a Commission composed of nine members "from civil life," to be appointed by the President, by and with the consent of the Senate, which shall "take into consideration and thoroughly investigate all the various questions relating to the agricultural, commercial, mercantile, manufacturing, mining, and industrial interests of the United States, so far as the same may be necessary to the establishment of a judicious tariff, or a revision of the existing tariff upon a scale of justice to all interests."

The Anderson bill to enlarge the powers and duties of the Department of Agriculture was discussed in the House on Monday. The bill provides for a Secretary of Agriculture, who shall be a Cabinet officer, and for an Assistant Secretary of Agriculture, who shall be a practical agriculturist, and that there shall be four bureaus in the new department.

When the Star-route cases were called at Washington on Thursday, Mr. Merrick called attention to the fact that John W. Dorsey, one of the defendants, was not present, and Colonel Bliss said that Colonel Ingersoll had "squarely promised" to produce Dorsey in court on the day appointed, in consideration of which the defence had not had him arrested on a bench warrant, and that now, as the promise appeared to have been violated in a "barefaced manner," he (Colonel Bliss) believed that the promise had been made with the intention of delaying the trial. Colonel Ingersoll then sprang to his feet, and cried: "It's a lie! You're a liar!" Judge Wylie "reproved both the gentlemen," and Colonel Bliss arose and withdrew his remarks. Mr. Merrick then asked the Court to postpone the trial for ten days, in order that the Government might look for John W. Dorsey, "who was so innocent and so anxious to be tried." As soon as this request had been made, Colonel Totten jumped up, and said his clients, Brady and Turner, were ready for trial; but as a separate trial of Dorsey would be expensive and inexpedient, the Court granted the motion to postpone. The above is an illustration of the anxiety of the innocent Star-routers to be tried, and of the shifts which their counsel resort to in order to postpone, if not evade, the ends of justice.

The Supreme Court of the United States on Monday denied Sergeant John A. Mason's petition for a writ of habeas corpus. The Court, in an opinion delivered by the Chief Justice, decided that the court-martial had full jurisdiction to try Mason for the offence with which he was charged, that its proceedings were within its proper jurisdiction, and that the sentence pronounced was not in excess of its power. This exhausts Mason's legal remedies, and executive clemency is now his only recourse.

Mr. Scoville has obtained a writ of habeas corpus directing John W. Guiteau, his brother-in-law, to produce Mrs. Scoville in court. Mr. Scoville declares that his wife has lost her mind and is being improperly used by certain persons who are allowing her to lecture in public.

A despatch was received at the Navy Department on Friday, dated March 24, from Engineer Melville, announcing that he had found the bodies of Lieutenant-Commander De Long, of the *Jeannette*, and his ten men, with all their papers and books, and that he would continue the search for Chipp and his companions in the other cutter. There is scarcely any hope, however, that they will be found alive. The news of De Long's death has been received with much sorrow throughout the country. No particulars in regard to the discovery of the bodies have been received as yet, but it is surmised that they were found not far from the station whence the two men, Noros and Ninderman—now the only survivors of the crew of De Long's cutter—were sent forward for succor.

A despatch was received from the Chargé d'Affaires at St. Petersburg on Sunday, saying that the crew of the *Rodgers*, which was lost by fire in St. Lawrence's Bay, in November, are all safe.

Last summer the American Bar Association appointed a committee of nine of the leading lawyers of the country to take into consideration the condition of business before the Supreme Court of the United States, with a view to recommending plans to relieve it from its present overcrowded condition. The committee found themselves unable to concur unanimously in any plan, but Messrs. Phelps, Evarts, Parker, and Merrick, whose opinions coincided, have embodied them in a report. The plan they recommend is radically different from the Davis plan, which is now under discussion by the Senate in a bill to establish a Court of Appeals. Instead of establishng new subordinate courts, they recommend that the Supreme Court shall be divided into two or more sections for the hearing of causes upon their docket, except such causes as pertain to the "original jurisdiction of the Court and all those involving questions under the Constitution or treaties of the United States," which are to be heard, as now, before the whole Court. The causes decided by a division are to be reported to the whole Court before the decision is announced, and all judgments are to be rendered as the judgments of the whole Court. This is the bare outline of the plan.

It is probable that the Democrats in the Senate will oppose Senator Davis's bill to establish a Court of Appeals to relieve the Supreme Court, for the reason that it gives the President authority to appoint eighteen circuit judges.

The Independent Republicans of Pennsylvania, who recently had a conference with the Stalwarts, and who were accused of "surrendering to Cameron," have published an address formally calling a State Convention for May 24. They call the resolutions adopted by the above-mentioned conference "plausible platitudes," and announce that should the Convention of May 10 "fail to nominate as its candidates men who in their character, antecedents, and affiliations are the embodiments of the principles of true Republicanism, free from the iniquities of bossism, and of an honest administration of public affairs, free from the evils of the spoils system, such nominations should be emphatically repudiated by the Independent Republicans of Pennsylvania in November next."

In a debate on the Reapportionment Bill in the Illinois House on Wednesday, Mr. Parrish called Mr. Herrington a liar, and Herrington thereupon knocked Parrish down. Parrish was dragged out and the blood washed from his face. Herrington then apologized to the House; but Parrish, on returning to his desk, denounced Herrington as a brute and a coward, and the bill was moved to a third reading.

News was received on Wednesday that a column of Mexican troops had met some of the hostile Indians of whom the United States troops were in pursuit, and had killed seventy-eight of them, and taken thirty-three prisoners. This is thought to put an end to the Indian

outbreak, and comparative quiet has been restored in Arizona and New Mexico.

An association has been formed at Cambridge, with Mr. James Russell Lowell as President, to take measures for the erection of a memorial to Longfellow, and arrangements have been made to invite subscriptions of $1 or more from all parts of the country, to be devoted to a fund for that purpose.

Horace Maynard died at Knoxville, Tennessee, on Wednesday. He declared his loyalty to the Government at the outbreak of the Rebellion, and his property was confiscated, and he and his family driven from East Tennessee by the Rebel authorities. He was member of Congress for a number of years, and was appointed Minister to Turkey by President Grant in 1875. In 1880 he was appointed Postmaster-General by President Hayes.

Rear-Admiral John Rodgers died on Friday evening at Georgetown Heights, D. C. He served with distinction in the civil war. He was in command of the Boston Navy-yard from 1867 to 1869, and commanded the Asiatic fleet from 1870 to 1872. In 1877 he was appointed Superintendent of the Naval Observatory in Washington and Chairman of the Light-House Board. He had received the thanks of Congress for his services.

FOREIGN.

A terrible tragedy occurred in Dublin on Saturday night. Lord Frederick Cavendish, who was appointed Chief Secretary for Ireland, to succeed Mr. Forster, and Mr. Thomas Henry Burke, the Under Secretary, were assassinated a little after seven o'clock, in Phœnix Park. They were attacked by four men wearing slouched hats, who are supposed to have first assailed Mr. Burke, whom they stabbed through the heart. Lord Frederick Cavendish attempted to defend him, and was also stabbed by the assassins, who repeatedly plunged their knives into the breasts of their victims, and, having cut their throats, got on a car and drove rapidly from the park. A large quantity of notes and gold coin, besides their gold watches, was found in the pockets of the victims, which showed that the object of the crime was not robbery. It is a remarkable fact that many persons sitting and walking within a few hundred yards of where the bodies were found heard nothing of the struggle. No clew to the perpetrators of the deed has been yet found, but several men have been arrested on suspicion. The affair has of course created the most intense sensation throughout Great Britain and Ireland, and the crime is denounced in unmeasured terms by Parnell, Davitt, and all the other prominent members of the Home Rule party, as well as by the Land League in Ireland and its branches in the United States.

Lord Frederick Cavendish was born in 1836, and was appointed Chief Secretary for Ireland on Thursday last. He was a brother of the Marquis of Hartington. He was in close personal and official relations with Mr. Gladstone, and up to Thursday had held the position of Financial Secretary of the Treasury. Mr. Burke was appointed Under Secretary for Ireland about 1870, during Mr. Gladstone's first administration. He continued to hold the office under the Beaconsfield administration and up to the time of his death.

A meeting of Conservatives was held in London on Sunday afternoon, at which Sir Stafford Northcote, the Marquis of Salisbury, and all the prominent members of the party were present. Resolutions were passed expressing sympathy with the Government, and the willingness of the Opposition to support the Government with all their strength in coping with the murderous state of Ireland. On driving to the House of Commons on Monday afternoon, Mr. Gladstone was assailed by a storm of hootings mingled with cheers from the crowd assembled in the streets, while Mr. Forster was greeted with marks of most respectful sympathy. The House of Commons was crowded, and the members of the Irish party, who were present in full force, were dressed in mourning. Mr. Gladstone spoke with great difficulty and painful emotion. He asked the attention of the House to the events of Saturday, and moved an adjournment in conformity with precedent. He described the crime as unparalleled in English history for its blackness, and for the horror which it had excited in the entire population of the kingdom, and went on to say that all previous intentions and engagements of the Government must be reconsidered and recast; but the present not being an opportune moment to grapple with the serious case of Parliamentary duty, he would limit himself to giving notice that he would introduce on Thursday a measure relating to the repression of crime in Ireland. This announcement, which was received with great cheering, Mr. Gladstone supplemented by the intimation that at an early day he would bring forward a measure dealing with the question of arrears of rent in Ireland, the consideration of which would, however, be necessarily dependent upon the progress made with the earlier bill. Sir Stafford Northcote seconded the motion for adjournment, assuring the Government of the hearty coöperation of the Opposition in such measures as might be necessary for the restoration and preservation of peace in Ireland. Mr. Parnell, speaking next, referred to the crime as having been committed by men who absolutely detest the cause with which he was associated, and who devised and carried it out as the deadliest blow in their power to the hopes of his party and the new course which the Government had initiated.

The scene in the House of Lords was similar to that in the House of Commons. A vote of censure on the Government, which was to have been moved on Monday night by Sir Michael Hicks-Beach, has been withdrawn, with the concurrence of the chief of the Conservative party. The Irish Parliamentary party have expressed a determination to support the Government in any measures having for their object the repression of outrages. It is said that after the Cabinet council on Monday, Sir Charles Dilke was offered the Chief Secretaryship for Ireland, but declined to accept the position unless with a seat in the Cabinet. On Tuesday a Secretary was found in Mr. George Otto Trevelyan, the nephew and biographer of Lord Macaulay. It is understood that the Ministry intends now to postpone the procedure rules, and that the whole of the rest of the session will be occupied with Irish business.

It is said that the bill which will be introduced into the House of Commons for the prevention of crime in Ireland will include clauses dealing with secret societies, and providing for the trial of agrarian offences by special tribunals. It is probable, also, that in cases of outrage a heavy fine in the shape of compensation will be imposed on the districts in which the crimes are committed. It is expected that if the bill does not interfere with personal liberty and the rights of public meeting, the Irish members will not offer serious opposition.

A meeting of the Reform Club was held in London, on Thursday, for the purpose of reconsidering the method of election to membership in the Club, on account of the recent blackballing of two brothers of Mr. Chamberlain, President of the Board of Trade, which event had created a great scandal, exposing as it did divisions in the Liberal party.

In replying to a question in the House of Commons, on Thursday, Mr. Chamberlain said he did not consider it advisable for the Government to take any action in reference to the adulteration of American cotton imported into England.

The returns of the Board of Trade show that during the month of April, British imports increased, as compared with the same month of last year, by £847,000, and the imports increased by £243,000.

England is to coöperate with other nations in establishing a chain of circumpolar magnetic and meteorological observatories. Fort Rae, in the north of Canada, has been selected as a station.

The first part of Wagner's "Nibelungen Ring" was produced at Her Majesty's Theatre, London, on Friday evening. The theatre was crowded. The royal Princes and the leading members of the aristocracy were present. The performance was received with enthusiasm.

The Vienna *Presse* says that after the assassination of General Strelnikoff, the Public Prosecutor of the Kieff Military Tribunal at Odessa, in March last, an accomplice of the assassin took from Strelnikoff's pocket a list of Nihilists to be arrested, and plundered his apartment, taking therefrom documents furnishing a complete plan of the Nihilists' methods of procedure and their projects. The recovery of these papers by the Nihilists is said to have been a great blow to the authorities.

A general exodus of Jews from all parts of Russia began on Wednesday. At a meeting of the Ministers, at St. Petersburg, on the same day, General Ignatieff recommended the adoption of measures calculated to accelerate the emigration of the Jews, but the proposal was rejected General Ignatieff is said to have become greatly excited at this, and to have left the assembly. There have been anti-Jewish riots at Alexandria in the Government of Kherson, and a mob of several hundred persons wrecked the houses of Jewish residents. On Tuesday a London despatch from St. Petersburg announced that the Senate as a court of appeal had decided that the decree banishing the Jewish apothecaries is illegal.

A despatch to the London *Times* from Berlin says that Secretary Frelinghuysen's despatch to Mr. Hoffman in regard to the treatment of Russian Jews has created a most favorable impression in Liberal circles, and that the United States is hailed as having taken the place of England as the champion of the down-trodden and oppressed.

In the Italian Chamber of Deputies on Friday, in the course of a debate on the treaty with France, Signor Luzzati, speaking of the apprehended invasion of American products, said that even those Governments which were most alarmed at the increase of American imports, were not sufficiently alive to the danger. It was time, he said, that Europe should think about defending herself against the United States.

There was a stormy session in the Spanish Senate on Monday. The first clause of the treaty of commerce with France was adopted by a vote of 143 to 85. Subsequently, by a vote of 111 to 24, the Senate voted urgency for the whole treaty.

The latest news in regard to Egyptian affairs is that the Powers have decided to allow France the initiative in the Egyptian question, leaving her to come to an agreement with England so as to secure unanimity of views. The principle of Turkish intervention under any form in Egypt has been abandoned. The present Khedive will be retained in power so long as his retention is compatible with the existence of order in Egypt, failing which, Halim Pasha will be substituted for him, through the medium of the Porte, at the unanimous request of the Powers; but the Powers have intimated that nothing must be done to precipitate the dethronement of the present Khedive until it becomes a necessity. The above-mentioned plan, while rendering the Porte the instrument of deposition, keeps the Khedivate under the collective protection of the Powers.

The Khedive has informed the Consuls-General that he has referred to the Porte the findings of the court-martial in the case of the Circassian officers.

TUESDAY, May 9, 1882.

THE IRISH HORROR.

THERE is happily no need to dwell upon the horror and atrocity of the Dublin murders, by which the whole civilized world was shocked and amazed on Sunday. Not even the dynamite section of the Fenian organization ventures to palliate them. There would, too, even if the Land Leaguers were not as emphatic as they are in expressing their sorrow and indignation, be every reason for acquitting them of all responsibility for them. The assassinations can work nothing but injury to the cause which Parnell and his followers have at heart, and which on Saturday last seemed on the verge of triumph, and they bring, whether well or ill-deserved, terrible shame on the Irish name. Nor can they be laid at the door of the League, as probably a very large portion of the English public will be disposed to lay them, by saying that they were the natural result of its teaching and instigation. Unhappily, murder as a means of redress did not make its appearance in Ireland with the Land League. It has been no more rife during the past year than during dozens of years before. Take what year we will of the last two hundred years, and we find murder a common Irish remedy for all sorts of political and social grievances. Moreover—and this is the saddest feature of the case—it has been the only effectual remedy. During the last century the Irish Catholics have risen from a condition of legalized degradation for which no parallel is to be found in modern times, to a full social and political equality; but every step in their enfranchisement has to all outward appearance been achieved by assassination and outrage. This seems horrible, but it is literally true. The government of Ireland has for two centuries been a training in crime, and if the world does not know the fact better and is not more horrified by it, it is because so few readers care to wander into that gloomy and blood-stained bypath called Irish history.

It must be remembered, too, that purely political assassination—that is, assassinations like that of Lord Frederick Cavendish—from simple political hostility, has been until now rare, if not unknown. Irish murders, when not committed for robbery, have been hitherto what are called agrarian murders—that is, murders of landlords or their agents, or of witnesses in land cases. Considering the large number of worthless English adventurers who have since 1688 been sent to the island either to make their fortunes in political office or as bishops of the Anglican Church, the immunity they have enjoyed from violence has been one of the singular facts of Irish history. That a man with so many titles to esteem as Lord Frederick Cavendish, coming to the country, too, with a message of more hopeful conciliation than had ever before crossed the Channel, should be the first English official to fall under the assassin's knife, is certainly a most solemn and impressive example of the irony of fate. That it was concocted by desperadoes in the inner Fenian circles, whose trade reconciliation in England would destroy, there is too much reason to believe.

That the appointment to the Chief Secretaryship was in some respects unfortunate seems very clear; but that it was dictated by the best motives on Mr. Gladstone's part is equally clear. Lord Frederick Cavendish was his familiar and confidential friend, and was at one time his private secretary, and is said to have been an excellent administrator. He was, therefore, doubtless intended to be in a peculiar sense the personal representative of the Premier in Ireland, and to act as the executor of his instructions to a degree which his predecessor had not done and could not do. In other words, the new policy was apparently to be Mr. Gladstone's rather than that of the Cabinet, and Lord Frederick Cavendish was to carry it out without originating or shaping it, and without criticising it.

To all this it would be impossible to take exception if the Irish difficulty had hitherto been due to any want of good intentions touching the land question on Mr. Gladstone's part. A very large part of Irish bad temper, however, is now due to disbelief in English sincerity, and, above all, to disbelief in English capacity to perceive the sentimental side of Irish griefs. The selection for the Irish Secretaryship either of a popular Irishman, or of an Englishman with strong Irish sympathies, was the only way to meet this. It is not enough to satisfy the Irish that Mr. Gladstone seeks their good: they ask also for proof that he is willing to seek it in their way; and if there be any value or any strength in the theory of constitutional government as it exists in England, the Cabinet officer specially charged with the government of Ireland ought to be the man marked out for the place by the confidence of the people of Ireland, and not the man marked out for it by the confidence of the English people. On this point the opinion of Dublin is all-important; the opinion of London is of comparatively very little importance. To trust the Irish to send members to the House of Commons, and then treat their approval as in no sense a qualification for their chief executive office, is an absurdity, and it is one of those absurdities which have long galled their national pride, and must come to an end if any attempt at reconciliation is to be effectual. Lord Frederick Cavendish's appointment was a piece of the old system inserted suddenly and to the surprise of everybody in the new system, and though this furnishes no jot of palliation for his murder, it probably suggested it to the wretches who executed it, and whose heads were probably filled with some fumes of patriotism, however foul or hell-born.

Mr. Gladstone, nevertheless, will have and has the sympathy of every one who honors purity and integrity, and long and successful devotion to the cause of the desolate and oppressed. His legislative labors have done much to transform England, and it will be the fittest crown of a long and noble career if he succeeds, before he quits the scene, in preparing the way for a new and transformed Ireland. The transformation of Ireland he cannot see. Very likely no one will see it within the present century. There is no such thing permitted in the moral order of the world as wiping out all at once, by any change of policy, evils of such long standing as those of Irish politics. That what you sow you must reap, is as true of national as of individual life. Not until the fruits of centuries of misrule have been fully garnered will it be possible, in Ireland any more than in other places, to prepare for a harvest of a different sort.

That the Tories should rally around Mr. Gladstone now, and offer him their united support when they think he may be driven by English anger and panic into a resort to violent repression, after spending two years in harassing and hindering him while he was seeking to end Irish woe by healing measures, is a striking and impressive illustration of the difficulties with which he has to contend at an age when most men are compelled to be simply lookers-on. But that he will not lose his head, and may yet be able to convert this dreadful tragedy into a means of a better understanding with the Irish malcontents, we cannot but hope.

THE BLAIR TALE.

SENATOR BLAIR on Thursday told the story of his career as Shipherd's counsel, and it is in some respects one of the best stories of the series; and if the Committee is sick and tired of the whole business, as the Washington correspondence of the *Tribune* says it is, it shows that the members are not men of taste. We wondered the other day what Mr. Blair got a "retainer" for from Shipherd, of whom he knew nothing. Mr. Blair's answer is that Shipherd wished him to "examine his papers and his case," and then to find out for him "the attitude which the Government occupied toward Chili and Peru, and the policy that the Government proposed to pursue in the future." This he readily undertook, and the result was that he first saw Mr. Blaine himself and brought up the subject of Shipherd's claim, and then introduced Shipherd to him. Shipherd at this interview expounded and discussed the Cochet claim, of which Mr. Blaine did not appear to think much, and the Landreau claim, of which he seemed to "know something." Either of them amounted to an enormous sum—say $900,000,000, or thereabouts—$10,000,000 more or less made little difference. They were made against a conquered country, and they were intended to bar the conqueror from seizing the most important part of its assets. The amount claimed, too, was enormous, preposterous. It was the largest claim ever made in money against a nation, except that made by Germany on France after a bloody war.

Shipherd, again, was, on their own confession, utterly unknown to Mr. Blaine and Mr. Blair. He was not in any regular business or profession; he had no settled residence; he had no one to vouch even that his name was Shipherd. He was introduced to Mr. Blair, it is true, by Mr. Cragin, but it does not appear that Mr. Cragin knew anything more about him than that he was a man with a large claim. He said he had powerful financial backers, such as Mr. E. D. Morgan or Mr. Belmont, but he had not a scrap of writing to show that they had ever heard of him. Nor did either Mr. Blaine or Mr. Blair communicate with any of them to get corroboration of Shipherd's story, or ascertain his antecedents, or make sure of his sanity. On the contrary, Blair took the retainer, and Blaine listened and discussed as to whether the Cochet claim was a "chose in action," or the Landreau claim "res adjudi-

cata"; and finally, when Shipherd asked the Secretary of State what the policy of the Government toward Chili and Peru was to be, he, says Mr. Blair, "explained" to the pair "the instructions he had given to Mr. Hurlbut and Mr. Kilpatrick," and satisfied Mr. Shipherd that there was nothing in the way of his sending his representatives,

"and making a definite agreement with Peru as to the amount of these claims which should be recognized, and for an assignment or hypothecation, or pledge (in whatever form) of the resources of Peru to secure the payment of these claims, or of whatever should be agreed upon in respect to them, and of such advances as Peru necessarily must have, including, of course, this indemnity and some provision for her foreign debt and for the running expenses of her Government."

There was nothing in Mr. Blaine's story, as told by himself, to contradict this Blair version. It really does seem to be true, that a strange man came to a United States Senator and told him that a foreign Government owed him about half the amount of our national debt, and that if he could get it, he would pay off another Government which had conquered the country and wanted an indemnity, but that to recover it the United States would have to aid him, and that the Senator said to the strange man, "All right. Come round with me to the State Department, and talk it over with the Secretary"; and that the Secretary, on seeing the strange man, and hearing his tale, expressed no surprise whatever, but said the matter was somewhat familiar to him; that the Landreau claim was "res adjudicata," and would have to be attended to, and that he would tell him what orders he had been giving to the United States Ministers abroad on a most delicate question of foreign policy.

If there be anything like this in the history of diplomacy, it has not seen the light, and the effect of it is much heightened by the fact that neither the Senator nor the Secretary had any good reason for feeling sure that Shipherd's real object was not the theft of an overcoat from Mr. Blaine's house. When one reads it, and remembers that from the first of July last to December it was in the power of the Secretary who received Shipherd and talked matters over with him, to plunge the country into war with one or two foreign powers, and cause a business panic of the first magnitude, one can hardly avoid a shiver of mingled amazement and relief. It was apparently only in November that the Department of State discovered that Shipherd was simply a visionary tramp, and that it was about as sensible to talk over the foreign policy of the Government with him as to ask him for a loan of $1,000.

EARL GRANVILLE'S ANSWER.

Earl Granville's despatch to Mr. West, in which he uses Mr. Seward's answer to English remonstrances about our arbitrary imprisonment of British subjects during the war as his own answer to our remonstrances about the arbitrary imprisonment of the American Irish suspects, is, it must be admitted, a clever bit of dialectics, but it can hardly be considered a real answer to American complaints. It is doubtless a pity that the question was not originally raised by a more competent and experienced controversialist than Mr. Blaine, who did so much of his diplomatic work in the spirit and with the methods of a smart criminal lawyer. One of these methods, and the one best known, is to say nothing of the real or apparent weak points in your own position, in the hope that your adversary has forgotten them or will not perceive them. It was this which led Mr. Blaine into the great blunder of warning England away from the Isthmus without saying anything about the Clayton-Bulwer Treaty, and thus gave Lord Granville's production of it the air of an easy victory. It was this which led him to demand the release of the suspects in the language of a stump-speech addressed to a sympathetic audience, in which trial by jury was treated as one of the rights which an American citizen carries with him, under the law of nations, all over the world. The fact that we had ourselves very recently imprisoned foreigners without trial, instead of being mentioned and discussed and its true character duly set forth, was passed over in silence, doubtless in the hope that Earl Granville would not be "smart" enough to think of it. The result is that he now produces it with the air of being even smarter than we are, and is held by the English press to have sent an arrow into American ribs feathered from the wings of our own eagle.

Earl Granville really disposes, however, in one short sentence, of the greater part of the argument by which the detention of the suspects has hitherto been justified by the English press. That argument is that foreigners live, like the natives, under the laws of the country in which they take up their abode, and must submit to the same punishments for their violation as are imposed on the natives, however harsh the laws may be, or however severe the punishments. There is no denying this. So far as our knowledge goes, it never has been denied. But it never has been admitted that a foreigner is wholly in the power of a Government in the same sense that its own subjects are. No Government has ever assented to the doctrine that it had no right to protect its citizens abroad against any rule, however oppressive or violent, to which the Government of the country in which they were living subjected its own people. There is a point at which every civilized Government steps in for the protection of its citizens abroad, and that point is reached when any injury is inflicted on them which has not the character of legal punishment—that is, which is not the consequence of judicially ascertained violation of the law. The law may be as bad as possible, and the punishment may be cruel or unusual, but it must be punishment—that is, it must be inflicted on a man who has been proved guilty of doing something which the legislator has said he must not do.

Earl Granville says distinctly that the imprisonment of the suspects is "not a measure of punishment, but of prevention." In other words, he admits that American citizens may be locked up under it, not because they have broken the law, but because somebody thinks that they may possibly break it. Now the right to imprison, for purposes of prevention or safety, all persons found on their soil, or within their military lines, is a right generally conceded to all Governments in time of war, and as a necessary incident of military operations. A state of war draws after it all sorts of exceptions, and this is one of them. It was only because we were at war that we asserted and Great Britain conceded our right to blockade our own ports during the Rebellion, and it was for the same reason that we claimed and exercised the right, against British remonstrances, to lock up British subjects without indictment or trial. Mr. Seward in 1866 was fresh from the controversies on this class of subjects to which the war gave rise, and undoubtedly wrote under the recollection of the great embarrassments into which our forced resort to weapons, which we had for eighty years been denouncing as worthy only of despots, had plunged us. That he felt he was conceding a great deal, and was not sure of his ground, was made manifest by his acknowledging that the situation created by the arbitrary imprisonment of the American Fenians would be "inconvenient and embarrassing" for Mr. Adams. If it were not a doubtful stretch of power, there would have been nothing more inconvenient and embarrassing about it than about the trial of American citizens for larceny or murder. A few years later he would undoubtedly have recurred to the old and only safe ground, that in time of profound peace, when its courts are open, no Government has a right to say that, because it finds it more difficult than usual to procure convictions for a certain class of offences, it may throw any foreigners into jail whom it thinks likely to commit such offences. Unusual difficulty in obtaining convictions by juries for one class of offences has really been the sole justification of the Coercion Act, but we trust our State Department will not now admit that this difficulty furnishes, as a defence for the arbitrary imprisonment of our citizens, a full equivalent for the difficulty created for us by open and prolonged war on our own soil, which was threatening the very existence of the nation.

SIGNS OF THE TIMES IN ENGLAND.

London, April 13, 1882.

I am no alarmist—I am firmly convinced that no mistake is so great as to underrate the strength and the resources of England; but no man of sense can shut his eyes to patent facts. The tempest which prophets of evil anticipate may not burst upon the country, but the storm signals are up, and it is well to note the signs of the times.

1. Mr. Gladstone's speech of the 4th of April is of itself little less than a portent. He is a statesman of great experience. He must be accustomed to measure his words. He is the head of as powerful a Ministry as any which has existed during the century. He knows that every sentence he utters is telegraphed at once throughout the length and breadth of the land. He is better aware than any man of the effect which language used by him must produce in Ireland. Under these circumstances, he makes two statements of immense gravity. Ireland, he asserts, is passing through a "social revolution." Having made this assertion, he cites "that declaration, that warning of the Duke of Wellington, that if ever the time came that there was a war against rent and tithe, the Government would be reduced to extremities, and would have no resources to bring to bear against such a move-

ment." What is the real bearing of these words? Mr. Parnell and his followers will undoubtedly interpret them as meaning that the Government's power to resist disorder is at an end. I do not believe them to have this sense; but I do confidently assert that the use by the Premier of words denoting alarm, if not despair, is one of the most singular and menacing signs of the times.

2. There cannot be the least doubt that whatever were the reasons which induced Mr. Gladstone to quote the dictum of the Duke of Wellington, the Prime Minister has called attention to two most serious and indisputable facts. Every telegram from Ireland proves that the country is passing through a social revolution. The success, further, no less than the failure of coercion, shows the extreme difficulty of checking or controlling the kind of movement with which English statesmen are now called upon to deal. Of rebellion, of insurrection, of forcible resistance to the armed power of the state, we hear nothing. Revolutionists no less than monarchs have learnt a good deal since 1848 : no one now believes that an undisciplined mob can vanquish trained soldiers. The immediate difficulty of coping with Irish disaffection lies, as Mr. Gladstone has pointed out, in the fact that a social revolution cannot be met by the same weapons as sedition or rebellion. It becomes each day more clearly manifest that no specific can work a summary and rapid cure of the evils from which Ireland is suffering.

3. At the very moment, however, when it is of supreme importance that the English people generally, and especially all English statesmen, should practise to the very utmost the nearly allied virtues of patience and of justice, the events of each day render the exercise of these virtues the more difficult.

"Making every just allowance that can be made, the fact remains that occurrences have of late taken place, and are now taking place, in Ireland which are a disgrace to any Christian country, and in reprobation of which the voices of all honest men ought to be raised. I am far indeed from alleging that the leaders of public opinion in Ireland are in complicity with such outrages, and I gladly record the fact that no voice has been more eloquent or more earnest in discountenancing outrages than that of Michael Davitt, whom I regard as not only one of the ablest but the wisest of the leaders of public opinion in Ireland. But I confess I should like to have heard his sentiments more frequently from the mouths of those who have influence with the people. I should like to have heard persistently enforced from the national platform, and from the national press, the lofty and sound lesson that no true effort of patriotism can be served by murder and outrage. I cannot doubt that in the past few months the issue of the 'No-Rent Manifesto' has been the cause, or certainly made the pretext, for the commission of crime. That manifesto, condemned by high Catholic authority, recommends the non-payment of rent until the release of the suspects, regardless of the ability or of the inability of tenants to pay, regardless of the justice or the injustice of the rent to be paid. Men are only too ready to act upon an injunction which accommodates itself to their own sordid views and interests, and it cannot be doubted, I think, by any just mind, that that manifesto has spread a tone of demoralization over a great part of Ireland."

This is the language of Mr. Charles Russell, the member for Dundalk, whose most seasonable and honest letter on the condition of Ireland* deserves fully as much attention from Englishmen as from the electors to whom it is addressed. No words could more accurately or fairly describe the facts of the case. It is easy to understand what are the feelings with which these facts, viewed neither accurately nor with fairness, excite in the minds of thousands of Englishmen. The "No-Rent Manifesto," though in reality an irregular and illegitimate form of rebellion, is felt in England to be a mere incitement to mean acts of dishonesty. The horrible and cruel outrages with which obedience to the manifesto has been enforced, though they find their miserable parallel in the acts of the Welsh followers of Rebecca and in crimes such as those which disgraced the trades-unionists of Sheffield, are looked upon as if they were the embodiment of specially Irish ideas, nourished by the peculiar wickedness of Irish nature. That a feeling of bitterness and resentment is slowly but surely growing up throughout England is at least a plausible and, as I myself think, a probable conjecture. It is full time that men like Mr. Russell should make their voices heard. A sudden outbreak of popular anger throughout Great Britain might at any moment lead to impatient action, producing results as disastrous to England as to Ireland.

4. In every direction may be seen signs that some change, some "new departure," as the phrase goes, may be necessary. This appears to me the significance of the demand openly made, for example, by the *Pall Mall Gazette*, for Mr. Forster's removal from the office of Irish Secretary. No one wishes to harass or attack a Minister who has filled a difficult post to the best of his ability, who, whatever his errors, has avoided all acts of inhumanity, and who has been the mark of much unjust obloquy. But change of measures necessitates changes of men. The real point of the assault on Mr. Forster's position is that he is identified with the policy which it is felt has not been a success. Coercion—that is, a system of arbitrary arrest—was at best a temporary expedient. It is a device which has not been a success. The time, further, for which it was appropriate has elapsed. I have myself always entertained so much distrust of a policy not based on legality that I am very possibly no fair judge of Mr. Forster's scheme of government. My own judgment would be that he has thought too much, if that be possible, of humanity, and too little, which is certainly possible, of legality. However this may be, the opinion is assuredly gaining ground that a change in the administration of the law in Ireland is needed, and that a new system ought to be carried out by new instruments. Mr. Goldwin Smith's letter, which has recently appeared in the *Times*, points in the same direction. That most of the special measures he recommends will ever be adopted, or can ever be adopted by an English Parliament, appears to me incredible. But the importance of what he writes lies not so much in his specific suggestions as in the expression which his clear-cut and incisive phrases give to the conviction that the social revolution which is passing over Ireland needs for its guidance administrators of exceptional energy, determination, and resource. The feeling, whether it be well or ill-founded, that the times require new and vigorous measures, is certainly not confined to Radicals. From the ranks of the Conservative party comes, with more or less of what may be called official sanction, the suggestion—which is truly startling, if we consider the persons by whom it is made—that the wealth of the state should be used to found or to promote the foundation of a body of peasant proprietors throughout Ireland. That Tories who have for years rejected the counsel of Mr. Mill, and denounced the policy of Mr. Bright, should now turn round and try to force on the Liberal Government measures which no Liberal Ministry could have proposed without being denounced by every Tory throughout England as the Socialistic supporters of an agrarian law, is startling enough. The sudden transformation of reactionists into revolutionists becomes a little less surprising, but in some respects also a good deal more alarming, when it is observed that a device for enabling tenants to buy private lands at public cost might be so managed as to be in reality a scheme for enabling landlords to sell estates of dubious worth to that best of all purchasers, the state. To "dish the Radicals" and at the same time to provide compensation for landlords, would be a feat worthy of the disciples of Lord Beaconsfield.

These, then, are some of the signs of the time. They all point toward a period of public disturbance and possibly of national danger. They portend at least two very serious perils. There is, in the first place, a danger that the present Ministry may, in spite of their Parliamentary majority, and in spite of the respect or veneration entertained for Mr. Gladstone by the mass of the electors, be driven suddenly from office. Everything suggests the conclusion that some change in the government in Ireland may become requisite. Such a change, were it only the recall of Mr. Forster and of the Lord Lieutenant, would for the moment weaken the Ministry itself. Alteration in policy is at the best a confession of partial failure. The Cabinet are surrounded by foes who, to judge by past experience, are singularly unscrupulous. There is every reason to suppose that the party who sought to retain office by denunciations of Home Rule would not hesitate to regain office by an alliance with Home Rulers. Independently of any party feeling, I confidently assert that the fall of the present Government would at the present time be a national peril, and this for a very simple reason : it would be absolutely impossible to form a Cabinet which could command anything like the same amount of public respect and confidence as is, as a matter of fact, possessed by Mr. Gladstone and his colleagues. Any Government which could replace them would, as things now stand, be a weak Government. But a weak Government means at a great crisis a weak nation, and national feebleness may any moment mean national disaster. This risk is so manifest that it probably would be guarded against by that good sense and self-control in which Englishmen of whatever party are rarely deficient.

There exists, however, a second peril, much less easy to avoid, because it arises from the inveterate habits or vices of modern party government. The experience of more than half a century warns Englishmen of the infinite harm which may be produced by that perverse form of factious conflict in which one party in the state attempts to keep office or obtain influence by adopting or exaggerating the policy of its opponents. When Conservatives play the part of Radicals, or Liberals display all the repressive energy of Tories, every statesman of eminence is sure to damage his character, while the whole country suffers both from the injured character of its leaders and from the recklessness with which men carry out a policy inconsistent with their own beliefs and principles. Those who can remember the agitations of 1866 and the immediate results of the strategy by which Mr. Disraeli snatched the advocacy of household suffrage out of the hands of Mr. Bright, will feel that there is ample cause for fearing grave disaster if Lord Salisbury take up and exaggerate schemes of peasant proprietorship stolen from the original programme of the Member for Birmingham. Should the Conservative leaders propose a definite scheme for making the tenants of Ireland owners of the land they cultivate, the plan ought of course to be considered on its own merits. But that it should be so considered either by Conservatives or by Liberals is, human nature being what it is, almost incredible. Lord Salisbury and Sir Stafford Northcote, or if not these leaders themselves, at any rate their followers,

* *Letter to the Electors of Dundalk on the condition of Ireland.* By Charles Russell, Esq., Q. C., M. P. London: Wyman & Sons.

will inevitably have before their minds fully as much the desirability of granting compensation to landlords as the expediency of procuring proprietorship for tenants. What should be a consistent policy is almost certain to be, to a certain extent, a political dodge. The very men, on the other hand, who, like Mr. Bright, have throughout their political career attacked the English system of land tenure, will consistently enough look with grave suspicion on a scheme of agrarian revolution proposed by the richest landowners in Europe. The suspicion will not be lessened by the knowledge that should the expedients of revolutionary conservatism fail, the loss of the failure will fall on the English taxpayer. Meanwhile, the substitution of a totally new agrarian policy for the arrangements sanctioned by the Land Act will, whatever its ultimate effect, make confusion in Ireland for the moment worse confounded. The peril of the time is lest the interests of England and Ireland alike should be made the sport of a party conflict. Manœuvres which produced discord and confusion in 1866 might well produce ruin and disaster in 1882.

A. V. Dicey.

THE ULTRAMONTANE AND CONSERVATIVE COMPROMISE.

Berlin, April 21.

I have delayed writing to you from day to day, in the hope of being able to report the final compromise between the Ultramontane and Conservative parties in the Prussian Landtag. It was perfected on March 30, in the Lower House, but received only yesterday the approval of the Prussian Government. Its principal features are (1) the prolongation of the discretionary powers of the Government till 1884; (2) the restoration of the deposed bishops; (3) the authorization of the Minister of Public Instruction to dispense with some requirements of the law of May 12, 1873, such as the exemption from a scientific examination of the candidates for a clerical office, and the abrogation of control by the Government in the appointment of priests by the bishops; (4) the doing away with the nomination of priests alone by the Government; and (5) the abolition of the state court on ecclesiastical matters. In short, this compromise leaves the Pope and his followers absolute masters of the field. We need no longer go to Canossa: we have already arrived there. The state has resigned its sovereignty in its relations with the Catholic Church.

This nefarious transaction originated with the Conservatives, who were afraid of being swept from the political surface by the coming elections unless they formed an alliance with their former alleged foes. It is a noble compact between a set of worthy brethren, the Protestant orthodox and the orthodox Papists, who have no country, no nationality, no ideas, and are solely led toward each other and kept together by their mutual admiration of the Pope and of the High Church, and by the common desire of suppressing all independent thought and action. The Conservatives have sacrificed everything, even honor and self-respect; the Ultramontanes, on the other hand, have pocketed on account what they considered their due, have paid nothing in return, except their friendship (if that be of any value), and are waiting for more. Their tone is as overbearing and supercilious as in their palmiest days under Frederic William IV. The "Falk laws" have been so shamefully put aside that it would have been better if they had never been passed. It is rather naïve to expect that a boundary-line can be drawn between Church and state. Not separation of the one from the other, but domination over the state by the Church, is what Rome is striving for. If any Government ought to know this, it is Prussia, which since 1819 has had ample opportunity of becoming intimately acquainted with the Pope's policy. If this was to be the end, why, then, did Bismarck begin his strife with Rome? The labor of the last ten years is lost. He now finds himself in the awkward position of being at the mercy of Leo XIII.; he can no longer impose his will upon his adversary, for, having shown the cold shoulder to his old friends, the Liberals, he has lost their help altogether, and has not strength enough left to crush the Centre. On the contrary, the latter is now the arbiter of our political situation, and it was the Chancellor who elevated it to this proud position. The Pope, as the embodiment of the Roman Catholic Church, can wait; Bismarck cannot wait. In his case the difficulties of yesterday's situation are in the way of to-day's plans, and even if yesterday's plans be given up, those of to-day will not be promoted by such surrender.

Bismarck yielded so much, in order to get his hands free for other plans and schemes, and especially for his pet measure, the tobacco monopoly. It will at once be submitted to the Reichstag, which is to reconvene on the 27th inst. If part of the Ultramontane party—say only thirty per cent.—votes in its favor, the country may be saddled with a most obnoxious law, which is detested by the great majority of the people, as it ruins a most flourishing trade and the wealth of so important a port as Bremen. The Ultramontane papers loudly declare that their whole party will, like one man, vote against such a monopoly; but a long and sad experience has taught us that little faith can be placed in such assertions, and that, if the interest of the Church be at stake, at the last moment the Centre will always find an apparently decent pretext for a profitable bargain. There is great danger that it will declare the tobacco question a non-partisan measure, on which every one of its members can vote as he pleases. Thus appearances will be saved and an important victory be secured to the Chancellor, who of course will thank the Centre for its support by new sacrifices. By the time this letter reaches you, the telegraph will have informed you of the fate of the tobacco monopoly. It will be the first important bill submitted to the Reichstag. Its opponents will of course vote for debating it in the House instead of sending it to a special committee. If their view can be carried, the bill will surely be defeated; but it is almost certain that, with a parade of moral wrath, the Ultramontanes will declare that they are in duty bound fully to discuss so important a measure in order to afford an opportunity to the Government to have the merits of the bill explained in committee. As its opponents are a minority without the Centre, the vote of the latter will decide the question. Once sent to a committee, the bill will serve as a basis for bargain and barter between Bismarck and Rome. Whatever the final result may be, both the high contracting parties will make each other the most liberal promises if not concessions, subject of course to still wider mental reservations. Softsoaping and whitewashing will be the order of the day. Which of the two parties is the more wily the debate even will not show, as the most important transactions will be carried on behind the curtain.

I have often been asked by American friends, whose opinion I value, why I did not side unconditionally with Bismarck's policy. Thus, the other day I received a letter from a friend in the West, in which he says: "You know the situation much better than I do, and of course I have no word of criticism for you; but if I were a German, I should dislike very much to put myself in active opposition to Bismarck, whom I admire so much, though I fear he is not as able a statesman for home affairs as for foreign." As this remark bears more a general than a personal character, I will answer it publicly, and by so doing interest perhaps a larger circle of your readers. I certainly appreciate the great merits by which the Chancellor has immortalized himself in the history of the world and in the hearts of his countrymen. I honor him as an energetic, unselfish character, an extraordinary statesman, and a very able diplomatist. At the same time, however, he has the faults of his virtues. He knows no will but his own, is an imperious dictator who suffers no opposition, who hates all restraints imposed upon him, uses every means in his power to carry his plans, and changes them as often as he sees fit. In his realistic tendencies he undervalues the power of ideas, and only avails himself of them for bargaining with them or realizing temporary advantages, as, in the present contest with Rome, he plays out the liberty of conscience and Protestant faith against the tobacco monopoly and tariff questions. His great qualities as a diplomatist are so many drawbacks in his home policy. He treats men and parties with whom he ought to work harmoniously, or at least in a friendly manner, as enemies when they do not agree with him even on minor topics. He thinks that he alone can do everything, and introduces at the same time dozens of measures into the political arena, thus creating confusion and disorder in all departments of the Government. His social and economical schemes are ill-digested and fraught with evil. "They are very interesting, indeed," said about a year ago an American friend in this city to me, "but I had rather have them tried on the German than on the American body politic." In a country like yours you can form no idea how deeply they affect the well-being of the people. Slavery, as long as it existed with you, chiefly injured the South, and did less harm to the whole nation than the monopolizing tendencies of the Chancellor with us. If he carries his points, private industry, individual exertion, and personal responsibility, which alone have elevated the Teutonic race to its present commanding position in the world, will make room for governmental control and patriarchal management. Just as the Government already monopolizes railroads and tries to monopolize a lucrative trade with tobacco, it would in future control even poorhouses and village schools, run machinery, open shops, do the shipping, freight, and insurance business, and, as the Postmaster-General has several times proposed, even monopolize the retail book trade. Why should the Government not as well buy out all the butchers, bakers, brewers, and other profitable trades? It saps the roots of our national wealth that such disastrous schemes are afloat and even seriously discussed in the papers, and it is our duty to oppose them by all legitimate means. "*Principiis obsta!*"

Besides, you must remember that what with you is settled law, which no American would dare to impugn, with us, though on the statute-book, is daily attacked and held up to opprobrium. Thus our Conservatives, supported by the Chancellor, with all kinds of weapons, and some very mean ones, too, fight for the repeal of our limited-shareholders companies, the law of civil marriage, of liberal care for the poor, of free emigration, of freedom of the press, and of freedom of trade, while they try to reintroduce the usury laws, imprisonment for debt, and the right of combination among workingmen. As long as the Chancellor stood on the Liberal side, these mediæval endeavors were of little consequence, but since he sides with the Conservatives they have gained a tower of strength. In

fighting them, the Liberals must therefore direct the weight of their attack against Bismarck himself. We have, chiefly through his craft and genius, gained the political form in which our national life will henceforth grow and thrive, but against Bismarck we must fill it with the independent spirit of self-government; we must insist upon free speech and free labor, the marrow of society; we must base it upon the principle of full and perfect human freedom.

Although I have always confined myself to our home policy, allow me occasionally to stray beyond my own limits. Negotiations are neither pending nor intended to acquire Luxemburg or any other slice of land from Holland. This hoax, as if Germany wanted to swallow wholly or partially her harmless Dutch neighbor, is a particular French pastime, which with the regularity of a migratory bird returns every two or three years. The alleged alliance with Sweden is likewise an invention, expressly manufactured for Russian consumption and for the purpose of proving to Europe that we are bent upon a war with Russia. Things which do not exist cannot be proved, but the best demonstration of the utter absurdity of these so-called schemes will be found in the foreign policy of the German empire since 1871. Our relations with Russia have of course changed for the better since Mr. Giers has replaced Gortchakoff; but how long the present system will last is a question which, in view of the vacillating and weak character of the Czar, it is difficult to answer. So much I know, that Bismarck had to make a heavy draft upon the "Reptile Fund" (the confiscated property of the King of Hanover) in order to win over to his side some very influential personages in Petersburg. If I am not mistaken, the Russians like this kind of food, and will soon cry for more. "*L'appétit vient en mangeant.*" The same play, in order to be successful, must be repeated over and over again; so that, in the long run, the candle will cost too much. I therefore apprehend that the money has been thrown away; although it may be better to spend it for the preservation of peace than for hiring spies, detectives, and conspirators. † † †

THE NATIONAL PARTY AND THE COPTS.

ALEXANDRIA, April 19, 1882.

I SPENT a few days at Easter in Cairo, and was glad of the opportunity of contrasting or comparing the state of opinion in that city on public affairs with the state of opinion here. The Chamber of Notables had been prorogued two or three weeks before, and there were no signs in any part of the city that I visited of political unrest or social disorder. Mr. Wilfred Blunt and Sir William Gregory had left, and one consequence of this was that Colonel Arabi Pasha was much less frequently seen haunting the European quarters. During Sir William Gregory's stay, I am told, he was incessantly popping in and out of Shepheard's Hotel. I found but one opinion here, as in Alexandria, among all the intelligent persons I spoke to—that the glowing colors in which Sir William Gregory and Mr. Wilfred Blunt had been allowed by the London *Times* to flaunt in columns of good print the so-called National Party were a caricature and a sham. Mr. Blunt is a fanatical admirer of the Arab race, but by the Arab race he means the Bedouin of the desert, and not the mixed race who inhabit the towns. I was given to understand by a competent authority, who conversed much with Mr. Blunt while in Cairo, that he seemed to care nothing about the land of Egypt itself or Egyptian politics as a national question, and that, when brought face to face with facts, he wholly declined any responsibility for details of any sort, whether relating to the past, the present, or the future. As to Sir William Gregory, his interlocutors spoke of him with greater respect, though they complained that he treated the whole subject rather as a holiday pastime than as a momentous topic of political concern, and that his party seemed rather to caress Arabi Pasha with a species of sentimental fondness than to subject his pretensions to any kind of political criticism. And yet the *Times* newspaper has been inserting columns and columns of this sort of stuff side by side with the well-informed and conscientiously-written letters of its own correspondents. To be sure, on a recent occasion, the *Times* also inserted an article of its own, in which it gently intimated that every word that Sir William Gregory said was distinctly contradicted by all persons of any credit on the spot; while on the same page on which there appeared a letter of Mr. Blunt's, there appeared another letter of Sir Samuel Baker's, proving by anticipation that every word of Mr. Blunt's was demonstrably false.

I had the opportunity of much close conversation with some of the highest English officials in the Egyptian Government, and the unvaried tale told me was of the saddest and gravest. The mere fact that the recent pseudo-national movement has been marked from the first with rancorous antipathy to the native Coptic Christians—who, if any, are the lineal descendants of the ancient possessors of the soil of Egypt—is a sufficient proof that purely national aspirations have no place whatever in the movement. One of the ablest and most trustworthy English Administrators told me that within the last six months every public office except that of finance had dismissed all the Copts employed in it. The practical inconvenience of this step has been very great, because the Copts have, time out of mind, had almost a monopoly of the arts of reading, writing, and account-keeping. A panic has in consequence set in among all the Copts employed in the public service—the more so as the most subtle devices have been resorted to by the Mohammedan heads of departments to move the Copts who cannot be immediately got rid of from the list of permanent to that of temporary officials, with a view to speedily excluding them altogether. An Irish bishop of repute, travelling up the Nile, told me that the captain of the postal steamer, who was a Copt, and in receipt of a good salary, requested his lordship to use any influence he might possess to obtain him employment under Europeans at Alexandria, because he knew the determination to eject all Copts from public employment was so clear that he was bound to provide for himself at once in the best way he could. A Coptic friend of mine, an intelligent deacon and teacher in the Coptic school, gave me a pitiful picture of the underhand malice and cruelty with which the Copts in the towns of Upper Egypt, especially Assiut, are persecuted. Complaints against outrages committed upon them, their churches, and their priests, were almost hopeless, because, owing to the corruption and denial of justice, witnesses were easily suborned to testify that the miscreants were not Mohammedans, but rival Christian sectaries.

One of my informants in high office gave me a curious proof of the improvement that had been wrought in the country through European intervention. In his department he had the opportunity of noticing that the taxes had, for some time past, been often paid in coins which had been several years out of date. This was a proof that the native taxpayers were now paying their taxes out of treasure long buried. In the iniquitous days of Ismaïl Pasha, the fellaheen preferred mortgaging their lands to extortionate money-lenders to paying with the money they had already saved. They well knew that if they disclosed the possession of capital the rate of taxation would be raised by the provincial official, and they would have to mortgage their lands after all in order to save themselves from the lash or *courbash*. Owing to the readjustment of taxation which had been brought about by the various administrative efforts that followed on the report of the Commission of Inquiry in 1878, to the regulation of the times for payment (so that these times corresponded with those of the sales of the crops), and to the strict supervision of the local functionaries, the taxpayers had little reason any longer to resort to the money-lenders. They even preferred paying the taxes out of their buried treasure to selling their crops before they could get the best possible market for them. Thus the reappearance of these almost obsolete coins is an unmistakable proof of the sound basis on which the financial administration of the country has of late rested. My informant went on to say that the obvious and necessary consequence of the relaxation of the European Control and of the disuse of European officials in high places will shortly manifest itself in the treasure being buried afresh. One of the most obstinate evils that the European Administrators had to deal with was the mode of taxation, which imposed a certain amount to be levied on each district, but allowed the local officers to exempt themselves and their friends at the cost of their poorer and dependent neighbors. The secrecy, slowness, shiftiness, and, in one word, unbusinesslikeness of all Oriental economics, rendered this enormity almost unassailable. A leading English official, practised in Indian finance, spent four months in travelling from village to village and doing his utmost to get at the root of this disorder. He and his coadjutors succeeded, and the result has been the most complete system of central supervision, and the absolute prevention of local tyranny and corruption. Signs have already appeared of this state of things being threatened. The Mudir of a province told my official informant that he expected to encounter serious difficulties from the return to their homes of the members of the Chamber of Notables. Hitherto he had been the only avenue for petitions and representations on the part of complainants to the central authority. Henceforth these returned members would each become a new and distinct avenue for local representations to the Chamber of Notables. "But," said he, "these multiplied petitions would be those from the rich to the disadvantage of the poor, whereas the petitions he had had hitherto to present were those from the poor complaining of the rich." It is needless to point out how these silent but veritable tokens are as straws showing which way the wind of anarchy and tyranny, under the outraged name of popular government, is beginning to blow.

On my return to Alexandria I found that the main topic of discussion was and is that of the new apprehended, or hoped-for, Collective Note. It is said that if France and England, empowered by the mandate of the leading states of Europe, should determine to avail themselves of Turkey to enforce their decrees, the Egyptian people and army would oppose very slight, if any, resistance. There is a profound belief that the Caliph has a right to do what he will with his own; and, though it is true that the agricultural population fear change of any kind more than they fear or hope for anything else, yet, if change is to come, a Turkish army would be the least unpalatable form of it. The profound objection hitherto entertained by France to alliance with Turkey for any purpose, seems to be giving way with the Tunis policy in the hands of M. de Freycinet. I am strongly averse myself to any

steps which could prolong for a day the organization of the vicious and corrupt court at Constantinople, or give a semblance to the notion that Egypt is ever to be governed in the way in which Turkish provinces, not protected from without, have invariably been governed. But I do not see that it is any countenance to the prolongation of Turkish rule to make its existing relations to Egypt real and profitable for Egypt's true welfare, instead of their being a mere instrument for extorting tribute and troops from a dependent country. A.

POLITICAL SYMPTOMS IN MEXICO.

MEXICO, April 11, 1882.

THE political transition through which this country is passing is in danger of going unnoticed on account of the more striking changes in commercial matters. Politics are very tame now in the eyes of those who see the great openings for speculation and business enterprise afforded by the new railroads. We have been for six years without a pronunciamiento or a "plan." Government goes on without very much of the old theatric display. The President can send his message to Congress with no word of any revolution or conspiracy. Everything seems at last solidly based. Congress will be too busy, this closing session, with the estimates to have time for anything exciting. So the correspondents dismiss politics and "write up" trade.

Yet one need not be a specially keen observer to catch glimpses of important political movements and tendencies which are suggestive of new complications in the difficult problem of Mexican self-government. For one thing, it is fair to conclude that the power of the Executive is still maintaining itself as almost dictatorial. This power, it is true, has to make itself felt under new forms and by new methods. Formerly it was brute force: the argument was that of pike and gun. The Constitution always seemed to side with the man who had the most troops. Little of this remains, although the Administration continues to make large demands on the Treasury for the equipment and support of soldiers, and takes marked care to keep on good terms with the military. But the power of intrigue of a party won over by the bribe of office, and held as devoted personal followers, is a power in peaceful times as effective as swords and bayonets in revolutionary periods. There can be little question that this power is utilized by President Gonzalez. Under the forms of the Constitution he governs with a personal arbitrariness vastly too great for the President of a republic. Indications are abundant that he is bending all things to his personal will. Take, as a sample, his attitude in the matter of the recent troubles in the State of Jalisco. His own account of the matter, in his message, is bad enough. The sense of his bland words is that, on his own showing, he refused to the constitutional Governor the Federal aid which the Constitution guarantees, and not only allowed an insurrection to make head against the lawful Government of the State, but actually recognized the leader of the insurrection as Governor: "without," as he inconsequently says, "implying by this recognition anything in respect to his legitimacy." This is going very far for a Federal Executive governing under a Constitution which leaves the rights of the States very much as does that of the United States. But when we add the suspicion, openly expressed here, and not without probable basis of fact, that this insurrection was fomented by the influence of the Federal Government, because Governor Riestra was not proving docile to the wishes of the President, it becomes a most damaging matter.

I do not write of this as trying to make myself, or any one, believe that the President is aiming at anything like a dictatorship. It is not to be imagined that he would even seek an unconstitutional reëlection. When Porfirio Diaz gives heed to the Constitution it is not probable that Manuel Gonzalez will defy it. The most that can be said in reference to the bearing on the future of this "policy of absorption," as it is called, is that it means a dictation of the succession, and so of the policy, of the new Administration. Whom Executive favor will choose is a secret, though it is thought that the recent allusions of the *Diario Oficial* to General Diaz, in connection with the anniversary of his victories over the Imperial troops in '67, may portend the restoration of that stout old soldier. All this is not of so much account, however, as the proof given that the old idea of Mexican rulers still persists—the idea, namely, that the President must have no opposition, that his will must be supreme, that his party must be dominant in State and nation alike. Proof is given, as well, that this ideal of government may be aimed at, and reached, in large measure, without a soldier leaving the barracks. There is an obedience to the spirit of a Constitution, as well as a working under its letter, which is a thing for Mexican Executives yet to learn.

I take a text from the President's message, again, in writing something about the condition of the suffrage in this country. General Gonzalez informs Congress, as a thing worthy of note, that "the elections for Judges of the Supreme Court and for the Attorney-General of the nation, have been held in all the republic, excepting a few remote districts." The very fact that he should think it worth while to speak of such a thing shows something of what the state of the case has been. Peaceful and universal elections have been a rare thing; and the truth appears to be at present that the peace and quiet of the elections is simply the peace and quiet of lethargy or death. It has been amusing to notice the announcements in reference to these very elections to which General Gonzalez alludes, furnished by the *Diario Oficial*, from time to time. On such a Sunday the election for Supreme Judge in such a district took place, and the result is that such a man is chosen unanimously—by thirty votes, it may be, at any rate some amazingly small number. So the records have been running. The organ of the Government maintains a grave face, and speaks of the choice of the people; while the truth is, as the figures show, and as the opposition newspapers boldly assert, that the elections are the merest farces, simply a cumbrous way of declaring the will of the Executive. The *Monitor* charges the gravest irregularities on the Government in the matter of advertising and managing the elections, and declares that in the recent choice of judges not a dozen votes were cast in the whole country, outside of civil and military officials, and that the successful candidates, in every case, are from the innermost circle of Gonzalez's partisans. The facts seem to be that, what with the indifference and ignorance of the people, and the intriguing of the party in power, Mexican elections are managed with a method and precision which might be the envy of a New York city caucus. The plan of indirect voting, with the opportunity for Congress to constitute itself a returning-board of the fullest powers, greatly increases the facilities for work of this sort.

Of course the thought at once suggests itself that these elections, though for important offices, are not of the sort to arouse popular interest, and that they are, consequently, not a fair gauge of the popular participation in the choice of rulers. There is some truth in this; but a recurrence to the official figures for the last three Presidential elections will not better the matter much. At the second election of Juarez a total vote of 12,361 was cast by a population of 8,836,000. After the death of Juarez, Lerdo in 1872 was chosen President by 10,465 votes, with less than 1,000 against him, all told. Revolution, not the suffrage, determined the succession in 1876. In 1880, 11,528 votes were recorded in favor of Gonzalez, with no appreciable opposition.

This, for a people with practically universal suffrage, is no great credit to republican institutions. In fairness, however, one must remember the many palliating circumstances. The decision of the sword has been so often put above that of the ballot, that the popular will has come to think, not unnaturally, that it is scarcely worth any pains to express itself. For this reason it is that patriotic Mexicans are looking anxiously forward to the Presidential election of 1884 as a time when it is to be seen if eight years of peace have restored political confidence and caused a greater popular desire to exercise the right of suffrage. Till then we must suspend judgment. If the improved public education, the increased freedom and value of public discussion, the contact of a vigorous civilization shall prove, as is ardently desired, a means of arousing the people to the duties of citizenship, there will yet be hope for this unhappy country, which has a written Constitution among the most advanced in the world, but which has shown a practical inability to govern itself ever since Hidalgo and Iturbide shook off the Government of Spain. O.

Correspondence.

COMPETITIVE EXAMINATIONS FOR PASSED ASSISTANT SURGEONS.

TO THE EDITOR OF THE NATION:

SIR: I hesitate to trespass on your patience again in a matter that can have so little interest for most of your readers, but would like to correct a mistake in the letter of "C. A. S." in the *Nation* of April 20.

"Your correspondent of March 30" is not at nor near the foot of his class, nor would he lose a single number by the passage and enforcement of the "Lamar Bill."—Very respectfully, etc,

GEO. ARTHUR, P. A. Surg.

U. S. NAVAL HOSPITAL, MARE ISLAND, CAL., April 27, 1882.

THE SLAVIC POPULATION OF AUSTRIA-HUNGARY.

TO THE EDITOR OF THE NATION:

SIR: In Mr. Knoch's letter of March 5, in answer to Mr. Freeman's "Revolt in Dalmatia," occurs the following sentence: "The Germans and Hungarians are in Austria the bearers of civilization and progress, and the possessors of wealth, and are therefore, aside from their numerical superiority over the Slavs, by right entitled to the influence they possess."

There lies before me at the present moment an abstract, with editorial approval in the *Dresdner Anzeiger*, of an article by "an old and proved" member of the staff of the *Augsberger Allegemeine Zeitung*. With this double endorsement, it may be judged that the article in question was not inspired by prejudice against the Germans or partiality for the Slavs. I will quote some of its estimates and remarks:

"According to the most favorable (for Germans and Magyars) estimate, the Germans constitute 40 per cent. of the total population of the western or Austrian half of the dual empire, and the Magyars 45 per cent. of that of the

eastern or Hungarian half of the same, excluding Croatia and Slavonia. Including Croatia and Slavonia, according to the terms of the settlement of 1867, the percentage of Magyars to the whole population of Hungary is reduced to 40. The Magyars of Hungary are, however, in so far more favorably situated than the Germans of Cisleithania, that they have historical tradition in favor of their position as the one dominant race, and that they are in all respects —geographical and religious, as well as political and linguistic—a unit, while the non-Magyars are split up into a variety of Slavic and Rumanian tribes, which are, again, still further disintegrated by differences of religious belief (Roman Catholics, Orthodox Greeks, Greek Papists, and Protestants). In addition to this, the Magyars are far superior in point of education and civilization to all the other nationalities, excepting the German, and these latter, amounting, perhaps, to 13 per cent. of the population, unite in all matters of importance with the Magyars, thus giving them an actual majority. In Cisleithania, or the Austrian half of the empire, on the other hand, the Slavs, who constitute 56 per cent. of the total population, although divided into several nationalities (Czechs, Poles, Ruthenians, and Slovenians), live together in homogeneous groups, possessing a national history and national traditions, are in all political matters comparatively united as against the Germans, and are almost, if not quite, the equals of the latter in point of civilization."

It is proper to add, with regard to the estimated ratios of the different races above given, that, so far as I know, there are no exact official statistics accessible. According to Fickler's estimates of 1876, adopted by Andrée, in his atlas, and familiar, perhaps, to some of your readers, the main elements of the population in Austria and Hungary are as follows:

	Austria.	Hungary.	Austria-Hungary.
Germans	7,800,000	1,800,000	9,600,000
Magyars	20,000	5,680,000	5,700,000
Czechs, Moravians, Slovakians,	5,000,000	2,000,000	7,000,000
Ruthenians, or Little Russians	2,600,000	600,000	3,200,000
Poles	2,500,000	.....	2,500,000
Croatians, Servians,	580,000	2,570,000	3,150,000
Slovenians	1,190,000	60,000	1,250,000
Slavs	11,870,000	5,230,000	17,100,000
Rumanians	195,000	2,800,000	2,995,000
Italians	630,000	3,000	633,000
Jews	860,000	580,000	1,440,000
Gypsies	8,000	159,000	167,000

According to this estimate, and excluding the newly-annexed Slavic provinces, it will be seen that the Slavs constitute about one-half of the total population of Austria-Hungary, while in Austria alone they outnumber all other elements combined. So much for their numerical strength in the western half of the empire. In estimating their importance as a political factor, the Poles must be reckoned as a separate nationality. They are in feeling almost a separate race, and are willing to make common cause with whatever party offers them the greatest degree of administrative independence. Something of this particularistic or national (in distinction from race) feeling has been visible among the Czechish leaders also, but at present it is to their interest to be pan-Slavic. The other Slavs follow their lead. Estimating in a similar manner the political strength of the Germans, they on their part do not constitute a political unit. With them party feeling is, as a rule, stronger than the sentiment of race. Accordingly we find that the present Austrian Ministry, that of Count Taaffe, was brought into power and is sustained by a combination of the Conservatives with the Slavs, or Nationalists, the Church playing a prominent part in effecting the union. The Liberals, on the other hand, the so-called "Constitution-true" party, are centralists, who seek to consolidate Austria, making it a German state in all its parts.

In Hungary, the party in power, which comprises almost the entire Magyar population, and was not long since in danger of going to pieces merely from its own weight, is the Liberal. Like the Liberals of Cisleithania, those of Transleithania seek to solidify the state by making it a social and linguistic unit.

Mr. Knoch speaks of the Emperor Francis Joseph as endeavoring to satisfy "the most powerful and numerous" of his subjects "without wronging the weaker ones." So far as the Austrian half of the empire is concerned, this is true in quite a different sense from that in which Mr. Knoch meant it. In so far as the Government is parliamentary, the tendency of the various Ministries since Sadowa revolutionized the whole political system of the country has been to concede to the Slavic element complete equality with the German. In so far as the Austrian Emperor's personal action is concerned, I should say it has tended in the same direction.

The subject of this letter is in no sense the question at issue between Mr. Knoch and Mr. Freeman, but, although incidental, I could not allow what seemed to me such serious misstatements to pass unchallenged. My letter is certainly tardy, but it was only yesterday that I received the *Nation* containing Mr. Knoch's letter.—Very respectfully,

JOHN P. PETERS.

DRESDEN, GERMANY, April 20, 1882.

Notes.

HOUGHTON, MIFFLIN & Co. have in press 'Reminiscences of Oriel College and of the Oxford Movement,' by the Rev. T. Mozley. The same publishers have issued 'Hawthorne' in their "American Classics for Schools." If all has not been done in it that might have been, with the material available, the selections are praiseworthy, and will be welcome to children.

Geo. W. Harlan & Co. announce 'Henry Wadsworth Longfellow: a Medley in Prose and Verse,' by Richard Henry Stoddard—a quarto volume. This firm has removed to West Twenty-third Street, now the neighborhood of a large fraternity of booksellers and publishers, embracing the Messrs. Putnam, Henry Holt & Co., E. P. Dutton & Co., and F. W. Christern.

"Two Gentlemen of Verona" is the latest issue in Rolfe's edition of Shakspere published by Harper & Bros.

"The Library of Cornell University" is the title of the first number of a publication analogous to the Bulletin of Harvard University. It is mainly a record of recent accessions to the library, with notes and bibliographical appendices. Deserving of remark are the brief lists of titles relating to the German civil service, and of Petrarch bibliographies, both drawn up by the Librarian, Prof. Willard Fiske, whose collections in these two widely distinct fields of human interest are known to be rich almost beyond parallel, either in this country or abroad. In a note on Marsand's *Biblioteca petrarchesa*, which was sold to the French Government, it is stated that this "most complete and precious collection of Petrarchiana ever brought together" was burnt by the Communists with the Tuileries.

In the Harvard Bulletin, No. 22, most significant are Mr. Winsor's list of the most useful reference books; Mr. Richard Bliss, jr.'s classified index to the maps in Petermann's *Mittheilungen* for 1855-81; and Prof. J. D. Whitney's list of American authors in geology and palæontology.

The bibliographies of the March Bulletin of the Boston Public Library relate to Copyright; Ireland and the Land Question; and Civil Service. A number of maps, we are told, of Boston and vicinity during the half century 1705–55 have been discovered among the "King's Maps" in the British Museum, and steps are being taken to have copies made of them.

From the fourth annual report of the Librarian of the Providence Public Library, we learn that his serial *Monthly Reference Lists* began its second year with 220 subscribers, some of whom reside in distant States and even abroad. Instructors in several colleges have found it to their advantage to see it regularly. We are glad that this library is beginning to receive material aid from the public-spirited, even if it is a little slow in coming and as yet but meagre in amount.

The valuable papers of the late Dr. James Rush are being arranged by Mr. W. H. B. Thomas for the Library Company of Philadelphia.

Prof. C. S. Sargent's Forestry Bulletins, Nos. 9–14, of the Census Office, show by tables and colored maps the amount of standing pine in Louisiana, North and South Carolina, Georgia, Pennsylvania, and Arkansas, and of the redwood in California—this last, a sorry strip along the coast from Santa Cruz to the Oregon line. The redwood area already deforested is seen to be an ominously large percentage of the total tract.

The *American Naturalist* for May contains the beginning of a discussion, by R. Ellsworth Call, of "The Loess of North America," in which Baron Richthofen's view of the origin of this wide-spread and peculiar formation is controverted.

We have received "The Chatauqua Scientific Diagrams" (Series No. 1: Geology), printed on ten sheets, each 27½ by 36 inches, and comprising fifteen sketches, intended to illustrate pictorially the action of water and heat as geologic forces, and, more especially, the forms of life, fauna, and flora, characteristic of each of the great geological periods. They are accompanied by a pamphlet of descriptive and expository text by Professor A. S. Packard, jr., of Brown University. The plates are executed and the work published by the Providence Lithograph Company. They are designed, mainly, for the use of classes in the lecture-room. As works of art, in quality of drawing, coloring, and printing, as well as in the grouping of animals of the prehistoric ages, with studied reference to the display of form and individual characteristics, they have much in common with the tailors' fashion-plates of this present Age of Man.

The American Association for the Advancement of Science will hold its thirty-first meeting at Montreal, beginning on Wednesday, August 23, under the presidency of Principal Dawson. The headquarters of the Association will be at McGill University. The circular announcement states that $1,250 have already been subscribed toward reprinting the earlier Proceedings.

With the aid of the Women's Education Association, the Boston Society of Natural History will reopen its Seaside Laboratory at Annisquam, Mass., from July 1 to September 1. This station is not far from the town of Gloucester. Those who have already made a beginning in the study are eligible for admission. Applications should be addressed to Alpheus Hyatt, the Curator of the Society.

White & Stokes, New York, have made a very handsome book of 'Summer Gleanings,' compiled by Rose Porter. The plan is perfectly simple, and the result will be a revelation partly of summer opportunities, partly of character. Every day from June 1 to August 31 has its page, introduced with a poetical or other "elegant extract," and containing a division called "Jottings by the Way," which explains itself, with one for a pencil or color sketch and another for pressed flowers.

The Saturday lectures just concluded at the National Museum, Washington, will shortly be gathered into one volume, with the imprint of Judd & Detweiler. They are a gratifying evidence of the steady growth of the capital toward a homogeneous and permanent life. Professor Theo. Gill, Professor Otis T. Mason, Professor J. W. Chickering, jr., Major J. W. Powell, Professor C. V. Riley, Dr. Robert Fletcher, Mr. William H. Dall, and Dr. S. W. Burnett delivered these popular scientific addresses, which have already been printed separately.

We have received from B. Westermann & Co. the first number of the quarterly *American Journal of Neurology and Psychiatry*, edited by Dr. T. A. McBride, with Drs. L. C. Gray and E. C. Spitzka as associates. About half the number is devoted to résumés of neurological publications, chiefly foreign, which will constitute its chief value to most American alienists and practitioners. It is evidently designed to be an organ of what is popularly known as the new Continental or anti-Utica school.

With the *Observatory*, *Copernicus*, and the *Astronomical Register* in England, the *Astronomische Nachrichten* in Germany, and *Ciel et Terre* in Belgium, there would seem to be little ground left for occupation by a new European astronomical magazine. M. Camille Flammarion has, however, just issued (Paris: Gauthier-Villars, March, 1882) the first number of *L'Astronomie*, a popular monthly, to be devoted to the progress of astronomy and kindred topics. The new journal is handsomely got up, and will doubtless fill a more or less important niche in semi-scientific circles in France. The chief article of this issue gives the history of the Paris Observatory, with illustrations of its appearance at the present day and at the time of Cassini, in 1672, very soon after its original construction.

The eighth year's issue of the Society for Photographing Relics of Old London is rich in promise. Half of the twelve plates (which are 10x8 inches, by the way) will represent Ashburnham House, outside and in; three will be devoted to Lincoln's Inn Fields, and one each to Little Dean's Yard (Westminster), the Banqueting House (Whitehall), and the Water Gate of York House. The series, it will be seen, is in a monumental vein, and the high standard of those which have preceded insures the full guinea's worth for these imperishable prints.

Das Magazin, in its latest issue, promises to reproduce shortly the inedited letters of Goethe to Carlyle.

The French school classics in use in this country are prepared to aid those to whom the language is strange. For advanced students there can be no doubt that the editions made for use in France are more advantageous. In the better and newer French schoolbooks the merely grammatical notes are fewer, and the literary and historical notes are greatly increased. Of the highest order is M. Ch. L. Livet's new edition of Molière's "Tartuffe," in which the ample notes are put at the end, but which gives variorum readings at the foot of the page and has an elaborate *lexique* or glossary as an appendix (Paris: Dupont; New York: F. W. Christern).

Incidentally in our notice of the last *Atlantic*, we referred to a poem, "Via Solitaria," as if unquestionably Mr. Longfellow's. The author, it appears, was Dr. O. M. Conover, of Madison, Wis. The verses were first printed in the New York *Independent* in the early part of 1863.

— We do not often have occasion to notice a book auction. Sales such as those of the Beach Lawrence collection of international law, for instance, which is just over, are too common to claim public attention, which is reserved for such exceptions as the Brinley sale. But there is one item in a catalogue otherwise commonplace enough—the law library of the late Senator Matt. Carpenter—which gives one pause: "1,111 volumes of United States documents"! Mr. Carpenter was Senator from 1869 to 1875 and from 1879 to 1881, and apparently saved one copy of each of those volumes which the Government publishes so indiscriminately, and gives away so liberally to so little purpose. In spite of the really valuable character of some of the issues, we doubt if many of his brethren have been as conservative. But if every Senator and Representative has done as well, and has kept all that came to him, Washington must be the richest city in private libraries in the country, or else there must be a number of private libraries scattered through the country of which we fear the Bureau of Education has given a very insufficient account. At the auction this lot will undoubtedly be the leading occasion of interest. We can imagine the auctioneer coming to it after the tiresome monotony of selling law books at prices ranging from three to eight dollars: "Now then, gentlemen, how much am I offered for this 'library in itself'?"

—The ten days' sale of the second third of the Sunderland Library ended April 27. The first sale occupied ten days and brought £20,000. The second, as was expected, was not pecuniarily so successful. Still there was much that was interesting. If there were no vellum Bibles to sell for £1,600, there were plenty of old French and Spanish chronicles, and twenty-two pages of early Ciceros; if there was no Boccaccio to fetch £920, there were precious Dantes, among them a manuscript of the 'Inferno' of the early part of the fifteenth century, and an excessively rare printed edition of 1472, both of which ought to weigh against gold, and a good deal of it, too. Among the works which were more interesting for their matter were some five hundred lots of volumes and pamphlets relating to French affairs mostly between 1563 and 1663, some of them surreptitiously printed, all of them rare, some, perhaps, unique. No doubt the British Museum and the Bibliothèque Nationale filled up some gaps in their shelves. There were many Americana, some of which may have been secured for this country; but we understand that in the previous sale comparatively little crossed the ocean westward. The noted bookseller Quaritch, when asked, after the first sale, what he should do with the nuggets for which he had paid such enormous prices, is said to have made a reply which implied that he had bought at haste to repent at leisure; we have not yet heard whether in the heat of the fight just ended he let his French or his American competitors carry off the prizes; but the amount of the proceeds, £9,530, favors that supposition.

—To those who remember "Professor" Hoffmann's 'Modern Magic,' by far the best manual of conjuring and prestidigitation in our language, his latest work does not need to be praised. It is a translation of Robert-Houdin's 'Tricheries des Grecs,' a work in which probably the finest and best-equipped prestidigitator that ever lived used his skill in laying bare the devices of gambling swindlers. The original French work, at one time very scarce, has recently been reprinted; and an English translation published in 1863 has been long out of print. "Professor" Hoffmann's 'Card-Sharping Exposed' (London and New York: George Routledge & Sons) is, however, not a mere translation of Robert-Houdin's work; it has been enriched with a suggestive preface by the English editor, who has also added many valuable notes, partly from his own experience and partly from the 'Filouteries du Jeu' of M. Cavaillé, and the 'Tricheurs' of M. Alfred de Caston, both published in Paris since the 'Tricheries des Grecs,' and both now hard to find. Nowhere is the perverseness of human ingenuity seen to more advantage than in devices a very large proportion of which are based on the sharper's belief that most players will be only too glad to seize an apparent chance to cheat. Not merely the "general reader" but the student of men and manners will find his account in reading the many neatly-told anecdotes which abound in Robert-Houdin's text and in "Professor" Hoffmann's frequent notes. Nothing is said, by the way, of our American national games, poker and euchre; and even faro is slighted. But this is of no great consequence, as the principles which underlie cheating are the same, whatever the variations in the game.

— Two recent issues of the Clarendon Press deserve the attention of Greek scholars. One is a second edition of Chandler's 'Practical Introduction to Greek Accentuation,' which opens a new vista in the possible miseries of authors Here is a book of over three hundred pages, most of it in fine print, and of such a character as to cost immense labor, both in compilation and in proof-reading, and yet the author freely expresses his disgust for the whole subject on which he has written. It is "an insipid subject," one "in which I never took more than a languid interest," "a mass of petty and uninteresting details," etc. He never tires of complaining of the absurd theories and conflicting statements of the ancient grammarians. We suspect much of this dislike of the subject may be due to having taken hold of it by the wrong end. Mr. Chandler professes to exclude all theories and principles as hypothetical and uncertain of application, but his whole classification of words is based on the assumed principle that proper names, or verbal nouns, or monosyllables, or *temenica*, or what not, having the same termination, ought to have the same accent. This principle, of course, he borrows from the early grammarians, and also of course it leads him into the same wilderness of arbitrary rules and countless exceptions into which he complains of its leading them. The principle is sound enough within a limited range of application, and some of the rules it furnishes are useful as a help to the memory; but any attempt, even so heroic a one as this, to group all the facts under a system of rules, must break down, because the rules with their exceptions become as burdensome to the memory as the facts themselves. The true way to deal with Greek accentuation, with the material at our command, is to learn the accent of each word and form as a part of the word itself, no more capable of being accounted for on a principle than the transitive and intransitive use of the first and second aorists respectively, or any other apparent caprice of language, and to restrict theory to the more general principles of the nature and possible position of accent. The method of this latter kind of investigation has never been better illustrated than by the late Professor Hadley's essay on the subject. Mr. Chandler's work, we think, will be useful mainly as a book of reference when one desires to get at the authorities on a doubtful case.

— The other work from the Clarendon Press is Mr. E. L. Hicks's 'Manual of Greek Historical Inscriptions,' and it is worthy of praise as having an excellent design excellently carried out. It consists simply of some two hundred inscriptions, from all parts of the Greek world, dating all along from about 600 B. C. to about 80 B. C., arranged in nine chronological sections, and accompanied by brief explanatory notes. The selection takes in only public documents, as a rule, such as have

some bearing on formal history, though in one or two cases others are added. The book is not in any sense a manual of the science of epigraphy; only three of its inscriptions are given in facsimile. Nor does it aim to open to the student the knowledge of private life which has been gained from the study of these records. Its design is to show by a few examples how much historical information, confirming or correcting or supplementing the statements in literature, or quite independent of these, may be gathered from this recently opened source. The great impulse which has been given to the study of antiquity since inscriptions began to be thoroughly and intelligently studied, shows how much good such a book as this may do for the coming generation of English-speaking students. Notwithstanding this modest purpose, the book is so prepared as to be a real contribution to the science to which it belongs. It contains several previously unpublished inscriptions (Nos. 4, 123, 174, 182) and several newly collated, in which new readings are proposed. It ought to be carefully studied by any one proposing to work in the projected American school at Athens. We should hope that in a second edition the notes might be somewhat expanded, the number of the inscription on the page added to the running title, and some of the misprints in accents corrected.

—The singularly low position assigned to the study of the natural sciences in the curriculum of French academic education may possibly account for the circumstance, pointed out some few years ago by M. Quatrefages, that France no longer holds the supremacy in the scientific world that she held during the first quarter of the present century, when, it might fairly be stated, every branch of scientific study had at least one master representative in the city of Paris. This decline, if we remember rightly, was attributed by the naturalist above mentioned to a lack of philological capacity among the French people as a nation, so that while specialists were able to keep abreast of the various advances made in their own country, they were unable to cope with their German and English brethren, whose rapidly-following discoveries were noted in unknown tongues. It appears from an interesting article recently published in the *Revue Scientifique* by the distinguished botanist, Gaston Bonnier, that for a considerable period preceding 1880 scientific instruction had been almost completely banished from the academic course (*études secondaires*) of the *lycées*, and that consequently only the elements, and usually not even these, of a scientific education were necessary for the degree of bachelor of letters (*baccalauréat ès lettres*). Even at the present day, and after the decree of August, 1880, exacting of every aspirant for the *baccalauréat ès lettres* a thorough scientific training, embracing, in addition to physics, chemistry, and mathematics, the studies of zoölogy, anatomy, palæontology, botany, physical geography, and geology, not even the rudiments of the last-named branches are demanded from the candidate for the degree of bachelor of sciences (*baccalauréat ès sciences complet.*) It may appear surprising that in the reforms recently attempted by ministerial decree in general academic education the introduction of natural-history studies should have met with decided opposition, yet M. Bonnier clearly shows that not only in many cases were the Government's instructions silently ignored, but in several instances they were as much as openly condemned by members of the various faculties. So slowly are the reforms being carried into effect that up to March of this year, as stated by M. Bonnier, there were in all the various *lycées* of France only two titular professors of natural history, one in the *Lycée Louis-le-Grand* and the other in the *Lycée Fontanes*.

—While the new movement has received the approval of many of the more prominent educators of France, it is interesting to note that so distinguished and eminently successful a naturalist as Lacaze-Duthiers, who has recently been elected to the Superior Council of Education, has set himself in direct opposition to it, grounding his reasons on the apparently practical fact that lawyers, notaries, and other non-scientific professional men would derive no benefit (and perhaps only injury) in their various vocations from the study of animal and vegetable forms, or from geological horizons. M. Lacaze-Duthiers appears to forget that it is not always the man that determines the study, but that in many cases it is the study that decides the man. The position taken by this *savant* contrasts prominently with that held by men across the water, like Huxley and Lubbock, who are using the most strenuous efforts to raise scientific training to the front rank of a liberal education.

—Maisonneuve & Co., of Paris, have undertaken a publication entitled 'Les Littératures Populaires de Toutes les Nations,' and comprising traditions, legends, songs, proverbs, riddles, and superstitions. The first volume, by Paul Sébillot (1881), is devoted to 'La Littérature orale de la Haute-Bretagne,' and contains a selection from all the above-mentioned classes of folk-lore. In addition to interesting local legends, many well-known popular tales here find variants and parallels. We can only mention one, "Le Colimaçon et le Renard," p. 237, which is a version of "How the Tortoise Outran the Deer" (Hartt's 'Amazonian Tortoise Myths,' p. 7), better known from Uncle Remus's inimitable chapter, "Mr. Rabbit finds his match at last." The second and third volumes (1881) contain 'Légendes Chrétiennes de la Basse-Bretagne,' collected by F. M. Luzel, whose labors in this field are already well known. Many interesting legends are given of Christ's journeys upon earth, some of which, as "Le Bon Dieu," "Le Sabotier et la Femme avare," p. 9, were previously known only through Italian versions (Bernoni's 'Tradizioni popolari veneziane,' p. 1). This is also true of a favorite class of legends, journeys to the other world (vol. i., pp. 216, 225, 254), hitherto known out of France only by Sicilian versions (Gonzenbach, No. 85, Pitrè, No. 111). Many of the legends are mixed up with fairy tales in a very curious manner, and show how popular tales are constantly undergoing change.

—We mention, out of its order, the fifth volume, 'Poésies populaires de la Gascogne,' by J. F. Bladé (1881), the first of several volumes. The present one is devoted to "Poésies religieuses et nuptiales," and is a valuable addition to French folk-songs. The fourth volume is in some respects the most interesting as well as the most novel. It contains 'Les Contes populaires de l'Égypte ancienne,' by G. Maspero (1882), and ought to find a ready welcome among those whom Ebers has interested in the every-day life of ancient Egypt. The stories it contains, seven complete, or nearly so, and six fragments, of little general interest, have all seen the light before in scientific periodicals, and one or two even in English magazines; but they are here gathered together for the first time, retouched by the editor, and prefaced with an interesting introduction, mainly devoted to a sketch of Egyptian life as depicted in the tales which follow. The best known is the first, "Le Conte des deux Frères," which offers many points of comparison with modern popular tales. A few such points are found in the other stories, as in "Le Prince prédestiné," p. 33, a common feature in fairy tales being the fairy godmother's imprecation of death to the child at a certain age from the prick of a needle, or spindle, etc. In the same story the princess is given to the one who can fly up to her window, which recalls the princess in modern stories bestowed on the suitor who leaps a stream, etc. ('Old Deccan Days,' p. 60). It weakens, of course, the theory of the Aryan origin of fairy tales to find these marked resemblances in a non-Aryan land. Maspero deems himself warranted in considering Egypt, if not one of the countries where popular tales had their origin, at least one of those where they first became naturalized, and where they assumed a really literary form. We may add that the volumes of the above series are charmingly printed in a limited edition, with ornamental letters, etc., and are bound in crimson cloth.

—The Roman correspondent of the Paris *Temps* states that the excavations recently made about the temple of Antoninus and Faustina, in the Forum, have not resulted in revealing fragments of the Fasti consulares, as was hoped, but have yielded a noble and curious recompense. In the Museum of the Capitol is preserved a fragment of the plan of Rome engraved in the time of Septimius Severus and of Caracalla—as has been computed, in the year 211. This relic was found some three hundred years ago in quite another place than the vicinity of the temple now being dug about, yet here has come to light another fragment which just fits it, and which represents the very section of Rome where it turns up. The older fragment had on it a part of the temple of Castor and Pollux; the new one completes this temple, and indicates a group of houses between it and the Palatine.

—A few weeks ago there died in the Russian province of Livonia a man almost entirely unknown to fame in Western Europe, who yet worked for the realization of a national scheme as gigantic as ever engaged the labor of a Charlemagne or a Peter the Great. His name was Jacobson, his occupation that of editor of a Dorpat journal, and his aim the transformation of all the north of the Russian Empire, from the Baltic Sea and the Gulf of Riga to the Ural Mountains, into a Finnic realm, ruled by the Czar as Monarch of all the Finns. Jacobson's paper, the *Saccala*, was published in the Esth, or Esthonian, dialect, which belongs to the Tchudic branch of the Finnic family of languages, embracing the Finnish proper (the language of Finland) and some minor idioms. Throughout his life he was active in awakening and fostering the sentiment of Finnic nationality among the Esths, a people of about 600,000 or 700,000 souls, forming the rural population of Esthonia and of parts of the neighboring Governments of Livonia, St. Petersburg, Pskov, and Vitepsk. These Esths were to form the great link between the Finlanders and the more eastern fragments of the Finnic race, as far north as the White Sea, and as far south as Moscow. Visionary and absurd as this scheme appears, Jacobson's activity was far from being devoid of influence. He powerfully contributed toward undermining the position of the ruling class in the provinces south of the Baltic, that of the landed proprietors of German and noble descent, availing himself of the coöperation of the levelling politicians of the Moscow school, who supported the movement as practically anti-Teutonic, instead of anti-Russian, and democratic. He founded educational, literary, and agricultural societies—all in the interest of the Esth husbandmen—secured the support of high official influence for his endeavors, accepted the aid of the Greek Church as against the Protestantism

of the German nobility, and carried his opposition to the latter to the verge of revolutionary agrarianism. He continued this agitation to the end of his life, and his funeral took place amid popular demonstrations.

—Dr. Brauns, in his 'Geology of the Environs of Tokio' (No. 4 of the *Memoirs of the Science Department* of the University of Tokio), has done a work for which the foreign residents in the capital and chief port of Japan, as well as native scholars and geologists, will be grateful. The immense cliff-cuttings at Kanagawa and Oji, which all tourists visit, are like open pages of the island's geological record; but, heretofore, only the initiated could read as they walked. The Tokio plain, stretching from the bay to the mountains in a rough semicircle eighty miles in radius, is of diluvial formation, its strata consisting of shale, sandstone, hard and loose conglomerate of enormous thickness, but with perfectly uniform fauna. Dr. Brauns assigns the whole of it to the Pliocene era. The determination of the age of this plain is of the highest importance, as its strata are found almost everywhere, not only in the maritime, but in the inland provinces of the Empire, the Tokio plain being the largest of all. The molluscous fauna of this plain he finds to be of a palæarctic character, and closely connected with that of prehistoric Europe, while among the larger animals are two species of elephants. He does not think that the Tokio plain has been covered with water within historic time. He is particularly careful not to commit himself to the dogmatic settlement of the question as to the antiquity of man in Japan. He mentions, but is very conservative with regard to, the alleged revelations of the Omori shell-heap, so well investigated by Prof. Morse, and treated of in a former Memoir of the University. Particularly fine are the illustrations of shells, and the maps and drawings by Mr. Hirauchi, a native artist; and the entire get-up of the book, printed and put together by native workmen, is highly creditable.

JOHN STUART MILL.

John Stuart Mill: A Criticism, with Personal Recollections. By Alexander Bain, LL.D., Emeritus Professor of Logic in the University of Aberdeen. London: Longmans; New York: Henry Holt & Co. 1882.

THOUSANDS of men now living owe a deep debt of gratitude to the teaching of Mill. They naturally desire to possess such a biography of their teacher as Stanley provided for the disciples of Dr. Arnold, or Mr. Trevelyan for the admirers of Lord Macaulay. Mr. Bain's 'John Stuart Mill' will, we regret to say, not prove anything like the life which Mill's followers wish for. The 'Criticism, with Personal Recollections,' is a book of some merit, for it gives in a precise and accurate form information which is of interest and value. But the author of the work is a Scotchman, a logician, and a grammarian. His treatise, therefore, is dull, pragmatical, and ill-written. It abounds in criticisms which might well have been shorter; it contains a small number of personal anecdotes of Mill, which, considering the writer's opportunities, might have been more numerous. A book of a totally different character, to a certain extent, supplies Mr. Bain's deficiencies. Miss Caroline Fox's 'Journals and Letters' have far too much individual flavor and character not to deserve notice on their own account. Their importance, however, for our present purpose is that they allow us to see that emotional side of Mill's nature which either was concealed from the scrutiny or escaped the analysis of the Aberdenian professor. Thus the 'Criticism' and the 'Memorials of Old Friends' supplement each other. They should be studied side by side with Mill's 'Liberty,' his 'Autobiography,' and his 'Essays on Religion.' Such study will enable a candid critic to obtain some insight into Mill's personal character, and hence to understand within certain limits the nature and the causes of two marked peculiarities in his intellectual and moral attitude as a thinker and a teacher. Our aim in this article is to point out the nature of these peculiarities. On another occasion we propose to show their close connection with the circumstances of Mill's life and education.

A first and unmistakable peculiarity of Mill's position is, that while he was the disciple and adherent of an emphatically dogmatic and unsympathetic body of thinkers, he was himself, throughout his career, bent on expanding the doctrines of his school so as to include ideas and sentiments many of them foreign to the Benthamite and Utilitarian creed. His function was, on his own view of it, the reconciliation of half-truths which were contradictory only so long as each of them was looked upon as the whole truth. The labor of his life might, if you take his own estimate, be defined as the reconciliation of the doctrines of the eighteenth century with the new truths or sentiments of the nineteenth. "The fight between the two eras always reminded me," he writes, "of the battle about the shield one side of which was white and the other black. I marvelled at the blind rage with which the combatants rushed upon one another. I applied to them and to Coleridge himself many of Coleridge's sayings about half-truths; and Goethe's device, 'many-sidedness,' was one which I would most willingly at this period [1830] have taken for mine." The *Westminster Review*, Mr. Bain tells us, "abounds [during Mill's editorship] in editorial *caveats*, attached to the articles; his principle of seeing partial truth on opposite sides was carried out in this form. . . . The watchword in those days of the *Review* was, Sympathize in order to learn. That doctrine, preached by Goethe and echoed by Carlyle, was in everybody's mouth, and had its fling." But if sympathy and reconciliation were the watchwords of the day, there was something markedly individual in the mode in which Mill gave expression to the ideas of 1830. He did not, as did many of his associates, consciously desert the principles of the eighteenth century. He attempted rather to enlarge the foundations of the system in which he was educated than to build up a rival scheme of doctrine. He held out a hand to Coleridge, but he never let go his grasp of Bentham. The result was remarkable. He did, as a matter of fact, unite in his own mind doctrines and sympathies rarely entertained by one and the same person. The theoretical basis of his ethical views remains to the end of his life Utilitarianism; but the doctrine of Bentham as developed by Mill runs very near to a doctrine of disinterestedness, and certainly has lost both the rigidity and the precision which it acquired in the hands of Austin. As a political economist, he remained a disciple of Ricardo; yet the strict dogmatism of the earlier economist is so expanded by Mill as to leave room for sympathy with socialism, and occasionally for something approaching toward toleration for protection. In politics, he remained a "philosophic Radical"; but his early belief in democracy became so modified by his dread, derived partly from De Tocqueville, lest the rule of the majority should encroach on individual freedom, as to display some affinity with Liberal-Conservatism.

The point in which he changed least is his logical and metaphysical doctrine. In this he remained the firm adherent of the dogmas in which he was educated. With this exception (which is for many reasons a most important one), Mill's efforts, whether consciously to himself or not, were directed toward the reconciliation of apparently opposed tendencies, as well of thought as of feeling. This aspect of Mill's teaching is well worth consideration. It assuredly immensely increased his influence during the period (say, roughly, 1850–1870) when his power over young and thoughtful men was at its height. The reaction against the eighteenth century had spent its force; the enthusiasm of the early Utilitarians for practical reforms had (partly because so many patent political evils had in fact been removed) cooled. The teacher who, holding to eighteenth-century modes of thought and reasoning, nevertheless sympathized with the feelings and the special enthusiasms of the nineteenth century, appeared the best and wisest of guides. His honesty was transparent. He was bound by no ties or prejudices of church, creed, or profession; he sought solely for the truth. Hundreds, therefore, came to him to learn what was true. Nor can any one who has felt Mill's influence deny, without the grossest ingratitude, that his influence was that of a thoughtful, noble, inspiring spirit. A man must have been singularly dead to some of the best feelings of youth who could (say, twenty or twenty-five years ago) have studied Mill's 'Logic' or 'Political Economy' without experiencing great intellectual improvement; or have read Mill's 'Liberty' without imbibing a spirit of generous enthusiasm for all that is best in human nature. If Mill was not in every respect the unrivalled teacher which he appeared to many of his youthful students, the cause of this is to be found in the second peculiarity of his genius.

This second feature, to which attention should be specially directed, is Mill's capacity for uniting in his own mind beliefs and sentiments which, in some cases at least, were united without being properly combined or fused together. It is hardly an exaggeration to say that this union without combination is, though Mill was quite unconscious of the fact, a characteristic of his system. He was far too honest and vigorous a thinker to hold together as true, opinions which he could not reconcile with each other. Wherever he perceived that such contrariety between his different views existed, he was assuredly prepared to admit with the utmost candor that his mind was not made up; but his mode of reconciling different tendencies of thought or sentiment was occasionally superficial. He further, especially when under the influence of strong feeling, at times advocated views which, if not fundamentally irreconcilable with each other, he never succeeded in fully reconciling because he did not perceive their inconsistency. It is difficult, for instance, to believe that any one but Mill himself can ever have felt that his attempt to reconcile the views of his father with the criticisms of Macaulay was satisfactory. Fewer still, we should suppose, can find, as Mill apparently found in Mr. Hare's scheme, a cure for all the possible perils of democratic tyranny. Mill, it should be noted, began life as a disciple of Bentham, and hence looked on the rule of the majority as a necessary guarantee for good government. From De Tocqueville and from his own speculations he derived the idea that the tyranny of the majority was a despotism no less to be feared than any other form of despotic rule. It would have seemed almost impossible for any man to admit as completely as did Mill the doctrines of De Tocqueville, and at the same time to retain his belief in the advantages of democratic government. For Mill, however, the difficulty was solved by Mr. Hare's admirable system of "Personal Representation." In this he saw "the greatest improvement of which the system of representative government is suscepti-

ble—an improvement which, in the most felicitous manner, exactly meets and cures the grand and what had before seemed the inherent defect of the representative system." Mill's acceptance of this solution is in many respects surprising. Bagehot's criticisms have rendered it very doubtful whether Hare's scheme would in fact achieve its immediate object. The oddity of the thing, however, lies in Mill's child-like trust in what at best is a mechanical device. In a democracy the majority are sovereign. Like any other sovereign, the majority may abuse their power. By no device whatever can both the minority and the majority be supreme. Mill, one would have thought, might have learned from Carlyle to distrust mechanical means for meeting moral difficulties. He must have been taught by Austin the lesson which he does not seem to have learned, that attempts to limit sovereignty are necessarily futile. That Mr. Hare's ingenious little device should have filled a man of Mill's intellect "with new and more sanguine hopes respecting the prospects of human society," is, take it all in all, one of the strangest and most noteworthy pieces of self-revelation which any autobiographer has ever left on record for the instruction of posterity.

Nothing, again, is more curious than the difference in tone between Mill's 'Liberty' and his essay on 'Nature.' This point, too, deserves careful examination. The whole thesis of Mill's 'Liberty' is the duty of leaving to each person the maximum of individual freedom compatible with the existence of society. "There is a sphere of action in which society as distinguished from the individual has, if any, only an indirect interest, comprehending all that portion of a person's life and conduct which affects only himself; or, if it also affects others, only with their free, voluntary, and undeceived consent and participation." Every form of argument and of illustration is used to prove that within this sphere each individual should be left completely uncontrolled by law, and but slightly controlled by social opinion. The advisability, further, of allowing free scope to individuality is based on the benefit of individual freedom to mankind at large.

"I forego," writes Mill, "every advantage which could be derived to my argument from the idea of abstract right as a thing independent of utility. I regard utility as the ultimate appeal in all ethical questions, but it must be utility in the largest sense, grounded on the permanent interests of a man as a progressive being. Those interests, I contend, authorize the subjection of individual spontaneity to external control only in respect to those actions of each which concern the interest of other people."

The assumption which underlies the whole train of reasoning by which Mill makes out his case is, that the "spontaneous," or, to use popular language, "natural," impulses and interests of mankind tend in the main to the benefit of humanity. The utilitarian defence of individual freedom, in common with most of the arguments in support of the principle of *laissez-faire*, rests upon a favorable or optimistic estimate of human nature. The case, for example, in favor of free trade rests on the assumption (in this instance a perfectly sound assumption) that if men are left free to exchange the products of their industry according to their own view of their own interests, this will tend to the good of mankind; the freedom of each will be the benefit of all. Hence free-traders such as Cobden, and preachers of universal *laissez-faire* such as Bastiat, have been confirmed optimists. What is true of a particular application of the principle of individual liberty is true of the general principle, that the protection of individual freedom is the best security for the general interests of the world. If the spontaneous or natural acts of men do not tend to the benefit of the human race, then the ground for leaving the spontaneous action of men as far as possible uncontrolled by law or custom is struck away from beneath the feet of a utilitarian. Mill, when defending liberty, is of necessity an optimist.

Now turn to the 'Essay on Nature.' Of the curious piece of inconsiderate rhetoric in which nature is denounced like a criminal at the bar, and in which we are told that "nearly all things for which men are hanged or imprisoned for doing to one another are nature's every-day performances," it is unnecessary to say more than to point to it as a proof that even the accuracy of Mill's language was sometimes affected by the force of passionate feeling. What ought to be noted, for our present purpose, is that he devotes pages of argument and rhetoric to demolishing the view of human nature which is popularly connected with the name of Rousseau. No Calvinist bent on proving the doctrine of original sin would go further than Mill in denouncing the idea that virtue is natural. By nature men are, as he asserts, neither truthful, nor just, nor humane, nor benevolent; we possess nothing better than the possibility of goodness. "The artificially created, or at best artificially perfected, nature of the best and noblest human beings is the only nature which it is ever commendable to follow." Can any one deny that this view of human nature, be it true or false, has a far greater affinity to pessimism than to any form of optimism? There is great difficulty in connecting it with any high hopes of the results to be obtained from individual freedom. If the natural and spontaneous action of man is thoroughly bad, the best thing for the majority of mankind must surely be that the mass of our species should be educated—that is, controlled—by the few higher spirits with whom Providence or fortune may from time to time bless the world. The 'Essay on Nature' leads up far more easily to the social, moral, and political doctrines of Carlyle than to the teaching of Mill's 'Liberty.'

No one will, of course, for a moment suppose that Mill's ingenuity could not have devised arguments by which to reconcile the dark view of human nature which pervades the 'Essay on Religion' with the most impressive defence of liberty that has ever been penned. He was far too acute a thinker to utter logical inconsistencies. Our contention is, not that Mill contradicts himself, but that there is a deep, not to say fundamental, difference of tone between the apology for freedom, which might have been the work of Bastiat, and the denunciations of human nature, which might have proceeded from Carlyle when hard-ridden by the hag dyspepsia. We further contend that such unconscious inconsistencies of sentiment are characteristic of Mill's writings. There exists a want of harmony between his intellectual theories and his feelings. This want of harmony can to a certain extent be explained by the combined action of his natural character and the peculiar circumstances of his life.

COX'S SECOND BATTLE OF BULL RUN.

The Second Battle of Bull Run, as connected with the Fitz-John Porter Case. A paper read before the Society of ex-Army and Navy Officers of Cincinnati, February 28, 1882. By Jacob D. Cox, late Major-General commanding Twenty-third Army Corps. Cincinnati: Peter G. Thomson. 1882. 12mo, pp. 124.

In this little book General Cox has presented some ingenious arguments in opposition to the conclusions arrived at by the Board of Officers (Generals Schofield, Terry, and Getty) who reexamined the case of General Porter. He seems to have felt it to be his duty to reiterate his belief in Porter's guilt, and he has applied himself diligently to the maintenance of the truth of this position. But we think a careful examination of his work will show that he has approached his task more in the spirit of an advocate than of a judge.

No better illustration of General Cox's method can be presented than his treatment of the first question of fact which he examines—"the question of the time of Longstreet's appearance on the 29th" of August, 1862. To those not familiar with the subject we may say that Porter maintained at his court-martial, and has always maintained since, that at or very soon after his arrival at Dawkins Branch—*i. e.*, a little before noon—he was confronted by the troops of Longstreet in position on the heights opposite; while General Pope, and others who have been convinced of Porter's misconduct, have insisted that Longstreet did not come up for several hours after, and that in the meantime Porter had in his front only a detachment of Stuart's cavalry.

General Stuart, who commanded the Confederate cavalry, and who was, on the morning of the 29th, on the extreme left of Jackson's position, tells us, in his official report, that in the forenoon of the 29th he rode over to confer with Lee and Longstreet, and that he "met with the head of Longstreet's column between Haymarket and Gainesville." If we can ascertain exactly when this rencontre took place, we shall be able, General Cox thinks, to form a correct estimate of the time it must have taken for Longstreet's troops to reach the field of battle.

The first thing to do, of course, is to find at what hour Stuart started. There was a little skirmish between his troops and those of Poe's brigade of Heintzelman's corps that morning, which Stuart mentions in his report, and which he says, in his 'Memoranda of Operations,' began about ten o'clock. Major White, of Stuart's staff, of whom General Cox says that he "seems to be one of the clearest and most consistent witnesses of the whole class" of Confederate officers, says in his testimony before the Board that the affair took place about "eight or nine in the morning." Poe says in his testimony that it took place at eleven. General Heintzelman's diary, cited by General Cox, simply says that he reached the field about ten in the morning, and that Kearney (Poe's division commander) was on the right. From this rather conflicting evidence General Cox concludes "that Stuart started from the scene of Poe's attack to find Longstreet, not earlier than half-past ten o'clock, and probably as late as eleven."

Having got him started, the next thing to do is to ascertain his rate of speed. Now, Stuart took with him a considerable body of cavalry, and General Cox assumes that he accompanied his troops in their march. He, therefore, says that we must take "into account the ordinary rate at which a large body of horse would move in marching." But Stuart, one would think, must have been very anxious that morning to see and communicate with Lee as soon as possible, and it seems rather absurd to suppose that he would limit his own rate of speed to that which his troops could attain. And Colonel Blackford, of Stuart's staff, testified that when the general and staff got in sight of Longstreet's dust they "*galloped ahead* to meet the column." This has evidently escaped General Cox's observation.

The next thing to be ascertained is the route which Stuart took. General Cox thinks that he "rode by way of Catharpin Valley around Jackson's rear, thence across the country to Gainesville, and [thence] out toward Thoroughfare Gap." Why General Stuart should have pursued this long and circuitous route is as puzzling to us as why he should have so carefully

limited the rapidity of his own movements to "the ordinary rate at which a large body of horse would move in marching." Nothing certainly could be more unlike that impetuous and dashing officer, and nothing could be more unsuited to the emergency as it must have presented itself to his mind that morning. But here, again, we are not left to our unaided common sense, adequate as that would seem to be to the decision of this point. Major White, of Stuart's staff, says in his testimony: "We moved off *across the country* to find out what had become of Longstreet's corps. We moved off in this way *toward Thoroughfare Gap.*" Colonel Blackford, also of Stuart's staff, says: "I think we did not follow the turnpike. The enemy were in strong force, and I think we avoided the turnpike, so as to strike *across the country.*"

The above ingenious suppositions enable General Cox to conclude that "it took Stuart (starting at eleven) *an hour and a half* to get to the point named, and that, therefore, the head of Longstreet's column was half way between Haymarket and Gainesville at half-past twelve, certainly not earlier than noon." It seems to matter nothing to General Cox what was the recollection of those officers who accompanied Stuart on this ride, but it may strike our readers differently. Blackford says he cannot fix exactly the hour. "The only thing I recollect about it is, that it was *early in the day.*" White says positively: "It was *about eleven o'clock.*"

This whole investigation is, as we shall point out presently, of no moment whatever as bearing on the time of Longstreet's arrival on the field; but as it gives an excellent notion of the method pursued by General Cox in this book, we have followed it with care, and we now drop the further consideration of it with the observation that if Stuart and his staff, as soon as the little skirmish with Poe was over—say, at half-past ten—had galloped across the country toward Haymarket (a distance of between five and six miles), they might easily have been there by eleven, or very shortly after.

But what has all this to do with the time of Longstreet's arrival? Why, this: that if the head of Longstreet's column had not proceeded beyond a point half way between Haymarket and Gainesville by twelve or half-past twelve o'clock, it could not have made connection with Jackson before half-past one. "The simple chain of evidence which leads to this conclusion," says General Cox, "seems decisive." Let us assume for the moment that this chain of evidence, which General Cox considers a simple one, does retard the time of Stuart's arrival to twelve or half-past twelve: there is another question to be answered here—Are we sure that it was really the *head* of Longstreet's column which Stuart saw when he got to the Haymarket and Gainesville road? That he saw the head of a column of troops passing by, and that those troops were Longstreet's, no one doubts; but that he saw then and there the very van of Longstreet's corps, we do most distinctly deny. Now, look at it: General John Buford, one of the best cavalry officers, certainly, that we ever had in our service, sent a despatch to General Ricketts, at half-past nine that morning, stating that seventeen regiments, one battery, and five hundred cavalry *had passed through* Gainesville three-quarters of an hour before; and he testified before the court-martial that he *saw* these troops himself, and made the report *from his own observation.* General Cox thinks his argument and chain of evidence, which we have given above, make this despatch of Buford absurd—a remark on which we forbear to comment. He also, in forgetfulness of Buford's testimony before the court-martial, says that his argument destroys the value of the despatch, except as evidence that Buford wrote it at half-past nine, *upon mistaken information.*

General Longstreet had with him that morning twelve brigades, in four divisions. That some one of these divisions was passing at the time when Stuart arrived, is no doubt the fact. But it was nothing to Stuart whether the column which he saw was the first or the fourth of Longstreet's divisions; and to rely so absolutely upon the accuracy of such a purely incidental statement, made by an officer who was not reporting about his own troops, is, to say the least of it, a very unusual thing in an historian. It is true that Colonel Blackford and Major White, of General Stuart's staff, assume that what they saw was the van of Longstreet's troops; but it does not appear that they made any inquiries as to the fact. They certainly gave no names of divisions or brigades.

To our mind, the truthfulness of Buford's despatch is in no way affected by General Cox's arguments. But Buford's testimony does not stand alone. Not only does Longstreet, in his official report, dwell upon the fact that the march was begun "early on the 29th," and "was quickened to the extent of our capacity," "the excitement of battle" seeming "to give new life and strength to our jaded men," but he says distinctly, "the head of my column *soon* reached a position in rear of the enemy's left flank." This word "soon" must be taken in connection with the phrase "early on the 29th," and it certainly could not have meant half-past one in the afternoon. Jones, who commanded one of Longstreet's divisions, and who in the course of the afternoon, as is admitted, was in front of Porter, says, in his official report, that he arrived on the ground about noon. We have no report from Kemper, who commanded the next division to Jones's; but Corse, who commanded one of his brigades, says, in his report, that his brigade "halted about three miles east of Gainesville about twelve o'clock." And there is more of this testimony, from the Confederate reports, to the same effect—testimony not given with reference to any controversy on the subject, and therefore the best we can obtain.

The criticism we make on General Cox's performance is that he does not take up these detached questions, such as the time of Longstreet's arrival, as he would do if they were not connected with this Porter controversy. Whether Longstreet arrived sooner or later is a question by itself, and it was something with which General Porter had certainly nothing in the world to do. Granted that the evidence on this point given before the Board of Officers is, all of it, or much of it, more or less colored by their sentiments in regard to Porter's conduct, no such thing can be said of Buford's despatch, or of Longstreet's or Jones's reports. Were an essay to be written solely on the time of Longstreet's arrival, without reference to its bearing on Porter's case, can any one suppose that the method which we have seen has been followed by General Cox would be pursued by a merely historical scholar? Can any one imagine a practical man, accustomed to weighing evidence, reaching his conclusion by ignoring the statements of a thoroughly competent eye-witness, and the official reports of the generals who led their troops to the field, and by relying entirely on the incidental statement of an officer who met the columns on the march?

We are not arguing, and do not propose to argue, the case of General Porter. We are simply criticising General Cox's methods of investigating some of the facts of the case. In his treatment of Porter's conduct on the afternoon of the 29th, General Cox puts the case against him with considerable force. But he does not seem to us to take into account two things—first, that the discovery of the advent of Longstreet upon the field changed the whole scope of the day's work, for the Joint Order implied that no battle was to be fought against the Confederate army when united; and, secondly, that Porter expected that whatever movement he was to make was to depend upon communication being established, by means of the intervention of McDowell's corps, between his isolated left wing and the rest of the army. That this communication was to be established between the two corps of McDowell and Porter and the rest of the army was the very purport of the Joint Order; that its establishment was to precede active operations by either of them was, we submit, a necessary inference. For this Porter waited. Whether he might not, while waiting, have done more in the way of reconnoissance or of demonstration is a question on which, no doubt, something may be said; but that his duty was to wait, and not, isolated as he was, to fight, there seems to be really no question.

BOWNE'S METAPHYSICS.

Metaphysics. A Study of First Principles. By Borden P. Bowne, Professor of Philosophy in Boston University. Harper & Brothers. 1882. Pp. 534.

For those interested in pure metaphysics, and not familiar with Lotze's views of ontology and cosmology, this will prove a work of great freshness and utility. The author's mind is saturated with the principles of his late celebrated master, to whose memory the book is dedicated, and from whom he rarely deviates, save to specify and illustrate—a relation in which the importance and amount of the latter is sure to seem greater to a writer than to the kindest of candid readers. The charm of Lotze, at least up to his latest years, lay very largely in his poise and temperance, which made him abhor all extremes, novelties, and smartnesses, and which was so great that he preferred to see even the belief in central personality clung to by the heart, although, perhaps, unrecognized there, than to have it demonstrated by the most coercive arguments. Our author, on the contrary, borrowing from Leibnitz, Herbart, and even Spinoza, the now all but universally discredited ideal that metaphysical deductions may approach those of mathematics in certainty and absoluteness of method, is not, like Lotze, content with a balance of probabilities, but postulates the very highest degree of certainty, and urges that possibility is merely a name for our ignorance. Else "reason is overthrown," "all science and knowledge are impossible," "all trust in mind and its products is broken down," the universe is "reduced to a rigid, stony stare," or a "scandal in philosophy," or a relapse to a "palæozoic age of thought, etc."—is the awful alternative, pointed out not once, but probably scores of times, till, as the argument is gathered in along so many converging radii toward the central abyss of personality, the average senior must have felt at last, in listening, that by hesitation in believing he would write himself down—not so much a sceptic or heretic as a fool; for happily the crack is from the whip of the schoolman and not of the theologian. Lotze had no anxieties lest thought should "commit suicide," and the "Americanization" of such vital portions of his system in this way we cannot regard as an unmixed good for philosophy, or even for religious opinion in this country just now; while we might safely appeal to the many pupils of Lotze now among us to say if anything could have been more distasteful to him than to have lived to see his well-organized subjunctives and persuasive optatives stiffened into rigid apodictics, as is done so systematically here.

Again, although this was not the "note" even of the great masters, we live in a day when philosophers have already felt the need, and are just beginning to feel the strength, of some sort of solidarity and consensus, wherein each contributes his part in a specialized field all over which far more questions than answers are now arising. Most thinkers now fear nothing more than premature conclusions, and are learning to enjoy what logic so rigorously requires—viz., keeping the great critical questions of the race as wide open as possible, for fear of surface healing—and are extremely anxious to exhaust every historical contribution or element in all matters before they are allowed to come to utterance. But our author reasons his way up and down the universe and the history of thought with a bravado and *abandon* of dogmatic mechanical ratiocination which discards all *nuances* and perspective as well as uncertainty, and which, in candor, though in sorrow, the critic must set down as philosophic intemperance, facilitated probably, though unconsciously, by the exigencies of religious discussion, the environment of the author's training, and certainly by a somewhat imperfect and fragmentary study of the history of philosophy, a still more imperfect understanding of speculative physics, and a most imperfect one of experimental and comparative psychology.

Much, however, as we object to his spirit and methods, and regret that, like speculative minds everywhere, our author finds it so much easier to think straight and freely out than to read, we cordially welcome his book as the best Lotzean volume in English, and as not entirely lacking in independence and originality. Many new devices, eddies, and side-lights, new logical "holds and trips," in wrestler's phrase, and a style which, though very diffuse and "protracted," has the rare merit of clearness to such a degree that the present writer can think of no book which brings so many metaphysical profundities, mediæval and modern, within so easy range of intelligences of so average an order—these are merits at the same time great and striking, and reveal a mind of a very high order of dialectic subtlety, and a rare skill in hitting off happy antitheses and pointed phrases that often bring real illumination while they often dazzle and confuse. The sometimes almost thrilling boldness and hardihood of assertion, where so many of the wisest now fear to tread at all, is quite in the spirit of German thought of half a century ago, and, in the philosophical renaissance upon which we are so rapidly entering, is to be expected with the rest. Really objectionable is only the choice and probably well-tested anthology of satirical fragments, from which selections never fail when H. Spencer, evolution, or physiological psychology is met with, although this is mainly a matter of taste, or perhaps of effectiveness in the class-room.

Although the truth of the belief in bottom intelligence and freedom in the world is "a matter of life and death to all philosophy and rational science," we are assured that this belief is treated so theoretically that "its practical value is slight" (p. 172). Nothing could be more at variance with every modern system that we know, whether of psychology, ethics, or logic (notably in the case of Lotze, Sigwart, and Wundt, to instance three of the latest and best), than the kind of separation here and elsewhere implied between the theoretic and practical reason. Kant's authority can surely not be appealed to; for our author is concerned throughout with the two "practical" ideas of God and freedom, which are made to cover in an indistinguishable way most of the theoretic field, Kant's conception being set aside in one instance as "the crudest possible" (inherence, p. 374.) In a score of different ways and writers, apperceptive thought is now identified with will, and all unpractical thought, using the word only in a fairly philosophic sense, is pretty sure to be unreal, contradictory, or fatuous.

A few of the points that are well and clearly put are—in the ontology, the difference between the order of impressions and the order of reason; the argument that no definite thing can come by reason from an indefinite; that generic being is a mental datum, a class notion only; that the nature of a thing is the law of its activity, and it has no rigid core of being in it; that the impersonal is ever changing, but only personal consciousness which makes or reveals identity can join change and permanence; that even impact is mysterious without a deeper than spatial relation, and that no interaction is possible save through a coördinating omnipresence; that substance is agent; that the homogeneous, which Spencer calls unstable, is the only thing stable, and without ground for advance or differentiation;—in the cosmology, that things are not spatial, but that by their interactions they give rise to the appearance of a world of extended things in space, for if space is real it must be active; that time is a thought-product, and that change is all; the discussion of Zeno's paradoxes of motion; and that atoms are acts of the infinite.

Broadly considered, the work is a series of special, often agonistic, arguments, direct and indirect, for personality and its implications; but, the most generic assent once yielded, the author is agnostic enough. Purpose is admitted to be inscrutable; the problem of evil seems inexplicable consistently with it, etc. Indeed, personality with him serves precisely like the will, the Unconscious, the idea, etc., in other well-known systems, as the big snarl into which all other knots and tangles of the skein are resolved, as in fact they may be with less intellectual effort than into any other. But resolving residual obscurities into one phrase or generic term does not tend to make it simple, still less give warrant to worship the phrase as a fetish; any more than tuning the discords of an organ into one key changes the accumulated discords into harmony of a supernal order. A point is gained if the latter key be the one least used; and so, too, the relegation of obscurities from the practical spheres into speculative fields, and dumping them there where they can least confuse action, is always a practical good of metaphysical endeavor, provided only that dogma and moral sanction are not derived from this central chaos of agnosticism. The great fact, now ignored, now disparaged throughout this work, is, that we really know and understand all that is only from its genesis and that of our knowledge of it, and from its practical bearings, since the former arises from the latter. Psychology is disparaged in the distinction between the how and why, or the ground and the cause of belief, and the subordination of the former instead of the latter; and ethics is arbitrarily postponed when its elements are, to say the very least, as much needed and indeed present in determining the existence of a divine person as in exploring his purposes. Upon his existence one may insist no less strongly than the author, yet all the more keenly regret that he so dispraises the argument from the consensus, history, instincts, and duties of men upon which this belief must forever rest and be debated, and has suspended the divine upon so fine a metaphysical thread, with so many technicalities and such disquieting and repeated indictments of common sense, that the uninitiated, while they must doubt their own grounds of belief, must at the same time despair of attaining his.

The work as a whole stands in the same relation to Lotze's 'Metaphysik' and a part of the 'Logik' that Mr. John Fiske's 'Cosmic Philosophy' stands to Spencer's system in general. The greater assumption of originality in the former case at first seemed a serious problem as we compared master and pupil topic by topic. The illusion was, however, without doubt perfectly sincere and indeed natural; for it is due, we are convinced, to the fact that the more subjective the data and inferences, the greater was the inward feeling of independence and freedom in the disciple.

Egyptian Obelisks. By Henry H. Gorringe, Lieut.-Commander U.S.N. New York: Published by the Author, at 32 Waverley Place. 1882. Small folio. Pp. x.–187. Illustrations.

THIS imposing volume proves that, whatever may have been Captain Gorringe's prime motive in removing "Cleopatra's Needle," he ended by becoming deeply absorbed in the study of the class of monuments to which the obelisk now in Central Park belongs. The dyer's hand was never more surely subdued to what it worked in. In this respect, so far as one can see, the contractor was superior to his employer, for Mr. Vanderbilt, though a well-known patron of the fine arts in certain directions, does not appear to have cared particularly for the obelisk of which he bore the expense of transportation in so public-spirited a manner. We do not refer to the fact that he took not the slightest risk in the enterprise, and agreed for payment on delivery as if so many tons of railroad iron were in question. This was also the case with Prof. Erasmus Wilson, when contracting for the erection of the sister obelisk on the Thames Embankment. But Mr. Wilson, as his book testifies, felt a genuine enthusiasm in the subject from an antiquarian point of view.

The work before us is in seven chapters, of which the first two are devoted to the New York obelisk, and are, of course, from Captain Gorringe's own pen. His, also, are the sixth and seventh chapters—the "Record of All Egyptian Obelisks" and "Notes on the Ancient Methods of Quarrying, Transporting, and Erecting Obelisks." The eighth, an "Analysis of Materials and Metals found with the Obelisk at Alexandria," has been edited by Prof. Persifor Frazer. The intermediate chapters, on the removal of the Luxor obelisk to Paris and of the fallen obelisk to London, and on the reërection of the Vatican obelisk, have been contributed by Captain Gorringe's associate, Lieut. Seaton Schroeder, and are eminently readable. The main interest, however, centres in the opening chapter, which gives the history of each step in an undertaking whose arduousness is even here but imperfectly set forth. The style is perhaps not that of a practised writer, but it has the quality of the man, and, while always modest, is graphic, racy, pointed, energetic, as the theme demands. We are told, of the transportation of the trunnions through the streets of Alexandria, that the Arabs "wisely selected the Christian Sabbath for the day to move them, owing to the diminution of traffic on that day. . . . For this an American missionary roundly abused us from a borrowed pulpit, and took advantage of the occasion to denounce the removal of the obelisk as a work of the devil." Further, as the Mohammedan and Christian Sabbaths are on different days, "it was impossible to respect both; and a respect for the opinions of both sects led to the rule that the work would be carried on without intermission, and that the workmen were at liberty to select their own Sunday and observe it in their own fashion." The Arab Mohammedans and Maltese "spent Friday, their Sabbath, in a rational manner, sleeping during the early

part of the day, attending services at the mosque at noon, and devoting the afternoon to social intercourse and amusement. The Christians, almost to a man, would devote the thirty-six hours from Saturday evening to Monday morning in drinking, gambling, fighting, and other excesses, and return to work drunk, sleepy, and bruised." Later, we read that "the engineers [of the *Dessoug*] were useful, hard-working, hard-drinking men. The quartermasters would do credit to a pirate's crew." As a final example, take this reply to the protests against the vandalism of removing the obelisk :

"Originally designed to symbolize the highest attribute of nature, the re-creative power; forming an essential feature of one of the most famous temples ever erected by man, in which Moses was educated, and of which he became a high-priest; the votive offering of one of the most celebrated Pharaohs, and bearing the records of another equally celebrated, the obelisk had become a Roman trophy to commemorate the subjugation of Egypt, and was threatened either with destruction by neglect, or preservation as a means of advertising a hotel or apartment-house. . . . Some objection has been made to removing it from its 'antique surroundings.' The most prominent surroundings in Alexandria were a railway depot, a new apartment-house, and an Arab fort."

Captain Gorringe's troubles began and ended on this side of the water, where one might have looked for fair if not generous dealing, and entire good-will, in consideration both of his character as an officer of the Navy and of the public object he had in view. Thousands of dollars were needlessly added to his expenses abroad by reason of interested opposition by foreign residents and by the Government officials; but "squeezing" and official hindrances were reëncountered the moment the *Dessoug* came to anchor in the North River, and fresh delays that might easily have been spared enhanced the pecuniary burden of the contractor, and put once more to the test his remarkable powers of resistance, patience, and persistence. The foresight displayed from beginning to end by Captain Gorringe is rendered even more admirable by the way in which the unforeseen —both physical and moral—was met and triumphed over in spite of defective resources and of every combination of chicanery, falsehood, extortion, and misdirected hostility like that of which the French and German archæologists were guilty, and which is severely censured on page 120 of this volume.

In two respects the contents will disappoint expectation : the interpretation of the inscriptions on the obelisk appears to be still uncertain, and the supposed masonic emblems found under the pedestal are partly explained away, and partly left open to conjecture. Some design is apparent in their collocation, but the early belief in their symbolism has apparently been shaken by competent archæological scrutiny. The illustrations are abundant, no less than fifty-one occupying a full page, and the majority of them being artotypes from nature, of which the excellence depends upon that of the original negative. Some are extremely fine, and all are interesting. The Roman specimens in that city of obelisks are grouped upon one page. Careful mechanical drawings exhibit the apparatus and *modus operandi* for the New York and other transported obelisks, and make clear even to the lay mind the originality and superiority of the brilliant engineering devised in the former case. There are also photographic portraits of Mr. Vanderbilt and of the ex-Khedive and his successor; but that of Captain Gorringe shines by its effacement. The presswork is, barring a few typographical lapses, highly creditable to the press of the Messrs. Putnam; and genuine taste has been shown by the author in his selection of designs to be stamped upon the sides of the cover.

Charles Lamb. By Alfred Ainger. [English Men of Letters.] Harper & Bros. 1882. 12mo, pp. 182.

THIS well-made and workmanlike volume will be welcomed by all who confess

> "A love that is not sham
> For Stothard, Blake, and Lamb,"

as Mr. Locker sings in one of his "London Lyrics." Not a few of us are ready with Macaulay to say of Lamb that "we cherish his memory as much as if we had known him personally." It is the great merit of the present volume that it will lead those who may not know him into making his acquaintance. Indeed, Mr. Ainger's book is of greater utility than certain of its predecessors in the same series, and there was a louder call for it. Johnson, and Scott, and Gibbon, and Goldsmith have told their lives or had them told in books known even to the hastiest "general reader"; but Lamb, whose place in the glorious company of English men of letters is as secure as theirs, had no Boswell, and has not yet had a Forster or a Lockhart. Talfourd's biographical matter is contained in two overlapping and disconnected books; Barry Cornwall's sketch is brief and personal; the rest is silence. Thus it happened that although Lamb was a familiar figure to those that love him—for the books that contain his writings and his sayings and his doings are not many, after all—there was no single volume telling the simple story of his life in straightforward fashion. This want is now supplied.

Mr. Ainger prefixes a list of "authorities consulted," in which we note only one omission of any importance. This is the 'William Godwin and his Friends' of Mr. C. Kegan Paul (2 vols., 1877). In this interesting and authoritative work are to be found many letters of Lamb's to Godwin, most of them bearing upon the drama in general, and in particular upon the plays and plots of plays which Godwin presented for Lamb's criticism. These letters would have served to enrich Mr. Ainger's chapter on "Dramatic Authorship and Dramatic Criticism." Moreover, neither Mr. Ainger nor any other writer on Lamb has ever commented on the fact reported by Mary Lamb in a letter to Mrs. Hazlitt, written in 1808 (two years after the damning of "Mr. H."), that Tom Sheridan invited Lamb to "write some scenes in a speaking pantomime, the other parts of which Tom now, and his father formerly, manufactured between them." Richard Brinsley Sheridan has been charged with the authorship of the spectacular "Blue Beard," but the making of speaking pantomimes is nowhere else recorded of the author of the "School for Scandal." The offer to Lamb is significant as showing that the managers of the theatre had still a belief in Lamb's dramatic faculty. This chapter of Mr. Ainger's on Lamb's theatrical experience is admirably done. Excellent also are the remarks on the unfortunate influence that the close companionship of brother and sister had on each, and especially on the more highly-gifted brother. Quite as good is the calm consideration of the brutal slur to be found in Carlyle's 'Reminiscences.' In general, Mr. Ainger's handling of all the vexed questions and delicate points is praiseworthy in the extreme. All that his book lacks is a little of Lamb's own humor and a little more of Lamb's charm of style.

Men and Events of My Time in India. By Sir Richard Temple, Bart., late Governor of Bombay. London. 1882.

THAT British rule in India was a marvellous and beneficent success, has long been accepted as an unquestionable article of faith by the majority of the English nation. But any student of history who cares to devote a little thought to the matter will speedily arrive at the conclusion that if British rule in India were the success which by Englishmen it is represented to be, it would be a perennial miracle—as direct a violation of the laws of nature as if water should flow up a hill. This at least is certain : in practical sagacity or in morality the Englishmen who, at any time, have been carrying on the government of India cannot have been in advance of the men who were carrying on the government of the Empire at home. And nothing is clearer in English history than this : that, but for the popular pressure brought to bear upon them, the governing classes would not have reformed anything, but would to this day be clinging, as to so many rocks of salvation, to the Corn Laws, the Irish Catholic Disability Laws, rotten boroughs, and the most antiquated prejudices of all kinds. The official mind never admits the wisdom or the desirability of change in that which is. It has to be violently dragged or propelled forward, and never ceases to invoke "the wisdom of our forefathers"—of the Saxon, the Dane, and the Norman—as a sufficient justification in favor of complete immobility. In India, of course, the English officials were absolutely free from any popular pressure. If any native of the country were sufficiently misguided to suppose that he might play the part of a Cobden or a Bright, he would very speedily find himself inside a prison, as a rebel against a paternal government. Add to this, that the Englishman differs from the native in every particular in which it is possible for one man to differ from another—in language, in religion, in education, in social customs, in color, in modes of thinking; that the Englishman regards the native as intellectually so inferior to himself that he will not allow him any participation in the government of the country; and the proposition that two hundred millions of people could be successfully governed under such conditions as these will, we think, be apparent in all its naked absurdity. For in rejecting the counsel and assistance of the natives in the work of governing India—in making no provision for ascertaining the popular feeling about any matter whatever—the English in India cut themselves off from the possibility of obtaining accurate knowledge about the country they are attempting to rule. They legislate in the dark, and they are equally in the dark as to the results of such legislation as they attempt.

How, then, arose this baseless legend of the beneficent results of British rule in India? It arose in this way: Englishmen believe, as though it were an axiomatic proposition, that if they undertake to govern any country, they must do the business better than the people of that country could do it for themselves. We see this faith illustrated in the case of Ireland. For seven hundred years the English have been trying to govern Ireland, and the history of the human race has not a more dismal and disastrous failure to record. Even Englishmen are at last beginning dimly to perceive that they have failed; but they maintain as confidently as ever that if the Irish had been allowed to regulate their own destinies, they would have failed still more disastrously. A similar *à-priori* conviction has been of yeoman's service to the English nation in regard to India. Whatever crimes or blunders may have been proved against the British Government, the Englishman lightly waves them away with the assertion that under native rule they would have been far more numerous and intense.

A nation in this frame of mind naturally lends a credulous ear to books such as this of Sir Richard Temple which we are now reviewing. It forms part of an abundant literature—the writings of old Indian officials recording their own astonishing achievements. Like all its predecessors, it

is written in a strain of unrelieved panegyric. The retired Indian official is far too wary to criticise unfavorably the work of any of his contemporaries, lest they in retaliation should turn upon and rend him. He eulogizes them all round, and then it is an understood thing that they, when occasion offers, shall do the like for him. Acting upon this ancient precedent, Sir Richard Temple can see nothing but what was entirely excellent in the "men and events of his time in India." Men whose characters and whose principles had not a single point of resemblance were, according to him, a happy band of brothers who never failed in anything they undertook; working upon wholly diverse principles, by some occult but happy magic their labors invariably ended in the same result—the growth of India in happiness and material prosperity. For, if we are to judge from the works of the retired Indian official, it is the remarkable property of the natives of India to be always improved if brought under the supervision of an inhabitant of Great Britain. It makes no difference, in that respect, whether the operator be Lord Dalhousie, Lord Canning, Lord Lawrence, Lord Mayo, or Lord Lytton. It is, of course, pleasant to the self-love of the British people to be assured of such things by those who ought to know, but it is needless to say that the picture is greatly overdrawn. As contributions to the history of British rule in India, the untrustworthiness of such books as this of Sir Richard Temple cannot be too emphatically insisted upon. The writer avoids the hard, unpleasant fact with as sedulous a care as the navigator avoids a rock. This, of course, cannot always be done without his being committed to statements which are not merely half-truths, but positive untruths. To expose all the inaccuracies of either kind which are to be found in Sir Richard Temple's book would require a volume as large as itself. We will content ourselves with a single instance, which we can assure our readers is a fair sample of the many we have not space to refute.

It may be asserted without fear of contradiction, that no act of either Clive or Warren Hastings was more infamous than Lord Dalhousie's enforced cession of the province of Berar from the Nizam of Hyderabad. The following are the terms in which Sir Richard Temple relates this dishonorable transaction:

"Berar, though not annexed, was brought permanently under British administration by a treaty with the Nizam. This measure was necessary in order to defray the charges of the Hyderabad contingent, a body of troops absolutely needed for preserving order within the Nizam's dominions, and for curbing the unruly bands of foreign mercenaries which had during the course of many years been collected by His Highness' authority. The British Government had from time to time advanced large sums for the pay of the contingent, until the debt reached a stage when a settlement for the past and a material security for the future became indispensable. The Nizam then signed the treaty whereby he made over the administration of Berar to the British Government, retaining his titular sovereignty, and being entitled to receive the surplus . . . after the expense of governing the province had been de rayed. There was no alternative left except that of taking over territory; the troubles in the Nizam's Government, having . . . thickened during many years, at length reached a stage when his relations with the British Government were compromised, and his state imperilled."

This is Sir Richard Temple's version of the affair. Now let us take note of the fact as it really was. The Hyderabad contingent was a force which the British Government was bound by treaty to maintain at its own expense, for the preservation of order in the Nizam's dominions. Nevertheless, the British Government had, since its embodiment, compelled the Nizam to pay the entire expenses of this force, and in 1853 Lord Dalhousie compelled that sovereign to cede the province of Berar as a material guarantee for the cost of the contingent in future. There can be no question about this; for at the very time that he was coercing the Nizam into ceding his territory, Lord Dalhousie frankly acknowledged in his private correspondence that the claim on the Nizam was a dishonest one:

"I have found myself forced," he says, "to the conclusion that the Government of India *has no right whatever, either by the spirit or the letter of the treaty of* 1850, to require the Nizam to maintain the contingent in its present form. . . . *Neither the words nor the intention of the treaty can be held to warrant such a construction of its obligations.*"

Again, Sir Richard says: "There was no alternative left except that of taking over territory," because the British Government had advanced large sums for the pay of the contingent, which the Nizam had been unable to defray. This statement is so made as to be altogether misleading. At the time that Lord Dalhousie exacted the cession of Berar, the debts due to the Nizam from the British Government were in excess of the sums advanced for the pay of the contingent. Of this fact, also, there can be no question, because it is asserted by the (then) British Resident at the court of Hyderabad. "I have always been of opinion," wrote Colonel Davidson, "that had the pecuniary demands of the two Governments been impartially dealt with, we had no just claim against the Nizam."

Again, Sir Richard Temple says that Berar was "brought *permanently* under British administration." This is true, as a matter of fact; but Sir Richard is careful to omit all mention of the circumstance that, although menaced with war in the event of his refusal, the Nizam would not consent to the cession required of him until the British Government had pledged its good faith that the cession was only "temporary." It is needless to say that this pledge has since been set at naught. The crowning element of baseness in this nefarious transaction remains to be told: so long as the Nizam defrayed the expenses of the contingent, its annual cost was £400,000; when the British Government had to defray them from its own revenues, this amount was immediately reduced to £100,000.

La Réforme au XVIe Siècle. Études et Portraits. Par Auguste Laugel. Paris: E. Plon. 1881. 8vo, pp. 393.

THE activity of the French Protestants in literary and historical directions is great beyond all proportion to their numbers. Less than one million souls in a population of over thirty-six millions, the record of their efforts during the past six years toward the complete illumination of the early history of their church shows a surprising degree of energy and success. Just as the history of those early days of Protestantism cannot be divided sharply into a political and a religious narrative, so this record of publications presents a series of works as interesting to the general student of history as to one working in the special field of religious development. The central point of this activity is the *Société de l'Histoire du Protestantisme Français*, now in the thirty-first year of its existence. Its purpose is to encourage—by means of yearly meetings, prizes for essays, assistance to publication, and by its own *Bulletin* and library in Paris—every undertaking in this peculiar field.

The work of the past few years in Protestant history has furnished to M. Auguste Laugel, favorably known as the author of several collections of essays, the material for a new volume whose title we give above. We have here eight essays, each of which is a review of some more detailed publication, and of which all but the last are connected by a thread of common interest—slender enough, it is true, in some parts, but sufficiently strong to justify the title. The first three are devoted to three of those women who played so marked a part in the storms of that most tempestuous period. The first of these is Éléonore de Roye, the long-suffering and devoted wife of the Prince of Condé. The sketch of her touching fidelity to the cause of "the religion," and to the husband whose levity of character alone prevented him from becoming the acknowledged head of French Protestantism, is founded upon the recently published life of the Princess by Count Delaborde. It throws out into prominence the critical moments of a short but troubled life, passed, in the midst of the wildest partisan contests, in calm faith and heroic courage such as have rarely been equalled.

The career of Jeanne d'Albret, the mother of King Henry IV., leads us out of the atmosphere of patient suffering for the faith into more stirring scenes of active diplomacy and military conflict. Daughter of the King of Navarre, and niece of the King of France, her marriage was a turning-point of diplomatic relations between France, Spain, and Germany for many years. M. Laugel sketches very neatly the course of the negotiations by which this proud woman with a will of her own was at first forced into a sham marriage with the Duke of Cleves in order to alienate this prince, together with his neighbors of the Rhine, from the imperial cause, and finally, left to her own choice, selected Antony of Bourbon rather than have for a sister-in-law a daughter of the King's mistress. Of her life as an ardent supporter of the reformed faith we hear but little.

The third figure in this most attractive group is Louise de Coligny, daughter of the great admiral, widow of his ardent admirer and follower, the young and brilliant Téligny, and then wife and widow of William the Silent. The sphere of her far-reaching political relations is defined by the mere mention of the great men among whom her lot was cast: Coligny, the purest and brightest name in the Huguenot annals; Teligny, the model of a chevalier, already an accomplished and valued diplomat—both murdered in cold blood, perhaps before the very eyes of the daughter and wife; finally, the sombre figure of William of Orange, a man of fifty, widower for the third time, father of nine daughters and two sons, of whom the elder was kept a prisoner in Spain. Within fifteen months after his marriage with Mme. Téligny, he too fell a victim to partisan hatred, and his widow was left with the cares of a numerous family and of the political interests of the House of Orange in Holland. Her letters, from which M. Laugel gives numerous extracts, reveal the complicated nature of the political world into which she was there thrown, and form the basis of the whole sketch.

A large part of these letters were addressed to Henri de la Tour, Vicomte de Turenne, afterward by his marriage Duc de Bouillon, who is the subject of the fourth essay. Turenne's part in the disorders accompanying the last days of Henry IV. and the early years of his successor is so important, that the effort to compress into one short sketch so wide and so various relations renders this the least interesting and satisfactory part of the book. We are hurried from one catastrophe to another with such breathless speed that the main line of action is easily lost out of sight.

'The Swiss Regiments in the Wars of Religion', is the subject of a work by Segesser, of which M. Laugel gives an interesting abstract. It is to be regretted that the details of marches and campaigns should have been allowed to obscure the more important matters of the diplomatic

dealings between France and the cantons, and the peculiarities of the Swiss as distinguished from other soldiers.

The most interesting of these essays is that upon the general character of the religious wars of the sixteenth century in France. It is most interesting because M. Laugel allows us here to see more of himself. He analyzes a recent work of the Viscomte de Meaux, 'Les Luttes religieuses en France au Seizième Siècle,' and presents a view of the problems there dealt with which differs materially from that of his author. M. de Meaux is an ardent Catholic, though he endeavors to do justice to the bravery and devotion of the hostile faction. M. Laugel tries to amend the impression thus produced by presenting either a Protestant or at least an impartially historical interpretation of the same phenomena. Especially good is the analysis of the motives of the Protestant party, by which it is made to appear that toleration was not their object. Both parties failed utterly to comprehend the possibility of two religions living side by side in the same state. The Protestants paid the penalty of this shortness of view by annihilation. The Catholics suffered from the same error by incurring all the evils of unchecked supremacy.

Exactly why the seventh essay should have been called "La Réforme en Hollande" one fails to understand, seeing that it contains scarcely a word on that subject. It is a review, in the form of an abstract, of Dr. Holmes's memoir of J. L. Motley, with an occasional reference to the historian's judgment of men and events. As to the eighth and last essay, M. Laugel has deemed an explanation necessary to account for its appearance in this volume. "Le Duel de Marie de Médicis et de Richelieu" carries us well beyond the period of the Reform. It rests upon a work by Paul Henrard, 'Marie de Médicis dans les Pays-Bas,' and attempts to summarize the very complicated diplomatic relations growing out of the voluntary exile of the Queen-mother.

To speak of the volume as a whole, it commends itself to the very large class of readers who prefer to study history through the medium of magazine reviews. If, as we have found here, the condensed narrative fails to give a vivid picture of men and motives, it is less the fault of M. Laugel than of the method he has adopted.

History of the United States of America under the Constitution. By James Schouler. Vol. ii. 1801–1817. Washington, D. C.: Wm. H. Morrison. 1882.

Mr. Schouler's work, the first volume of which we reviewed in January, is now completed to the end of Madison's second administration. The second volume covers, most satisfactorily, the interesting and important period of the Louisiana purchase, the embargo, and the war of 1812—the period which in reality made the United States a nation in its domestic as well as in its foreign relations. The strong points of the first volume—its realism, its close use of contemporary periodical literature, and its attention to the personality of the actors on the public stage—are even further developed in this volume, nearly one-sixth of which is devoted to an exhaustive sketch of the United States in 1809, the political institutions, resources, and religious, literary, and social characteristics of the people. The author has also been exceptionally fortunate in striking a new lead in a period whose authorities were, to all seeming, already worked out: he has obtained access to the undigested and inedited mass of the Monroe correspondence in the Department of State at Washington, and through it has thrown new light on many of the debatable points of our political history of 1808–14.

Mr. Schouler expresses his intention, "if life, health, and opportunity are spared him," to continue his history to 1861; but such little indications as the addition of a complete index to the second volume, and the announcement in the preface that there may be considerable delay in the preparation of the third volume, are sufficient to suggest a fear that the "opportunity," at least, may be finally wanting. It would be very much to be regretted if this should be the case. Mr. Schouler has given us what is, in many respects, the best history of the United States; but it covers, as yet, no greater space than Hildreth's. Beyond the year 1820 is almost virgin soil for the historian, and hardly any field of literary labor seems more worthy of Mr. Schouler's ambition than the immediate and vigorous prosecution of the work which he has so successfully begun.

Orations and Essays. By J. Lewis Diman, D.D. Boston: Houghton, Mifflin & Co. 1882.

This book is designed to commemorate a man whose too early death must be deplored by all who desire to see the moral problems of the day discussed in a spirit of entire sympathy both with the progressive tendencies of modern thought and with the most conservative orthodox faith. Prof. Diman could not have a more appropriate monument, or one better fitted to bear record of his remarkable qualities. It is not too much to say that neither a prejudiced allusion nor a narrow sentiment is to be found in the book. Among the papers which it contains, his two reviews, "Religion in America, 1776–1876," and "University Corporations," are perhaps of most permanent value, and the first is of especial interest both to the thinker and historian. Addresses always labor under some drawbacks when it is sought to secure for them a permanent place in literature, their main object being to impress the listener rather than the reader; yet the oration of 1876 on "The Alienation of the Educated Class from Politics," delivered before the Phi Beta Kappa Society at Cambridge, presents many suggestive thoughts on a question which is likely long to interest the thinking classes in our country.

Mountain Life in Algeria. By Edgar Barclay. With illustrations by the author. London: Kegan Paul, Trench & Co. 1882. Pp. xviii.–119. 8vo.

The mountains to which Mr. Barclay went in search of sketches lie about sixty miles to the east of Algiers. They are the lower hills of the high range which forms the southern boundary of Kabylia. For an artist it would seem to be a very attractive region, as, according to our author, the vegetation excels that of southern Italy in luxuriance, "and the glorious mountain masses, with their scarped precipices, cannot be easily matched for their form and color." The Kabyles, too, are interesting, from the fact that they are "a people of entirely different race and speech to the Arabs," and have suffered comparatively little from their intercourse with the French. Few Europeans are ever seen in their villages, perched on the tops of the hills, save a chance traveller and the missionaries, the colonists preferring to settle upon the plains. "The women, although Mohammedans, expose their faces with the same freedom as Europeans." Some are strikingly handsome, while their dress is "the same as the Greek dress of antiquity." The olive grows in great profusion, and constitutes the chief wealth of the country. The people are agriculturists, and cultivate even the steepest hillsides with great care. A few, however, manufacture jewelry and work as blacksmiths, while the women weave cloth, some of which is "most beautiful in workmanship, design, and color," though made without a shuttle. The women also make surprisingly good pottery simply with the hands, the use of the wheel being seemingly unknown, although they have a rude turning-lathe. Mr. Barclay's account of his three months' stay among the Kabyles contains some very picturesque sketches of village life and customs. He shows, however, but little literary skill, and has a strong propensity for quotations, chiefly Biblical and classical, at times exasperatingly ill-chosen. The illustrations are generally good; those taken from the instantaneous photographs being particularly striking.

THE MUSIC FESTIVAL.

TUESDAY.

Beyond a doubt, the great Music Festival of last week will be chronicled in the history of American music as in every sense one of the most successful festivals on record. Although the programme of the first concert possessed uncommon interest for amateurs, it was yet unquestionably considered somewhat "heavy" by the public. Nevertheless, the official list shows that there were no less than 6,730 persons in the auditorium, and if the seats had been arranged as they were at last year's festival the house would have been completely packed. The new arrangements

made by the Festival Committee added materially to the comfort of the public. The raised seats gave every one an opportunity to see the stage, while the seven separate entrances, supplied with lamps whose color corresponded with that of the tickets, enabled the audience to enter and clear the hall in a few minutes without the usual annoying crush. The sight of all these spectators in the vast building, and of the 1,800 singers and 300 instrumentalists was sufficiently picturesque to make it worth while for even an unmusical or deaf person to attend one of the concerts.

But this picturesqueness was soon forgotten in the impressiveness of the musical performance. The New York, Brooklyn, Worcester, and Reading choruses formed a body of sound so compact, harmonious, and reliable, that it seems almost fabulous to state that on this occasion they sang together for the first time. With the exception of a few passages, where the chorus dragged a little, everything was sung with precision, correct shading, animation, and brilliant effect. The choral numbers were Bach's Cantata, "A Stronghold Sure," and Handel's Utrecht Jubilate. The grand old chorale of Luther's which closes the Bach Cantata was so superbly sung that the audience broke out in prolonged and enthusiastic applause. The same was the case with the final chorus of the Utrecht Jubilate, which it would be safe to say has never been sung in a more admirable manner at any of the Handel festivals in England. Choruses of such imposing grandeur completely neutralize whatever acoustic disadvantages may be inherent in such a vast building; and they are all the more appreciated because the great dimensions of the building arouse in the spectator the emotion of the sublime, and thus put him in the abnormally receptive mood in which he finds himself in a cathedral.

The solo parts in the cantata were sung by Miss Winant, Mr. Candidus, and Mr. Whitney, and in the Jubilate by Miss Winant, Mr. Toedt, and Mr. Henschel. They acquitted themselves very creditably of their tasks, although it was in their case that the disadvantages of so large a hall were most distinctly felt. Mr. Whitney's "lion-bass," strange to say, was not so effective, so far as power is concerned, as might have been expected. Mr. Candidus's tenor was distinctly and clearly heard in all parts of the house, and gave pleasure by reason of its purity, brilliancy, and good vocal style. As had been anticipated, Frau Materna, who made her American début with the recitative and aria "Abscheulicher" from "Fidelio," completely annihilated space with her extraordinary voice, and made the audience for a moment imagine themselves transferred to Steinway Hall. The reception accorded her on her first appearance showed that American audiences are willing to accept a singer's merits on the testimony of Wagner, Verdi, and the united critical voices of Europe. But the ovation tendered her after the performance was of more value, for it was the result of personal conviction. Chorus and audience rose to their feet, and, amid waving of handkerchiefs, the great singer was recalled five times, until she consented to repeat the aria. Her full, rich, and expressive voice was, even in piano passages, everywhere audible.

WEDNESDAY.

Both of Wednesday's concerts attracted audiences which almost completely filled the great Armory. Of the two, the afternoon performance was, on the whole, the more enjoyable, in spite of the fact that most of the numbers were solo pieces, in which it was to be expected that the vast space would neutralize the efforts to produce the finer shades of expression. There seemed to be in the atmosphere a crystalline clearness and a buoyancy which not only acted as a refreshing tonic on the nerves of the hearer, but, one fancied, even facilitated the regular rhythmic movements of the tone waves. The greatest surprise in store for those who had studied the acoustic conditions of the hall was created by Mme. Gerster's performance. This popular lyric artist, who was greeted in a most cordial manner by the audience, sang "Der Hölle Rache" from the "Magic Flute" in a technically faultless and charming manner. It had been supposed that her flute-like staccato notes would sound like those of a canary bird upon a high tree; but this was not the case. They were distinct, clear, sweet, and mellow. In response to prolonged applause, Mme. Gerster repeated the aria. Signor Galassi sang the scene "Diane impitoyable" from Gluck's "Iphigenia in Aulis," following an admirable interpretation of the overture by the orchestra. His rich voice and thoroughly artistic style enabled him to give this selection in an effective manner. The same artistic merits characterized Mr. Henschel's singing of Spohr's "Der Kriegeslust ergeben," from "Jessonda," although the sensuous quality of tone was not the same in this case. Signor Campanini's rendering of "Vainement Pharaon" was the least satisfactory solo of the afternoon. It was correctly sung, but it reminded one of an expensive suit of clothes that has been worn too much. The aristocratic cut and style are still there, but it looks threadbare.

The only other solo was a lengthy recitative and aria from "Oberon," "Ocean, thou mighty monster," sung by Frau Materna. A singing teacher would have easily detected a few faults in her voice on this occasion. They are the same that we noted in Mme. Patti's voice at her first concert in Steinway Hall: some of the highest notes were a little hard and a shade flat. But such a sunspot may be left to the consideration of those pedants who condemn Rubinstein because he occasionally strikes a wrong note on the piano. These blemishes, moreover, as well as the slight, not at all disagreeable, occasional vibrato, are quite recent acquisitions, for they were not noticeable in her voice when we last heard her in Berlin and Vienna a year ago, as *Brünnhilde*, and are, as we have ascertained, due to the fact that the American concert pitch is about a semitone higher than the European. And they are simply *nil* when compared with the fine dramatic and emotional qualities of her voice. No other singer can boast of such a distinct enunciation, combined with such passionate declamation and expressive adaptation of every tone to the poetic meaning of the word to which it is wedded. Her voice is thoroughly sympathetic in a double sense: it is fully in sympathy with the emotional contents of each musical phrase, and it conveys that emotion to the hearer with irresistible magnetism. All the vocal solos were accompanied in a discreet and discriminating manner that reflected great credit on Mr. Thomas and his musicians. The orchestral pieces were Schumann's "Manfred" and Mendelssohn's "Ruy Blas" overtures, and Schubert's Ninth Symphony. We do not remember having ever heard the symphony under more favorable conditions. All its exquisite details of coloring, choice modulation, and alternation of tender and energetic passages were brought out with marvellous distinctness, even more so than on Tuesday evening, when Mozart's Jupiter Symphony was performed.

Beethoven's Fifth Symphony and his grand Missa Solennis constituted the programme of the second evening concert. All that has just been said of the performance of Schubert's Ninth applies equally well to Beethoven's Fifth. Mr. Thomas was enthusiastically recalled three times at the end. The attempt to produce Beethoven's Mass in its entirety on such an occasion was an experiment which it took all Mr. Thomas's nerve and courage to make. So difficult is this work that it is very seldom given even in Germany. Just as Bach looks at all his forces from the organist's point of view, so Beethoven treats all his vocal parts as if they were instruments. But the human voice is not as flexible and agile as an instrument, and hence the solo parts of the Mass were not infrequently beyond the powers of the famous singers to whom they were entrusted on this occasion. They were divided into two sets, the first embracing Frau Materna, Miss Winant, Signor Campanini, Signor Galassi, and Mr. Whitney, and the second Mrs. Allen of Boston, Miss Winant, Mr. Candidus, and Mr. Henschel. Of these Frau Materna was the only one whose voice always floated conspicuously on the surging waves of sound. Mrs. Allen had only begun to study her part on Monday, when she was engaged as a substitute for Mrs. Osgood, and she had the disadvantage of appearing after Frau Materna. Taking these things into account, she deserves praise for the manner in which she rendered her part. Miss Winant not only did her own share of the work remarkably well, but also that which had been allotted to Miss Cary. Most of the choral parts were finely executed.

THURSDAY.

Only one sentiment prevailed at the close of the Wagner matinée on Thursday. Audience, soloists, choristers, musicians, conductor, directors, and critics of all parties seemed to unite in the opinion that what they had just heard not only was the culmination of the Festival, but was an entertaiment to which the oldest concert-goer would find it difficult to find a parallel in his memory of rare treats. The audience was larger than on any previous occasion, comprising more than eight thousand spectators, many of whom had come from a great distance especially for this event; and if the performers had needed any stimulus besides that contained in the beauty of the works that were performed, they would have derived it from the great enthusiasm of the audience, which seemed to be animated by an æsthetic fervor whose intensity can only be compared to the state of mind produced on religious people at a revival meeting. We are able to state on the very best authority that Mr. Thomas never felt more happy in his life than he did at the close of the afternoon. It was due to his persistent efforts that the vast assembly was enabled to appreciate the works of the greatest musical genius the world has seen since Bach finished his labors. And it must be particularly noted that it was not the Wagner of the "Rienzi" or even of the "Lohengrin" period that was thus applauded. The works belonged to what French critics call Wagner's third style; and they were performed in a manner that has never been surpassed in Germany itself, as far as our own very extensive experience is concerned.

The selections that were played were taken from the four music-dramas which constitute the Nibelung Trilogy—"Rheingold," "Walküre," "Siegfried," and "Götterdämmerung"—opening with the marvellous introductory scene illustrating the movement of the Rhine and the gambols of *Alberich* and the Rhine-daughters, and closing with the grand dramatic finale of the "Götterdämmerung." The parts of the Rhine-daughters and *Alberich* were beautifully sung by the Misses Schell, Wurmb, and Henne, and Mr. Steins. Mr. Remmertz then sang, appearing in the scene on mountain heights where *Wotan* awakes and beholds the castle built for him by the giants; and this was followed by *Loge's* account of his adventures in

search of a ransom for *Freia*, and the closing scene, beginning with the cloud-and-storm-compelling Donner, and ending with the laments of the Rhine-daughters for the lost gold. On the operatic stage the mournful trio of the Rhine-daughters is heard as proceeding from the river, over which the gods are marching on a rainbow bridge. At the Armory, by a happy inspiration of Mr. Dietrich, the chorus-master, they were placed in the high window to the right of the sounding-board, and the effect cannot be described by any other word than angelic. It was, acoustically, the greatest marvel of the Festival, as it was musically one of the most thrilling passages. After a short intermission, the brief, stormy introduction to the "Walküre" was played. In it the violins persistently keep up an agitated, monotonous movement, while one after another the remaining instruments are added, until at last the whole orchestra bursts out into a fierce tornado of sound. The noise gradually subsides, and by a clever transition we are introduced to the famous love song of *Siegmund*, "Winterstürme wichen dem Wonnemond." This fine specimen of lyric song has often been heard in our concert halls, but Mr. Candidus for the first time sang it as it should be sung. His impressive style, and strong, rich, and expressive voice were so eminently suited to the character of this piece that the audience insisted on a repetition and got it. In the next piece, the "Ride of the Walkyries," the orchestra played with a demoniac passion and wild grandeur that caused the audience to jump to their feet, wave handkerchiefs, and keep up a frantic applause for five minutes; but Mr. Thomas refused to repeat it. *Wotan's* sad and touching farewell to *Brünnhilde* was nobly sung by Signor Galassi. There is perhaps no other passage in all Wagner's works where there is such a variety and brilliant display of orchestral colors. It was in this selection, besides the "Ride of the Walkyries" and the closing scene from "Rheingold" (where six harps added a most exquisite clang-tint to the body of sound), that the superiority of the Festival orchestra over an ordinary orchestra was best displayed. It became evident on this occasion that Wagner's orchestral compositions gain as much in richness by the multiplication of instruments as Handel's choruses gain in impressiveness by the redoubling of the vocal forces.

From "Siegfried" only one passage was taken, but it was a gem—the "Forging of the Sword" by *Siegfried*. This part should have been assigned to Mr. Candidus. Signor Campanini made a very creditable effort to make himself heard above the orchestra, but he is not responsible for the physiological impediments which prevent an Italian lyric tenor from effectively singing Wagner's heroic rôles. Frau Materna now took her place on the stage, and the orchestra played the funeral music which accompanies the procession bearing away *Siegfried's* body from the place where he was murdered. The grandeur of the performance must have inspired the great vocalist to make one of the greatest efforts of her life. Scenery, costume, dramatic action, were absent, but they were not missed. In this finale all the emotion, pathos, and passion of the whole trilogy is concentrated and summed up. To those who have heard the dramas, and know the meaning of all the leading motives that are here interwoven into a texture of inexpressible beauty, the music itself has a pictorial suggestiveness that enables it to dispense with stage accessories. In this music Frau Materna for the first time revealed the full beauty of her voice. There was not a speck on it, but a hundred specks would have been forgiven and forgotten in the grand, pathetic, and tragic style in which it all was sung. Those who did not hear Frau Materna sing on this occasion have missed a sensation which no other living vocalist can ever give them.

FRIDAY.

If, on Thursday afternoon, Mr. Thomas's compact, well-arranged, and obedient orchestra had an opportunity to display all its brilliant qualities to the best advantage, Friday evening was the occasion when the choral forces were sure to come to the front. The chorus was larger than at any previous concert, embracing fully three thousand singers, and including, besides the New York and Brooklyn Philharmonic choruses, the Oratorio Society of Baltimore, the Cecilian of Philadelphia, and the Handel and Haydn of Boston, who have become familiar with every bar of "Israel in Egypt" at frequent performances of the work in that city. It was to be expected that the volume of sound would be more impressive than ever before, but the most sanguine patron of the Festival could not have imagined that all these societies could, without a single joint rehearsal, sing with such marvellous precision of attack, purity of tone, and unanimity of sentiment. The great choruses of the first part, "He gave them hailstones for rain," and "He sent a thick darkness," produced a tremendous effect and were most enthusiastically applauded. All the other choruses too were admirably sung, and Mr. Thomas proved on this occasion that he can conduct a chorus as successfully through an arduous task as he can an orchestra.

Nevertheless, the choice of this oratorio for performance at the Festival must be pronounced a decided mistake. Excepting the choruses just mentioned and parts of one or two others, it is a third-rate work by a second-rate composer. The solo parts, which were well sung by Mrs. Osgood, Miss Schell, Miss Winant, and the Messrs. Candidus, Whitney, and Remmertz, are as tame and commonplace as modern spring poetry, and of the choruses the majority are not only stupid but painfully stupid. We say painfully, because the fruitless search after a single pregnant and striking musical idea in a forest of contrapuntal solfeggios and roulades is certainly not a pleasurable exercise of mental ingenuity. There is a certain nimbus about Handel's name in this country which can be traced to the Handel-worship prevalent in England. That it is based chiefly on religious motives, we have ventured to point out on a previous occasion; and the best proof of it is that in Germany, where works of art are judged from a purely æsthetic point of view by the masses, Handel occupies a much less exalted position in popular estimation than he does in England. One reason of Handel's popularity in England, however, is purely musical, and lies in the fact that most of his works are superficial, and, therefore, like Italian opera melodies, are easily apprehended. His choruses impose more by their sonority than by the impressiveness of their musical ideas, and they are massive rather than grand, for true grandeur implies not only dynamic power but creative spontaneity.

SATURDAY.

The afternoon concert of Saturday was devoted entirely to Italian compositions. For their interpretation so many popular soloists had been secured that the character of the programme was probably a matter of considerable indifference to a large part of the audience, to whom the personal element in art is a matter of much greater concern than the nature of the works performed. The artists who sang, alone or in concerted pieces, were Mme. Gerster, Mrs. Osgood, Miss Cary, Miss Winant, and the Messrs. Candidus, Campanini, Toedt, Henschel, Galassi, and Remmertz. Miss Cary, who could not resist the temptation to appear at least once before a Festival audience, was rewarded for this resolution by a hearty reception on the part of the public. She sang in her usual impressive manner. Mme. Gerster recieved a great ovation, after a wonderful rendering of "Ah, non giunge," from "Sonnambula." It does make a difference whether this artist is heard amid such surroundings or in the discordant wilderness of Strakosch's cacophonous opera troupe. The work done by the other vocalists and the orchestra was so much in keeping with its usual character that there is no necessity for analyzing it in detail. The programme gained especial interest from the fact that the pieces were arranged in historical order, beginning with Corelli, and leading through Stradella, Boccherini, Cimarosa, Cherubini, Spontini, Rossini, Donizetti, and Bellini to Verdi. One lesson taught by this arrangement was that, to a certain extent, the history of Italian music is an instance of retrogradation, instead of progressive evolution—Verdi always excepted.

In the evening Liszt's Dante Symphony, a scene from the second act of Rubinstein's "Dæmon" (Mme. Gerster), and the second act of Berlioz's "Fall of Troy" were on the programme. The Dante Symphony has been repeatedly performed here, but the chorus of female voices at the close was last evening heard for the first time. The sudden introduction of these voices after an hour of pure instrumental music produces a deep and striking impression. Although the second part of this work is undoubtedly somewhat too elaborate, the first part is strikingly graphic, vivid, and characteristically weird—a truth which is brought home more forcibly to the hearer at every repetition of the work. Its interpretation by the orchestra was equal in finish and power to that of any previous performance. The "Fall of Troy," of which the second act was given for the first time in New York, proved to be a work of such uncommon interest that its long neglect can only be explained by the fact that for its execution greater forces are required than can be commanded at ordinary concerts. "La Prise de Troie" is the first half of a double opera, of which the second half is "Les Troyens en Carthage," the whole work bearing the name of "Les Troyens." Berlioz considered this as not only his masterwork, but the grandest and noblest composition ever written. At least, he says in a letter to his son, dated May 4, 1861: "Je suis sûr que j'ai fait une grande œuvre, plus grande et d'un plus noble aspect que ce qu'on a fait jusqu'à présent." We should hardly go so far as this, but gladly bear witness to the fact that it is a work of imposing grandeur, full of significant ideas, and a dramatic truthfulness and definiteness of characterization difficult to surpass. The dramatic motives are taken from Virgil's "Æneid," and the contents of the second act relate to the story of the wooden horse. The rôle of *Cassandra* was assigned to Mme. Materna, and we need not point out that such a rôle is eminently in keeping with her vocal style and the highly tragic parts which constitute her specialty. The remaining soloists were Mrs. Osgood, Miss Winant, and the Messrs. Campanini, Toedt, Galassi, Remmertz, and Whitney. A want of steadiness characterized parts of the finale, and the choral forces might have been increased to advantage. But otherwise the performance was very good. The concert closed with the chorus "Wake! Wake!" from the third act of the "Meistersinger," a more imposing, soul-stirring chorus than which could not have been found for fittingly closing the great Festival. At the end Mr. Thomas was repeatedly recalled, amid such demonstrations of enthusiasm as are commonly supposed to be characteristic of Italians and South-Germans alone.

Henry Holt & Co.

WILL PUBLISH SATURDAY:

On Horseback,

IN THE SCHOOL AND ON THE ROAD.

By E. L. Anderson. 12mo.

W. B. Clarke & Carruth

Call attention to their very full stock of BOOKS, new and second-hand, in all departments of literature, which they will sell at the very lowest market prices.

Send for catalogues. Correspondence solicited.

Special agents for

The Victorian Review.

Subscription price, $7 50 per year; single numbers 65c.

Publishers of

Appalachia,

Edited by members of the Appalachian Mountain Club, and full of information of interest to lovers and students of mountains. Price per number, 50 cents.

Their assortment of books on POLITICAL ECONOMY is especially complete.

W. B. CLARKE & CARRUTH,
340 Washington Street, Boston, Mass.

TRAVELLERS TO EUROPE should take two books with them to read on the voyage. MRS. MOULTON'S 'RANDOM RAMBLES' in the "beaten track" of English and Continental travel, bristling with intelligence, good sense, and humor ($1 25). HENRY BACON'S 'A PARISIAN YEAR' "shows an intimate acquaintance with Paris and with Paris life, especially as that life is known to or actually experienced by cultured Americans and English. Mr. Bacon follows the order of the months of the year, and presents Parisian life in its changing aspects. The book is eminently readable, and not uninstructive. It contains nothing frivolous or unwholesome. We commend it to Americans intending to visit the capital of Europe." Price $1 50. ROBERTS BROTHERS, Publishers, Boston.

Thomas Carlyle.

History of the First Forty Years of his Life. By James Anthony Froude, M.A. Two volumes in one. 12mo, 650 pages, price only $1 50.

This is one of the most valuable additions to modern literature. Ask for Ogilvie & Co.'s edition, as all others cost from $4 upward. Sold by all booksellers, or mailed to any address on receipt of price by

J. S. OGILVIE & CO., Publishers,
31 Rose Street, New York.

A Magnificent Library

Of over 10,000 vols., the result of collections of the finest works, made between 1790 and 1850, is to be disposed of by private sale. There are many curious and rare books, some having been printed at the beginning of the seventeenth century. For catalogues, price 25 cents, etc., apply to

REID TAYLOR,
Park House, Montreal.

The Portable Bookcase

(PATENTED)

In Ebony, Cherry, Black Walnut, or Ash. Solid and Permanent. No room where Books are used complete without it.

For descriptive circular and price-list, address the sole makers, LOCKWOOD, BROOKS & Co., 381 Washington St., Boston.

NEW BOOKS.

THE GYPSIES. With Sketches of the English, Welsh, Russian, and Austrian Romany. Including Papers on the Gypsy Language. By Charles G. Leland, author of 'The English Gypsies and their Language,' etc. Crown 8vo, $2.

Mr. Leland embodies in this book the results of many years' study of the Gypsies, their origin, language, and life, and has produced a most valuable and interesting work.

SATCHEL GUIDE, 1882. A Satchel Guide for the Vacation Tourist in Europe. Revised edition for 1882. A compact Itinerary of the British Isles, Belgium and Holland, Germany and the Rhine, Switzerland, France, Austria, and Italy. With maps. 16mo, roan, flexible, $2.

CHRISTUS: A Mystery. By Henry Wadsworth Longfellow. Comprising "The Divine Tragedy," "The Golden Legend," and "The New England Tragedies." With a Prelude connecting Interludes, and Finale. *New Household Edition*, uniform in binding with the *Household Edition* of Longfellow's Poems. 12mo, cloth, $2.

NEW EDITIONS.

PARTON'S 'Life of Horace Greeley.' With portrait and illustrations.

PARTON'S 'General Butler in New Orleans.' With portrait and maps.

Both volumes bound in same style as Parton's 'Voltaire.' Crown 8vo, $2 50 each.

A COMPREHENSIVE COMMENTARY on the Qurán: Comprising Sale's Translation and Preliminary Discourse, with additional Notes and Emendations. Together with a complete Index to the Text, Preliminary Discourse, and Notes. By Rev. E. M. Wherry, M.A. Vol. I. Vol. XXIX. in the Philosophical Library. 8vo, gilt top, $4 50.

A work of great value to all who are interested in the Koran, or in Comparative Religion.

JULES LÉVY, Cambridge, Mass.

A New and Important Work on Political Economy, by an eminent disciple of Carey & Colwell.

JUST READY:

CONVERSATIONS ON THE PRINCIPAL SUBJECTS OF

Political Economy.

By William Elder, author of 'Questions of the Day, Economic and Social.'

"Dedicated to the memory of Alexander Hamilton, Henry C. Carey, Stephen Colwell, the political economists of the New World for the new time."

In one volume of 316 pages 8vo, handsomely printed on fine paper, price $2 50. By mail, free of postage, at the publication price, to any address in the world.

CONTENTS: Chapter I. Political Economy. II. Wealth. III. The Growth of Wealth—Its Agencies. IV. Man and Land—Occupation of the Earth. V. The Law of Migration and Occupation of the Earth by the Human Race. VI. Rent. VII. Commerce and Trade — Sources of Wealth—Domestic Commerce as a Source of Wealth—Improvement in Travel and Transportation a Source of Growing Wealth. VIII. Substitution: 1st, From the Animal to the Vegetable Kingdom; 2d, From the Animal and Vegetable to the Mineral Kingdom; 3d, From Animals, Vegetables, and Minerals to the Imponderables; From Inferior to Better of the Same Kind. IX. Population. X. Wages—Profits and Interest. XI. Money. XII. Functions of Money. XIII. Money and Prices. XIV. Standards: Gold or Silver, or both. XV. Money a Producer of Values. XVI. Money of Account. XVII. Credit-Money. XVIII. Banking—Banks of Issue—Bank of Genoa—Bank of Amsterdam—Bank of Hamburg—Bank of England—American Bank Experiences—Our National Banking System—Bank of France. XIX. International Trade. XX. Close of the Debate. Appendix. Proportion of Bank Checks, Banknotes, Bills, Drafts, and Coin, respectively, in the Banking Business of England and the United States. Index Raisonné.

*** The publishers confidently present this book to the reading public as one of the most brilliant and incisive treatises ever published upon an economic subject; and they are well satisfied that this must be the general judgment in regard to its merits. The striking manner in which the interesting question of money and its various substitutes is treated, must alone invite the attention of a large body of intelligent inquirers after truth in this important field of investigation.

☞ The above, or any of our books, sent by mail, free of postage, at the publication price, to any address in the world.

☞ Our various catalogues, embracing the Literature of Science applied to the Arts, as well as two catalogues of books and pamphlets on Social Science, Political Economy, the Currency, the Finances, Banking, Population, Pauperism, etc., sent by mail free, and free of postage, to any one in any part of the world who will furnish his address.

The Nation.

NEW YORK, THURSDAY, MAY 18, 1882.

The Week.

THE Dublin murders formed the subject of many sermons on Sunday, and furnished materials for many startling conclusions. The Rev. James King, who gave a sketch of Irish history, from the fourth century, in a Methodist church, said "he knew that in every Irish town where British soldiers were quartered, there was a premium set on lechery." The report of this may be imperfect, but to give the observation value or pertinence it ought to be accompanied by an explanation where the premium comes from. If furnished by the British Government out of the revenue, nothing can be more dastardly. Moreover, Mr. King, in trying to account for "the coarse features and quarrelsomeness of the Irish immigrants," proposes an experiment which is clearly impracticable when he says, "Take our most cultured people, New England for instance, and oppress them for eight centuries, and they would have worse-looking faces than the Irish!" It may be so, but to give the suggestion practical value, a shorter period of oppression ought to suffice. We think the beauty could be taken out of an average New England face by even twenty years of oppression. The Rev. Dr. Newman, the noted Stalwart, also discoursed on this subject, but he simply pointed out that assassination as a remedy for political and social wrongs is a failure. Dr Talmage, however, acquitted Irishmen of the deed, and laid it to the charge of "Desperation and Nihilism," and declared that Nihilism "would cut the throat of every decent man or woman on the planet," but fixed $25,000 as the proper amount of the reward for the detection of the Irish assassins. All above this amount would, he said, constitute "a premium on perjury." The Rev. James O'Connell, at the Masonic Temple, made the assertion that "cold-blooded assassination was not in accordance with Irish ideas," and that he "had never heard or read of an Irishman stealing up behind his victim and stabbing him in the back." Mr. O'Connell, if this be true, cannot be a newspaper reader. Cold-blooded assassination may not be in accordance with "Irish ideas" of what is right, but unhappily it appears to accord fully with a great many Irish ideas of what is expedient, and has played a more prominent part in recent Irish history than in that of any country in the world. It may be more discreditable to steal up behind a man's back with a knife than to lie in wait for him behind a hedge with a rifle, but the distinction is one for which few men who were going to be murdered would care a straw.

The annual argument on the subject of the disposition of the money paid by Great Britain under the Geneva Award began on Thursday in the House. The bill reported by the majority of the Judiciary Committee was a measure framed in the interest of all the claimants other than the insurance companies, and, as was to be expected, it was passed on the following day. The matter now goes to the Senate, where the insurance companies have a better chance. But there is little probability of any bill getting through both Houses and becoming law. This latest proposed scheme of distribution furnishes a glaring instance of the incapacity of Congressional committees to deal with claims against the Government in a satisfactory manner. The provision which it makes for the payment of claims for the destruction of vessels by the "exculpated cruisers" is simply a piece of spoliation. An "exculpated" cruiser means any one of the Rebel war cruisers for the acts of which England was decided by the tribunal at Geneva *not* to be liable to our Government. What we submitted to the tribunal was, the decision of the damages which England should pay us for injuries inflicted upon our commerce by Rebel vessels which were negligently allowed to escape from its ports. Consequently, the very first question the court had to decide was, what vessels had been allowed to get out in this way. It decided that the *Alabama*, *Florida*, and *Shenandoah* were the only cruisers for whose acts England could be held responsible. As to a number of others it exonerated England altogether, and these became known as the "exculpated" cruisers. The money was awarded for the acts done by the three ships we have mentioned.

Now, there is no dispute whatever about these facts. The "war-premium" claimants have invented a mysterious argument that the "war-premium" claims were recognized in some occult way by the payment of the Award in a "lump sum"; and all the opponents of the insurance companies contend that their receipt of war rates is an argument against paying them any of the fund. In other words, with regard to these classes of claims, there has been from the first some show of reasoning *pro* and *con*. But there never has been any pretence of a reason for the payment of the "exculpated cruiser" claims. No legal or moral argument has been advanced in support of them, for the simple reason that there is nothing to be said, the very term used to describe them showing that they have no standing of any kind. They are confessedly illegal claims, having been determined by the Court to which they were submitted to have no validity. The money which, if the present bill were passed, would be used to pay them, belongs either to the insurance companies, to the war-premium claimants, to the United States, or to Great Britain. That the Judiciary Committee of the House of Representatives should year after year recommend the payment of claims which every single member of it knows to be illegal, is about as striking an illustration of the irresponsible way in which the decisions of legislative committees are reached as could be had. The reason why the Committee recommends the payment of claims ruled out of court really is *because* they were ruled out of court.

The foreign exchanges so ruled during the week that it was necessary to export about $3,600,000 more specie, of which about $3,000,000 was gold; and shipments of at least as much more have been engaged. Our merchandise imports continue much in excess of our merchandise exports; accordingly, either specie or securities have to make up the balance, and Europe is not freely taking the latter, although late in the week it was announced that one loan of $5,000,000 had been negotiated in London for the Atchison, Topeka and Santa Fé Railroad on its six per cent. trust mortgage bonds. The drafts against the loan are to be made in instalments, so that its effect on current operations was not large. Aside from the balance due on the excess of merchandise imports over exports, a large amount of what are known as loan bills are maturing, and a part of the gold shipments have been on this account. The gold going to London is expected, through its influence on the market there, to increase, in due time, the demand for American securities, particularly if our harvests prove as good as they now promise. Thus far the loss of the $17,000,000 of gold shipped since January 1 has had no influence on the rates for loans in this market; it has simply checked the rising tendency of the surplus reserve of the New York banks; this surplus having last week been still above $8,000,000. The time when the loss of this gold will be felt, if at all, will be next autumn, but before then the European demand for American securities, or the trade exchanges, by reason of the outcome of the growing crops here and in Europe, may have changed the whole situation. At the Stock Exchange it was the dullest week of the year for speculation. General trade was rather quiet during the week. In the iron industries considerable depression is reported. Railroad traffic east of Chicago was only moderate in volume; west of that point it was large on account of the business in connection with the immigration movement, which continues to be unprecedented. The crop prospects remain excellent, the heavy rains of the week having done more good than harm.

Mr. R. P. Flower's observations in the House of Representatives, as to the necessity of passing a Refunding Bill as an adjunct to the Crapo Bank Bill, have considerable force, in view of the fact that the session is now so gorged with business that there is little chance of considering any new measure, which must needs run the gauntlet of both Senate and House. A Refunding Bill adequate to the emergency, and sufficient to cover the next three years, has passed the Senate, and can be passed by the House at any time under a suspension of the rules. Mr. Flower points out that bonds held as security for $41,000,000 of circulating notes will be paid off by the first of August next, and that in the absence of a Refunding Bill the banks will not be able to replace the security, and must, therefore, retire the notes. This would be a very severe, if not disastrous, contraction of the currency, coming at the beginning of the crop-moving

season. A more comprehensive measure than the Refunding Bill will be needed soon, in order to deal with the currency and bank question, seeing that within a few years the bonds will all be paid off; but for the present the Refunding Bill now before the House, or some equivalent measure, seems to be requisite to meet the exigency pointed out by Mr. Flower.

A telegram from Des Moines, Iowa, says that the "Western Miners' Bureau, representing twenty-two corporations and a capital of $42,000,000, have passed a resolution favoring an increase in the amount of silver in the standard silver dollar, making it intrinsically worth one hundred cents." The Western Miners' Bureau is an organization which we never heard of before, and we infer that the $42,000,000 of capital represented by it must consist largely of stationery and printers' ink. Nevertheless, their resolution is an approximation to common sense. It is, unfortunately, not practicable to make the silver dollars intrinsically worth 100 cents without recoining them every time the market value of silver changes. But for this difficulty, the resolution of the Western Miners' Bureau would be the embodiment of sound financial doctrine. If it could be put in force, there would be no objection to the free coinage of silver on the same terms as of gold. The action of the Bureau is nevertheless significant at the present time as showing that the owners of silver mines feel that the existing practice of the Government—expending $2,000,000 per month in the purchase of bullion not wanted for any earthly purpose—is untenable, and cannot be long continued. But the Western Miners' Bureau will not be harmed if this resolution is objected to by Congress on the ground of insuperable mechanical difficulties, for if it could be carried into effect its net result would be to give them only the market price for their silver from day to day. This is what they obtain now.

It is reported that a resolution will be introduced in the Assembly requesting members of Congress from this State to vote for a bill to allow citizens of the United States to buy foreign-built ships and run them under the American flag, provided that this permission shall not extend to the coasting trade. The last Legislature did something practical for the revival of shipping when it passed the act to exempt vessels from taxation. The present Legislature might well give moral support to the revival by passing the proposed resolution. It is true that the regulation of ocean commerce is not within the jurisdiction of the State, but this consideration surely need not repress an expression of opinion on the part of the Assembly, which lately instructed the British Government as to the theory it should adopt in its proceedings against the murderers of Lord Frederick Cavendish and Mr. Burke. The city and State of New York are more directly interested in the free-ship question than any other part of the country, and the people will not be likely to make a point of order against a formal declaration of their views on this subject by their representatives at Albany.

The Attorney-General of the State has given an opinion which bids fair to ruin utterly the prospects of female suffrage in this State. In other words, he says the State Constitution confines the suffrage to males, and it cannot, therefore, be given to females without an amendment to the Constitution. Now, an amendment to the Constitution has to be passed by two successive Legislatures and then submitted to the people, and it is all but certain that no proposal to give women the ballot could survive such a process, within any period sufficiently near to be worth considering. The number of men who soberly and in the society of their own sex consider that the community would be benefited by having women vote is very small, and is certainly not growing, and the worst of it is that the deadliest silent and secret opposition to it comes from women themselves. As a general rule the women who influence men most do not want the suffrage for themselves, and do not wish other women to get it, so that the scheme would have no chance before the people. In the Legislature, where its advocates catch a small body of men with their judgments about women disturbed by absence from their wives and families, it might be possible to get a majority for one passage of the amendment, but few would face the final passage. In short, the prospects of the movement, whatever one may think of its merits, are gloomy.

Mr. Oscar Wilde delivered a lecture, on Thursday evening, on "Art Decoration," in which he gave a curious account of his reformatory æsthetic efforts in Leadville, where he has lately been laboring. In all his travels, he says, the only well-dressed men he has seen have been the Western miners. "Their wide-brimmed hats, which shaded their faces from the sun and protected them from the rain, and the cloak, which is by far the most beautiful piece of drapery ever invented, may well be dwelt on with admiration. Their high boots, too, were sensible and practical. They only wore what was comfortable and therefore beautiful. As I looked at them, I could not help thinking with regret of the time when these picturesque miners should have made their fortunes, and would go East to assume again all the abominations of modern fashionable attire." So concerned was he at this thought that he made some of them promise that when they come East, they will "still continue to wear their lovely costume." The account the poet gives of his reflections at Leadville brings out in an interesting way the difficulties with which the reformer has to contend. He says that when he thought that all the shining silver he saw coming from the mines was to be made into "ugly dollars," he became "sad." But this is just what makes the picturesque Western miner glad. What he is thinking about is the ratio of sixteen to one, and the good clothes he can get at a "dry-goods emporium" in Broadway, and the ugly "palatial residence" he will build in Fifth Avenue with his "ugly dollars." Still, if Mr. Wilde has taught even one miner to long to "live up" to his hat, boots, and cloak, his visit will not have been wasted.

The French journalists are getting into serious trouble over the term "snobisme," which has been adopted from the English, but has apparently somewhat changed its meaning in the transfer. M. Weiss wrote an article lately on the "Conservative Republic," in which he used "snobisme" as the equivalent of silly idleness, which is a clear perversion. As defined by Thackeray, snobism, or snobbery, was "mean admiration of mean things," and a snob was a person whose mind was filled with the importance of external social distinctions, and who sought to raise himself in the social scale by humbug and pretence. Busch gives an account of a discussion on the proper use of the term at the German headquarters during the siege of Paris, in which Bismarck took part, but in which it plainly appeared that he, too, though a good English scholar, had failed to grasp the true and original sense of the term. The party had, however, just been lunching off a *croustade* with mushrooms and a pheasant with sauerkraut, washed down with champagne, and were probably not, philogically considered, in good condition. The Chancellor, at all events, held that a snob was simply a self-satisfied simpleton, a narrow-minded person, or, in other words, that the word was merely the equivalent of the German "Philistine," which is clearly an error, though the definition comes very near that in most common use in this country. Here a snob is, in popular parlance, not so much a person like Thackeray's snob, who is dissatisfied with his own position and is trying to raise himself by low arts, as a person who thinks a good deal of his position, and shows it by giving himself airs. In fact, it may be said, that the snob in America looks down on others, while the English snob looks up to others, and tries whimperingly to climb up to where they are. Further west the term is applied to men particular about their dress, and there are regions where the habitual use of a pocket-handkerchief or tooth-brush would put a man in the snob category.

The crisis which has long been impending in Egypt seems at last to have arrived, and pretty much in the shape in which it has been expected ever since February of last year, when the garrison of Cairo compelled the Khedive to release certain officers who were being tried by court-martial. This surrender to the mutinous troops of course meant the transfer of his power to the Army. He has ever since had but the shadow of authority. In the following September Arabi Bey, the Colonel who had headed the outbreak in February, seized the command of the troops, and ordered the Khedive to dismiss the then Ministry, increase the strength and pay of the Army, and grant a Constitution. He conceded everything except the Constitution, and for this he substituted a Chamber of Notables, who were simply such persons from each district as the local functionaries were directed to send up. When the Chamber met, it drew up an organic law which handed over the control of the budget to a committee composed of members of the Chamber and of Ministers in equal numbers, but made no place whatever for the so-called European Control over the finances exercised by two representatives of France and Eng-

land respectively. These gentlemen protested, and their Governments warned the revolutionists not to go too far. More than this could hardly be done, however, because the Control was not established by treaty, but by a decree of the Khedive, and therefore foreign interference would not be justifiable until it appeared that the establishment of the new régime was actually disturbing the existing financial arrangements. Arabi Bey and his friends, however, declared loudly that they had no intention of disturbing the existing financial arrangements. They simply wished to reform the Government by making it parliamentary and giving Egypt to the Egyptians. In other words, they set up as a national and constitutional party, seeking to overthrow the old despotic system working under foreign influence, and in this character they managed to get a certain amount of countenance from a portion of the English and French press, besides deluding a certain number of English travellers into the belief that they represented the Arab revival in Islam.

Things have remained in this condition ever since last September, France and England waiting to see what the Army and the Chamber would do, the Sultan waiting for a chance to interfere in his character of lord paramount, and thus reassert the Caliph's authority over Egypt, and the Army waiting for something to turn up. What the end would be, few calm observers have ever doubted. To suppose that a Constitution and Chamber created and set in motion by a mutinous army could last long, would be to disregard all experience. No Legislature which cannot control the Army ever lasts long, much less a Chamber which the Army has called into existence. In fact, Arabi Bey has made no secret during the past six months of the fact that the Army rules Egypt, and the knowledge of this fact has already produced considerable dislocation in the financial system, and notably a revival in the provinces of the old abuses in the mode of levying the taxes. The exact nature of the complication which has just arisen at Cairo is a little difficult to understand on the information furnished by the telegraph, but the Ministry, which represents the Army, came to loggerheads with the Assembly, and the latter refused to meet on the summons of the former. Arabi Bey's plan seems to have been to procure from the Chamber the deposition of the Khedive and his family, or, failing that, to enforce it with the aid of the troops. The deposition of the Khedive would be of but little consequence to France and England if his proposed successors professed to respect the Control, but instead of this they actually talk of the expulsion of all foreigners. So that the two Powers must either sacrifice their bondholders over whose interests they have been watching tenderly for seven years, and submit to humiliation which would make it very difficult to restore their prestige, or else take active steps to put Arabi Bey down. They have apparently solved the problem by sending ironclads to Alexandria and threatening to let the Sultan land gendarmes. This appears to have broken down the mutineers, for on Tuesday evening Arabi Bey and the rest of them went and begged the Khedive's pardon, and kissed his hand and the hem of his coat. He received them coldly, however, and they went away, it is said, "humiliated." If he will now bastinado them all round, Egypt will again be peaceful and happy.

The confidence of the *Times* and other London papers in the efficacy of the new Coercion Act is very curious, considering that there has been the same confidence in the success of every coercion act ever passed, and notably in that of Mr. Forster. One can compare this confidence to nothing but the perseverance sometimes displayed by incurables in the consumption of quack medicines. The twelfth bottle they often think will do the business, though the other eleven may not have brought the slightest sign of improvement. A meeting of Irishmen was held here on Friday night to denounce the Dublin assassinations, at which the Mayor presided, and at which resolutions, on the whole, moderate and sensible, were passed. But there was considerable disturbance from the presence of the dynamite and blatherskite variety of Irish patriot, and of Mr. James Redpath, who yelled out, "God bless dynamite in Russia!" and expressed admiration for the Nihilist publicists of that country.

Mr. Gladstone has introduced his bill providing for the relief of the tenants who were prevented by their owing arrears of rents from taking advantage of the Land Act. The hardship of their case was clearly perceived by the Ministry before the Land Act was framed, and the bill introduced by Mr. Forster, and which the Lords rejected in the winter of 1880-81, was intended to give them temporary protection from eviction on account of the arrears. Most of the arrears are due to three bad harvests, and most of them are arrears of rents which the Land Act Commissioners would undoubtedly pronounce too high if the tenants could get into court. But they have hitherto been prevented from getting into court by eviction, and a large proportion of the recent outrages are ascribed to the disappointment thus caused. Mr. Gladstone now proposes that any tenant who pays one year of arrears shall have another paid for him by the Government out of the remainder of the Church property, and that the landlord shall be compelled to forgive the rest, which will occasion no difficulty, because there was not the least chance of his getting it. The sum the Government will have to provide is estimated at about $10,000,000. The landlord will, therefore, be put in possession of two years of exorbitant rental, of which he had no expectation; the tenant will receive a complete discharge and be able to make a fresh start in life. It is true that this bill only applies to tenants whose rent falls below $150 on the Griffith valuation, and this will cover all cases of real hardship. The tenant will have to prove his inability to pay before the County Court, but this we suspect will be an easy task, because nobody will be much interested in impeding him. In fact, the ease with which the dishonest will here be able to escape from their obligations is the weighti est objection to the measure.

There was a very acrimonious debate at the introduction of the bill on the point whether there had been a bargain between the Ministry and the Parnellites before the recent change of policy. Mr. Forster read a memorandum, showing that he had had a conversation with a Captain O'Shea, a friend of Parnell's, which looked to him like a Parnellite offer to make a bargain, and disgusted him, and caused him to drop the matter. Mr. Gladstone denied that there had been any official stipulation, but hardly denied that there had been an understanding with the Parnellites. To such an understanding there was no real objection on grounds of practical statesmanship. The suspects were locked up because there were outrages. It was found that keeping them locked up did not stop the outrages. It was, therefore, perfectly rational to let them out on their proposing to stop the outrages. But there was in it sufficient offence to English pride to give the Tories materials for a savage attack, in repelling which Mr. Gladstone seems to have lost his temper. The fact is that the Tories stood ready to bargain with the Parnellites themselves. Their proposal to create a peasant proprietary is a distinct bid for the Land League vote, and what is enraging them now is that the Liberals should have got the whip-hand of them.

Mr. Parnell has read in the House of Commons the letter he wrote to a friend, on seeing which Mr. Gladstone is said to have resolved on a change of policy and to have entered into what the Opposition jeeringly calls the "Treaty of Kilmainham." The letter simply says that if the arrears of rent question were settled, the Irish party in the House would regard it as a practical settlement of the land question, and would exert their influence, with probable success, for the stoppage of outrages, and would be able to coöperate with the Liberals in the support of Liberal measures regarding England. This last part of the letter he did not read till called upon, and when read, it called forth ironical Tory cheers, but why, it is hard to see, inasmuch as it contains no proposal in the nature of either conversion or perversion. The Irish have commonly acted with the Liberals in general legislation, so that what was here promised was simply to return to normal courses if the Irish questions were out of the way. The Irish judges are said to have forwarded a protest, which the Government are considering, against the proposal contained in the new Coercion Bill to compel them to discharge the functions of both judge and jury. If they should refuse to sit in the new tribunal altogether, they would be within their strict rights. They were appointed to perform the ordinary duties of British judges, and sitting in quasi-courts-martial, created as part of a system of terrorism for a short period, is no part of these duties. Their main and strongest objection to the rôle which it is proposed to assign to them probably is, however, that it would greatly lower the popular respect for their office, by ruining popular confidence in their impartiality, if they consented to become part of a system of coercion by doing what no British judges have ever done before, even in Ireland—consenting to pass in capital cases both on the fact and the law. What they recommend is a majority verdict from juries.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

MR. WORTHINGTON'S nomination to be Collector of the Port of Boston was confirmed by the Senate on Monday, the vote being 38 to 14.

Senator David Davis's bill to establish a Federal Court of Appeals was passed by the Senate on Friday, the vote being 32 to 18. The minority was composed of Democrats. The bill provides for the appointment of two additional judges in each judicial district. The two new judges, the Supreme Court justice assigned to the Circuit, the present Circuit judge, and two of the District judges in rotation are to constitute a Court of Appeals, intermediate between the Circuit and District and the Supreme Courts. The amount in controversy must exceed $500 to entitle the litigant to an appeal, except in cases of unusual importance, when the case may be sent up by the Circuit or District Court.

By a vote of three to two, the Senate Select Committee on Woman Suffrage have agreed to recommend for adoption Senator Lapham's joint resolution proposing a sixteenth amendment to the Constitution of the United States, that "the right of citizens of the United States to vote shall not be denied or abridged by the United States, or by any State, on account of sex." Congress is given power to enforce the provisions of the amendment by appropriate legislation.

The National House of Representatives, on Wednesday, passed, by a vote of 172 to 7, the bill creating an Executive Department of Agriculture, under the supervision and control of a Secretary of Agriculture, who shall be an experienced and practical agriculturist. It also establishes the following bureaus: of Agricultural Products, of Annual Industry, of Lands, and of Statistics.

On Friday, the House of Representatives passed the Geneva Award Bill, which provides for the reëstablishment of the Court of Commissioners of Alabama Claims, and for the distribution of the remainder of the Geneva Award. The court is to continue in existence for one year, and all claims must be filed within four months of its organization. It is provided that the court shall award damages for claims directly resulting from damage done on the high seas by Confederate cruisers during the late rebellion; and for claims for the payment of premiums for war risks, whether paid to corporations, agents, or individuals, after the sailing of any Confederate cruiser.

The River and Harbor Bill was reported to the House of Representatives on Saturday. It was ordered printed and recommitted. The aggregate amount appropriated is about $17,000,000. The House Committee on Appropriations have completed a bill appropriating $100,000,000 for pensions for the coming fiscal year.

During four days of last week the Sub-Committee of the House Committee on Foreign Affairs was in this city taking testimony in regard to the Peruvian scheme. Mr. Robert E. Randall, who as agent of the Crédit Industriel made the contract with Morton, Bliss & Co. to act as consignees for Peruvian nitrates and guano, testified that soon after Minister Morton's arrival in Paris he called upon him and spoke of the contract with the New York firm. Mr. Morton said: "Mr. Randall, that is a matter which you have been conducting with Mr. Bliss, so far as my firm is concerned, and I prefer, for many reasons, that it should so continue, and, in fact, I do not want to know anything about the matter whatever." Mr. George Bliss, of the same firm, testified before the Committee in regard to the contract, which he said was an ordinary business transaction of no special significance. The Sub-Committee have returned to Washington, as Mr. Shipherd refused to appear before them, alleging as an excuse that he had not had an opportunity to peruse Senator Blair's recent testimony.

It is reported that the Secretary of the Interior has decided to adopt the policy of disarming all the Indians in the Western States and Territories who are subject to the effective control of the Government.

The bill of exceptions in the Guiteau case was argued before the court in banc of the District of Columbia, last week, Chief-Justice Cartter presiding. Col. Reed appeared for the defence. He made an able argument, the chief points of which were that the courts of the District had no jurisdiction to try Guiteau, because the President died in New Jersey; that the sentence is void, as the day of execution was not fixed within thirty days after the next term of the Supreme Court of the District, and that Judge Cox confused the jury by his charge. Mr. Reed was answered by Col. Corkhill and Mr. Davidge. On Friday afternoon Col. Reed made the closing speech.

It is authoritatively stated in Washington that a decision in the Guiteau case will be rendered on Monday next, overruling all the exceptions and, consequently, affirming the sentence. Mr. Reed, counsel for Guiteau, says that he will then appeal to the Supreme Court of the United States for a writ of habeas corpus, on the ground of lack of jurisdiction.

Guiteau is reported to be very despondent over the supposed decision of the court in banc against him. He says that he now relies wholly on Executive clemency.

John W. Dorsey unexpectedly appeared in court, at a hearing of the Star-route cases in Washington on Tuesday. Bail was fixed at $10,000 and was secured.

The Virginia Bourbons are severely denouncing Senator Mahone on account of his vote with the Republicans, by means of which the Tebbs case was referred to the Committee on the Judiciary. They arraign Mahone on the ground of disloyalty to the Confederate cause. Young Tebbs, who was in the Confederate service, desires to become a surgeon in the United States Navy, and wishes to have the law which forbids ex-Confederates to enter that service set aside as to his case.

The Mississippi Democrats in Congress are disturbed over the fact that General Chalmers, lately replaced in Congress by the colored Republican, Lynch, has gone home with the announced purpose of organizing an Independent movement in Mississippi against the Bourbons. He has issued a circular announcing himself an Independent candidate for Congress.

Nine leading Georgia Independents have indefinitely postponed the mass meeting called for June 1, and urge their followers to support Alexander H. Stephens for Governor.

The Tennessee Senate has passed the bill to refund the State debt at 60 cents for the 100, and 3, 4, 5, and 6 per cent. interest. The lower House will also probably approve it.

The Pennsylvania Republican State Convention met at Harrisburg on Wednesday. Senator Cameron had agreed to give the nomination for Lieutenant-Governor to Charles S. Wolfe, the Independent leader, in order to reconcile that wing of the party. The proposal, however, was so distasteful to Mr. Cameron's followers that he was compelled to restore State Senator Davies to the "slate." The Convention nominated the following ticket: Governor, James A. Beaver; Lieutenant-Governor, William T. Davies; Secretary of Internal Affairs, John M. Greer; Judge of the Supreme Court, William H. Rawle; Congressman-at-large, Thomas M. Marshall. This ticket is Cameron's own, with the exception of the candidate for Congressman-at-large. The discontented elements unexpectedly united in nominating Mr. Marshall. The platform adopted is, substantially, the recent declaration of principles agreed upon by the Stalwarts and Independents at the Philadelphia conference. The leading Independents, such as Senator Mitchell, Wharton Barker, and Francis B. Reeves, are dissatisfied with the arbitrary way in which the ticket was nominated more than with the personnel of the ticket. They assert that the Independent Convention on May 24 will probably nominate a full ticket, though they may approve Marshall for Congressman-at-large.

The Assembly at Albany, on Wednesday, passed a bill providing that in case the carriers of immigrants to the port of New York refuse to pay not less than fifty cents for each alien passenger landed at Castle Garden, to the Commissioners of Emigration, the Commissioners shall be authorized and required to exclude the carriers from landing immigrants at Castle Garden, and from the benefits of the State emigrant institutions at Ward's Island.

A new charge was brought, on Friday, before the Assembly Judiciary Committee of this State, now investigating some of Judge Westbrook's acts. Mr. Rufus F. Andrews wrote a letter alleging that, in proceedings with reference to the Stewart estate before Judge Westbrook in 1878, Judge Hilton paid, through his attorney, $5,000 for the purpose of influencing the decision of the Judge with regard to the substitution of Ira Shafer as attorney for an alleged heir of the late A. T. Stewart, and that Judge Westbrook's decision was in accordance with Judge Hilton's wishes.

The Attorney-General of this State has given an opinion that it would be unconstitutional for the Legislature to enact a law giving women a right to vote.

An Irish-American mass-meeting was held in Cooper Institute, this city, on Friday evening, for the purpose of denouncing the assassination of Lord Cavendish and Mr. Burke, but the time was mostly spent in denunciations of the British Government and the new bill for the repression of crime in Ireland.

Five Bishops were elected on Tuesday by the General Conference of the Methodist Episcopal Church, South, in session at Nashville, Tenn. They are the Rev. A. W. Wilson, D.D., of the Baltimore Conference, the Rev. Athens G. Haygood, President of Emory College, Oxford, Ga., the Rev. J. C. Grandberry, D.D., late Professor of Mental and Moral Philosophy at the Vanderbilt University, the Rev. Lewis Parker, and the Rev. R. Hargrove.

The twenty-second annual Convention of the United States Brewers' Association met in Washington on Wednesday, and remained in session two days. Large sums of money were appropriated for the purpose of opposing prohibition in the Western States.

Crop reports for the past week show that in the Northwest the outlook for a good wheat harvest is excellent. In the South and Southwest, where the wheat is much further advanced, great damage has been done by the prevailing rain and storms.

Brevet Major-General John Gross Barnard, of the Corps of Engineers, U. S. A., died in Detroit, Mich., on Sunday. He was a brother of President Barnard of Columbia College. He was graduated at West Point in 1833, and served in the Mexican war with such credit that he was brevetted Major. His services during the Rebellion were important and meritorious. He was Chief Engineer of the Army of the Potomac in 1862, and on June 5, 1864, was appointed Chief Engineer of the armies of the field, on General Grant's staff. Several important military works were written by him.

Ex-Governor Cadwalader C. Washburn, of Wisconsin, died at Eureka Springs, Ark., on Sunday. He was the youngest of the three brothers who have occupied a prominent place in American politics. He was born in 1818. Early in life he removed from Maine to Wisconsin to practise the legal profession. There he entered politics, and was soon elected to Congress, where he made a good reputation. He served on the Special Committee of Thirty-three which considered President Buchanan's last message, and made recommendations intended to prevent the civil war. In the war he rose to the rank of Major-General. He was elected Governor of Wisconsin in 1871. He

has given very liberally to the Madison, Wis., University.

Mr. E. W. Kingsland, of Jersey City, for twenty years Treasurer of Hudson County, N. J., and President and practical manager of the Provident Institution for Savings, of his city, one of the largest savings banks in the State, attempted to commit suicide, on Friday morning, while alone in his banking-room. He fired five shots at himself from a revolver, one of which took effect, passing in at the right cheekbone and out at the left side of the nose. He regained consciousness late Friday afternoon. The wound is not necessarily fatal. The bank officers say that the funds of the Institution are all right. The Institution was subjected to a run on Friday and Saturday, but met all its obligations promptly. It is supposed that disease, aggravated by worry over many business affairs, caused Mr. Kingsland to attempt suicide. No reverses in business have occurred to him, as far as known.

In the Malley trial at New Haven, during the week, the prosecution has offered testimony to show that during the last two days of Jennie Cramer's life she was almost continually in the company of James and Walter Malley, and Blanche Douglass. The most important testimony offered was that given by a witness who asserted that he saw James Malley and Jennie Cramer together at Savin Rock after eight o'clock on Friday evening, August 5, the supposed night of her death. It is said that the prosecution will soon produce testimony to show that ten months ago Walter Malley purchased four ounces of white oxide of arsenic at a New Haven drug store. The entry was made in the record book of the store.

At three o'clock on Saturday morning the steamship *Pliny*, of the Liverpool, Brazil, and River Plate Mail Steamship Company, from Rio de Janeiro for Brooklyn, ran ashore at Deal Beach, N. J., and foundered. The passengers and crew were rescued by the Life-Saving buoy of Station No. 6. The vessel and cargo are a total loss.

FOREIGN.

In the House of Commons, on Thursday evening, Sir William Harcourt, the Home Secretary, introduced Mr. Gladstone's bill for the repression of crime in Ireland. The bill provides that, in those places where the ordinary law is not observed, special tribunals, consisting of three judges, shall be appointed by the Lord Lieutenant of Ireland to try cases without a jury. The judgment of the court must be unanimous. Appeal can be made to the Supreme Court, which may diminish but not increase the severity of the sentences. Power is given to enter houses, by day or night, under a warrant of the Lord Lieutenant, to search for secret apparatus of murder. Persons prowling around at night, and unable to give an account of themselves, are to be arrested and dealt with summarily. The bill provides for the arrest of strangers and removal of foreigners considered dangerous to the peace —thus reviving the Alien Act. Membership of secret societies is made an offence under this Act. Unlawful meetings are to be dealt with summarily. Seditious newspapers are to be suppressed. Outrages are to be dealt with summarily by courts which are to consist of two stipendiary magistrates. Compensation for murder and outrage will be required of the districts where they occur. The Lord Lieutenant can proclaim districts to which this act may be applied. The bill places almost unlimited authority in the hands of the Lord Lieutenant. Its operation is limited to three years. This measure will be followed by one dealing with the arrears of rent.

In the debate on the Repression Bill, Sir Stafford Northcote said the Opposition desired to give the Government all the assistance in their power, but held them responsible for the way in which they discharged their duty. Mr. Parnell denounced the bill, and declared that it would result in an hundred-fold greater failure than what had gone before. Mr. John Dillon followed with even more vehement denunciation. He said that the bill would bring disaster, and destroy all faith in ultimate justice. The only way to deal with Ireland, he asserted, was to accept the aid of himself and his friends. The bill was passed to a first reading by a vote of 327 to 22, the minority consisting of Home Rulers.

The London *Times* believes that the Repression Bill covers the whole ground and grapples every part of the subject resolutely and boldly. The *Daily Telegraph* and *Standard* have also approved the bill, but it is bitterly assailed by the *Pall Mall Gazette* and Dublin *Freeman's Journal*.

The funeral of Lord Frederick Cavendish took place at Chatsworth, England, on Thursday. Mr. Gladstone appeared among the mourners. It is said that fully 30,000 people witnessed the ceremonies.

On Saturday three arrests were made at a hotel in Cork, on information which it is said will lead to important revelations. The Dublin police have discovered that the name of the man who drove the assassins' car is Rush.

The Dublin police believe that the Irish assassins are now in that city, and that they are afraid that if they should be separated one would turn traitor. Later information shows that at least twelve persons were engaged in the tragedy, and that it is probable they intended to murder eight persons.

Mr. Holden is the Liberal, and Mr. Charles Gathorne-Hardy the Conservative candidate for Lord Frederic Cavendish's seat in the House of Commons.

Mr. Parnell, it is reported, has received police protection, owing to rumors which are current, and to threatening letters which he has received. He has denied the rumor, but it has been ascertained that an application was made for his protection by another Home Ruler, without his knowledge.

A canister twelve inches long and six inches in diameter, filled with blasting powder, was discovered by a policeman on Friday night attached to the railing in front of the Lord Mayor's mansion in London. The policeman extinguished a burning fuse connected with it in time to prevent an explosion. There is no clew to the persons who are connected with the plot.

Messrs. Parnell, Kelley, and Davitt went to Paris on Friday to consult with Mr. Egan, Treasurer of the Land League. It is said that their visit has some significance in view of rumors of a break between the Parnell and Rossa factions of Irish agitators and sympathizers.

Mr. Gladstone introduced the Arrears of Rent Bill in the House of Commons on Monday evening. The bill is limited to tenancies up to £30, Griffith's valuation. It is to be administered by a land commission, before which the tenant will be obliged to prove inability to pay arrears. The bill deals with two years' arrears, and requires the tenant to pay one year's arrears from November, 1880, to November, 1881. When that is paid the whole of the remaining arrears will be cancelled. The Government will contribute the remaining rent from the residue of the Irish Church Surplus Fund, the estimated amount of which is about £1,500,000.

In the House of Commons, on Monday afternoon, Mr. Parnell read a letter, which he wrote to Mr. O'Shea, a Home Ruler, before his release, and which was to the effect that reforms of the Land Act in regard to arrears of rent were necessary, and that on the completion thereof the Land League would do all that was possible to suppress outrages in Ireland, and the Land Leaguers might act cordially with the Liberals, in support of Liberal principles. This letter led to a heated debate on Tuesday. Mr. Gladstone declared that there had been no official communications or stipulations with Mr. Parnell before his release, and that such accusations were a disgrace to those making them

A memorial window of stained glass, presented by Americans to St. Margaret's Church, Westminster, England, inscribed with Raleigh's name, was unveiled on Sunday. Minister Lowell wrote a four-line poetical inscription for the window. Canon Farrar preached he sermon at the unveiling.

Anarchy has again appeared in Egypt. At an audience with the Khedive on Tuesday evening, May 9, Mahmud Barudi, the Prime Minister, insisted on a modification of the decree commuting the sentences of the rebellious Circassian officers. He spoke insultingly of the foreign Consuls, and threatened violence to Europeans. The Khedive declared that he would not yield. The Ministry then, in violation of the Organic Law, summoned a meeting of the Chamber of Notables over the head of the Khedive; their real object being to depose the family of Mehemet Ali, to which the present Khedive belongs, and put Arabi Bey, the present revolutionary Minister of War, at the head of the Government. They entirely rejected the authority of the Khedive, and their relations with the English and French Controllers-General were ruptured.

Unexpectedly, the Egyptian Notables refused to convene on Sunday unless convoked constitutionally. When Arabi Bey heard of their decision he exclaimed: "Then we shall have civil war!" He manifested a disposition to depose the Khedive by an array of force, without the aid of the Notables. One regiment, however, remained true to the Khedive. The situation was still further complicated by an announcement made on Saturday to Arabi Bey that if he attempted to depose the Khedive by means of the army, the Bedouins would enter Cairo. Large bodies of Bedouins had already gathered in lower Egypt.

Mahmud Barudi resigned on Sunday afternoon, and Mustapha Fehmy, Minister of Foreign Affairs, was offered the Presidency of the Council, but refused it. The Khedive then resumed his original attitude toward the Ministry. The Porte on Monday sent a despatch of warning to the Ministry.

Relations were resumed, on Monday, between the Khedive and the Egyptian Ministry, and the latter submitted completely to his authority.

Lord Granville, Foreign Secretary, announced in the House of Lords on Monday that the Government's policy in regard to Egypt was the maintenance of the Sultan and the liberty of the Christian population. They were in accord with the French Government.

The French Mediterranean squadron of Toulon was on Saturday ordered to sail immediately for Egypt, and the English Channel squadron will be ready to join them on May 28.

Bismarck's troublesome Tobacco Monopoly Bill was referred to a committee of 28, by a vote of the German Reichstag, on Saturday.

The Italian Chamber of Deputies, by a vote of 172 to 82, has approved the treaty of commerce with France.

Returns for the past four months show that imports in France have increased 78,000,000 francs, and the exports 133,000,000 francs, as compared with the corresponding period last year.

General Kaufmann, one of the Czar's most brilliant soldiers, and Governor of Turkestan, is dead.

The Peruvian Minister at Washington has received despatches from his native country which say that Envoy Trescot reached Huaraz, an interior city, on April 25, and was received by provisional President Montero. He presented the Chilian project of a truce, the principal conditions of which are that Chili should keep the province of Tarapaca as a conquest, and that Peru should be obliged to sell to Chili the province of Arica. Peru rejected the propositions.

TUESDAY, May 16, 1882.

THE THEORY OF THE WORTHINGTON APPOINTMENT.

THE confirmation of Mr. Worthington, the editor of the Boston *Traveller*, as Collector of that city, is not simply a striking illustration of the small amount of importance which men in office attach to platform professions about civil-service reform, but also a striking illustration of the difficulty there is in getting from the defenders of the spoils system a definition of what the spoils system is. It is seldom that any two of them ever tell the same story about it. Whenever they do, it is almost certain that before very long their practice will prove a total denial of their theory. When the reformers say, as the Cincinnati platform said in 1876, that Senators ought not to distribute the appointments, the spoilsmen make answer that nobody is so fit to distribute them, because they know more about the candidates for office and the needs of the public service, in their respective States, than the President can. While we are thinking over this doctrine, however, and asking whether after all there may not be a good deal in it, appointments are made not only without consulting the Senators from the State in which they are made, but in defiance of them. So, also, when the reformers say that merit ought to rule in the work of selecting candidates, the spoilsmen acknowledge that merit ought to rule, but say that in seeking for merit, and rewarding it, you should also aim at promoting the harmony and efficiency of the party organization in the place where the appointment is made. But it is not at all improbable that, while we are turning this rule over in our mind, we shall hear of an appointment made, not only without the consent of the Senators, but in the teeth of the violent opposition of a majority of the party in the State.

Nor is the puzzle diminished by consulting the speeches and articles of the spoilsmen, for they never hang together about a single point in their system. When Messrs. Conkling and Platt resigned last year, they wrote a long letter justifying their course. In that letter they attacked the appointment of Mr. Robertson to the New York Custom-house on the ground that the Senators had not been consulted about it; that neither the interests of the party nor those of the public service would be promoted by it; that it was wrong to remove without cause, to make places for those whom "the President or a member of his Cabinet may wish to repay for being recreant to others or serviceable to him"; and also wrong to "put a man who had no training for the position, and could not be said to have any special fitness for it," into a vacancy made by the dismissal of "an experienced officer." That President Arthur was heartily in sympathy with these views then is fairly to be inferred from the fact that he went to Albany and lobbied vigorously, in the teeth of much public condemnation, to procure from the Legislature an endorsement of the resignation of the two Senators. If it be said that Mr. Robertson's appointment differed from Mr. Worthington's in that his predecessor was removed in the middle of his term, the answer is that President Arthur disposed of this distinction in his first message, in which he laid it down that the tenure of public functionaries should be "stable." The law does not say that Collectors shall be dismissed at the end of four years. It simply says that they shall require a fresh commission.

Now, however, the President has done in Boston everything which, either as logical spoilsmen, or logical civil-service reformers, or faithful readers of his own biography, we had a right to expect him not to do. He has appointed a Collector in defiance of the Senators of the State, and in defiance of the Republican merchants and importers of the city, and of the best portion of the party; he has removed an experienced officer to make way for a man without the slightest experience, and in doing so has shown that he does not believe in his own doctrine that the tenure of office should be stable. To convict him, or the Republican Senators who voted to confirm his nominee, of inconsistency or bad faith is, however, a matter of small importance. The chief use of the incident lies in the proof it affords of the very small account which reformers should take of the professions contained in platforms and messages. Party managers began to make these in 1868, and have continued to make them with growing unction ever since. They are substantial admissions that in their opinion the public is becoming more and more convinced of the need of a change in the constitution of the civil service in order to arrest the degradation of the Government which the present system works. But they are evidently nothing more than this. They do not mean that the managers will take any active steps for reform until some stronger pressure than has yet been applied begins to be felt. They are really neither pledges nor promises.

What is now needed is the attack of the spoils system at the polls by voting against every candidate, by whomsoever nominated, who is not sound on this subject; or, in other words, by making the reform "the main question" until it is embodied in or fortified by legislation. No reform is ever effected until it has become a main question for enough voters to terrify men seeking election or reëlection. Such performances as the Worthington confirmation will continue to occur, until the Senators who vote for them come to believe that they thereby imperil their continuance in public life, and until the Senators who vote against them come to believe that they thereby give themselves a stronger hold than before on their constituents. The present position of the civil-service reform question is in fact highly demoralizing to our public men, and has done much to debauch the Republican party. Nothing can be worse for a party organization than the maintenance of a recognized piece of humbug. Hypocrisy is a bad thing for individuals, but it is worse for congregations. A single hypocrite almost always believes his neighbors are sincere, and this saves him from utter shamelessness; but when a whole assembly agree to play the hypocrite together, there is nothing between them and total moral ruin.

THE PLANS FOR THE RELIEF OF THE SUPREME COURT.

THE two reports of the Committee of the American Bar Association on the Supreme Court show a radical difference of opinion on the whole subject. The majority, five in number, favor the plan of an intermediate Appellate Court in the several circuits. The minority, four in number, favor that of a division of business among the judges according to their convenience. They have abandoned the idea that a permanent division of the Court itself would be necessary. They say that the "sections" ought "not to be made up by permanent assignment of judges, but by such system of division as the Court may from time to time find expedient; no judge to sit upon review of his own decision; and the causes not to be distributed by their subjects, but according to the discretion of the Court, under such regulations for the despatch of business as they may deem expedient." Causes of which the Court has original jurisdiction, and all those involving questions under the Constitution or treaties of the United States, would be heard, as now, before the whole Court, and the Court would of course have power to direct any cause to be so argued, if it seemed advisable.

The minority of the Committee insists with much earnestness that this scheme does not contravene the provision of the Constitution requiring that the judicial power of the United States shall be vested "in one Supreme Court." In the first place, they say in any case the whole Court would determine what causes should be heard by a division; that division, upon hearing the cause, would determine whether a hearing before the whole Court should be required, and if required it would be had; upon the report by a division of a decision arrived at, it would still remain competent for the whole Court to require a further argument; and all judgments, when finally pronounced, would be judgments of the whole Court. Again, it has always been understood that Congress has power to decide how many judges should form a quorum of the Court:

> "They have exercised that power, and the constitutionality of their action has never been questioned. By the statute now in force, six judges are made necessary for a quorum. In the absence of any statute, five judges, being a majority of the Court, would upon common principles be sufficient. Whence did Congress derive the power to enact that more than a majority should be requisite for that purpose, unless under the clause of the Constitution above quoted? And if that clause confers the power, as it is conceded, what limit does it prescribe to the exercise of that power? The whole subject is left in the hands of Congress. It may be said that if Congress can make four judges a quorum for certain purposes, then it may make one a quorum, which would be a perversion and abuse of the functions of the Court. Perhaps they may. The safeguard is in the wisdom and discretion of Congress, in their responsibility to their constituents, and in the potency of public opinion."

The majority does not attempt any reply to this argument drawn from the power of Congress to prescribe the number of judges which shall constitute a quorum, perhaps because they see that it goes too far to have much weight. Whatever the exact object of the founders of the Government was in vesting the judicial authority of the Government in "one Supreme Court," it certainly could not have been their intention to give Congress au-

thority to vest it in a single judge. Such an authority would give Congress a power dangerous to the last degree to public rights and to the security of life and property. The majority, however, do not point this out, but content themselves with reiterating the assertion that judgments of the Court on the proposed plan would be wholly void.

As we have before now pointed out, there is only one way of settling this dispute about the meaning of the phrase "one Supreme Court" as used in the Constitution. The judges of the Court can tell, and no one else in the universe can. If they think that the Constitution requires that causes must be heard by the whole Court or a majority of the judges, then it does so require, and any such bill as that proposed by the majority is so much waste paper. If they do not, then the names attached to the minority scheme as well as the simplicity of the plan itself entitle it to the most serious attention. The question will undoubtedly come up in the House, and we trust that when it does some one will be able to say, authoritatively, what the opinions of the judges are with regard to it. The existence of serious judicial doubts on the subject is enough; there would be a glaring absurdity, after all the years of delay in reaching the point at which Congressional legislation seems possible, in conferring powers which might turn out to be wholly void, and the case seems to be one in which the opinions of the judges should be communicated to Congress in some way in advance.

The fact that lawyers of such high standing as Messrs. Evarts and Merrick still insist strenuously on the scheme of "sections," is hardly explicable unless they believe that there is nothing in the constitutional objection. It is high time that this fundamental question should be settled. We have little doubt that the opinion of the Court is sufficiently adverse to the minority scheme to make it a waste of time to continue to carry on the contest over it, and the sooner the attention of the profession is devoted wholly to criticism of the Senate bill, the better. There are many parts of this which need the most searching examination and criticism that can be given. Messrs. Phelps, Parker, Evarts, and Merrick solemnly warn the country that "the proposition to create nine local sub-executive departments, or nine local Congresses, to sit for even limited Federal purposes in widely-distant sections of the country, would be justly regarded as almost the certain forerunner, if adopted, of so many ultimate divisions of the Union"; and the inference which they draw from this assumption is that a system of local appellate courts is fraught with the same danger. We must do them the justice to suppose that they really believe this, and, if so, we are brought face to face with the extraordinary alternative of a bill for the relief of the Supreme Court declared by one-half of the best lawyers of the country to be wholly void, and another declared by the remainder likely to entail a dissolution of the Union. This gloomy suggestion is unsupported by any very effective argument, but the minority is bound to do its utmost to protect us against any such disastrous possibility by securing such amendments and modifications of the majority scheme as are practicable, rather than by continuing to insist upon a scheme which in all human probability cannot get through Congress, and even then might be declared void by the Court itself.

THE PENNSYLVANIA CONVENTION.

The practice of nominating candidates for election by the people in party conventions rests upon the theory that such conventions are composed of faithful representatives of the party, freely chosen by the members thereof in local primary meetings. In this way conventions were expected to give true expression to the will and wishes of the majority as to the policy as well as the candidates of the party. That it was so immediately upon the adoption of the system, and for some time afterward, cannot be doubted. But in Pennsylvania and some other States things have been greatly simplified since. For years we have not been so fortunate as to see there a free and full conference of delegates as to what the rank and file of the party in different localities desired, or as to what it would be best to do for the benefit of the party and the promotion of its cause; but we have seen a certain leader of the party quietly establish his headquarters in a hotel of the town where the Convention was to take place, and without much circumlocution inform the Convention, through his lieutenants or aids, what candidates he wanted to have nominated, and what platform adopted, and it was done. This leader had the public patronage at his disposal, and by its use attached to himself a large following. When the time for a Convention approached he considered in his own mind what men it was best to nominate for the offices to be filled, so that his own power might thereby be confirmed and fortified; next he directed his henchmen to secure the election of delegates to the Convention who would be obedient to his will; and then he ordered the latter in a business-like way to "put through" the nomination of the candidates determined upon by him, which in an equally business-like way they did. In this style the Camerons, father and son, have ruled the Republican party of Pennsylvania for many a year. And this power they have hoped and expected to keep in the family, and to bequeath from sire to son, as long as there should be a party in Pennsylvania to boss and an office to occupy or to give away. In pursuance whereof, Mr. Cameron, the younger, held his State Convention at Harrisburg on the 10th instant.

But there is always a spirit of rebellion against so simple a form of government, demanding that the people should have something to say in these things; and that rebellious spirit has become so painfully apparent of late as to oblige the reigning Mr. Cameron to give it some consideration. It had shown itself obstreperous and troublesome in 1880; it had actually gathered 50,000 "Independent" voters in support of a revolt last year, and it threatened to do worse this summer. Mr. Cameron, therefore, instructed his confidential lieutenants to meet the leaders of the rebellious Independents in conference some time ago, so that "harmony" might be restored; "harmony" meaning, in the understanding of the boss, an agreement upon certain terms on which his power over the good things of this world would be acquiesced in by the rebellious spirits. In that conference the lieutenants of Boss Cameron, for the sake of "harmony," agreed to a string of resolutions in which in every form of speech the boss system was condemned as a very bad thing, and various measures recommended to put an end to it; and these resolutions were also to be adopted as the platform of Mr. Cameron's Convention at Harrisburg. They agreed also that some men who had hitherto been objectionable to the boss should be put on Mr. Cameron's slate as candidates. But upon one thing the lieutenants insisted: that Mr. Cameron's Convention as called must be held this year, and that his candidates for the places of real power must be accepted; in other words, they insisted that the boss should keep in his hands all the strong instruments of power, for present and future use, while giving to the Independents, for the sake of "harmony," some less important places and no end of declarations on paper.

Mr. Cameron's Convention on Wednesday carried out the orders given it by the boss, at least substantially. It received the resolutions agreed upon in the conference, which lustily condemn the boss system with all its methods, with sly winks and "derisive laughter," but nevertheless it adopted them without balking. They had been changed in committee only in one point, making the packing of primary meetings a little easier. The Convention nominated the candidates determined upon by Mr. Cameron one after another, with the exception of the last one, for the place of Congressman-at-large; but with regard to that nomination Mr. Cameron had already signified his gracious willingness that the Convention should be allowed a little latitude. In short, Mr. Cameron's programme was carried out substantially without any difficulty.

And yet, the boss is not as serene as he once was. There are two very dark spots on the horizon. One is that, although his programme has been carried out, it was not such a programme as he would have resolved upon had he been free to act. As it stands it is a confession that he is no longer free to do as he pleases, and that he no longer feels himself master of the situation. He was compelled to treat with the rebels against his rule. He had to submit to humiliating conditions. Of course, he cares nothing about platform paragraphs, but it is after all not pleasant to him to have resolutions condemning his whole political existence adopted by his own Convention. It may be of comparatively little importance to him what man holds this or that place without political influence. But it certainly jars upon his feelings to acknowledge the necessity of nominating men who have been his enemies, especially such a man as Mr. Thomas Marshall, of Pittsburg. Altogether he has had to take pills very bitter for the head of a reigning family.

But that is not the worst of it. All these concessions and humiliations will, after all, not "harmonize" the Independents. The most influential leaders of the latter are loudly declaring that the adoption of anti-boss

and civil-service reform resolutions by the boss's own henchmen, who do not believe a word of it, is nothing better than a roaring farce; that promises of this kind, made by such men without immediate performance, are written in water; that while Mr. Cameron's lieutenants are making such promises, he himself is dealing in appointments and removals in the old spoils and boss fashion; that the nominations dictated by Mr. Cameron are to be opposed, not on the ground that they are particularly bad, but that they are dictated in a despotic way by a boss, instead of being resolved upon in an open consultation of the party by freely chosen representatives; and finally that, while the Independents want to be Republicans, they do not want in any way to support and serve a party owned by Mr. Cameron. The Independents will therefore hold a Convention of their own toward the end of this month, and it is thought that they will also nominate candidates against those selected by the boss. In that case the defeat of Mr. Cameron's ticket is very probable, and boss rule may before the end of this year be as dead in Pennsylvania as it is now in New York. It may be considered now in an exceedingly precarious condition.

THE NEW POLICY IN IRELAND.

We greatly fear that the opportunity for a new departure in Ireland, on the part of the Liberals, which the feeling excited by the late murders created, has been destroyed by the new bill introduced by Sir William Harcourt on Thursday. The main objection to it is not that it suspends trial by jury and gives the Lord Lieutenant almost unlimited power of search and seizure, and greatly increases the summary jurisdiction of the magistrates—for all these things may be necessary—but that all these things are done without the advice or consent or approbation of that portion of the House of Commons which really represents the bulk of the Irish people. The first reading was passed by 327 to 22. Twenty-two is a wretchedly small minority, it is true, but if the experience of the past two years proves anything, it proves that it is these twenty-two who speak for the great body of the Irish population in the West and South, and that any legislation, and especially any legislation of a penal character, which they condemn is likely to prove abortive. It is, therefore, to our minds, all but certain that Parnell's prediction that the present bill will prove a complete failure will be literally fulfilled, and that before the end of the three years for which it is to be enacted the Government will have to acknowledge this and ask for other and greater powers. Mr. Dillon's remark that the only way to deal with Ireland was "to accept the aid of himself and his friends," contained the whole philosophy of the Irish situation. Mr. Goschen's answer, in which, according to the telegram, he "repudiated the notion that the kingdom was to look to members steeped in treason for protection to life and property in Ireland," contained in one short sentence the secret of English failure to protect life and property in Ireland—a failure which, as they have not been protected over a period of nearly two hundred years, may be considered well established, and, indeed, somewhat notorious. The main object of English attempts in this direction is—as that of the attempts to subjugate the American colonies, which Burke so mercilessly exposed, was—not so much to restore order, as to restore it in the way most gratifying to English pride. There has been no period of English history when persons hostile to English authority in any part of the world were not considered by English opinion "persons steeped in treason," whom it would be degrading to England to treat with or conciliate. In other words, Mr. Goschen expressed exactly the sentiment which lost the American colonies, and which would have lost Ireland in the last century also, had Ireland been further away, stronger, and more civilized.

The difficulty in the way of the protection of life and property in Ireland has never been that there were not police enough, or courts enough, or jails enough, or judges enough, or summary jurisdiction enough, or penalties enough. In 1827, a bill was passed under which a man was liable to transportation for seven years, or, in other words, to penal servitude beyond the seas, for being found in a public house between nine o'clock at night and six in the morning, for precisely the same purpose for which it is proposed to pass the present bill. The Irish difficulty has always lain in the fact that the people were not on the side of the law, and that even if they disapproved of the crime they would not capture or testify against the criminal. The statesmen who should overcome this, and make them feel that the law was their law and they were responsible for its execution, would solve the Irish problem, in so far as crime and outrage are concerned. We do not say that this can be done in a day; but if the opportunity afforded by the Cavendish-Burke murders had been seized, and the Home Rulers had been taken into counsel and been asked to draft the measure for the suppression of secret societies and the prompt punishment of murderers and intimidators, a long step would have been made toward it. Those remarkable powers of combination which are now used to screen criminals and baffle the police, would probably have been turned in the other direction, and the national pride or vanity—in Ireland a very powerful force—would probably have produced extraordinary exertions to give England and the world an example of what the Irish could do in the way of self-government. This has not been done, however. A great opportunity has been again allowed to slip by. The new bill will be received as a fresh English insult to the Irish people, and the chances are that the assassins and intimidators will find their task easier than ever. If any one asks how we know this, our answer is that we know it from the history of about fifty other bills of the same character tried within the last hundred and twenty years.

Of course it is very likely that with such a Secretary as Mr. Trevelyan, and such a Lord Lieutenant as Earl Spencer, the Act will be executed in such manner as to cause the least possible amount of irritation. But the least possible amount of irritation which such a measure can cause is sure to be very great, because in Ireland, no matter who holds the reins of government in Dublin, a Coercion Act has to be executed by an army of functionaries who have been long used to consider the people as a conquered people, and who by no endeavor can ever give arbitrary searches, arbitrary prohibitions of meetings, arbitrary suppressions of newspapers, arbitrary arrests for being out at night, a mild or conciliatory character. The whole scheme is in short a huge mistake, committed, as hundreds like it have been committed, in deference to English opinion on the one subject of all subjects in the world on which English opinion is probably least informed, most prejudiced, and most misleading—the remedy for Irish turbulence.

THE COMING PUBLIC LIBRARY IN NEW YORK.

The commandment, "Thou shalt not look a gift horse in the teeth," has been repeatedly disobeyed by New York in the matter of the Astor and Lenox libraries. From their very foundation there has been a constant succession of newspaper criticisms on the management, chiefly finding fault with their inaccessibility, which is declared to be so great that they do not deserve to be called public libraries. But it may be doubted whether Mr. Astor and Mr. Lenox ever thought of establishing public libraries in the sense in which that term has come to be understood of late.

The Lenox is not a library at all, but a museum—a collection not of books to read but of books to show. Here, perhaps, it may be allowed that the founder's name was a misnomer. But he never styled it the Lenox Public Library. It was in fact his private museum of book rarities, which grew too large to be kept entirely to himself, and so was ordered to be opened occasionally to the public, like the picture-gallery in an English nobleman's country mansion. It is a little more difficult to get access to the Lenox Library than to a Duke's castle, to be sure, and the library is open fewer days in the week than most of the English show houses; but that is a matter of detail. On the other hand, Mr. Lenox magnificently built a separate house for his book-gallery, which is an ornament to the handsomest part of the city, and another reason why New Yorkers should not be dissatisfied. Moreover, he put it out of the power of himself and his heirs to sell the collection—a termination of galleries and libraries which is not unexampled. Whatever rights the public has in the library are secured to it forever. The right to complain is not among the number.

As to the Astor, the library was hardly ope when people began to show their ingratitude. A collection of 80,000 volumes was nothing if the books could not be taken home. They wanted a circulating, not a reference, library. It was of no use to compare the British Museum, and urge the comfort of being sure that all the books in such a library will be there when one wants them, and to point out that a book which has been taken home practically does not belong to the library; all this did not avail to prevent a constant succession of reproaches. However, on this point the trustees stood firm; no book has been allowed to go outside of the walls, and nearly a generation has exhausted itself in futile grumblings. Side by side with this was a real grievance, if there can be a grievance where there is no right. Granting, it was said, that it is best to confine the books to the building, why limit their use to hours when no man who has his living to earn can go to the building? If you would let us study the books at home, even a

couple of hours a day might be enough for their delivery and return; but if you oblige us to come to the library, let it be open at hours when we can come; and let it be open long enough to enable students from the country or from other cities to get a full day's work. Some of us cannot afford to live in New York for only six hours' work a day.

Now, if the library had been a public institution, supported by the people's money, this would have been, we repeat, a real grievance, calling for very strong language, as showing that the trustees entirely failed to comprehend the public needs. But the case was different with a privately-founded library. The trustees must be assumed to have comprehended the wishes of the founders, for the founders were members of the Board. They could not have intended the library to be of use—at least of convenient use—to the mechanic, the clerk, the merchant, the professional man. It was plainly designed for those who are not tied down to any fixed hours of employment during the day. These should have been, and probably were moderately grateful. Other people ought to have held their peace, as the matter did not concern them at all. Lawyers might as well have complained because a medical library did not contain law books, and was accessible only at hours when they were engaged in court. Nevertheless, the outcry was so loud on this point that, after twenty-seven years' resistance, the authorities last year lengthened the opening an hour at each end; and there are even rumors, the wish perhaps being father to the thought, that at a not too distant future a room will be opened in the evening where books can be studied for which orders have been left either in person or by mail during the day. When that is done it will be in human nature to complain that the light is poor and the ventilation bad. If we may argue from a considerable experience of evening reading-rooms, both assertions will be true, but we hope they will not be publicly made, at least till the newness of the favor is a little worn off.

But now a new objection has been brought forward which at least avoids the charge of ingratitude. You may not too closely inquire into the age of the nag given you by a kind friend, but suppose the present prevents another friend from giving you an Arab steed, because you are thought to be well provided for in the matter of horseflesh. May you not ask your friend to take back his gift, or may you not let it be generally known that you are not quite satisfied with the slow gait and staid demeanor of your dobbin? This is what a contemporary critic has done:

> "While the Astor Library continues to exist and to grow in superficial area and in the number of its hoarded volumes, the State will not give us what we need; the legislator at Albany will point to the ponderous and drowsy building in Lafayette Place. Let the Astor stand out of the way."

We must say that the suggestions here, actual and implied, do not strike us favorably. It is not easy to see how the Astor can "stand out of the way"; it is not at all likely that the legislator at Albany will give a library to New York city out of the State fund; and the proposition to add a new screw to the "Machine" is one which taxpayers will regard with dismay.

The true solution is not a State grant, not a city establishment managed by a political commission, not an institution founded by one man for objects dear to him alone; but a fund raised by combined generosity, where no one person can have a prevailing influence, vested in the hands of trustees who, receiving it for the public use, will be sensitively on the watch for all methods by which the public good can be furthered; not committed to any one policy, but able to reshape their course from time to time as experience teaches them. Such a library will not need to demand that any of the older ones shall stand out of the way, for those to whom the new organization will look for support will never imagine that the older libraries supply the need. Moreover, it has been noticed elsewhere that a little rivalry between public institutions is a useful stimulus to the generosity of their friends. The late lengthening of the hours at the Astor gives ground for hope that its arrangements may in time be so modified as to meet the requirements of busy as well as of leisurely students; the Mercantile, the Young Men's, and the Apprentices' will supply certain somewhat different needs, and the New York Free Library will cover all the ground that is left; for it is incredible that any institution which does so much good work should long be allowed to labor with such inadequate means. This is not so showy a method as that of meeting all wants by one great public institution, as at Boston; but perhaps it may turn out to be as useful in the end, and as well suited to the circumstances under which the apparently rather clumsy system will have grown up.

SOUTHERN PINE.

THE future of the Northwestern lumber industry has already been discussed at some length in these columns, in the light of Prof. Sargent's investigation into the forest wealth of the United States. Forestry Bulletins covering several of the Southern States have lately been issued by the Census Office, and it is now for the first time possible to obtain an accurate idea of the extent and composition of the great maritime pine belt which stretches from Virginia nearly to the Brazos. The statement that, at the present rate of consumption, twelve years would practically exhaust the pine of the Lake Region, must have seemed startling to persons unfamiliar with the actual condition of the Northwestern pineries. It will be no less a surprise, even to those best informed in regard to Southern forests, to learn that Louisiana contains over 84 billion feet of merchantable pine, or more than was left standing at the end of the census year in Michigan, Wisconsin, and Minnesota; or that Arkansas, which has never been looked upon as a great pine State, contains, in addition to its unrivalled hard-wood forests, over 41 billion feet of yellow pine, or rather more than the amount of white pine credited to Wisconsin. Texas is believed to possess some 67 billion feet of pine. These three States contain more than 190 billion feet of merchantable pine, or more than double the amount supposed to remain in the three Lake States from which of late years the country has been chiefly supplied with white pine. The Southern pine belt, running through nine States, is believed to have contained, at the end of the census year, not less than 255 billion feet of merchantable pine, or enough to last, at the rate of consumption of that year, some two hundred and fifty years.

The value of this great body of timber is enormous, and must have an important influence in developing the material prosperity of the South. But because Southern forests contain a greater amount of pine than they have been supposed to contain, the almost total destruction of the white pine of the North is none the less a national calamity. The Southern forests produce no pine which can take the place of white pine. The long-leaved pine, of which the forests of the Southern coast are largely composed, is one of the most valuable timber-trees. The wood of no other pine at all equals it in strength or fitness for all kinds of heavy construction. It is, however, as compared with white pine, difficult to work, especially when seasoned, and so full of resin as to be unfit for those uses to which white pine is universally applied. The yellow pine of Arkansas, which also covers much of Louisiana and eastern Texas, is a valuable building material, although inferior to the long-leaved pine in strength, and without the peculiar qualities of the white pine. The destruction of the white pine will deprive Eastern America of her most available and, all things considered, most generally valuable lumber, and Southern pine, whatever its value, can never take its place.

The study of the actual condition of our forests indicates important commercial changes which may be expected to grow out of the changing conditions of the lumber trade. New Orleans seems destined at no distant day to become one of the greatest lumber-distributing and manufacturing centres of the world. Its position with reference to vast forests, its commercial importance, and the ease with which logs may reach it by river and lake, point to this conclusion. A great deal of Northern capital has been invested during the last few months in Southern timber lands, and the number of persons seeking such investments is rapidly increasing. The best-informed Northern lumbermen realize at last that the time has come when they must seek new fields for their operations or abandon the business entirely. These men are getting ready to move their mills, capital, and energy into the South; and their attention is naturally directed to the Gulf States. The outlook for new investments of this sort in the South Atlantic States is not favorable. The four Atlantic pine States, including the whole of Florida, contain less than 24 billion feet of pine. The most accessible timber, situated along the streams and railroads, has already been removed, and much of the remainder has been injured in the manufacture of turpentine. Alabama and Mississippi contain great bodies of pine, but in the three pine States west of the Mississippi, pine forests in which the sound of the logger's axe has never been heard extend over tens of thousands of square miles. Here during the next twenty-five years will be seen, we believe, the great lumbering operations of the continent—if, indeed, these forests can supply during twenty-five years the demands which will probably be made upon them. It is not easy to foresee how great these demands will be. The population of an enormous territory must procure its building materials from these trans-Mississippi pineries. From the Brazos to the Sierra Nevada of California, except on the high and usually inaccessible mountain range of the Southern Rocky Mountain region, a tree fit to saw into boards does not grow. The northern Mexican plateau is destitute of valuable forests, and must depend, with growing prosperity, upon the United States for its lumber. West of El Paso, the country will be supplied from the Pacific Coast; east of El Paso—that is, all of Texas and the provinces of northeastern Mexico—it must draw its lumber from the pine forests immediately west of the Mississippi River. It is needless to point out how rapidly western Texas is now becoming settled, or to estimate even the growing demand made upon these particular forests. Their position with reference to a treeless, although rich agricultural and grazing, region insures their entire destruction at no very distant day.

The demand for Southern pine for Northern consumption and export is rapidly increasing also, and the country must not make the mistake, which it made first in regard to the pine supply of Maine, and then in regard to the pine supply of Pennsylvania and Michigan, and which the Californians are now making in regard to their redwood, and conclude that, because the Southern States contain vast quantities of pine

the supply will last for ever. No forest is inexhaustible if nothing is done to protect or perpetuate it. The recklessness which has marked the management of forest property at the North has not been wanting in the South. The Southern pine forest, as it stands to-day, is mature throughout, and ready for the axe. No young trees are coming up to take the place of those which have reached, or nearly reached, their prime. The custom, first instituted by the Indians, it is said, has long prevailed in the South, of carefully burning over every spring the whole territory occupied by the pine forest, to improve the poor and scanty grazing the forests afford. A more ingenious system for destroying the permanent value of a forest could not have been devised. A forest fire kindled every year does not find much to feed upon, and cannot burn long enough to greatly injure the old trees, but it sweeps up the humus from the surface of the ground, destroys the vitality of any seed that may have fallen during the winter, and exterminates all seedlings and young trees.

Looking forward fifty years, the future of these forests is not brilliant, and, unless some general change of management can be initiated, their extermination is inevitable. It may take a few years less or a few years more, as the country is prosperous or otherwise, to find a market for the 255 billion feet of lumber which Prof. Sargent tells us these forests may be expected to contain; but unless fire and grazing animals can be excluded from them, their days are numbered. The South has only to turn to Maine, New York, Pennsylvania, or Michigan, to learn how quickly forests which were only a few years ago deemed inexhaustible may melt away before reckless disregard of the simplest laws of nature.

"THE RANTZAUS."

PARIS, April 27.

"LES RANTZAU" is the great event of the Théâtre-Français, as "Francesca de Rimini" is the great event of the Opéra. MM. Erkmann-Chatrian were very successful in adapting their novel of 'Ami Fritz' to the stage, and they were fortunate enough to have their piece played by the best actors in the world. The "Ami Fritz" was at first very much criticised: it was not dramatic; it was a mere succession of tableaux; there was too much eating and drinking; and even love was too much intermixed with gourmandizing. All this must be admitted. Nevertheless, there is all through "Ami Fritz" a freshness, a natural exhibition of the simplest emotions of the human heart, a certain sort of rural innocence, which conquered the Parisian public, blasé as it is, and perhaps because it is blasé. I have heard "Ami Fritz" so often that I know every intonation, every gesture of the actors, and I must confess that I can still hear it with pleasure. It is so really "Alsatian," it brings back the healthy odors of the Vosges; the noisy gayety of *Fritz* and of his friends seems to do me good, and to scatter the mist from my thoughts.

I was, therefore, quite prepared to admire "The Rantzaus"; and in order not to spoil my pleasure, I did not read the novel, 'The Two Brothers,' which served as a canvas for the piece. I knew that M. Perrin, the director of the Français, had taken the greatest pains: that the scenery was true; that the best actors played in the piece—Got, Worms, Maubant; that Mlle. Bartet was to be the heroine; and Mlle. Bartet, though she is only one of the minor stars of the French stage, has a very pure and delicate light. I must confess that I was much disappointed. The story of "The Rantzaus" is very simple; it is even common. Two branches of a family are separated by a great hatred, and the two descendants fall in love with each other. It is the story of the Capulets and the Montagus, of "Romeo and Juliet," transferred to a country village of Alsace. But in order to give something poetical to this subject, you must give some poetical cause to the family hatred; you must give it the character of a vendetta: some crime must be avenged. Mérimée did not forget this rule in his admirable 'Colomba,' which is a Corsican version of the old story. The great and almost revolting defect of "The Rantzaus" is the terrible vulgarity of the cause of the family hatred: the two brothers hate each other, and for thirty years keep up one against the other a state of perpetual and savage warfare, merely because their father's will did not leave them equal parts in the inheritance—one of the Rantzaus received as much more than the other as the French law allows. For two brothers, this *quotité disponible*, as the law calls it, is one-third; one of the brothers having two-thirds, the other only one-third (with three children, the disposable amount which can be given to one of them in excess is one-fourth; with four children, it is one-fifth, etc.). The hatred of the Rantzaus is as vulgar in its origin as it is in its expression: the two brothers bid against each other whenever there is a piece of meadow to be sold in the valley; they fight each other with the help of notaries and lawyers. It is impossible to take any interest in two such disagreeable creatures; and, as they are perpetually on the scene, the whole piece is spoiled by their presence.

I will add, also, that the two Rantzaus having no real local coloring, the piece is not truly Alsatian, as is "Ami Fritz." It might just as well take place in Burgundy, in Provence, in Brittany—wherever there are any avaricious people. Even the dress of the Rantzaus is disagreeable; they are bourgeoisie rather than peasants, and are dressed in the fashion of 1820. Maubant and Got reminded me all the time, with their top-boots and their odd hats, of some very absurd dramas I once saw at the Porte Saint-Martin or at the Ambigu. The lovers are not much more interesting than their parents. The girl dresses as a demoiselle; she has not the pretty country costume which Mlle. Reichenberg wears in "Ami Fritz." She is a silly, foolish young thing, who says nothing bright; she is in perpetual fear of her father, who is a brute, and who beats her when she refuses to marry the man he intended her to marry—the elegant *garde-général* of the state forces, an official with a fine green uniform embroidered with silver. The scene between Rantzau and his daughter is absolutely revolting. The poor girl does not even avow her secret love for her cousin; she is hardly conscious of it; she simply says that she will not marry the *garde-général*, and she asks permission to enter the convent of Molsheim, where she received her education. This declaration drives Rantzau to such a pitch of fury that he positively knocks his daughter to the ground.

Such scenes are not made for the French Theatre. The audience at the first representation was shocked and dissatisfied; but this is a picked audience, and experience shows that it no longer makes public opinion. There is in reality no public opinion left in theatrical matters; the directors can play almost anything they like, as there are always hosts of foreigners and of *provinciaux* in Paris. The railways bring every day an enormous floating population, which rushes to all the theatres. The same piece can be played a hundred, two hundred, sometimes three hundred times. Even when people hear that a play is not good, they will see it once for curiosity's sake. Our age can really be called a theatrical age. Thirty years ago "The Rantzaus" would not have been tolerated at the Porte Saint-Martin; it is tolerated now at the French Theatre.

The end of Erckmann-Chatrian's new piece is of course the reconciliation of the Alsatian Capulets and Montagus. It is brought about by the coarsest means. The young daughter falls ill, almost unto death, and is cured by the simple means found long ago in the "Amour Médecin." The favorite character in the piece is a schoolmaster, who acts as go-between, for the two Rantzaus hate each other so fiercely that without this intermediate character there could be no communication, no play at all. The schoolmaster's part is played by Coquelin; and it must be said, in justice to him, that he filled the rôle of a country schoolmaster—good, virtuous, sentimental, the friend of every woman and child in the village—with a singular perfection. The schoolmaster is in this play what the rabbi was in "Ami Fritz": he is sententious, he says things which might be put in schoolbooks, he is timid, he is kindly, he succeeds in his undertakings by the mere force of truth and of virtue. He discovers the secret passion of the two lovers; he brings them together; he is the universal confidant. His bonhomie is in striking contrast with the coarseness and ill-temper of the Rantzaus. However, if such a part were not played by an actor like Coquelin, it would be simply insipid and dull.

It is really a pity to find so great a distance between the production and its interpretation—such admirable instruments employed in such ordinary work; but such seems to be the destiny of the stage at present. The multitude of spectators accept almost any sort of theatrical work upon two conditions: the *mise-en-scène*, the scenery, must be a pleasure to the eye, and the actors must be as perfect as possible. The importance given to the material accessories of the stage—furniture, chairs, curtains, etc.—is not a very good omen; for it implies that the spectators care less for the drama itself than for its *cadre* or mounting. They know when a room is furnished in the Louis XIII. or Louis XV. style; but do they know as well what forms the play of the eternal human passions took at these periods? The importance given to the actor himself, to his personality, is also a bad symptom; it is not well that the papers should be informed every day of whatever concerns the life of every eminent actor or actress, with as much care as if they were kings or queens. We are positively invaded by what the Parisian calls vulgarly the *cabotin*. A Republican actor was once hissed, toward the year 1831. He advanced gravely to the front of the stage, and said: "Are these hisses for the actor, or are they for the citizen?" "They are for the *cabotin*," answered somebody. The *cabotins* are now everywhere and everything. I dare say—I am sure—there are in the theatrical profession some good, conscientious, even some virtuous people; but it cannot be denied that the profession of actor has never been regarded as one which tends to elevate the character of a man or of a woman. There have been a few very great men and women, in England, in France, in Italy, who showed real genius on the stage, and who associated with the best people of their time; but this is the exception which confirms the rule. Actors and actresses have lately become too prominent. I do not object, in one sense, to the decoration of the Legion of Honor given last year to M. Got, of the Comédie-Française, though it seems strange to associate an order of chivalry with *Mascarille*, or some other parts. I suppose some of the subscribers of the *Revue des Deux Mondes* will not object to the article written in the last number on a play of Molière's by M. Coquelin, who takes the part

of the schoolmaster in "The Rantzaus." In this article M. Coquelin comes out again as schoolmaster, and explains his views on the woman question. His article has nothing very new or original, and its style, though it is not bad, can hardly be compared with that of Fénelon in his 'Éducation des Filles.' These incidents, trifling in themselves, show, however, one thing: the actors and actresses of the day are not satisfied with coming before the public in the various characters which they must assume on the stage. Their vanity has been so cultivated by the press, by the admiration of the public, that they wish to be admired in themselves. They take off the mask, and wish to be applauded and courted as men or women. In our democratic society they are, with the leaders of the popular parties, perhaps the most notorious characters. It is not to be wondered at that Gambetta and Coquelin are very intimate; they both feel that they are before the public, and that they have something to learn from each other.

My analysis of "The Rantzaus" has carried me perhaps a little too far, and it is quite useless to moralize on the fashions of the day. It is interesting, however, to note that literature can be inferior while the art of acting is getting more and more perfect. It is the same, perhaps, in all arts: the mechanical part of painting and sculpture can be very perfect while there is a great lack of ideas among the artists; houses can be very comfortable and very splendid, and yet the architecture be very poor and insignificant; the *virtuoso* can play admirably, while the music he plays has no sense, harmony, or melody. The greatest works of mankind have perhaps been made with the meanest tools.

Correspondence.

THE NEW VIRGINIA.

To the Editor of The Nation:

Sir: On Thursday of last week the Readjuster Board, lately appointed by Governor Cameron for the University of Virginia, met here to effect an organization, and to prepare for the reorganization of the institution next month. For the first time in its history since founded by Jefferson, aspirants for various positions in the institution were here *in person* urging their claims upon members of the Board. It was a novel spectacle to see the entrance and steps of the Infirmary, where the Board is accustomed to hold its meetings, crowded with men from whose pockets protruded voluminous testimonials, while those a little less pushing stood beneath the trees and lined the fence!

This lobbying, undignified method of pushing their claims demonstrates the fitness of these aspirants, as well as the fitness of the *Liberal Party*, which has introduced this system, for the trusts and responsibilities it has so rudely assumed. Unless something can be done to save the University of Virginia from the fate which has overtaken its sister institutions, and which now threatens it, truly the eagles have not gathered together too soon. Daylesford.

Charlottesville Va., May 8.

Notes.

Estes & Lauriat, Boston, have in preparation a map of the headwaters of the Aroostook, Penobscot, and St. John Rivers, compiled by Thomas Sedgewick Steele. It will be mounted on cloth, and must commend itself to campers-out, hunters, and canoeists. The size is twenty by thirty inches.

Ginn, Heath & Co. are on the point of issuing the first of a 'College Series of Latin Authors,' edited by Professor C. L. Smith, of Harvard, and Professor Tracy Peck, of Yale. Cicero's 'Brutus,' edited by Professor Martin Kellogg, of the University of California, heads the list.

'Among the Azores,' an illustrated volume by L. H. Weeks; 'Essays from the *Critic*'; and a new novel, 'A Reverend Idol,' are among the forthcoming publications of J. R. Osgood & Co.

In Mrs. Oliphant's "Foreign Classics for English Readers," the new volume to be published by J. B. Lippincott & Co. is 'Rousseau,' by Henry Graham. The same house has in press 'Zoölogical Sketches,' by Felix Oswald, and 'Brushland,' by John Darby.

American editions of the Rev. Andrew Jukes's 'Types of Genesis,' and 'The Restitution of All Things,' will be published by T. Whittaker, who has just issued a third edition (in this country) of Mr. S. Baring-Gould's amusing and edifying life of Robert Stephen Hawker, 'The Vicar of Morwenstow.'

A. D. F. Randolph & Co. publish immediately 'Across the Atlantic,' a daily manual for ocean travellers, which contains, besides appropriate Scriptural selections, a map and a miniature memorandum log-book. Of the same class is the little volume recently put forth by this firm—'Red-letter Days: a Memorial and Birthday Book'—compiled by Frances Ridley Havergal.

M. Jules Lévy's monthly periodical, *Le Français* (Cambridge, Mass.), which presently terminates its second year, has maintained itself in all respects on a level of excellence never before reached by any similar pedagogic work in this country. A cultivated taste presides over the selections, and large experience enables the editor to anticipate and to meet the difficulties of students of the French language. *Le Français* is scrupulously printed.

The first of the three volumes of Mr. Pierre Irving's 'Life and Letters of Washington Irving' has just appeared in the "Geoffrey Crayon" edition of the Messrs. Putnam.

M. M. Ballou's 'Notable Thoughts About Women' (Houghton, Mifflin & Co.) fills 403 pages with 3,471 "elegant extracts" of varying length. The compiler says he "has been exercised by a catholic spirit," and begs not to be committed to the sentiments of every author whom he quotes. But he has been less than catholic in admitting, as if applicable to only one sex, sentiments like these: "In love, anger is always a mistake." "It is easy to fall in or out of love." The index to "love," by the way, is appallingly long.

From the same publishers we have 'A Satchel Guide for the Vacation Tourist in Europe,' the eleventh edition. This handy work, besides the usual annual revision, has this year added to it a select list of famous pictures to be seen in European galleries.

More diminutive, but not less authoritative within its sphere, is Mr. T. W. Knox's 'Pocket Guide for Europe' (New York: C. T. Dillingham). Mr. Knox is a veteran traveller, and his instructions have an element of humor which is not a common feature of guide-books. The book will serve for the Levant.

Mr. Knox's latest volume for the young folks is 'The Young Nimrods Around the World,' to be issued shortly by the Messrs. Harper.

A laborious example has been laudably set by Mr. C. C. Royce in his 'Cessions of Land by Indian Tribes to the United States, illustrated by those in the State of Indiana,' which forms a chapter in the first annual report of the Bureau of Ethnology, and has also been struck off separately. The subject is very obscure, but is not without its fascination for the student. Mr. Royce gives a large colored map of Indiana and a corresponding list of cessions.

At the Matt. Carpenter sale the monotonous succession of law books at five or six dollars each was varied by knocking down the 1,111 volumes of public documents at *eight cents* apiece. A Washington bookseller was the courageous purchaser.

On Monday of this week (May 15th), after the long rain-storm, occurred the semi-annual change of weather, the correlative of the November atmospheric wave of cold, dry air which introduces our six-months' winter. Accordingly, we are at last again arrived at summer—the true meteorological summer, which, being a natural epoch, is not arbitrarily exact in its advent, but is this year more than three weeks later than it was last.

Mr. H. H. Warner, of Rochester, N. Y., offers a number of prizes, from two hundred dollars to fifty, for the discovery of new comets in the United States, Canada, Great Britain, or Ireland, during the present year, or for meteoric stones found there (*a*) with fossil remains, or (*b*) without them.

In the volumes of astronomical observations issued by the United States Naval Observatory, Washington, it has been the custom, from 1866 to 1876, to print the observations with the transit circle in very full detail; but in the 24th volume, lately issued—that for the year 1877—the system has been changed, and only the results of the observations and their reductions are printed. The consequent diminution in the size of these volumes will be agreeable to all who have occasion to handle them. The 26-inch equatorial appears to have been very active during this year: it will be remembered that it was in the month of August that the satellites of Mars were discovered with this instrument by Professor Hall. Six appendices conclude the volume, the more important of which are, "Observations of Double Stars," by Professor Hall; "Investigation of the Objective and Micrometers of the 26-inch Equatorial," and "The Multiple Star Σ 748," by Professor Holden; and "The Solar Parallax from Meridian Observations of Mars in 1877," by Professor Eastman. From this latter investigation results a value of $\pi = 8.''953$—which is only another contribution to the certainty that either astronomers do not yet know how to discuss observations of this sort, or that this method of determining the solar parallax is worthless.

The twenty-eighth volume of *L'Art* (J. W. Bouton) has the usual abundance of full-page etchings after ancient and modern masters; portraits of Edmondo de Amicis, of Theodore Rousseau, and of David d'Angers; some outline Campagna sketches, of great breadth and force; a sketch of the highly successful Rabelais statue set up at Chinon, etc.

In No. 837 of the *Nation*, attention was called to Finamore's valuable 'Vocabolario dell'Uso Abruzzese.' The author has undertaken a series of volumes devoted to the popular literature of the same locality, consisting of tales, legends, poems, and proverbs. The first volume, 'Tradizioni populari Abruzzesi,' has recently appeared. It contains fifty-two tales. The value of the work, however, does not consist in the interesting variants it offers of well-known stories, but in the careful treatment of the dialect and the philological introductions prefixed to the stories of each commune. These constitute a significant contribution to Italian glottology.

—To the growing practice among book-lovers of publishing catalogues of their collections we owe a privately printed 'Catalogue of Books on Angling, from the Library of a Practitioner of more than fifty years' experience in the Art of Angling,' which has the imprint of the University Press at Cambridge, Mass. Catalogues of

angling collections in this country are not plentiful (we have seen but two before this), and are of great use to the increasing number of those interested in this department of literature. Mr. John Bartlett's (for our "practitioner" is none other than the author of the 'Familiar Quotations') enumerates about 600 volumes, many of them rare and nearly all standard books on the subject. It is very rich in Waltons, containing copies of about fifty editions (including the very rare first), seven of the John Majors, and, we think, all of the Pickerings. There are four of Berners, four of Bowlker, four of Venables's 'Experienced Angler,' the second to the thirteenth inclusive of Thomas Best, and two copies of T. P. Lathy's interesting poem "The Angler," of which the original manuscript was lately for sale in London. Coming to the more modern and, we think, more desirable books, for the mere reader, there are Scrope's 'Days and Nights of Salmon Fishing'; Henderson's 'My Life as an Angler,' a charming narrative; Stoddart's five volumes, Francis Francis, Chitty (Theophilus South), Blacker (in our opinion the best book on fly tying), and numerous others well known to lovers of angling. We must not omit mentioning the two sets of the Newcastle "Fisher's Garlands," of six and ten volumes respectively. The collection, though not large, is excellently selected, and the editions are generally of the best; the print and paper of the Catalogue are creditable to all concerned.

—The English lecturer does not err by an overestimate of the intelligence of his audience; and Mr. Freeman, last winter, took an hour to make it perfectly plain to the meanest understanding that we—or at least the bulk of his audience—were not Britons, but Germans, and, after much emphatic iteration, we all knew to our heart's content that we had no part or lot in Caractacus, Caratacus, Caratucus, Caradoc, or whatever may be the last fashion of spelling the name of that hero. Moreover, we had no share in the glory of Boadicea. She was not our grandmother; not a drop of her blood flows in our veins. And yet the fascination of the mere soil survives. Poor boys, doomed to read Cæsar, do not care a button for Ariovistus, although he was their cousin never so many times removed, and yet like to read the Fifth Book and learn something about Britain. Surely it would be cruel to take a lesson from Mr. Freeman and tell them that they must not take to themselves Cæsar's complimentary notice of the inhabitants of Kent. In spite of the great historian, we feel that the Roman occupation of Britain is a personal concern of ours, and so Prof. Hübner, the distinguished editor of the 'Inscriptiones Britannicæ,' has done well to publish a separate and more accessible edition of his essay on the Roman army in Britain, which appeared first in a recent number of the *Hermes*. This essay, based on a close study of the inscriptions and of the topographical finds, as well as of the scant indications in ancient authors, will be welcome to wider circles than those usually reached by the pages of a philological journal; and students of English history have reason to thank Prof. Hübner for this resumption and extension of his previous studies. His sketch begins with the army of occupation under Claudius, or rather under Plautius, and breaks off at the reorganization of the Roman army under Diocletian. The first part treats of the legions; the latter part deals with the difficult question of the auxiliaries—Gallic, German, British, Pannonian, Spanish. An outline map enables us to represent to ourselves the distribution of the legions. *More Germanorum*, Prof. Hübner gives his predecessors a touch of his critical quality, but he is not unmerciful. There is a special charm of reality about a work of this kind, as there is nothing like contemporaneous documents.

> "Perish'd many a maid and matron, many a valorous legionary,
> Fell the colony, city, and citadel—London, Verulam, Camulodúne."

That seems far away, unreal, as artificial as the accents on Camulodúne. Much nearer to us is this simple statement: "The only inscriptions of the XIVth legion that have been found in England are two which mark the graves of legionaries who seem to have fallen during the expedition of Paulinus to Mona; in both the legion appears without the name *Martia Victrix*, which it did not receive until the recovery of Camalodunum." What a pity, in this age of pedantic exactness, that Mr. Tennyson did not know that Camalodunum, not Camulodunum, was the old, original spelling.

—A French library journal has been started, to match the German *Neuer Anzeiger* of Petzholdt; the English *Monthly Notes* of the Library Association, and our *Library Journal*. A new series of *Le Cabinet Historique*, to be edited by M. Robert, of the Manuscript Department of the Bibliothèque Nationale, is to consist of three parts: First, all documents about the service and the organization of libraries and archives; second, extracts from archives and inventories or catalogues of manuscripts in public or private libraries; third, a *Courrier*, or, as we should say, letters "from our regular correspondent." The new journal evidently looks rather to the historical and bibliographical than to the practical part of bibliothetics, which naturally has less interest for the European mind than for us, since in long-established libraries most details are settled beyond the possibility of change. Another promised periodical (approximately bi-monthly) will devote itself not so much to the librarians as to the bibliomaniacs. The *Guide du Libraire-antiquaire et du Bibliophile*, edited by J. de Beauchamps and Éd. Rouveyre, undertakes to keep its public informed of the changes in the prices of rare books. In the rapid fluctuations of the present day any volume like Brunet's 'Manuel de l'Amateur' is out of date almost as soon as published. Nothing but a periodical can give information sufficiently contemporary to be of much service. We have not for a long time met with a more impressive example of the pace at which we live nowadays. That the want of such information has been felt is shown by the fact that since the first announcement, in July, 1881, two thousand subscriptions to the new journal have been received. Its editors say that they have been preparing for the work for ten years—not consciously, we suppose—and have collected nearly 25,000 card-titles of the most important rare books, which they have kept constantly annotated with the prices obtained at auction sales or demanded by the second-hand booksellers, not neglecting bibliographical information and anecdotes concerning the literary or artistic value of the books. The *Guide* will be sold in separate *livraisons*, at three francs. Each twelve parts will make a volume, and be provided with an introduction and indexes of titles and of authors.

—Under the title of 'Schottische Reiseskizzen' (Leipzig: Schottlaender), Prof. von Holtzendorff has collected the letters contributed by him to several German periodicals while a delegate to the Social Science Congress of Edinburgh, in October, 1880. These letters, although mainly devoted to the proceedings of the Congress, commend themselves to a far wider public than can now be interested in that occasion. Prof. von Holtzendorff is emphatically an author who could not write a dull page if he tried; and one would think that the opportunity of trying were given in the task of condensing the arguments of Scotch speakers and commenting on Scotch law. He is, however, so great an admirer of British institutions, and withal so keen and genial a discerner of foibles—whether British, German, or purely human—that neither readers of the author's 'English Country Squire' nor of his "Political and Unpolitical Notes" (*Politische und unpolitische Zeitglossen*) will be disappointed in these 'Sketches of Scottish Travels.' We transcribe at random some of his happy touches. A learned assembly of German specialists, as contrasted with the heterogeneousness of the Scotch gathering, strikes him as "a fair for the mutual exchange of opinions which everybody is fully determined never to part with." The astonishing progress of the United States in the technical sciences, in spite of the inferiority of American schools to those of Germany, he ascribes to the fact that the Army and Navy offer so little attraction to men of ability. In Germany the higher grades of the Army and the civil service absorb much of the best talent of the country, while in the United States "the scramble for office and the yoke of partisanship repel the better elements." In discoursing with a lady on the Scottish Sunday, he thus defends the attendance of freethinkers at divine worship against the charge of hypocrisy:

> "Where a people in its entirety is religiously inclined, . . . I consider it even creditable in a freethinker to do violence to his feelings during the few hours of Sunday service. By your presence in church you do not pay your respects to the pastor, . . . but to the congregation. He who accuses you of hypocrisy because you make concessions to the sentiments of your community or of your servants, must also call the lord of the manor a hypocrite who, at the village festival, according to ancient custom, leads off the dance with the oldest maid in his employ."

Here is a glimpse of Lord Brougham, who presided over the meetings of the Social Science Association in its first years:

> "I made the acquaintance of the old gentleman in Dublin, in 1861, and marvelled equally at the prodigious memory of the octogenarian, who quoted literally entire passages from the Parliamentary proceedings of forty years ago, and at the occasional ignorance of the great jurist, who knew more about French law than about the criminal law of Ireland."

—In one of the instalments of the "Zeitglossen" (*Gegenwart*, No. 10, 1881) Prof. von Holtzendorff had briefly but vigorously recorded his opinion of the many-headed nuisance comprised in the word "Trinkgeld" (*pourboire*), and but vaguely hinted at by the English "waiter's fee." The subject is now exhaustively and learnedly treated, as to origin, ethical and economic importance, and remedial measures, in the April number of *Westermann's Monatshefte*, by Rudolf von Jhering, a distinguished colleague of Prof. von Holtzendorff, and, like him, a frequent contributor to the periodical press. The learned Professor, pursuing the strictly scientific method, begins *ab ovo* with the legal definition of the *Trinkgeld*, and, after properly subdividing his subject into three classes, confines himself more particularly to the most obnoxious species—*i. e.*, the "waiter's fee." In its crude beginning a bribe pure and simple offered by a guest to secure extra service, the obsequious waiter soon learned to exact it as his due. In its further development, the greedy innkeeper stepped between it and the waiter's pocket, and insisted on having it turned over to himself. Skill and dishonesty, however, baffled greed, and in the next stage of its evolution the *Trinkgeld* advanced to the dignity of a perquisite taken into account in fixing the wages. As it approached perfection, the landlord not only paid no wages at all, but even de-

rived a handsome revenue from the letting out, under contract, of the chief-waitership, which in turn never failed to yield a large income. The *Trinkgeld*, having now been fully established as a tax which must not only be paid but computed by each chafing guest, the obliging landlord proposes to do away with it altogether, and the result is the introduction of "service and candles" into the hotel bill. But, unfortunately, "the porter is not included in the service"; the unsuspecting guest pays the porter, and the "service," and the "candles," and the waiter, and the maid, and the "boots," and the head-waiter—and the *Trinkgeld* has at last reached the height of perfection. Nor is its pernicious activity confined to the hotel, for, according to Prof. von Jhering, it threatens to sap the very foundations of the hospitality of the social board. No entertainment in a friendly circle, no cup of tea, however weak, without its corresponding *Trinkgeld*, given under the very eyes and with the sanction of the lady of the house. In order to remedy this distressing state of affairs, Prof. von Jhering advises his countrymen first of all to take courage from the example of the English traveller, who dares to brave the frowns of the indignant waiter, and has actually succeeded in introducing into a first-class hotel of Lucerne the regulation: "MM. les Étrangers sont priés de ne plus donner de pourboire aux employés de l'Hôtel." The possibility of reform being demonstrated, the Professor sees, as in a vision, the speculative innkeeper of the future advertising the fact that in his establishment no *Trinkgeld* is tolerated, profiting thus by the very disappearance of the nuisance. And, while urging the formation of anti-*Trinkgeld* clubs, Prof. Jhering, mindful of the dictates of justice, wishes the annual contributions of the members to form a fund for the benefit of needy waiters and servants of all classes. It must be added that he is himself not very sanguine as to the success of his measures; but he may justly claim the credit of having been the first to take a particularly unmanageable bull by the horns.

—Apropos of the rapacity of landlords, a writer in *Vom Fels zum Meer*, under the tempting heading of "Unselfish Innkeepers," describes a state of society from which one of the elements of the innkeeper's greed—direct interest in fostering the intemperate habits of his guests—has been happily eliminated. We refer to the Swedish city of Gothenburg, where, for the past fifteen years, the control of the liquor-traffic—the source of so much evil in the north of Europe—has been in the hands of a stock-company guided solely by humanitarian motives. Formerly every landed proprietor in Sweden had the right to distil brandy for his own consumption, until in 1830 the number of such distilleries reached 173,000, producing annually about 42 million gallons. The efforts of the friends of temperance, who finally succeeded in abolishing all but steam-distilleries, had in 1871 reduced the number of inns and grog-shops among the rural population of Sweden (comprising about 3½ millions) to 460; while in the towns pauperism caused by intemperance continued to increase. The stock-company referred to began operations by acquiring of the city of Gothenburg the exclusive license to carry on the liquor-traffic. Of the sixty-one inns which thus passed into its hands, the company suppressed twenty-one. The rest, transformed into well-appointed dining-rooms, are managed by employees of the company, who have the right to sell on their own account beer, tea, coffee, etc., and are thus directly interested in discouraging the indulgence of their customers in stronger beverages. The profits of the company are turned into the municipal treasury, while losses are to be borne by the shareholders. In 1876 the gains amounted to about $175,000. The example of Gothenburg has, so far, been followed by fifty-seven of the ninety towns of Sweden, Stockholm included, and nineteen towns of Norway.

—Whether "the wickedest man in New York," of whom we used to hear so frequently a few years ago, has slidden back from conversion into his earlier broad way, we cannot affirm; but, even if he has unhappily done so, his record, unless he has gone on transgressing with most illaudable enterprise and persistence, must pale before that of an erring sister who has emerged into sudden notice across the Atlantic. Jane Johnson, just now well known there by her photograph, is this palmary heroine. Her age is four-score and four; and the total of her inferential delinquencies is no less remarkable than her vivacious anility. In the course of her career, she has been an inmate of Leeds prison two hundred and forty times, and the walls of the jail at Bradford are likewise very familiar to her. So, at all events, testifies Mr. Elijah Cadman, "Major of the Yorkshire Division of the Salvation Army," who has benevolently undertaken to "exploit" the veteran culprit's cast-off rags of naughtiness. Jane "has been saved now two months, and spoke four times yesterday in Hull," according to Major Cadman, in a letter which he has communicated to a London journal. To what, then, may the eloquence of Jane, if she only keeps steady, wax when she shall have been "saved" twice two months? However, be it, or not, that her tongue is destined to get more and more loosed as she grows established in reputable living, let us hope that May and June will find her in the same frame of mind that she was in during March and April. As her admiring impresario further informs us, "she holds her stick, which she calls her 'old man'; and with him she used to thrash the policemen." Catholicism has often shrewdly utilized fanatics; and an ancient virago, once bridled and snaffled, could undoubtedly be turned to much worse account than by being impressed in the service of the proletarian church militant.

—One of the most attractive figures in the Norse annals is that of King Olaf Haraldson, whose efforts to convert the heathen of his realm won him a crown of martyrdom when he fell by the hand of his rebellious subjects on the field of Stikklestad. The sanctity of the dead hero was confirmed by many miracles, and his canonization followed as a matter of course. The popularity of the saint was enormous, his cult extended from Norway to Spain, and his legend was duly treasured up in the vast storehouse of Christian mythology. One of these legendaries was compiled by Augustinus (Eystein), second Bishop of Trondhjem, who died in 1188, and is extant in several incomplete and anonymous forms. An examination of a MS. in the Library of Corpus Christi College, Oxford, revealed the complete version and the author's name. This version has recently been edited by F. Metcalfe, M.A., under the title, 'Passio et Miracula Beati Olaui' (Oxford: Clarendon Press. 1881). The editor has prefixed an admirable introduction, containing the story of Olaf and an account of the author. The contents of the MS. (a facsimile of which is given) do not call for any detailed notice, as they differ but little from the ordinary wearisome mediæval legendaries. Only one miracle has any comparative interest—namely, that of the two penitent parricides (p. 96), whose chains break of themselves—those of one brother at Jerusalem, of the other at the shrine of St. Olaf. This episode occurs in other legends, and recalls the bursting of the iron bands in the story of the Frog Prince (Grimm, No. 1).

HUXLEY'S SCIENCE AND CULTURE.

Science and Culture, and Other Essays. By Thomas Henry Huxley, LL.D., F.R.S. D. Appleton & Co. 1882.

THE various articles, lectures, and addresses collected in the volume before us have been delivered by Huxley during the past seven years. They cover a variety of subjects which the author delights to expound, and his treatment of which cannot fail to leave a deep impression on his hearers or readers. He has an admirable skill as a popular expounder and critic, and chiefly as such he will be recognized hereafter in the scientific history of his time. His original scientific memoirs have been far less numerous and important than those of many less well-known naturalists, but the stamp of the master-workman is on all that he does, and no one understands better than he how to explain a new subject or illumine an old one. These essays, treating of education, philosophical speculation, and biological theories, show us the range of his knowledge, and in each he has given full play to his characteristic method of attacking the subject in hand.

The opening of Sir Josiah Mason's Science College at Birmingham has furnished Huxley with an appropriate occasion to press the claims of science as an essential element of a liberal education. He speaks for all scientific men when he says: "After having learned all that Greek, Roman, and Eastern antiquity has thought and said, and all that modern literatures have to tell us, it is not self-evident that we have laid a sufficiently broad and deep foundation for that criticism of life which constitutes culture." But this broader standard is by no means generally accepted. The man who has learned Latin and Greek is still considered the educated man *par excellence*, while he who has perhaps reached the highest eminence in other branches is considered a specialist, and left "outside the cultured caste." Our universities are still practically in the hands of the "Philistines." Their highest honors, their chosen degrees, their greatest prizes are not within the reach of the scientific student, unless he be also a classical scholar. Indeed, they are less liberal toward the learned professions of our day than were the ancient universities to those of their time: *they* opened their doors to the faculties of medicine, divinity, and law, which have remained ever since an integral part of the university programme, while scientific professions of more recent growth, but no less vitally connected with the progress of knowledge, stand outside, or are admitted on sufferance. The scientific student asks only to share, not to curtail, the honors of his classical and literary fellow-students. In the nineteenth century, when every year is broadening the domain of knowledge, no set of men can claim to be the dispensers of true culture. Huxley has well said that in the ideal university "all sources of knowledge and all aids to learning should be accessible to all comers." Such a university the age demands, and if the men of the past do not meet the men of the present half way, they may find themselves left behind among the priests of the monastic period of the nineteenth century. We cannot leave the material claims of the community out of consideration. Scientific investigation is shaping the opinions of men, and daily proving its right to recognition by the cultivated classes. The despised practical men are often the most eminent specialists of their time; they have obtained a "firm grasp of principles" by personal experience.

Our modern universities need the sympathy of

the artisan, the inventor, and still more of the original investigator, who provides them both with ever new materials and resources. They are the men whose pulse is felt to the furthest borders of the land; and yet these men, unless they have had some smattering of Latin and Greek, are excluded from the so-called educated class. Neither Hugh Miller, nor George Stevenson, nor Davy, nor Faraday, nor Franklin could receive university honors. It may be asked how the university can confer her degrees upon those who, from force of circumstances or from deliberate choice, have not fulfilled the conditions upon which their degrees are based. To this one can only answer that the university must enlarge her borders. Let her offer every man such instruction as he has time and means to accept, without binding him to a given period or a certain enforced amount of Latin and Greek; and in her awards let eminence in any department of true knowledge be accepted as evidence of learning and intelligence. Let the physicists, the chemists, the engineers, the geologists, the mathematicians, and the naturalists enter the charmed circle of the historians, the poets, the philologists, the metaphysicians, who have hitherto represented the cultivated class. So will the universities strengthen their own hands and draw to themselves the men who are peers in attainment, however distinct may be the fields of their activity.

In his opening address as Lord Rector of the University of Aberdeen, Huxley defines the proper functions of universities from his point of view, and emphasizes again the risk for themselves in excluding from their domain the science of to-day. This and the foregoing Birmingham address are supplemented by one on technical education delivered to the Workingmen's Club and Institute. The lecture on the "Method of Zadig" contains an admirable popular account of palæontological methods and their practical application, enabling us to predict from the later terms of one genealogical series its earlier ones, and so turning backward the tide of prophecy. Huxley's crisp clearness of statement is especially felt in the lecture on the border territory between the animal and vegetable kingdoms, where a subtle subject is so presented to the unscientific reader as to give an exact idea of the questions at issue, and of the problems with which we deal when we attempt to decide upon the animal or plant nature of organisms which seem to share the properties of both. In his chapter "On Certain Errors, Respecting the Structure of the Heart, Attributed to Aristotle," Huxley finds a field for his cold and critical acumen. He traces with a nice precision, and with clear insight, the share which Aristotle has had in our knowledge of this organ, repudiating Cuvier's criticism, without, however, sharing his reverence for the great old investigator. His treatment of Cuvier can hardly be called generous. He seems to delight in forcing his pen, scalpel-like, between the joints of his statements, and is indeed too prone to judge not Cuvier alone, but all our immediate scientific predecessors, by the knowledge of his own day rather than by that of theirs. Nowhere, perhaps, is this better shown than in his lecture on the coming of age of the 'Origin of Species.' Huxley's power as a critic is especially felt when he thus analyzes the special history of any given point in biology; and yet his own standard applied to himself, within the limits even of his scientific generation, would reduce Huxley to a far less prominent position than he now occupies. One is, therefore, naturally impatient when he judges his predecessors rather by what they have failed to do than by what they have done.

Huxley's well-known Belfast address on "Animal Automatism," and his lecture on the sensiferous organs, are philosophical discussions of questions which have rarely been treated in a general and popular way. In the former he becomes the champion of Descartes, and asserts his claim to be considered no mere speculator, but a physiologist of the first rank, the first to lay the foundation of the modern physiology of the nerves. This lecture has been so long before the public, and so much discussed, that further notice of it here would be out of place.

In the lecture on "Evolution in Biology," the development of the doctrine itself is fully, though rapidly, sketched from the time of Descartes, De Maillet, and Erasmus Darwin through that of Treviranus and Lamarck to that of Charles Darwin and Wallace and the principal expounders of the modern evolution theory, Spencer and Haeckel. He dwells at length on the great difference between the position of the doctrine of evolution as understood to-day and its attitude a century ago. He shows his readers how Cuvier and Von Baer, by their recognition of four distinct plans of organization among animals—the one reaching his result by the study of structure, the other by the study of embryology—knocked down the ladder on the successive rounds of which animals had been arranged in a regular series from lowest to highest, instead of which they are now disposed like the twigs and branches of a tree united in one stem at its base. Another step in the same direction was the recognition of the correspondence between the series expressed by the relations of animals in any one great group and the series expressed by the embryonic phases of any highest member of that group—a correspondence hinted at by Meckel, St.-Hilaire, and Serres, and developed mainly by Agassiz in his "Poissons Fossiles." To these changes must be added the foundation of the science of morphology; the investigation into the significance of rudimentary organs; the study of living organisms as affected by physical conditions; the study of geographical distribution and geological succession. On all these powers Huxley calls as leading up to the modern evolution theory, which, he says, can no longer be considered "an hypothesis, but an historical fact, leaving only the physiological factors to which that evolution is due open to discussion." Many of these workers believed in evolution only in the closer scientific sense, as manifested in cycles of development which can be seen and followed by the patient investigator. That they have, however, contributed to make the present attitude of the theory possible is certainly true; and yet from Huxley's own statement the investigations are narrow as compared with the inferences, and hardly afford sufficient foundation for an "historical fact" as wide as the organic kingdom and as comprehensive as life itself.

The closing chapter of this interesting collection of essays contains Huxley's address before the International Medical Congress of London. It is perhaps the least satisfactory of all. It was delivered almost at the same time with a similar address by Virchow, and the English production suffers by comparison with the German essay. We find it difficult also to reconcile many of the views in relation to the proper methods of medical education formerly enunciated by Huxley with his later statement, in which all will cordially concur, that the future of practical medicine depends upon the extent to which those who occupy themselves with these subjects are trained in the methods and impregnated with the fundamental truths of biology.

GARDNER'S WATERLOO.

Quatre Bras, Ligny, and Waterloo. A Narrative of the Campaign in Belgium, 1815. By Dorsey Gardner. Boston: Houghton, Mifflin & Co. 1882.

THIS is a good-sized quarto, of rather more than five hundred pages. It is "intended," Mr. Gardner tells us, "to afford a somewhat detailed *narrative* of the events of the campaign in Belgium during the four days, June 15–18, 1815. Military criticism, as far as possible, is excluded, and, where it is essential, the writer has in general preferred to use the words of those entitled to speak with an authority to which he has no claim." This is a very good description of the book. It is, perhaps, the most complete narrative of the Waterloo campaign that has yet appeared. It is, of course, in great measure, a compilation—there are long extracts from Siborne, Thiers, Kennedy, and Charras in its pages; but it is well worked up, and the reader will find it no mere piece of mosaic. He will, on the contrary, find that, by a diligent search among the authorities, Mr. Gardner has been able to set before him the various views in which all, or nearly all, the chief questions connected with the campaign are seen by the principal writers on the different sides.

The most unique feature of the book consists in the notes and appendix. In these the author has inserted extracts from the descriptive and poetical literature which this famous battle has called forth. Byron, Scott, and Southey contribute largely from their poems, so celebrated at the time; extracts from Victor Hugo's wonderful description of the battle in 'Les Misérables' are inserted in the appropriate places; Mercer's entertaining diary is largely used; the familiar chapters from Thackeray's 'Vanity Fair' greet us at the beginning of the action; even Erckmann-Chatrian's novel, 'Waterloo'—in which the experience of the soldier, which is most graphically told, leads him through the crises of the battles of Ligny and Waterloo—is largely made use of for illustrating the fortunes of the fight. The result is a really very interesting book, unique in its plan, and successfully carried out. It cannot be said, perhaps, to add much to our knowledge of the events of the campaign, but it does put within the covers of a single volume all the narrative parts of the most authoritative works on the campaign of which it treats. And the story is illustrated throughout by personal experience, and by the prose and poetry which this most dramatic of all military catastrophes has evoked from the most brilliant writers of our times.

In two matters, moreover—and they are both of great interest—Mr. Gardner has collected the facts with great pains, and the result is well worth the careful attention of the student. The health of Napoleon during this period is made the subject of a very valuable note, on pages 31–37, and the conclusion is reached that some malady, the nature of which is unknown, prostrated him at intervals during the campaign, and was "quite sufficient to account for the constantly-recurring delays and general slackness in the French operations." The other subject to which we refer is the treatment of his subordinates by Wellington, and it must be confessed that the instances adduced by Mr. Gardner show the great Duke in a most unattractive light.

Mr. Gardner evidently intends to be impartial. He has, however, made the mistake of trusting too entirely to the writers of the school of Charras and Chesney. This new school of writers on the campaign of Waterloo had its origin in the political animosity against the Second Empire. Charras and Quinet were themselves exiles, and Chesney unconsciously imbibed

their tone. They contributed very much to our knowledge of the campaign, but they must be read with the remembrance of their political bias.

Truth compels us to say that Mr. Gardner's treatment of the agency of Marshal Grouchy in causing the loss of the battle is not very satisfactory. He tells us that the sun rose at 3:48 A.M., yet he says that Grouchy's orders to Vandamme and Gérard, his corps-commanders, to move at six and seven respectively were "orders for the timely movement of his troops." Surely these hours were very late for troops charged with a pursuit. The men had gone into bivouac at ten at night; by four in the morning they should have been on the march.

We are told that "Grouchy was instructed to ascertain whether the enemy [*i.e.*, the Prussians] were 'separating from the English or bent on uniting with them to save Brussels, and try the fate of another battle.'" This instruction was contained in the only written order which reached Grouchy up to the time of his movement on Wavre, and he received it not later than 2 P.M. on the 17th. There is not a word in this despatch about going to Wavre; the name of the town, even, is not mentioned. The first question for Grouchy, evidently, was to make up his mind whether the Prussians were bent on uniting with the English or not. When he found, as he did during the night, that they had retreated in the direction of Wavre instead of to the eastward, toward Perwez and Liége, he knew that they must be intending to join the English. The question then was, What was the true direction for him to take? As to this there can be no doubt. Charras's reasoning puts it beyond a question, that Grouchy's true course was to make with all possible speed for the bridges of Mousty and Ottignies, and get into communication with the main army under the Emperor. Yet we find Mr. Gardner, when speaking of the discussion between Grouchy and Gérard as to the advisability of making this movement from Sart-à-Walhain, where they were when they heard the cannon of Waterloo, actually saying that the question was, whether to make this cross movement "or to adhere to the Emperor's orders to follow the Prussians"; and again, that "Grouchy persisted," in opposition to the advice of Gérard, "in adhering to the orders the Emperor had given him." Statements like this hopelessly confuse the subject. The Emperor's orders were to find out whether the Prussians were intending to unite with the English and try the fate of another battle; he left the course to be pursued, if his lieutenant found this to be the fact, to the judgment of that officer, unhampered by any other orders whatever. The alternative was not, as Mr. Gardner puts it, to do what the Emperor had ordered or to do what Gérard counselled, but whether the direct movement upon Wavre or the cross-march to the bridge of Mousty was the proper course to be taken under the circumstances.

Mr. Gardner, also, like Chesney and some others, misunderstands the purport of the orders which reached Grouchy later in the day, and which approved of his marching in the direction of Wavre. The vital question, as we have stated, was whether the Prussians were retreating east, toward their base, separating themselves from the English, or north, toward Wavre, to unite with the English. Grouchy wrote the Emperor, at 10 P.M. of the 17th, that, as he found they had gone, he would himself direct his own movements, either eastward by the town of Perwez, or northward "in the direction of Wavre." Soult, the Emperor's chief-of-staff, having this despatch before him, writes to Grouchy, at 10 A.M. of the 18th, that the Emperor "desires that you direct your movements upon Wavre, *so as to approach us.*" That is, his direction was to be that of Wavre as distinguished from that of Perwez, and the object of this direction was that he might approach the main army under the Emperor. As Thiers justly says: "It was evident that Wavre was only a general expression signifying the direction of Brussels in opposition to that of Liége." But this remark, so obviously correct, is stigmatized by our author as "gross casuistry," and as sufficient to deprive Thiers of any title to respect. This simply shows that Mr. Gardner has something to learn about military despatches. To order an officer at a distance, in command of 30,000 men, to direct his movements upon A instead of upon B, is a very different thing from ordering him to go to A by the shortest road from where he may happen to be when the despatch reaches him. It is the *direction of the movement* which is the essence of a despatch of this kind; the names of the towns simply serve briefly to indicate this direction; there is no order to go to the particular town mentioned. In closing, we may remark that our author is in error in supposing that Vandamme supported the advice of Gérard; he was not present at the discussion.

On page 62, Mr. Gardner has accidentally omitted from the enumeration of the troops of Ney the four divisions of D'Erlon's corps. We were rather surprised not to find any quotations from Leeke's interesting narrative of 'Lord Seaton's Regiment (the 52d) at Waterloo.'

BOOKS ABOUT THE STAGE.

A New History of the English Stage, from the Restoration to the Liberty of the Theatres in connection with the Patent Houses. From original papers in the Lord Chamberlain's Office, the State Paper Office, and other sources. By Percy Fitzgerald, M.A., F.S.A. 8vo, 2 vols., pp. xii.–437, 463. London: Tinsley Bros.; New York: Scribner & Welford. 1882.

The Elder and the Younger Booth. By Asia Booth Clarke. [American Actor Series.] With illustrations. 12mo, pp. 194. Boston: J. R. Osgood & Co. 1882.

Charlotte Cushman. By Clara Erskiné Clement. [American Actor Series.] With illustrations. 12mo, pp. 193. Boston: Osgood. 1882.

Private Theatricals: Being a Practical Guide for the Home Stage. By an Old Stager. With pictorial suggestions for scenes, after designs by Shirley Hodson. 8vo, pp. 118. London: W. H. Allen & Co.; New York: Scribner & Welford. 1881.

Le Théâtre de la Révolution, 1789-1799. Par Henri Welschinger. 8vo, pp. 525. Paris: Charavay; New York: F. W. Christern. Third edition. 1881.

La Faustin. Par Edmond de Goncourt. 8vo, pp. 343. Paris: Charpentier; New York: F. W. Christern. 1882. (In English) Philadelphia: T. B. Peterson & Bros.

Aus dem literarischen Frankreich. Von Paul Lindau. 8vo, pp. 383. Leipzig: Schottlaender; New York: F. W. Christern. Second edition. 1882.

We have given in full the title-page of Mr. Percy Fitzgerald's ponderous work, because it sets forth plainly what the author in his preface claims for it—that it is a *new* history of the English stage, and especially of the patent houses, based on a study of the official documents, patents, licenses, orders, decisions, and what not, preserved in the Government archives. Mr. Fitzgerald asserts that it is only by the use of these documents that the history can be told scientifically; and in this we may agree with him, though we must deny emphatically that he has done what he declares desirable. Indeed, we feel bound to say that very rarely have we seen so irritatingly unscientific a history as this. Scattered through Mr. Fitzgerald's two volumes are many important papers now for the first time printed; and for these we must thank him, but for these only. The rest is the loose sort of composition familiar to those who have read the author's books on David Garrick and the Kembles. He seems to have set out with the excellent idea of supplementing the records by extracts from contemporary authors, with only such additions of his own as might be necessary to connect what he copied, and thus supplying the reader with the facts on which he could form his own opinion. A history of the English theatre on this plan is greatly to be desired, but Mr. Fitzgerald has not provided us with it. His chronological sense is extremely defective; he very rarely gives chapter and verse for an assertion or a quotation; he prints long extracts with no clew, or only the faintest, to their source. Passages of importance, a page or two in length, are introduced with "A writer says" or "A contemporary records," when it would have been just as easy to tell us who was the writer and where the contemporary recorded.

Of course the book is not wholly worthless. Not only are the reprinted documents of value, but some of Mr. Fitzgerald's own work is useful. His reading has been very wide in theatrical annals; and if he were only as accurate as he is industrious, he might enjoy a high reputation as an authority. One instance of his carelessness is as good as a hundred. On pp. 322–3 he gives an account of Palmer's attempt to open the Royalty Theatre in defiance of the patents. He tells us that "Palmer had actually engaged Garrick, Johnstone, Mrs. Wells, and others." On both of these pages Mr. Fitzgerald prints the date of this attempt—1787. But in a previous chapter he had told us of Garrick's death in 1779. Even Mr. Fitzgerald's index is a disappointment, being as careless as the book itself. Under Sheridan, for example, there are references to Richard Brinsley, but none to his father, the friendly rival of Garrick, or to his son, who helped him to mismanage Drury Lane Theatre, although both names occur in the text. It refers to Goldsmith's "She Stoops to Conquer" and Davenant's "Rivals," but not to the "Rivals" of Sheridan or to his "School for Scandal."

There were already in existence three lives of the elder Booth. The first in point of time is the very scarce volume called 'The Actor; or, A Peep Behind the Curtain,' published here in 1846. The second is 'The Tragedian: an Essay on the Histrionic Genius of Junius Brutus Booth,' still in print; and the third is the volume of 'Booth Memorials' put forth in 1866 by his daughter, Mrs. Clarke, who is also the author of the book before us, which is, indeed, a carefully amended and elaborated version of her earlier effort. For the general reader, it is certainly the best of the four, and it has the advantage over its predecessors of giving the outline of Mr. Edwin Booth's life as well as of his father's. Still, it is merely an outline of her father's and brother's careers that Mrs. Clarke attempts, and she exhibits very unusual restraint in the execution of her task. We have here an authoritative statement of the facts of the elder Booth's life, and we are told all we have a right to ask in regard to his son's. The only fault we have to find with the book is a vagueness in the references, like that we have just reprehended in the case of Mr. Fitzgerald. There is a delightful story (p. 97) of J. B. Booth's getting into a fit of depression while on a trip South on the steamer *Neptune*, and finally jumping overboard. Tom Flynn, the actor,

who accompanied him on the voyage, was in the small boat which picked him up, and he reported that the first words of the would-be suicide were: "I say, Tom, look out! You're a heavy man; be steady; if the boat upsets, we'll all be drowned."

Mrs. Clement had a freer field than Mrs. Clarke; for her only predecessor, Miss Stebbins, had, in her life of Charlotte Cushman, written the least theatrical and the least dramatic of all histrionic biographies. Miss Stebbins had much to say about Miss Cushman her friend, but very little indeed about Miss Cushman the actress. Mrs. Clement has taken great pains to set the artistic career before us at full length. Hers is a well-made biography, revealing only here and there the writer's unfamiliarity with the stage and its history. In eleven chapters, rigorously headed by dates, she traces Miss Cushman's life from beginning to end. A twelfth chapter gives extracts from her letters, and a thirteenth contains the special reminiscences of Mr. Wm. T. W. Ball. There are abundant quotations of criticisms and citations of authorities. For the two most striking passages in the volume Mrs. Clement is indebted to Mr. Lawrence Barrett. One is a strong description of the effect of Miss Cushman's acting as *Nancy* after *Bill Sikes* had given her the death-wound. She kept her face away from the audience, and begged *Bill* to kiss her. By the peculiar management of her voice, she produced a feeling of chilly horror; for it was as though "she spoke through blood!" The other is the fact that she told Mr. Barrett that during the more important scenes of the play, both *Macbeth* and *Lady Macbeth* were under the influence of wine.

Of the making of books on private theatricals there is no end, and "An Old Stager's" is one of the weakest and worst. The suggestions it contains and the instruction it gives are for the most part either erroneous or of such an elementary nature as to be useless. The only chapter of interest is the seventh, on "Some Celebrated Amateur Actors," which contributes a few facts for the future History of Private Theatricals, a very amusing work, still waiting to be written.

M. Welschinger's history of the Parisian stage during the French Revolution is not without a certain freshness. It is true that M. Louis Moland had already made a volume out of the best-known political plays of the revolutionary epoch, and that M. Théodore Muret, in his 'L'Histoire par le Théâtre,' had considered the production of these pieces; but M. Welschinger is more comprehensive, and has sought to study the stage in all its phases during the ten years of turmoil. He takes up in turn authors, actors, and censors; discusses the presentation on the stage of French society under its changed conditions, with special chapters on the family, on divorce, on religion, and so forth; sets forth the new types brought forward for the first time or revived by the accident of appropriateness; takes up the pieces which contained among their characters the historic figures of the day—Voltaire, Charlotte Corday, Robespierre, for instance; and, in a final part, dwells on the *grandes journées*—the 14th of July, the 10th of August, the 9th of Thermidor, and the 18th of Brumaire. An appendix gives a list of the laws and decrees concerning the theatres from 1790 to 1799, and there is an ample and admirable index. The work is very well done. M. Welschinger is a hostile critic, and does not attempt to conceal his bias against the men who made the Revolution. It is perhaps this polemic tinge which has carried the book into its third edition.

M. de Goncourt's latest novel belongs among books about the stage because it is a study of the life and character of an actress of extraordinary ability and—to our mind at least—of decidedly abnormal nature. The novel is constructed with M. de Goncourt's accustomed skill, and may be described as a dissection of an artistic temperament under unhealthy conditions. Many of the incidents and minor touches are evidently transcripts from life. There is an account of a rehearsal of "Phèdre" at the Comédie-Française seemingly of stenographic fidelity to the actual fact. The book is one to be read attentively by those who take an intellectual interest in the art of acting, but it is not for young men and maidens.

Paul Lindau's volume is a collection of biographical and critical sketches of French authors gathered from the monthly *Nord und Süd*, and from the weekly *Gegenwart*. All of the ten authors treated have written plays, and the three finest studies are of writers known especially for their dramatic works—MM. Victor Hugo, Émile Augier, and Eugène Labiche. The sketch of Hugo's career is the amplest of all, and fills a fourth of the volume. The chapters on Gérard de Nerval, Georges Sand, Gustave Flaubert, Ernest Renan, and Jules Claretie are slighter, but scarcely less admirable in their interpretive criticism. It is perhaps from the careful study of these French writers that Herr Lindau has caught an ease and a grace of style and of construction not at all common among German critics. Especially to be recommended is the vigorous dissection of M. Émile Zola's literary and dramatic theories, though the supplementary criticism of 'Nana' is scarcely as acute as Mr. Henry James, jr.'s.

The Decay of Modern Preaching. An Essay. By J. P. Mahaffy. New York: Macmillan & Co. 1882.

Mr. Mahaffy has turned up in a new character. Heretofore he has been best known as a writer on the social life of Greece, and other kindred topics. Now he appears as a critic of modern preaching, announcing its decay and suggesting various remedies for the state of things which he discovers and deplores. Whatever value his discussion may have for the class for whom it is primarily intended, it will have much less for any American preacher or layman. The circumstances and conditions which it sets forth are those of the Established Church of England. The preachers and the laymen of this Church may find something which, if considered earnestly, may be to their advantage; but all others, even the Dissenting ministers of England, will find little in Mr. Mahaffy's book pertaining to their case.

His diagnosis of preaching in the Established Church is no doubt sufficiently correct. He does not overstate the indifference, the *ennui*, of the average congregation. It is probably true, as he says, that the most regular and attentive churchgoers do not fall behind the rest in speaking freely of the dulness, sameness, inconsequence, laxity, and length of the sermon. No congregation now would beg the preacher to reverse his hour-glass and give them another hour. Endeavoring to discover the causes of this state of things, Mr. Mahaffy reports that some of them are historical, others social, others personal. By historical causes he means those which depend on great changes in human life and opinion produced by the course of time. The preacher's situation now is entirely different from that of the first preachers of Christianity. These, when they said, "Believe in the Lord Jesus Christ, and thou shalt be saved," meant something very sharp and definite. There was boldness and novelty in their preaching; they were announcing a new God and demanding a new life. In a despised minority, to speak at all they had to be men of force and courage. The increase of general culture is another historical cause of the decay of preaching. Formerly the preacher was qualified to instruct his people; they listened to him as a person of superior intelligence. They do not any longer, as a rule. Mr. Mahaffy's historical causes are not confined to these, but some others that he mentions are of little weight, and he makes no allowance for the fact that the growth of infidel opinions in our time gives to the preacher who is still thoroughly convinced of the truth of Christian orthodoxy a better opportunity for the display of force and courage than the preachers of the immediate past have had.

The causes of the decay of preaching which are here characterized as social are peculiar to his own Established Church. The first is the force of custom—the insistence on the adhesion to certain forms of speech. The preacher must never be amusing; he must always have a text. Debate in the pulpit is frowned upon as an exhibition of bad taste. Again, consider that marriage in the English Church is almost as compulsory as celibacy in the Church of Rome; and Mr. Mahaffy is clearly of the opinion that a married clergyman cannot do justice to his work, and that his domestic relations will be apt to prejudice his social influence.

Under the head of personal causes, Mr. Mahaffy names, first, "lack of ability." The lack of piety on which others insist, he assures us, is far less important. This cause is surely not peculiar to the English Church, but there are circumstances attending the stocking of the ministry in this Church which make ability even more rare in it than among the preachers of other churches. So, too, the lack of special training is a cause which is much more largely operative there than elsewhere.

The fifth section of Mr. Mahaffy's book is a review of certain "defective types" of preaching. One is "the logical extreme," by which is meant the tendency of those "who think that everything ought to be clearly proved." He instances the bargain theory of the atonement and the doctrine of eternal punishment. Apparently Mr. Mahaffy is not himself entirely sound upon these doctrines. His remarks on "the emotional extreme" have very general application: the type suggested is not by any means confined to the Established Church of England. Another defective type is that of extreme orthodoxy. Under this head Mr. Mahaffy returns to his account with the doctrine of eternal punishment, and proves, if nothing else, that he is one of many in the Established Church for whom this doctrine has lost much of the attractiveness it had in former times. But he conceives that "extreme heterodoxy" is also another defective type, by which we are to understand a general laxity of dogmatic energy—an allowance that dogma is of little importance if the life is strictly moral. Mr. Mahaffy is decidedly opposed to moral preaching. Dogmatic preaching, not moral preaching, he insists, has been the world's salvation—a point on which he might easily stir up a lively opposition. Under the heads "Excessive Sameness" and "Excessive Variety" he is somewhat contradictory. The examples of excessive variety which he enumerates are "excursions into politics, popular science, secular poetry." Here, again, it would not be difficult for him to find opponents who would like to break a lance with him. There are those who think that "preaching politics" and other secular matters would do as much to arrest the decay of preaching as any of Mr. Mahaffy's specific remedies.

To these he does not give so much attention as his readers will be apt to desire. Those which he enumerates are the avoidance of extremes, ma-

terial inducements—*i.e.*, larger pecuniary temptation to compete for influence in the Church; higher culture, both general and special; the celibacy of the clergy; a system of itinerant preaching; the publication of "authorized sermons" for men to read who cannot themselves write a decent sermon; and, finally, greater elasticity in the sermons. Of all these remedies the dreariest—not even the celibacy of the clergy excepted—is that of "authorized sermons." We do not expect any remarkable improvement in preaching to result from Mr. Mahaffy's essay. His tone is miserably low. His problem is, How to get good preaching out of weak, incompetent, immoral men. The real problem is, How to get strong men, competent and moral men, into the ministry.

Popular Dictionary of Architecture and the Allied Arts. By W. J. and G. A. Audsley. Third edition. Vols. i., ii. London. New York: G. P. Putnam's Sons.

THE appearance of two volumes of a third edition of Audsley's 'Dictionary of Architecture and the Allied Arts' indicates that this laborious and in many respects admirable work is bearing good fruit for its authors. As this edition seems to be largely prepared for the American market, though in fact it introduces no new elements, and confines itself mainly to textual revisions of no importance and to the correction of typographical errors, it deserves a new introduction. The scope of the dictionary is unusually wide for special works of this sort, and, although objections have been made to it on this ground, they are obviously hypercritical. Any work which, like this, treats of architecture as a fine art cannot exclude the allied arts without denying to "the art preservative of all arts" one of its most essential functions. It is therefore not without good reason that we find in this 'Dictionary of Architecture' the terminology of sculpture and painting, mosaic, costume, armor, heraldry, embroidery, enamel, pottery, metalwork, and stained glass, as well as the aspects and attributes of all the heathen deities and of the celestial hierarchy of Christendom in their relations to art, and the iconology of the saints, doctors, and prophets of the Church. This is a comprehensive scheme, and appears much more grotesque and incongruous in the statement than in the work itself. There is little here which the architect, the critic, and the student do not at some time need to know in the direct line of this all-embracing art.

In the first volume the most noteworthy titles are *Altar*, *Ambo*, *Angel*, *Aqueduct*, *Amphitheatres*, *Application*, *Apostles*, and *Apse*. These are reasonably full essays, attractively presented, with descriptive quotations from the best authorities and some indications of intelligent special research or independent observation. The titles *Angel* and *Apostles* are well developed in their way, and fairly exemplify the archæological tastes and resources of the authors. The article *Apocalypse*, in its relations to painting and sculpture, is especially instructive, and contains much information not elsewhere readily obtainable. The treatise on the *Apse* occupies about fifty pages, has some twenty-seven illustrative plans, and is a symmetrical and well-prepared historical study. We cannot detect in it the omission of any important link of evidence. Nothing is more easy than to discover faults of omission and commission by diligent research in a work of this sort—as in the failure, under the head *Angle-column*, to note the characteristic Greek treatment of this feature, and to explain by proper illustrations such words as *Anthemion*, *Angular shaft*, *Annulated shaft*, etc.; but, on the whole, there are rather too many than too few titles, and the fault of saying too little under any title is not common.

In the second volume the principal subjects are *Arabesque*, *Arch*, *Architect*, *Assyrian architecture*, *Atrium*, *Aureole*, and *Baptistry*. *Arabesque* is mainly devoted to the discussion of the Roman and Raphaelesque methods, and dismisses the interesting and characteristic work of Byzantium with a brief paragraph. The more legitimate *Arabesque* is to be found, much too barely stated, under the heads *Arab-ornament* and *Alhambresque*; but more is promised under the title *Moresque*. The article *Architect* occupies some forty pages, and is a full compendium of the best and latest authorities on the functions of the architect in antiquity and the Middle Ages, with well-compiled descriptive lists of the most famous names in the several schools. *Aureole* favorably compares with *Angel* and *Apostles* for well-directed archæological study. *Atrium* has sixteen pages, and *Baptistry* thirty-four.

It is but just to the Messrs. Audsley to note that, unlike most of their countrymen who have written upon art, they have avoided the error of taking a merely English view of the subjects of which they treat, and have been sufficiently cosmopolitan to give to English examples and English customs no more than their fair share of notice under the general titles. Our young architects have scarcely yet recovered from the insular bias created in their minds by the distorted historical perspectives in nearly all the popular English writings on the Gothic style. The high standard of performance set by M. Viollet-le-Duc in this department of literature must necessarily act as a severe strain upon all who follow him in similar fields, not only in respect to the thoroughness, learning, and ingenuity of his essays, but as regards the wondrously graphic quality of their illustrations. It is in the latter quality especially that the present work must by every reader be found wanting. Though the illustrations are in general sufficiently apt, they none of them are brilliant, and they are but grudgingly bestowed. Some of the archæological articles, like *Angel*, have diagrams enough to give the subject its full value; but throughout the work numerous opportunities for effective exposition by the pencil are lost. In such titles, for instance, as *Apse* and *Aisle*, it is a serious omission to have plans alone, and no sections or elevations by which to define the characteristic types of construction and design. We have no hesitation in saying that the starving of such a work in such a way is false economy, and that, by a more liberal and intelligent use of illustrative prints and diagrams, the practical value, if not the pecuniary success, of the work would have been increased threefold, without any essential additions to the text. Indeed, such illustrations should have been afforded at the present price of the work to subscribers.

Life and Writings of Frank Forester (Henry William Herbert). Vols. i. and ii. New York: Orange Judd Company.

HENRY WILLIAM HERBERT may be justly called the father of American sporting literature, and it is by his contributions to that only that he is still almost entirely known in this country. It seems from this book, however, that it was not until after repeated failures in other lines of literature that Mr. Herbert devoted himself to writing on sporting topics. He was the author of a number of novels, chiefly historical, several of which, notably 'The Brothers of the Fronde' and 'Oliver Cromwell,' passed through several editions, and were highly commended in England, though here they met with a very cold reception.

Mr. Herbert was the son of the Dean of Manchester, grandson of the Earl of Carnarvon, and a graduate of Caius College, Cambridge. He came to this country in 1831, and after a short experience in school teaching took the editorship of the *American Monthly Magazine*, which had but a short existence, seemingly due to his intemperate and quarrelsome disposition. For a number of years after, he was connected with several magazines and journals, among them the *Courier and Enquirer* and the *Commercial Advertiser*, and did for them and in the preparation of his romances a good deal of literary work. His final failure in journalism was owing, his biographer says, to "his being prolix and diffusive in general style, lacking ability to concentrate passing ideas into telling paragraphs, while upon general topics he was autocratic and dictatorial, ever inclined toward aggressive assertions, and paying little attention to popular prejudices." In the latter qualities he was apparently a few years too early for success. Although before 1837 Mr. Herbert began the contribution of occasional sporting sketches to the *Turf Register* and *Graham's Magazine*, it was not until 1848 that the first of his standard books appeared, 'The Field Sports of the United States and British Provinces of North America.' This was soon followed by 'Fish and Fishing of the United States and British Provinces,' probably the best and most enduring of his works; and in 1857 by 'The Horse and Horsemanship in North America.' There are several minor and less-known volumes on kindred subjects, but on the three last named rest his best claims for reputation.

Mr. Herbert's life, as told, was on the whole a singularly unhappy one. Unable, through his habits and proneness to quarrel with his best friends on trivial provocation, to retain the companionship of those with whom his birth and education entitled him to associate, conscious of repeated failures in the branch of literature he most desired success in, the last days of his life were passed in melancholy and gloom. His first wife lived but a few years, and it is hinted her death was hastened by his passionate and overbearing disposition. A second alliance, contracted in 1858, was terminated by his wife leaving him a few months after marriage; and soon thereafter Mr. Herbert invited a number of his friends to a dinner in New York for the purpose, as was ascertained, of making it the occasion of his suicide. But one guest appeared in response to the invitation, and toward two o'clock in the morning Mr. Herbert rose from the table, walked in front of a mirror, and shot himself directly through the heart. Two letters left for the coroner and "press of America," respectively, showed the act to have been long deliberated, and requested that his tombstone might be inscribed with the word "Infelicissimus."

Mr. Herbert was gifted with many accomplishments and charming social qualities when he chose to exert them, and for years his home, "The Cedars," near Newark, N. J., was the resort of many well-known men of letters and position from New York and elsewhere. Col. Picton gives some interesting stories of the house and its frequenters. One of the prominent characters was "Sailor," a large Newfoundland dog which had a passion for pulling people out of the water, and, Col. Picton says, "in this way frustrated several attempts at suicide, and notably those of two of Herbert's guests, both distinguished in the world of letters, who, beneath the influence of *mania a potu*, plunged into the waters of the Passaic and were dragged out by the dog despite their frantic opposition. The

life of one of Herbert's friends was thus saved upon three distinct occasions." Col. Picton's biography of Herbert occupies one-third of the first of the two volumes, which are meant to be the beginning of the republication by the Orange Judd Company of Herbert's writings, and is well written and interesting, while, intentionally or not, it contains a lesson no reader can help observing. The rest of the book consists of sketches and short stories by Mr. Herbert, concluding with several "American historical ballads" of questionable merit.

The Life and Public Services of Ambrose E. Burnside, Soldier, Citizen, Statesman. By Ben: Perley Poore, with an Introduction by Henry B. Anthony. Providence: J. A. & R. A. Reid. Illustrated. 8vo, pp. 448.

THIS work is elegantly printed and will be welcome to a large circle of friends and constituents. General Burnside's friends were always devoted ones, and his power of attaching others to him personally has been universally recognized. Mr. Poore has had the means of learning some things of the early life of Burnside which have not been made public before; but in reference to his military career, which is the only important thing for the general reader, it cannot be said that any valuable addition has been made to our former knowledge. The character which Burnside maintained down to the close of his life reacts upon the history of his military service, as it is right that it should do. He impressed his associates in the Senate, as elsewhere, with the conviction that he was an earnest, modest man, who meant to be entirely sincere in all he did, and was guided by pure principle and a high sense of honor. Such a character is inconsistent with any intrigue, and in considering the long-mooted question whether he was sincere in objecting to be made commander of the Army of the Potomac in 1862, when he relieved McClellan, it may justly be said that his subsequent and prior life should settle the question in favor of his absolute sincerity.

By the same evidence we see that he was not a man of great intellect, and that his modesty was based upon an honest self-judgment. He had a reasonable measure of success in operations of the second class, like the Roanoke expedition and the campaign in East Tennessee, and was a faithful subordinate when commanding a division or a corps in a great army. His repulse at Fredericksburg did not in itself prove that he was incapable of handling a large army, but the exasperation which he showed toward those of his officers who had criticised him, seemed to prove that he could not dominate or manage the chafing elements of which a large army is composed. His march to Fredericksburg was well conceived and carried out, and he would have secured solid footing south of the river had the authorities at Washington despatched the pontoon trains in time. In his exasperation he tried to march a little later when the elements were too much for him, and he left the command because the President did not feel that he could afford to dismiss a considerable list of general officers whose conduct closely resembled insubordination.

It can hardly be said, therefore, that Burnside's military capacity was fully tested, but the impulsiveness and impetuosity of temper which led to his resignation must be admitted to be an element unfavorable to success under very large responsibilities. He was, besides, very unsystematic in business details, and lacked the method in current affairs which enables a man to keep all the threads of complicated duties well in hand. Regimental officers have been known to send hundreds of miles for deserters from the ranks, but these, when brought back, have produced an irregular furlough written by Burnside upon the fly-leaf of a memorandum book, of which no report or record had been made. To those who served him in good faith and with zeal, he allowed the largest latitude, and would unhesitatingly assume the responsibility for what they did, whether the result were good or ill. But they had also to expect the most eccentric interference with their subordinates, if it occurred to him to countermand directions which they had given. All these things combined to make a peculiar character, and it is not easy to gainsay those who deny his fitness for a great command. It is plain, however, that this is rather a conclusion from probable reasons than a thing proved by his career while in command of the Potomac army.

Zhizn za Okeanom. [Life Beyond the Ocean: A Sketch of the Religious, Socio-Economic, and Political Life in the United States of America.] By A. Lapukin. St. Petersburg.

MR. LAPUKIN has made a very entertaining book from his impressions of life in New York during a stay of some two years as Psalmist of the Russian Chapel. (The psalmist is a functionary combining in varying proportions the offices of deacon in the Episcopal Church with that of clerk in the English sense, and of choir-leader in ours.) His object in writing was to supply his countrymen with something of the information for which he had sought in vain before leaving home. "For us Russians the New World is yet a *terra incognita*, and we must still wait for our Columbus who may anew discover America—especially for us." He brought to his task a quick and ready eye and a most kindly sympathy, while, within its brief limit, the book is rather rapid and cursory than superficial. It might be called 'The New World, as seen from New York,' since the writer's personal experience was confined to this vicinity, and his information in general was mainly derived from New York sources. The book reads almost like a history of 1880 and 1881, but from a standpoint so unlike that usually taken by foreigners that it has a most attractive freshness. For one thing, mere physical magnitude does not overpower our author: space and stretch of country are no novelty to him. Then, the book is strictly written for Russians; there is not the faintest suggestion that Americans would ever see it. Hence, in a way, it is a remarkable example of how others see us.

America is not perfect in Mr. Lapukin's eyes; it is not the land of promise. Nevertheless, it is evident that he brought hither a tradition of admiration and affection rarely found in foreigners. We are always "our transatlantic friends." Of course his subjects are multifarious; yet if his choice is sometimes a little surprising, the point is not missed. Of Tanner: "At the end he was the most notorious doctor in the United States; and in the United States notoriety is money." "He who has not seen New York has never seen a grand procession." He believes the Concord School of Philosophy to have been founded by "Alcott, a rich American," but describes it as an example of "the American fondness for uniting profit with pleasure." "Besides the regular professors, there are at the readings of the lectures a number of amateurs who delight the party with the fruits of their philosophic speculations. At intervals the orchestra plays, and not far off are the 'refreshments.' At the close of the readings teachers and pupils scatter in the beautiful park, and continue special conversations on philosophic subjects. The rustling of the leaves and the murmur of the river give a romantic character to this philosophic pleasure. . . . The founder of the school himself, now an old man of eighty, jumps for joy, like a child, at the realization of his long-cherished dreams."

Seventy pages are devoted to the Presidential campaign, which was watched with keen and discriminating interest. Writing for his public, the story could but begin with the canal-boat; it ends at the moment when the hope of recovery last summer was strongest. As a careful and impartial, though quietly humorous, picture of the external aspects of our quartain fever, it would be worth something to the American public. Quite another side of the book is the religious one, though the writer has expressed himself more fully in a special work of which we shall speak hereafter. We make one extract, to comfort those who fear that the Bible is going out of fashion:

"The Bible in America is not only the book of books in the usual sense of the words, but it has gone into the very body and blood of American society. To take away from the American people the Bible would be to rob it of half its substance. With the Bible, for an American, are united the sweetest memories of a happy childhood. As soon as a child is conscious, so soon he begins to see, without exception, in every home, a thick, gilt-edged book which a gray-haired grandfather or a wrinkled grandmother reads each morning and evening by the fireside. Later, at Christmas, with the other presents, the father gives to the son or the daughter a beautiful little Bible. After that school begins, and the sweetest recollections of the home life of the child are renewed and perpetuated by the daily reading. A good knowledge of the text of the Bible is thus obtained by children in America at an age when European, and especially Russian, children have hardly any conception of the book itself."

Mr. Lapukin's work should be of value for the light it affords about the Russians themselves. It is a grief to him to find his country so misrepresented, so little known. "Entire ignorance of the Russian language stands like the great Chinese wall as a complete bar to any acquaintance between the two peoples." "Even in London, among ten different newspapers, Russian affairs are in the hands of Poles or Jews. Among them all there are but two Englishmen." With what pleasure he regards Schuyler's 'Peter the Great.' Of the Mission Chapel he says:

"The congregation was usually of the most varied character. There were the Greek millionaire trading in cotton with the Indies and Australia, and a whilom Russian actor selling needles in the streets, a Russian doctor, and a student of the University of Moscow; a wandering sailor serving as clerk in a toy-shop, and a nobleman making coffee in a restaurant; a merchant's son escaping from military service; a former lieutenant of the army living by picking rags in the streets; an Austrian Serb acting as Russian interpreter in the hotels, and the Russian radical living by borrowing without paying; a Pole boasting himself half-Russian and a lieutenant of the Russian fleet, working at the smoking of sausages in a German establishment. Usually there were a few Americans of both sexes, and from time to time came representatives of the American clergy of different denominations. Of Russians of high rank, the church saw within its walls the Grand Dukes Alexis Alexandrovitch and Constantine Constantinovitch at the time of their visits in New York, and the reverend Bishops John and Nestor of Alaska at the time of their journeys through New York."

Of Russian immigrants, he says there are very few: "The papers reported in the course of a few weeks nine hundred Russian immigrants, so I went down to Castle Garden to take a look at my countrymen. What was my disappointment and surprise to meet only Poles, and only long-nosed Polish Jews at that." The Americans distrust the Poles as not trustworthy or capable of serious work; hence they are eager to call themselves "pure Russians."

"One day one of them came to the church asking help of the charitable society. It was

necessarily refused him, but at the same time there was given him the address of one of the Hebrew societies. 'I'm not a Jew; by God, I'm not a Jew,' said the man. 'I'm a Russian, by God; I'm a Russian.' 'Then why don't you speak Russian?' 'That's no matter, no matter; by God, I'm not a Jew. I'm a Christian Tartar —Peter Troitski. By God, I'm not a Jew'—all the while working the muscles of his face to make himself look less like a Jew."

Mr. Lapukin repeats the pathetic story of the failure of the Russian colony in Brazil. Of one of those who came thence to this country he asked, "though I knew it was a cruel question": "Would you now return to Russia?" The man of Samara hung his head, then, his eyes suddenly glistening, with despairing pathos he exclaimed: "Now, heaven is nearer far for us than our foolishly lost Russia!"

Another work, by the same writer, 'Rimski Katolitzizm v' Amerikye' (Roman Catholicism in America), we can hardly more than mention here. Superficially striking is the remark that "at the time of the Civil War, the Protestant sects and bodies were completely divided, and offered no hope of reconciliation. The Roman Catholic Church alone continued to be united, with its powerful organization and its impartiality toward both the contending parties." But Mr. Lapukin imagines what never existed when he goes on to represent the public as turning wistfully to that church for aid as a mediator between the two sections. The only other sects worth taking into account, according to our author, are the Methodist and the Episcopal, which both lack historical authority. This defect the latter might supply, he thinks, by a union with the Orthodox Church of the East. To prove that such a union has been desired by the Episcopal Church in America, he produces at length, from the Proceedings of the General Conventions of 1868 and 1871, the resolutions which were sent to the authorities of the Greek Church, and also the reply received in 1874 from the Patriarch of Constantinople and the Bishops of Alexandria, Antioch, and Athens. Doubtless most who heard them believed them to be simple expressions of Christian fellowship and charity, but (we follow Mr. Lapukin) they were the first step toward union, a step so important as at once to alarm the Roman Catholic Church, to which Episcopalianism in its present shape is of the utmost value, "since from it, or through its influence, come one-half of all the converts to Catholicism." To arrest the movement, "the Roman Catholic press sounded the alarm and rushed to arms for the struggle against this dangerous tendency of Episcopalianism." "Not counting sufficient its own strength, the American press called out the reserves of French Jesuitism." Hence the appearance in this country, not only of the life of Prince Galitzin, but of such books as 'Le Récit d'une Sœur,' and the biographies of Natalia Naryshkin and Madame Svetchin, all intended to show the superiority of the Latin to the Greek Church. This influence, Mr. Lapukin is convinced, put an end to the idea of union.

Incredible as it may seem that any one should suppose such a scheme was ever seriously meditated, it will not be absurd to one who knows anything of the dream of the extreme Slavophil, that effete Western Europe is to be restored by the strong young Slavic blood, or, viewing it from the other side, to one who remembers the general tone of Dean Stanley's 'Eastern Church.' Mr. Lapukin, though with a modesty which commands respect, faithfully believes that the Russian Church in New York is a mission church.

A Primer of Art. By John Collier. London and New York: Macmillan & Co. 1882.

THIS little book seems intended largely as a practical guide to beginners in drawing and painting. It includes a general definition of art, and a brief account of its earliest beginnings. It is hardly, however, a book from which either the special student or the general reader can derive much profit. One or two brief quotations will illustrate this. In the course of some remarks on decoration the author says: "As we hear a great deal about decorative art nowadays, it may be as well to inquire if there are any great principles of decoration. Is there any rule to which it must conform? There is only one—it must be beautiful; it is subject to no other law. Beauty is that which pleases the eye. If ornament is pleasing, it is good; if not, it is bad. As to what is pleasing, that each person must decide for himself" (p. 11). Does the author really mean to affirm that beauty is that which pleases *any* eye? There are short chapters on The Practice of Painting, Outline Drawing, Light and Shade, Texture, Anatomy, Perspective, Color, etc. In the chapter on Light and Shade (the whole chapter is in twenty-two lines) we read: "The absolute degree of light can seldom be imitated in a drawing; but this is of little consequence, as the eye is chiefly conscious of relative intensities, and these can be perfectly rendered." Now the absolute intensity of shade, in nature, can hardly be approached any nearer than the absolute intensity of light. It is difficult, therefore, to perceive the truth of this statement. There are many other loose and inaccurate statements. In the chapter on Color, thirteen out of seventeen pages are devoted to an account of the wave theory of color sensations, and the physical structure of the eye—a kind of information with which the student of art, as such, has very little concern.

BOOKS OF THE WEEK.

Anderson, E. L. On Horseback, in the School and on the Road. Henry Holt & Co. $1 50.
Ballou, M. M. Notable Thoughts about Women: a Literary Mosaic. Boston: Houghton, Mifflin & Co. $1 50.

LECKY'S

History of England in the Eighteenth Century.

VOLUMES III. AND IV. JUST READY.

THE WORKS OF WM. E. H. LECKY.

A History of England in the Eighteenth Century.

Vols. I., II., III., and IV. Small 8vo, cloth, price per vol., $2 25.

"Mr. Lecky never touches a subject without presenting to the eye some hitherto unobserved angle and facet; and we find in this 'History of the Eighteenth Century' the old unwearied industry, especially in the by-paths of literature, his delicate subtilty of observation, and the same fine ear for the undertones of life, which are apt to be drowned in the noisy hum of battles, sieges, and dynastic changes. No one, not even Macaulay, has burrowed so industriously in the pamphlets, newspapers, and quite unclassical literature of the last century in search of light as to its manners and customs. He has written the best history of the century, has corrected many errors of his predecessors, and his manner of treatment is large, philosophical, and impartial."—*London Spectator.*

"No more important book has appeared of late years than this history, uniting as it does so engrossing a subject with so vital an object. . . . We say, again, that Mr. Lecky has made his mark upon our time by his careful and fascinating book, and we have reason to be glad that while he is still himself, and his pen has a sharp point and is held with a strong hand, his temper has gained gentleness with time, and his mind has not lost insight by laborious study."—*New York Times.*

History of the Rise and Influence of the Spirit of Rationalism in Europe.

2 vols. small 8vo, cloth, $4.

C F Bickford 620 26 83

"A man of earnest conviction, Mr. Lecky . . . free from bigotry; as an historian he is almost faultless, and as a critic he is without a pe . . . is animated by a vital idea which gave it birth, and which quickens every paragraph to . . . the idea is too large and luminous to have the character of a dogma. The work will no d . . . ively read. The wealth of its contents and the singular grace of its style—always flow . . . picturesque, sometimes burning with suppressed eloquence—will insure a multitude of admir . . . We hope they will."—*The Nation.*

"This work may be regarded as a series of dissertations, a form of writing in which the author shows great skill, and a command of clear and forcible expression. Thus, he exhibits not only the struggle of rationalism with credulity, but the origin and growth of the opinions with which the sceptical spirit had afterward to contend. If this method keeps his main argument in suspense, and compels him sometimes to reiterate the terms of it, and even to remind himself by repetition of the proper aim of his whole work, it is a method which greatly adds to its historic value, and one which enables the writer to manifest his power of historical appreciation, as well as his perfect freedom from any merely destructive spirit. The two closing chapters of the work are specially dissertational, and they treat of a variety of topics of considerable present interest. . . . The ability of the writer is unquestionable. He is gifted with a style of easy, natural eloquence. His manner of dealing with each separate topic which he brings under discussion is clear and masterly."—*London Daily News.*

History of European Morals, from Augustus to Charlemagne.

Third edition, revised. 2 vols. 12mo, cloth, $3.

"So vast is the field Mr. Lecky introduces us to, so varied and extensive the information he has collected in it, fetching it from far beyond the limits of his professed subject, that it is impossible in any moderate space to do more than indicate the line he follows. . . . The work is a valuable contribution to our higher literature, as well as an admirable guide for those who may care to go in person to the distant fountains from which Mr. Lecky has drawn so freely."—*London Times.*

The Leaders of Public Opinion in Ireland: Swift, Flood, Grattan, O'Connell.

12mo, cloth, . . . $1 75.

"A writer of Lecky's mind, with his rich imagination, his fine ability to appreciate imagination in others, and his disposition to be himself an orator upon the written page, could hardly have found a period in British history more harmonious with his literary style than that which witnessed the rise, the ripening, and the fall of the four men whose impress upon the development of the national spirit of Ireland was not limited by the local questions whose discussion constituted their fame. Especially has O'Connell found in Mr. Lecky a fond biographer, and a most conscientious and impartial judge. The volume is elegant and brilliant in style, and treats with equal ability and warmth the three other men whose names appear with that of O'Connell."—*New York Evening Post.*

1, 3, and 5 Bond Street, New York.

The Book for Practical People.

DR. RICH'D S. ROSENTHAL'S

Meisterschaft System

FOR

French and German

Gives the pupil in ten weeks that complete fluency of speech which is rarely attained by other methods after years of study.

This practical system offers an

INVALUABLE OPPORTUNITY FOR SELF-INSTRUCTION,

as the lessons are so simple and the instructions so plain that each person can be his own teacher and yet be studying under the superintendence of one of the best European linguists. The course of lessons for each language makes fifteen pamphlets of three lessons each. All students or members of the school have the privilege of asking by letter questions concerning each lesson, or any difficulty in regard to study which may have occurred to them. All exercises are corrected and all questions answered, gratis, by return post, by Dr. Rosenthal or one of his assistants.

From a mass of Testimonials we select the following:

What the *Literary World*, London, Eng., says: "Dr. Rosenthal has worked out his theory with a skill, thoroughness, and adherence to sound scientific principles which we have not found elsewhere."

What the *Scotsman*, Edinburgh, Scot., says: "It has never been known to fail in what it professes—viz., to give a complete mastery over a foreign language in a wonderfully short time."

What the *Academy*, London, Eng., says: "A pupil cannot fail to master a knowledge of French from this wonderfully simple and ingenious method."

From the *Nation*, New York: "We believe that this system is the best yet devised for learning to speak a foreign language in a short time."

FIVE DOLLARS is the price for each language. This amount ($5) entitles the member to receive the fifteen books or pamphlets containing the lessons, also answers to his questions.

For 25 cents we will send, as a specimen pamphlet, Part 1 of either the German or French lessons.

All remittances must be made to the Publishers,

ESTES & LAURIAT, Boston, Mass.

W. B. Clarke & Carruth

Call attention to their very full stock of BOOKS, new and second-hand, in all departments of literature, which they will sell at the very lowest market prices.

Send for catalogues. Correspondence solicited.

Special agents for

The Victorian Review.

Subscription price, $7 50 per year; single numbers 65c.

Publishers of

Appalachia,

Edited by members of the Appalachian Mountain Club, and full of information of interest to lovers and students of mountains. Price per number, 50 cents.

Also publishing agents for the Society for Political Education.

Their assortment of books on POLITICAL ECONOMY is especially complete.

The Nation.

NEW YORK, THURSDAY, MAY 25, 1882.

The Week.

THE decision of the full bench of the Supreme Court of the District in Guiteau's case leaves him only two chances of escape—an application to the Supreme Court of the United States for a writ of habeas corpus, on the ground that the court had not jurisdiction to try the prisoner, or a lunacy inquest. The latter may be dismissed as out of the question, because no judge would listen to any but the most overwhelming evidence of insanity where the issue has been recently involved in a murder trial, and has been decided against the prisoner; and there is no more reason for thinking Guiteau insane now than there was at the time of the verdict. It is possible that habeas-corpus proceedings may be attempted, but even if the Supreme Court should undertake to review the decision of the trial court by such means, it is impossible to imagine any way in which the verdict could be upset. The "jurisdictional point" in Guiteau's case—the question whether the District courts have jurisdiction over a murderer whose victim has died in New Jersey—is one on which there are conflicting decisions, and, in accordance with the usual rules governing such cases, the Supreme Court of the United States could hardly do otherwise than take the decisions of the Supreme Court of the District as finally establishing the law for the District. It would no more inquire whether these were right or wrong than it would whether the decision of such a point by the Court of Appeals of this State was correct, and for this very reason the Judges may very well refuse to entertain habeas-corpus proceedings at all, as involving a mere waste of time. In all human probability, therefore, Guiteau will be hanged on June 30.

If the steady growth of a bouffe atmosphere about a custom or institution be a sign of its approaching extinction, we are certainly near the end of the spoils system. Kauffman, one of the Cameron nominees for an Internal Revenue Collectorship in Pennsylvania, *vice* Wiley, dismissed without cause, or rather in the teeth of much cause for retaining him, has been confirmed by the Senate, the beautiful reform platform of the Pennsylvania Republicans to the contrary in any wise notwithstanding The debate over the matter in the Senate was very remarkable. Senator Mitchell opposed the confirmation by eulogizing Mr. Wiley, and by reading the beautiful platform and "public opinion" hostile to the change from Pennsylvania newspapers. To this Mr. Cameron replied by abusing Mr. Wiley, and reading "voices in the air" from other Pennsylvania newspapers favorable to the change. The beautiful platform, however, remained to be disposed of, but Mr. Cameron was not troubled by it. He met it by pleading that it had no *ex-post-facto* operation, or, in other words, did not apply to nominations made before it was adopted. In other words, the platform is like the temperance pledge of the inebriate, which was to take effect as soon as he had disposed of a keg of whiskey which he happened to have in the house. We believe, however, that this is the first time that a man in high office has produced a reform which is to begin after certain abuses already on hand have been executed.

Mr. George William Curtis has availed himself of the opportunity afforded by a letter to Senator Mitchell of Pennsylvania, apropos of the Independent revolt in that State, to utter some solid chunks of good sense about the practice, so much indulged in by reformers in and out of politics of late years, of denouncing bosses and the use of patronage for political ends without specifying the particular mode in which these abuses are to be put an end to. He shows that the common language of reform platforms on this subject now simply sounds to the country "as vapid declamation intended to conceal personal disappointment and spite"; and, he might have added, to get the control of the Machine for a new set of "workers." As soon as the reformers begin to ask for the adoption of competition as the sole mode of entering the service, and promotion as the chief mode of reaching its higher grades, so as to leave no power to "influence," the voters will begin to believe in the sincerity of Independents, and reform movements will sweep everything before them. The languid interest now felt in them is due to the strong suspicion that they originate in a desire for a "new deal."

Mr. Conkling has been again "foully slandered"—this time by the Kingston *Freeman*. This wicked sheet says that he became a candidate for reëlection "out of his own head," and not by the advice of his friends; that his friends urged him from time to time to withdraw, but that he would not; and that he was a party to a "corrupt bargain" looking to the election of himself and of "another person." It will be a surprise to most persons that Mr. Conkling should stoop to notice such slanders as these. Indeed, it seems to be a surprise to himself that he should be doing it, for in an interview on the subject he recalls the fact that his "habit has been never to reply to slanders, however foul." His friends have, it seems, persuaded him that this habit has "encouraged calumny." On their advice, he has resolved to depart from his habit in this case, and reply to the libel. In his emphatic way he now declares that "each of these charges is without truth and positively against truth." The fact, he says, is that he went to Albany at the urgent request of his friends and supporters; that he never asked any man to vote for him; that though he frequently requested a withdrawal of his name, his friends positively refused to consent to it; and that he was not a party to a bargain of any kind, corrupt or pure, on the subject. This interview has been followed by one with Mr. Sharpe, who was supposed to be one of Mr. Conkling's closest friends at the time he went to Albany, as to his responsibility for the article in the *Freeman*. He says he knew nothing of it until he saw it in print, but that he would "like to know the names" of the friends who advised Mr. Conkling to go to Albany, and then goes further and declares that the great man "never consulted" them at all, either at Washington or in this State. He also says, somewhat truculently, that the editor of the *Freeman* "has a good deal of personal knowledge" of the facts in the case, and "knows how to take care of himself." It almost looks as if Mr. Conkling's early habit of total silence worked better than replying to charges, and as if in departing from it he had been again misled by his friends. Everybody would like to know who they are. They may be good and pure men, but they are sadly deficient in judgment. Would it not be better for Mr. Conkling to pay no further attention to their suggestions on any subject?

Mr. Crapo's bill to extend the charters of national banks passed the House by a vote of 125 to 67, receiving nearly a two-thirds majority on the final test. The political division of the vote shows that 103 Republicans and 22 Democrats voted for the bill, and that 3 Republicans, 8 Greenbackers, and 56 Democrats voted against it. Approximately ninety-seven per cent. of the Republican and twenty-five per cent. of the Democratic vote was cast for the bill—three per cent. of the former and seventy-five per cent. of the latter being cast against it. Votes taken on amendments proposed at various stages of the debate show that one-third of the House, divided politically in about the same way, were not only opposed to continuing the national-banking system, but were in favor of issuing new greenbacks to take the place of the existing bank notes. The Democrats have thus signalized themselves anew as the bedlamites of finance; for although the Greenbackers claim peculiar distinction in this regard, and although in the debate they attacked the Democrats fiercely as being only hypocrites and pretenders in the cause of fiat money, they furnished only one vote in eight to the common muster-roll. It is now some fourteen years since the Democratic party first attempted to make an attractive issue for themselves out of some plan for producing financial chaos. In every single instance where they have succeeded to their hearts' desire in making this issue pronounced and definite, so that the people could divide upon it, they have been ignominiously beaten at the polls.

The most important amendment to the National Bank Bill was that which provides that all suits brought by or against national banks shall be tried in the same courts in which suits brought by or against other banks are tried—*i. e.*, in the State courts, if the parties to the suit are citizens of the same State. This amendment is of no value and is of doubtful constitutionality. In so far as it assumes to deprive the United

States courts of jurisdiction in this class of cases it is clearly unconstitutional and void. The Constitution, art. 3, sec. 2, says: "The judicial power [of the United States] shall extend to all cases in law and equity arising under . . . the laws of the United States." The National Banking Act is certainly a law of the United States. Consequently the rights of parties to sue in the courts of the United States in any and all cases arising under that law cannot be impaired. If the object of the amendment was merely to give the State courts concurrent jurisdiction in such cases, it was hardly worth the trouble of passing it. The concession seems to have been made by the friends of the bill in order to secure the support of a few State-rights fanatics who would otherwise have voted against the whole measure. Although this was the only important amendment adopted, several very bad ones were voted down: that of Bland, which provided for substituting greenbacks for bank notes, being defeated by the decisive vote of 71 to 138. The most significant vote of all was on the amendment of Mr. Springer to limit the extended charters to ten years, on the ground that as the national debt would be paid off within ten years the present banking system would necessarily come to an end. This amendment also was defeated, and the vote shows that the House does not consider the extinction of the public debt as equivalent to an extinction of the national-banking system. This is as it should be.

The House Foreign Affairs Committee has disposed of the Shipherd contempt case in a singular way. On Wednesday Mr. Shipherd appeared before it, armed with a bagful of books and papers, and was asked whether he still declined to produce *all* the documentary evidence he had bearing on the attempts to enforce the claim of the Peruvian Company against Peru. On his saying positively that he did refuse, the Committee went into secret session, and after ten minutes opened their doors and announced that Shipherd would be discharged until further notification. Thereupon Shipherd sat down and wrote a long letter to the Chairman, saying that he had a great deal of evidence to produce, which he insisted upon producing as a matter of right, including "an important letter from the President of the United States," and correspondence with representatives of Peru and the State Department. He declared that as the Committee had permitted other witnesses to discredit him, he was entitled to an opportunity to be heard to clear himself. The affair has been compared with the Hallet Kilbourn case, but there is really a wide difference between the two. When Kilbourn was called upon to testify with regard to the District of Columbia "real-estate pool," what the Committee wanted was to draw from him all the facts within his knowledge connected with that concern. Kilbourn refused, and was in consequence sent to jail, where he languished for some time, but finally got out on habeas corpus, and established his right to refuse to testify by a decision of the Supreme Court to the effect that the Constitution gives Congress no jurisdiction over "pools" of any kind, real or personal, and that consequently the House cannot compel witnesses to testify with regard to them. But Shipherd does not refuse to testify: he longs to testify. He declares that he has a letter of General Grant about the Peruvian Company; a letter from President Garfield's private secretary, by means of which the "missing documents" in the South American correspondence can be traced into the possession of Mr. Blaine; letters of Senator Blair concerning his communications with Mr. Blaine as to the Peruvian Company; besides other correspondence bearing on the use made of the State Department to advance the objects of that corporation. The offer of testimony with regard to the missing documents is particularly important, as it was in great measure to discover what had become of them that the Committee was instructed. Shipherd not only longs to testify with regard to all these matters, but insists that he has a constitutional and common-law right to do so.

But the Committee is not to be forced into taking testimony which will enable them to report to the House what they were directed to find out, so easily as this. When they found that Shipherd refused to testify on some things but really wanted to testify on others a few days ago, they immediately voted to discharge him as a witness; and now that he has offered to produce letters showing what actually became of the "missing documents," they have passed a resolution that he be allowed to submit any documents he may have for examination by the Committee, and that "if such papers be found pertinent," and "if there should be occasion therefor," or, in other words, if the Committee please, it will recall him. The case, therefore, presents the interesting and novel question whether a committee can lawfully prevent a witness from testifying before it when he says that he has evidence to give directly bearing on the matter which it has been directed to investigate.

Shipherd has published a card, couched in very impudent and abusive language, in which he offers five dollars reward, and "no awkward questions asked," for the return of "one James G. Blaine," whom he describes as "missing," and, when last seen, "making across the country south-southwest at the approximate rate of sixteen and three-quarter miles per hour." He declares that Mr. Blaine has carried off the Foreign Affairs Committee with him, and he wants them both back, in order to continue his "narrative." He says, however, that he has received "requests" for the tale, with the accompanying documents, "from nearly every State in the Union," and he is now considering the expediency of continuing it "in some other place than the now deserted Committee-room." There is no reason why he should not comply with these requests, and "thunder it out," as Guiteau would say, to the American people. They have a right to know what the tale is, even if the Committee has grown sick of its task.

Among some interesting information of the cost of churches given by the Rev. Joseph Pullman, of Brooklyn, on Sunday, was an estimate that "the cost of a single war vessel would build 250 churches of a better character than the average church building to-day." The average church is far better adapted to its purpose than our average war vessel. Most of the ships of our alleged navy are either rotting on the stocks, or, if afloat, are useless for purposes of attack or defence. Our 92 vessels—"serviceable," "requiring extensive repairs," and "unserviceable"—would represent, at this rate, 23,000 churches; and it is safe to say that the latter would make about as effectual a stand as the former against the guns of a first-class European navy. The money expended on the 250 churches is made up of voluntary contributions. If they were allowed to fall into decay before they were finished, or if when completed they were unfit to be occupied, the contributions would soon cease. The war vessel is paid for by enforced taxation, and as the people are not consulted on the question of contributing the money, their complaints as to the way in which it is expended are not considered. Mr. Pullman's comparison is more suggestive than perhaps he suspected.

The Massachusetts Supreme Court has rendered a very important decision with regard to property in unpublished plays, which removes from the law of this country the last vestige of the antique notion, dear to dramatic pirates all over the world, that stealing plays by memory is not piracy, but a legitimate branch of business. Judge Devens, overruling the well-known decision of his own court, made more than twenty years ago in the "American Cousin" case, holds that while a spectator at a play is entitled to "all the enjoyment" he can derive from its representation, and may even, if he thinks such an occupation likely to give him any pleasure or to improve his mind, take notes of what he sees, for purposes of criticism, etc., he has no right to commit the play to memory, or take it down in shorthand, and then reproduce it. In other words, the author does not by the representation of his play abandon it to the public, but retains all his rights. This decision makes the law of Massachusetts and New York identical on this point, and makes the security given to dramatic property in the United States greater than that given anywhere else in the world. This, however, is the work of the courts, not of the legislature.

The strike which at one time promised to be among the most formidable and wide-reaching in its influence seems to have failed. The Pacific Mill strikers in Lawrence, Massachusetts, have spent nearly all their money and are unable to collect any more. The owners have filled their mills—partly with new operatives and partly with the old hands, of whom only 150 are now unemployed—and are doing, in some branches, more work than ever before. In this case the costly instrument for enforcing an advance or preventing a reduction of wages has not served its purpose. In other cases—particularly in this city—the workingmen have secured what they demanded. The latest to quit work are the boiler-makers, and there is a probability of concessions on the part of employers. The attitude of the iron and steel workers of Pennsylvania has for

some time been a constant menace, and is likely to take a more positive shape. The manufacturers have rejected the proposed new scale, although the operatives modified it in some important respects. If the latter make good their threats, 30,000 men will go out of employment on the first of June. They are said to have a thorough organization and a large fund; but these very possessions will make the strike, whatever its final result, a very expensive proceeding. The varying fortunes of this extreme measure may induce the workingmen to ask themselves whether it is not at best a makeshift, and whether the troubles which reappear from time to time may not be averted by an inquiry into their causes. The iron and steel manufacturers say that "they have few orders and low prices, and can better afford to shut down than go ahead." The Textile Fabric Manufacturers' Association have decided to reduce the production of certain grades of goods because they "are glutting their shelves." The effect is to put a great number of workers on half time. Here are two cases in which over-production, in the absence of foreign outlets for manufactures, has compelled payment of wages unsatisfactory to the workmen, or exclusion from employment in whole or in part. It is argued in the latter case, indeed, that popular extravagance has induced a demand for higher-grade goods, but none the less was the production of the lower grade excessive. Artificial stimulation is the beginning and end of the high-tariff system. Protectionists say that it benefits labor, but laborers may well ask whether the alleged gains are not offset by the losses, in the form of reduced pay, idleness, strikes, and lock-outs, caused by the excesses to which the system leads.

Early in the week, $4,675,000 specie was shipped, making the total shipment since January 1 $25,491,297. The market for foreign exchange then fell below the gold-exporting point, and so ruled until near the close of the week, when the settlement of another large lot of borrowed bills forced another heavy shipment. The large Treasury disbursements and the favorable condition of the domestic exchanges modified the influence of the heavy gold exports on the bank figures for the week; and the surplus reserve of the New York banks was reduced only $2,020,725—to $6,152,225. The rates for money were in no way affected by the reduction in the bank reserve, the rate for demand loans not having ruled above three per cent. At the Stock Exchange, hesitation and dulness have characterized the week. In the early part the inclination was to higher and in the latter part to lower prices. The weather is closely watched by the stock speculators, and it was admittedly favorable until the latter part of the week, when a cold wave in the Northwestern States created some anxiety. General trade continues rather dull, and depression is the feature of the iron trade and the branches of business dependent upon it. The Pacific Bank of Boston, which failed some time ago and then resumed on a reorganization, again suspended business during the week. In the foreign markets, money has been in abundant supply at low rates, and the demand for American securities has increased without becoming sufficiently large to have much influence on the foreign exchanges.

The first speech of Mr. Trevelyan, the new Secretary for Ireland, is not encouraging. He has apparently taken on the half-paternal, half-autocratic tone toward the Irish by which Mr. Forster did himself so much injury, and which, however grateful it may be to the Tories and Conservative-Liberals, must simply help to increase the difficulties of the Government in Ireland; for, after all, it is in vain that the English Tories think well of the Irish policy of the Ministry if it does not pacify Ireland. It may be very well to show the Irish that Parnell does not govern the island, but besides this they have to be shown who does govern it. This last is, as experience has proved, by far the harder part of the job. The Irish judges, except the Lord Chancellor, have protested against the proposed suspension of trial by jury, and for the reasons which we foreshadowed two days ago. They rightly feel that it would do serious injury to their own influence and authority. The effect of the whole scheme, in fact, on Irish feeling seems to be very unfortunate, and it is already stamped with failure.

Mr. Gladstone is slowly pushing the Repression Bill through. Many of the Liberals object to the provisions relating to the suppression of newspapers and the prohibition of public meetings, and the Irish judges are notoriously unwilling to become the instruments of executing the law without the aid of juries. As yet there is not from any quarter the slightest suggestion of a new and more efficient mode of procuring evidence of agrarian crime. The difficulty of procuring such evidence has had far more to do with the failure of the ordinary law to repress crime than the refusal of juries to convict. In fact, the failures of justice through want of witnesses are to the failures through the refusal of juries to convict in the proportion of about twenty-five to one. So that abolishing trial by jury, without making any better provision for getting testimony, is very like making a house tight by carefully weatherstripping the windows while leaving large holes in the roof. The unwisdom, too, of putting the whole island under a system of arbitrary rule because there happens to be a savage and, as the Government admits, justifiable quarrel between the landlords and tenants about land, is well illustrated by the following admission from the London *Economist*, one of the calmest and most impartial of English journals:

> "The law itself in these parts of Ireland is in a condition almost without a precedent in Europe. Upon all ordinary subjects it is carried out as well as it is anywhere. If a man murders a wayfarer for robbery, or steals his neighbor's spoons, or interferes with him in any way, he is punished exactly as he would be in London or Paris. There is in the worst districts nearly perfect security both for life and property if either are unconnected with land. If, however, the property is land, or the life that of a landlord, agent, or minister of the law, the insecurity is very great—greater than in the wildest States of Western America."

The concessions made by Prince Bismarck to the Catholic Church by the repeal of the principal features of the celebrated Falk laws, have so far entirely failed to produce the desired results. They have not elicited from the Vatican any valuable expression of satisfaction, in the way of an assurance that now the Church considers itself at peace with the state and will act accordingly. To a firm will supported by strength the Church has sometimes bowed, waiting for better times. But a yielding, conciliatory policy on the part of its opponents has always reanimated and stiffened in the Church the spirit of domination. The policy of "overwhelming generosity" with regard to the Church question, which has been recently announced by members of the German Government, will in all probability only result in this, that the Vatican will always be ready to take what it can get, at the same time quietly expressing its expectation of more. Bismarck has, therefore, not made any satisfactory progress in that direction. He has equally failed in securing, as he hoped, sufficient parliamentary support for his pet measure, the tobacco monopoly, to carry it through the Reichstag. The committee to which the subject was recently referred has voted and reported against the Government proposition by a majority of 24 to 4, and the fate of the measure in the Reichstag itself appears therefore no longer doubtful. But Bismarck is known as one of those statesmen who never acknowledge a defeat, and although it is given out that he will not dissolve the Reichstag on account of the rejection of his principal measure, he will bring this bill before it again and again, and have it argued over and over in Parliament, and in election campaigns, until it is finally put through by main force of perseverance, if he lives long enough to tire out the opposition. But he is now sixty-seven years old, and his health is none of the firmest; and after him the unknown.

The French, who have been long troubled about the failure of their population to grow in as great a ratio as that of their neighbor nations, are, since the census of 1880, more troubled than ever. The summary of it has just appeared, and the marriage and birth returns are rather startling. At the rate at which the French population grew in 1860, it would have doubled in 145 years. At the rate at which it is now growing, it would double in 433 years, or, in other words, is virtually stationary. There was a slight increase of marriages during the two or three years following the war, owing to postponements during the war, but ever since 1873 there has been a marked decline both in marriages and in births, illegitimate as well as legitimate. It is with the Germans that the French writers now anxiously and for obvious reasons compare the national productiveness, and there is but little comfort to be got in that way, for the German births are 3.91 per hundred of population, while the French are only 2.47. If it were not for the German emigration, in fact, the French outlook would be very dark. The lowness of the death-rate at first looks consolatory, but then examination shows this to be due to the smallness of the number of children, who in all countries make the largest contribution to the bills of mortality.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

THE House of Representatives further considered the bill to extend the charters of the national banks on Wednesday and Thursday. On the latter day a flood of amendments to the bill were offered, among which was one offered by Mr. Hammond, of Georgia, giving State courts jurisdiction of suits to which national banks are parties, which was adopted without a division. On Friday a vote was finally reached and the bill passed by 123 to 67. Three Republicans voted against the bill, and twenty Democrats for it. The bill as passed provides that any national-banking association may at any time within the two years next previous to the date of the expiration of its corporate existence under the present law, and with the approval of the Comptroller of the Currency, extend its period of succession, by amending its articles of association, for a term of not more than twenty years, and shall have succession for such extended period, unless sooner dissolved by the act of shareholders owning two-thirds of its stock, or unless its franchise becomes forfeited by some violation of the law. Section six provides that the circulating notes of any association so extending the period of its succession, which shall have been issued to it prior to such extension, shall be redeemed at the Treasury of the United States, in accordance with section three of the Act of June 20, 1874. These notes are to be replaced by new circulating notes, "bearing such devices, to be approved by the Comptroller of the Currency, as shall make them readily distinguishable from the circulating notes heretofore issued. Section eight provides that national banks having a capital of $150,000 or less shall not be required to keep or deposit with the Treasurer of the United States United States bonds in excess of $10,000 as security for their circulating notes, and such of those banks as now have on deposit bonds in excess of that amount are authorized to reduce their circulation by the deposit of lawful money as provided by law.

The House passed a bill, on Thursday, providing that any person, originally a citizen of the United States, who has been naturalized as a subject of Great Britain, may publicly declare his renunciation of such naturalization and resume his character and privileges as a citizen of the United States by signing an instrument to that effect.

On Monday the President sent to the House of Representatives the report from the Secretary of State, and its accompanying documents, in reponse to the House resolution concerning the imprisonment of American citizens in Ireland. The correspondence is mainly upon the negotiations after April 3, at which time nearly all the Americans had been released, and is voluminous. In answer to Lord Granville's quotation from Mr. Seward, the Secretary of State says, in brief, that the President could not expect that the exercise of sovereignty assumed by the United States when their security was imperilled should not be assumed by other powers similarly situated; but that when the system of legal administration in Ireland worked injustice to American citizens, it became the President's duty to inquire into it, and that the President is unable to see that even the exceptional condition of Ireland "furnishes a sufficient reason why an American citizen should remain incarcerated without accusation, without chance of trial, without opportunity of release." In regard to a release conditional upon the suspect's leaving the country, Mr. Frelinghuysen says: "The President has little doubt that her Majesty's Government do not intend to insist in practice upon the extreme doctrine that an American citizen, against whom there is no charge, shall, without trial, remain in prison or leave the United Kingdom. But he believes by fairly considering each case as it arises conclusions will be reached satisfactory to both Governments.

The House Committee on Civil-Service Reform has asked the House for permission to sit during the recess for the purpose of formulating a general bill on civil-service reform.

On Tuesday the Senate, by a vote of thirty-eight to twelve, passed the bill for reëstablishing the Court of Commissioners of *Alabama* Claims for the distribution of the unappropriated money of the Geneva Award. Every amendment was rejected, the Senate approving the House Bill without changing it in any particular.

The President has approved the Fortifications Appropriation Bill, the Agricultural Department Appropriation Bill, and the Act providing for the removal of the remains of the late General Kilpatrick to the State of New Jersey.

Shipherd appeared before the House Committee on Foreign Affairs, on Wednesday, and was asked by the Chairman whether he was prepared to furnish, and would furnish, "all papers and other evidence in your possession tending to show what you did or attempted to do to enforce the claim of the Peruvian Company, or induce the United States to enforce this claim against Peru." In reply to this, Shipherd positively refused to produce the papers and evidence called for. He sent a letter to the Committee later in the day, in which he asked to be allowed to reply to Mr. Blaine's statements before the Committee, and said that he was prepared "to supply in effect, though I cannot literally," all the evidence called for by the Committee. He further stated that this evidence included an "important letter from the President of the United States, and recently discovered correspondence with official and unofficial representatives of Peru and with the Department of State," and that this documentary evidence, with much more which he did not need to specify, would enable him to absolutely disprove every imputation upon his veracity. The Committee adopted a resolution on Friday that Shipherd be permitted to submit to the Committee, for their inspection, any original papers which were pertinent to the inquiry, without reserve as to any part of their contents, and that if the papers were found to be pertinent, the witness would be further examined touching them. Shipherd has since, however, issued a card offering for sale the documents which he had prepared for the Committee. He says he does not propose to "bother with the Committee any longer."

On Wednesday Mr. Frelinghuysen received a despatch announcing that Mr. Trescot had sailed for home. No news has yet been received in regard to Mr. Trescot's interviews with Montero, or the rejection of the Chilian project for a truce. It would seem that Mr. Trescot will be the bearer of his own despatches concerning the results of his special mission.

The General Term of the Supreme Court of the District of Columbia handed down its decision in the Guiteau case on Monday. The verdict and sentence of the lower court are sustained. The decision of the Court is an elaborate one, and considers very fully the points raised by Guiteau's counsel as to the application of the general statute of the United States in regard to the crime of murder to the District of Columbia, and as to the jurisdiction of a court of the District over a criminal whose murderous act was followed by death elsewhere. Guiteau received the news calmly, without the least appearance of nervousness. It is said that Mr. Reed, Guiteau's counsel, will now apply for a commission *de lunatico inquirendo*.

Among the subscriptions received by Treasurer Gilfillan, for the Garfield Memorial Hospital, to be erected in Washington, were $3,352 49, contributed in London and Paris, and forwarded by Mr. Morton, American Minister to France.

The Grand Jury at Washington returned new presentments against Brady, the Dorseys, Rerdell, Turner, Miner, Peck, and Vaile on Saturday, charging them with conspiracy to defraud the United States in connection with the awards of Star-route contracts. The indictments which are now being tried will be dismissed and give place to the new presentments, and it is thought by the prosecuting officers that they close up the several loopholes which were left open in the old indictments.

Mr. Thomas M. Marshall, who was nominated on the Cameron ticket for Congressman-at-large from Pennsylvania, has declined the nomination.

At a conference of Independent Republicans, on Wednesday, Mr. Charles S. Wolfe was elected a Senatorial delegate to the State Convention to be held on May 24. In his address Mr. Wolfe referred to the recent conference of Independents and Regulars, and flatly contradicted the charge that he had made a bargain with Cameron. In concluding, he said that he deprecated the action which the Independents would be obliged to take, and that he deprecated Democratic ascendancy in the State, but that all hope of peace was at an end, "and nothing is left but war—war against the spoils system and bossism."

Mr. Alexander H. Stephens has written a letter declining a nomination for Governor from the Independent party of Georgia. He says he will accept a nomination from the regular Democratic party and no other.

The steamer *Alaska*, of the Guion Line, arrived in New York on Sunday, having made the run from Queenstown to Sandy Hook in seven days, four hours, and ten minutes, which is the shortest passage on record.

The steamer *Rio Grande*, of the Mallory Line, which was on a voyage from Galveston to New York, was discovered to be on fire at about five o'clock on Tuesday, the 16th, when she was about ninety miles to the southeast of Cape Henlopen. The passengers were transferred to a bark which fortunately happened to be near at hand, and the captain of the *Rio Grande* then ran the steamer ashore and put out the fire, and succeeded in saving a large part of the cargo.

The New York *Herald* says editorially that Mr. Bennett will take care of the widow and orphans of Lieutenant De Long, "and not of them alone, but of every widow and of every orphan of the men who sailed with the *Jeannette* and have perished."

The 107th Anniversary of the Declaration of Independence by the people of Mecklenburg County, North Carolina, was celebrated at Charlotte on Saturday. Senator Vance made a speech of welcome, Senator Ransom read the Declaration, and Senator Bayard was the orator of the day.

The prosecution rested its case in the Malley trial on Tuesday. The State has shown that the prisoners were probably with Jennie Cramer up to about seven hours before she was found dead on the beach, and that they had opportunity to give her poison, but has failed utterly to prove that she was killed by arsenic administered by either James or Walter Malley or Blanche Douglass.

The Attorney-General of Massachusetts has forbidden the further publication of Walt Whitman's 'Leaves of Grass,' by Osgood & Co., unless some indelicate passages are expurgated. Mr. Whitman has refused to consent to this, and Osgood & Co. have given up the work.

FOREIGN.

The debate on the Repression Bill was continued in the House of Commons on Thursday. Mr. Trevelyan, Chief Secretary for Ireland, who was reëlected Member of Parliament for Harwich without opposition, in speaking on the bill, declared that it would facilitate the summoning of witnesses. The Government, he said, would be slow to use their power with regard to public meetings, and where meetings were held they would regard less the utterances of the speakers than the effect which they were intended to produce.

Mr. Dillon, speaking against the bill, maintained that the failures to convict were not the result of intimidation, but of popular sympathy. The bill, he declared, would have no other effect than to provoke secret organization The debate on the second reading of the bill came to a close on Friday, and a division was taken showing a majority of 338 in favor of the measure. The most noteworthy incident in the discussion on this day was the emphatic denial by Mr. Gladstone that the bill was the outcome of English resentment. Mr. Gladstone said that the main basis of the bill, and the motives which prompted the Government in carrying it forward with all possible energy, had reference not so much to those persons of rank and station who had become the victims of the fury of criminals, as to the misery which had been carried far and wide among the people of Ireland by the infliction of outrages in every cruel and extreme form.

On Monday Mr. Gladstone moved the second reading of the Arrears of Rent Bill. He said it was impossible to compel people to borrow, and therefore the money supplied by the Government must be a gift. He stated that there were 585,000 tenants in Ireland paying under £30 rent (Griffith's valuation); out of these 200,000 were excluded from the benefits of the Land Act by being in arrears. This, he said, must be remedied. He admitted that the proposal was extraordinary, but so, he said, was the state of Ireland. Mr. Sclater-Booth, Conservative, described the Government's plan as communistic and demoralizing. He said it was an evil precedent, and most objectionable in view of the Scotch and English farmers, who suffered as much as the Irish farmers. Mr. Forster said it would be for the interest of the landlords to reduce the number of tenants, and that if the poor tenants got a fair start, they would become fewer and better off. He strongly favored the grant taking the form of a gift. Mr. Trevelyan said the bill would give the tenants the great advantage of a fresh start, with a feeling of independence which probably neither they nor their predecessors had ever before known. After some further discussion, notwithstanding Mr. Gladstone's efforts to bring about a vote, the debate was adjourned.

The Arrears-of-Rent Bill was passed to a second reading in the House of Commons on Tuesday by a vote of 269 to 157, the amendment of Mr. Sclater-Booth, that it is inexpedient to charge the consolidated fund with any payment for arrears except in the form of a loan, having been previously rejected.

Evictions of tenants for non-payment of rent, which were stopped for the moment, have been resumed in many parts of Ireland. The measures of repression proposed in Parliament are said to be creating a revulsion of feeling throughout the country. Murmurs of discontent and dissatisfaction are heard at the course pursued by Mr. Parnell. The Irish judges have protested against the proposed abolition of trial by jury in Ireland.

Diligent search has as yet been unavailing to discover the murderers of Lord Frederick Cavendish and Mr. Burke, although numerous arrests have been made.

The *St. James's Gazette* says that it learns that Under-Secretary Burke was followed for protection by a constable on the day of his assassination, but the constable, just before the murder, was lured away by a false report that a woman was being murdered.

Mr. Lowell opened the "Garfield Home for Working Girls" in Brixton Road on Wednesday. Mr. Lowell in his address said he had been drawn to the opening of the Home first by the name of Garfield, and second by his own real interest in the object of the institution.

At the Reform Club in London on Thursday a poll was taken on Lord Hartington's proposal that the election of members should be conducted by a committee instead of being decided by a ballot of the whole club, and it was lost by a vote of 361 to 382. It is stated that several distinguished members intend to resign on account of the result of the ballot.

The London Mansion-House Jewish Relief fund now amounts to £72,000. The Fund Committee despatch six hundred refugees to America weekly, at a cost of £5,500.

The Vienna *Presse's* correspondent at Brody says that the condition of the Jews there is more terrible than previous telegrams had led people to suppose. It is complained that the Liverpool Relief Committee transport strong young men only to America, while men and women with large families are left at Brody. Starvation is increasing, and sickness is widespread. The emigration from Russia is still going on, and the Jews are selling the whole of their property at any cost and hurrying to the frontier. Seventy of the principal business firms of Moscow have addressed a memorial to the Minister of Finance setting forth the disastrous consequences of expelling the Jews from Moscow. According to trustworthy data, the material damage done by the anti-Jewish movement, including houses, breadstuffs, and other property destroyed, and money taken away by the emigration of Jews, amounts to £22,000,000, all lost to Russia. The Jewish question has created a deadlock in the Russian Cabinet. The Minister of Finance, who sees the great loss which the exchequer must suffer from the exodus of the Jews, threatens to resign if the measures of General Ignatieff to accelerate the emigration of the Jews are adopted. On the other hand, rumors are circulated that General Ignatieff intends to resign the position of Minister of the Interior.

At a council of the Russian Imperial family recently it was decided, on account of the receipt of alarming information touching the projects of the Nihilists, to defer the coronation of the Czar for a year. It is said that the information of the projects of the Nihilists which caused the postponement was received from the foreign police. The German Embassy at St. Petersburg is said to have been warned that the German Crown Prince will incur great danger if he attends the coronation of the Czar, as there is a "deep, undiscoverable conspiracy against the Czar and his guests."

On Wednesday the London *Times* published a telegram from the President of the Egyptian Chamber of Notables, saying that the differences between the Khedive and the Ministers had completely disappeared. Other despatches stated that the Ministry would remain in office for a few days, in order to allow the negotiations between Turkey and the powers to proceed. English and French fleets have appeared at Alexandria. A despatch from Cairo on Monday said that the Ministry were making strenuous efforts to obtain the support of the Notables in inaugurating a policy of resistance to England and France. It is said that the English and French Governments are mistaken if they think Arabi Bey will be frightened into yielding by the presence of ironclads at Alexandria. Arabi Bey's adherents say that he can count upon the Army, and that he means to fight. On Monday it was announced that the Turkish Minister of Foreign Affairs had demanded of the British and French Ambassadors, in the name of the Sultan, the recall of the squadrons from Alexandria, on the ground that order is now restored. The Ambassadors have communicated the request to their respective Governments, and are now awaiting instructions.

An interview has taken place between Arabi Bey and the French Consul in Egypt in connection with the efforts which are being made to induce Arabi Bey and the rebellious Army officers to leave Egypt. The interview was without result. Arabi Bey maintained that the country was with him in favor of determined resistance. It is also announced that the negotiations between the Consuls and the Ministry have failed, and the latter refuse further negotiations unless the English and French fleets are withdrawn. A council of war has decided in favor of active military preparations. In fact, the latest despatches represent the situation in Egypt as having become alarming again, and it is generally thought that the presence of Turkish troops will be necessary to prevent an outbreak.

The French Chamber of Deputies on Monday resolved, notwithstanding the opposition of M. Say, Minister of Finance, to consider the proposal substituting a duty on alcohol for the duty on wines and beer, and M. Say thereupon, at the end of the sitting, tendered his resignation as Minister of Finance; but on Tuesday the Chamber of Deputies, by a vote of 302 to 36, passed a resolution of confidence in M. Say, who will accordingly remain in office.

The action brought by the municipality of Marseilles against the ex-Empress Eugénie to recover possession of the château presented to the late Emperor by the city has been decided in favor of the Empress.

A Berlin despatch says that the Committee of the Reichstag, to which the Tobacco Monopoly Bill was referred, has rejected all the clauses to number 31 of the bill. Only four members voted in their favor. The House has adjourned until June 6.

The Crivoscians, being destitute of all means of carrying on their revolt, have crossed the Montenegrin frontier and surrendered to the Montenegrin troops.

Debate was begun in the Spanish Chamber of Deputies on Wednesday on the Government measure for instituting oral and public trials. The Attorney-General has resigned. He will introduce a counter scheme in favor of the establishment of the jury system. Several important members of the majority are said to approve this plan, and the Democrats have resolved to support it. The Prime Minister, Señor Sagasta, has declared that the country is not yet ready for it, and will make the Government scheme a Cabinet question. On Friday, however, the Minister of Justice announced that the Government would introduce at the next session a bill establishing trial by jury and a new penal code framed on very liberal principles. It was thought that this statement would appease the dissentient section of the Ministerial majority, but on Saturday the amendment proposing the institution of trial by jury was offered, and although Señor Sagasta spoke against the amendment, and said the adoption would be regarded as a vote of censure, yet twenty-eight influential members of the Ministerial party voted for the amendment, and forty members abstained from voting. The amendment was, however, rejected by a vote of 181 to 55.

The Canadian Parliament was prorogued on Wednesday with the customary ceremonies. The Governor-General, in his address, referred to the abolition of the duties on metals and other raw materials, and said: "It is satisfactory to know that a buoyant state revenue will permit these reductions—amounting to about $1,250,000—to be made without inconvenience." Referring to the rapid and successful development of manufacturing, agricultural, and other industries, the Governor-General said he thought progress in these directions would be still greater were it not that capitalists "hesitate to embark their means in undertakings which would be injured, if not destroyed, by a change in the trade and fiscal policy adopted by you in 1879," and that therefore, in order to give the people without further delay an opportunity of expressing their deliberate opinion on this policy, and at the same time to bring into operation the measure for readjustment of representation in the House of Commons, he announced that it was his intention to cause the present Parliament to be dissolved at an early day.

TUESDAY, May 23, 1882.

MR. LOWELL AND THE IRISH.

WHETHER President Arthur has determined to recall Mr. Lowell, and the *Herald* is preparing the way for an announcement of the fact, or the *Herald* has itself determined that Mr. Lowell ought to be recalled, and is trying to bring the President over to the same way of thinking, we do not know. Whatever be the reason, the *Herald* is publishing a series of articles urging the recall, on the single ground that Mr. Lowell, however fit for the place he may be in other respects, has the capital defect of not enjoying the confidence of the American Irish. There is apparently no specific charge of neglect of duty made against him. The list of Irish-American citizens whom he was some time ago accused of having allowed to languish in British dungeons, is somehow not forthcoming. In other words, the inmates of dungeons who claimed American citizenship have mostly turned out to be persons who had little or no title to American citizenship, and claimed it, not from love of liberty—for some of them refused to be released on condition that they would quit Ireland—but in the hope of making trouble between Great Britain and the United States, or, as they would themselves doubtless express it, for "divilmint."

Nor is it now alleged—though some such absurdity was broached in the beginning—that Mr. Lowell is not American enough for the Irish voters. This was probably too wild a charge for even O'Donovan Rossa to stick to. If it were true that Mr. Lowell, at the age of sixty, had forgotten how an American should feel, and had forgotten the sources of American greatness, and forgotten what American honor and fame required in the intercourse of the country with foreign nations, it would give strong support to the theory that no American could safely be trusted with the foreign policy of the Government, and that the President should select his diplomatic agents, from the Secretary of State down, from among the most recent comers at Castle Garden. So that the sole objection to Mr. Lowell is that a portion of the foreign-born population of the country do not like him, and are annoyed by the popularity which his high character, his scholarly attainments, his fame as an American author, and his attractive manners have created for him in English society.

Even if it were conceded, however, that a Minister, in other respects unobjectionable, ought to be recalled because the Irish or Germans, or any particular section of the population are dissatisfied with him, we should still have to inquire *why* they were dissatisfied with him. In this, as in all other matters, it is the majority of the American people only whose wishes have to be obeyed without explanation. It is the majority only which is sovereign. It is to the will of the majority well ascertained only that the President owes implicit heed. When a minority, and especially a small minority—the Irish number about 2,250,000 all told in a population of 50,000,000—asks to have a thing done for its special gratification, it is bound to explain why it wants it, and is bound to show that what will satisfy it will do no harm to the rest of the community. In other words, American Ministers should represent the American people, and not a portion of the American people, and if the President orders, or permits, a Minister to represent anything less than the American people, he fails in his duty. The reasonableness of this becomes obvious enough when we consider that all diplomatic representations, or remonstrances, or requirements, have the use of the national force, or, in other words, war, behind them as a possible contingency. But war has to be waged by the whole people. Its burdens, and losses, and sorrows fall on the whole people. If we should get into a war with England about dungeons, it is not the Irish who would carry it on and suffer for it. It is every man, woman, and child in the United States. So that it is the American people which Mr. Lowell is bound to represent in London, and not the Irish portion of the American people. It is American traditions, ideas, and policy which he is bound to uphold, in his intercourse with the British Government, and not Irish traditions, ideas, or policy.

As a matter of fact, no American Minister in London has ever satisfied the Irish. They were as hostile to Mr. Charles Francis Adams as they are to Mr. Lowell, and were as eager for his recall, and yet Mr. Adams was probably the most useful Minister we have ever had at that post. The inference, therefore, that they cannot be satisfied is not unfair.

This would be true even if the Irish ideas or policy which Mr. Lowell is called on to support abroad related solely to American affairs. It is doubly true when they do not relate to American affairs at all. The internal condition of Ireland about which Mr. Lowell is called upon to work himself up in London has, diplomatically considered, no more interest for the United States than the internal condition of Turkey. The United States has even less right to interfere about it than about the internal condition of Turkey. The fact that large numbers of persons who are interested in it have come to this country, and that their excitement continues in their new homes, creates no new duty for the United States Government. The one duty of the United States toward immigrants is to provide them with security for person and property, and all the opportunities for the pursuit of happiness on American soil which are enjoyed by the natives. This has been their duty from the beginning; it is their duty still. As part of this duty they owe it to foreign-born no less than to native citizens to maintain toward foreign powers the position of a great civilized nation—of a land of settled government, controlled by the international ideas and usages of Christendom; and not to allow their diplomacy or their army or their fleets to be converted into the missionaries of any collection of half-crazed revolutionists who seek refuge on their shores.

No one has a deeper sense of the wrongs inflicted on Irishmen by English misgovernment than we have. No one is more heartily in favor of anything which will not only give them material prosperity, but satisfy that remarkable national pride of theirs which has managed to spring up on such very stony ground, and has survived so many storms and frosts. But there is no one who knows anything of their agitation who does not see that it is seriously impeded by their moral isolation from the rest of the civilized world, and by the absence of leaders who command the respect of other nations, and by the savage absurdity and violence of many of their methods. Nothing has done so much for them of late years, nothing has contributed so much to create respect for their cause in England, as the fact that a large body of them have become members of a successful, prosperous, and rational community on this side of the Atlantic. It has given them a splendid chance of showing that under favorable conditions they are not wanting in political capacity, and that they can work a settled government as well as anybody. The worst thing that President Arthur or anybody else could do for them now—the most damaging to their political reputation—would be to commit this Government to barbarous or crazy courses in real or apparent deference to their wishes. Their bitter enemies in London have for weeks been repeating their wild and hysterical denunciations of Mr. Lowell as proofs that they were irreclaimable savages, whom nothing but buckshot could tame into civility. They have within a week been compared to the Ashantees, on whom it might be well to try the soldier who brought King Coffee Calcalli to reason. And now comes the *Herald*, and proposes that the President shall present them in a still more degrading aspect before the world, by giving up to be kicked, and cuffed, and driven out of office by them, as unworthy to represent his own country, one of the foremost Americans of his day, who is loved, and honored, and admired by every civilized people. Was there ever anything done for the Irish looking more like ingenious hostility and contempt?

BLUNDERING IN THE SOUTH.

THE drift of things in most of the Southern States is evidently in the direction of new political formations. The number of people who are getting tired of a stupid, hidebound, bigoted party policy, under a set of narrow-minded, selfish drill-masters as party leaders, is constantly increasing; and this restlessness shows itself in all sorts of "independent" movements, of more or less strength, for all sorts of objects, but all giving the same evidence of the waning power of party discipline and of the decreasing respect and affection of the masses for old political associations. A large majority of these movements aim more or less directly at the obliteration of the color line in politics, and are therefore calculated to bring forth beneficial results by dividing the white as well as the colored vote, by bringing the latter under the influence of a leadership identified with the interests of the respective communities, and by thus gradually withdrawing from political contests in the South the most hurtful cause of apprehension and unreasoning passion. The "Bourbon" element—that is, the adherents of the old system of party rule—of course exhibits great alarm at these symptoms of disintegration, and will try for some time yet, by

violent appeals and dreadful predictions, to maintain their ancient influence and power. But these dreadful predictions will soon prove their own groundlessness, and the artificial excitement created by them cannot last long. The process disintegrating the old organizations will proceed, and that very rapidly, as the new pursuits and wants of Southern society naturally create new political aspirations and stimulate new discontents.

The irresistible strength of this tendency shows itself now and then in an almost comical way. When, for instance, Mr. Chalmers, of Mississippi, after having been ousted from a seat in Congress to which he had not the least shadow of right, says that he will have nothing more to do with the regular Democratic organization, and proclaims himself an "Independent," on the ground that the Democrats in Congress did not work hard enough or filibuster long enough to keep him in a seat obtained by the most shameless election frauds, the exhibition is decidedly grotesque. Still, it proves that almost anything is now considered a sufficient pretext for swinging off from the regular organization.

The most stubborn struggle against party disintegration seems to be made in South Carolina, where the Democratic leaders derive great comfort and encouragement from the failure of the Government to bring those connected with the notorious election frauds in that State to justice. The Charleston *News* congratulates the Democratic party of that State upon its "good condition." It says: "There was much laxity and lukewarmness until the course of the political trials in Charleston showed the people the depth and breadth of the Stalwart conspiracy to Africanize the State." The Stalwart conspiracy here referred to consisted in certain prosecutions instituted under the Federal election laws for the purpose of bringing to condign punishment those who stuffed ballot-boxes or in other ways defrauded voters of their legal rights, thus transforming a minority into a majority. And "Africanizing the State" means securing to the colored voters in South Carolina the free exercise of the suffrage guaranteed to them by the Constitution and the laws. The Democratic organ, then, virtually congratulates itself upon the prospect that ballot-box stuffing and other ways of falsifying the elections may go on in South Carolina without danger of being interrupted by successful legal prosecutions, and that, consequently, the Democratic party there may expect another lease of power.

We have sincerely sympathized with all legitimate efforts made in the South to secure to those States honest and intelligent government, and when their people in the old carpetbag times, to accomplish that end, resorted to very objectionable methods, which, as law-abiding citizens, we had to condemn, we were not unwilling to take the unusual provocation into account as a mitigating circumstance. But the pressing necessities of those days are behind us, and in the meanwhile there has been time and opportunity enough to bring the ignorant vote of the South under influences of a perfectly legitimate and legal kind, that can prevent it from becoming a mere support to profligacy and peculation, and make it as useful, or at least as harmless, as the ignorant vote is elsewhere. If our brethren in South Carolina, who put themselves forward as the guardians of the interests of that State, have not yet discovered any better means to protect those interests than cheating at the polls and committing wholesale frauds in making up election returns, they have shown a lamentable lack of ability as well as moral sense. We can scarcely conceive of a greater folly than to believe, as they seem to do, that they can keep up in the long run a "government by election fraud." A government by force is intelligible, also a government by election when the majority is reasonably certain that the results of the elections represent its will. But a system of government by election fraud, not only systematic but open and confessed, as the frauds in South Carolina have been, where everybody knows that the elections do not in any wise represent the will of the majority—such a system must necessarily break down under its own weight; for, even if the disfranchised majority could find no means to enforce its rights, one after another of the supporters of the spurious government would, in the long run, either become disgusted with those vicious practices or, through dissatisfaction for other reasons with the acts of those in power, select the disreputable origin of the Government as the point of attack. It must, therefore, inevitably fall. And in the meantime the arts employed to keep it up, those ingenious methods of fraud and falsification which in South Carolina have been developed to so high a degree of perfection, will only serve utterly to corrupt and demoralize all classes that take any part in the politics of that State. It is a nursery of political crime teeming with the seed of future disaster. The advocates of the system do not know how soon its present victims will use it to plague its present beneficiaries. South Carolina is evidently in the hands of very shortsighted and dangerous friends.

MOORE, OF TENNESSEE, ON THE CIVIL SERVICE.

THERE are not many men in the world who have obtained so much fame by a single *mot* as Flanagan, of Texas, who, at the Chicago Republican Convention in 1880, asked, bluntly, "what they were there for but to get the offices"—his simple and straightforward mind being greatly puzzled by all the talk he heard against the treatment of offices as "spoils." It bewildered him nearly as much as the orders of the Prince of Montenegro to his troops in the late war, not to bring him any more Turkish heads or ears. To Flanagan, politics without clerkships or post-offices to be got by winning elections was what war without heads was to the Montenegrins—if, indeed, he was able to get the idea into his brain at all. His innocent question excited much mirth, because it revealed the fact that there were politicians in the party who had not even got so far as to take up reform of the civil service as a useful and slightly amusing bit of humbug. He could not even see the joke of it, and confessed it publicly.

That Flanagan did not stand alone, however, but represented a considerable class, was revealed the other day in a very entertaining conversation with Mr. Moore, a Congressman from Tennessee, reported by the Washington correspondent of the *Herald*. Mr. Moore has got a widow named Mrs. Wilcox turned out of the Post-office Department. She was the granddaughter of Andrew Jackson's adopted daughter, Mrs. Donelson, and the widow of a Confederate general, and was appointed by General Grant in 1869. The correspondent of the *Herald* called on him for an explanation of the matter, and he gave it, and it was nearly as simple and diverting as Flanagan's question. He declared that he wanted the Widow Wilcox dismissed because she was a Democrat; because she had been in office long enough, "drawing Republican pay," and because he and Judge Houk wanted the place for the widow of a Union soldier, and because he was opposed to "sentimental appointments." His theory of the civil service, or his "general ideas on the subject," as he called them, he said would be found in a "crude bill" which he introduced into the House on January 23, of which the following is the preamble:

> "Whereas, The Government of the United States is a government necessarily of parties, and whereas the interests of the successful party demand the distribution of the public offices among those who indorse the principles of said party; and whereas, under the existing peculiarities of our human nature as well as the genius of our institutions, no party can prosper under a system which recognizes the right of one set of claimants to hold office continuously; therefore, be it enacted," etc.

With these "general ideas," it is no wonder that Mr. Moore "has no patience with civil-service reform, so called," and that "if he has any politics it is practical politics." Thus far Mr. Moore had got along swimmingly; he had met his questioner as a man with no nonsense about him, with a regular system embodied in a bill.

But here the correspondent became troublesome, and, in fact, began to prepare poor Mr. Moore for destruction. He cunningly asked him first whether he applied this system to his private business, and Mr. Moore had to acknowledge that he did not, because it would be bad for his business, and because the Government officer, besides doing clerical work, has to support his party as his principal duty. The "general idea" here was rather cloudy, but still up to this point Mr. Moore had borne himself like a philosopher and statesman. But at this point the correspondent asked him how the doctrine applied to the Memphis Post-office, in which Mr. Moore was seeking the removal of a Republican widow to make room for his own brother-in-law. This was a cruel question. Here the philosopher collapsed, and the philosophy all went to pieces. He confessed that he wanted the widow removed for "business reasons and general inefficiency"—the comparative unimportance of which is a prominent feature in his "general idea"—and next because, if his brother-in-law were put in her place, it would help to stem the tide of repudiation in Tennessee. But he protested that it was not because he had married his wife's sister that he chose him for this great work, but because his appointment would "antagonize the party" less than that of anybody else. The greatest thought in the preamble of the Moore bill was, in fact, that "the existing peculiarities of our human

nature" call for rotation in office, as indeed they do for an equal division of all the good things of this life. They call also for the retention of Union widows in office until your wife's brother wants the place, but no longer.

THE EGYPTIAN CRISIS.

ALEXANDRIA, May 3.

THE present is a moment of extraordinary calm and general expectancy. The calm is extraordinary because no person ever meets another in the street, on the railway train, in places of public resort, or at festive gatherings, without expressing a wonder that something decisive does not take place, and an assurance that the social stability from day to day is simply resting on no basis at all. For a few days the plot against Arabi Pasha seemed as if it augured the beginning of a new crisis which would not be resolved without finally clearing the air. But the latest news is that in spite of the courts-martial and judicial inquiries which are going on with Oriental ostentation and tedious prolongation, the Minister of War—that is, Arabi himself—is now bent on hushing the whole matter up. There is no doubt that for some days his life was really imperilled, and it was unsafe for him to appear abroad. The Circassian element among the officers was apparently the main source of the conspiracy. This fact is instructive as to the true origin of the present revolution, which keeps silently progressing. Old Egyptians will remember how it was the fixed policy of Mohammed Ali and his first successors to compose the Army of different and counteracting classes such as Turks, Circassians, and Arabs. The progressive influence of the policy worked out with such success by Ismaïl Pasha in the direction of separating Egypt from the rest of the Ottoman Empire has resulted in the vastly preponderant weight of the Arab element in the Army. This is so much the case that during the last few months even the Coptic element has been discountenanced, and I have been told on the best authority that among the hundreds of officers who have been promoted by the present Government there is not to be found a single Copt.

This exclusive policy, though it no doubt seems favorable to a joint Mussulman and national interest, has in fact resulted in the creation of a frighful Frankenstein-monster, before which the Government itself is beginning to quail. The Army is the Egyptian people, minus the Copts, in their most organized, luxurious, self-seeking, indolent, and probably worthless aspect. The condition of a standing army in a civilized country such as Germany, France, or England, is notoriously unfavorable to the personal morality and integrity of the soldier. But in these countries the idlest regiments at home cannot exempt themselves from the control, direct and indirect, of a public opinion far more enlightened than the average notions prevailing among themselves. The moral and constitutional, not to say the religious and social, forces which are in such abundant activity in Western countries, reduce the soldiery, even when consisting of exaggerated numbers, to an insignificant item in public affairs. The reverse is the case in such a country as Egypt, where the only organizing force is that of the Mohammedan religion, in the profession of which the soldiers share to a man. When, on a recent occasion, some of the late Khedive's family, on the plea of health, attempted to land at Alexandria, the Minister of War, Arabi Pasha, published a manifesto, in the course of which he declared that "the soldiers, as well as the Government, would not tolerate any attempt to reintroduce the excluded ruler or his household." This allusion to the views of the soldiers and their political determination in a Government proclamation is an almost unprecedented event in political history. In fact, the Prætorian Guards of Imperial Rome went through the form of choosing an Emperor as civil governor before they employed him as their voice in directing the destinies of the state. But Arabi Pasha affects no concealment of the fact that the Egyptian Army at the present moment is the first political factor, the concurrence of which must be secured in each new undertaking.

Obviously the danger to public security comes from the probable competition of the officers among themselves. According to all accounts, and even the reports of his best friends, Arabi Pasha is by no means a born leader of men, such as Mohammed Ali and Napoleon, let alone Washington or Cromwell. He seems to be personally well rather than ill-intentioned, with a little smattering and varnish of Western constitutional doctrines, drawn from English tourists or enthusiasts who have been gratifying their own self-conceit by interviewing one whom they have essayed to force into the position of a real man of note. It is probably to be wished that things should get rapidly worse in order for them to become really better. Public order, though not yet compromised, rests on a weaker foundation than in any other country in which so many civilized people live; commerce of an enterprising and progressive character is at a standstill; the able and honest administration of the public departments is being daily assaulted by the wholly uncalled-for commissions directed against the European functionaries; and, as I shall have occasion to show in an early paper, the Report of the Controllers, just issued for the past year, shows that the provisions laboriously made for paying off the debt are already being impaired by the increased military expenditure.

To take a still larger view of the situation, it may be said that the present condition of Egypt, like that of Russia, shows the extreme difficulty of obtaining any security for public order and liberty where the whole population of the country is at once homogeneous and uneducated. The growth of society in the originally feudalized countries of Western Europe has been determined partly by the progress at unequal rates of advance of a variety of different classes in the population, and partly by the mutual relationships which these classes have at all times had with one another. Commerce, political interests, religious discrepancies or combinations, social needs, economical contribution or coöperation, have in these countries welded the population together by the strongest of ties, while at the same time maintaining an equilibrium of innumerable independent forces. The result is that while widespread combination for the ends of disorder or purely selfish interest is simply impossible, there is no limit to the field for combination for beneficent and worthy political objects. In Egypt, on the other hand, at the present time, the only sort of combination which is possible must be for evil, and cannot be for good. If the nation, in its present stage of infantine education, not to say of recent emancipation from slavery, combines at all, it must combine for purposes which it ill understands. The result must be that its organ will be the man or men who can best flatter its ignorant or fanatical susceptibility, and turn it to his or their own private account. It is the old story of an unenlightened democracy giving place to tyranny; the only new chapter in the story being that the Egyptian people have not even the individual and personal elements to entitle them to the name of a truly democratized society. Thus, whereas in other countries which have passed through similar stages the tyranny has been shortlived, and finally given place to constitutional monarchy or Republicanism, the only conceivable outlook in Egypt, apart from help from without, is anarchy, or the sort of spurious semblance of order covering the most flagitious disorder which is familiar to all those who have investigated the conditions of a Turkish province left to itself.

There are, however, certain fixed institutions and facts in Egypt which render it wholly improbable that when a sufficient crisis presents itself the Powers of Europe will any longer forbear decisively to intervene. The public debt, the Turkish tribute pledged for the Turkish debt, the Suez Canal, and the Mixed International Tribunals, the guarantees of commercial intercourse and of Government solvency, are distinct interests which cannot be misapprehended by English and French diplomatists, or even by those of Italy, Germany, and Austria, which countries have never failed to come to the front when the occasion demanded. A.

Correspondence.

PROF. ADAMS'S 'MANUAL OF HISTORICAL LITERATURE.'

TO THE EDITOR OF THE NATION:

SIR: In your very generous notice of my 'Manual of Historical Literature,' you have fallen into one or two errors which I cannot resist the temptation to point out. Bernhardy's 'Russia' is mentioned as an omission from the volume, whereas an extended notice of the work is given at the proper place at p. 377, and reference is made to the same in the index. You also charge me with saying that vol. iii of Lindner's 'Geschichte des deutschen Reiches' appeared in 1875, whereas the second volume was issued in 1880; but what I did say (p. 251) was that vol. i. appeared in 1875, a statement which accords with the fact. Nor is it quite accurate to say, as you do, that "nothing is given for Portugal," inasmuch as a section of chap. xii. is given to "Histories of Spain and Portugal," and in that section are to be found somewhat detailed accounts of Ballaert's 'Wars of the Succession in Portugal and Spain,' Dunham's 'History of Spain and Portugal,' Landmann's 'Portugal,' and Crawfurd's 'Portugal, Old and New.' Schäfer's 'Portugal,' which you note as absent, is given on p. 191 as one of the Heeren & Ukert series. My blunder concerning Röpell & Caro's 'Geschichte Polens,' though arising from a confounding of the work with Röpell's 'Polen um die Mitte des 18. Jahrhunderts,' is sufficiently mortifying; but my wounded sensibilities are somewhat soothed by the fact that my reviewer did not get into print without two or three errors of his own. C. K. ADAMS.

UNIVERSITY OF MICHIGAN, May 6, 1882.

Notes.

GINN & HEATH, Boston, will shortly publish an edition of the Anglo-Saxon epic 'Béowulf,' edited from Hayne's fourth edition by Professor J. A. Harrison, of Washington and Lee University; this to be followed by a Glossary, in preparation by Professors Harrison and Robert Sharp, of the University of Louisiana.

Fords, Howard & Hulbert have in press a new volume of sermons by Henry Ward Beecher.

Jansen, McClurg & Co., Chicago, announce 'A Mere Caprice,' a novel of Parisian life, by Mary Healy, daughter of the eminent portrait-painter. Miss Amy Fay's 'Music Study in Germany,' originally published by this house, has

been translated into German (Berlin: R. Oppenheimer).

The Century Co. have secured for first publication in their magazine a 'History of Life in the Thirteen Colonies,' by Mr. Edward Eggleston, which may, the author says, form part of an ultimate 'History of Life in the United States.' The scheme of the prospectus is very novel and attractive, and the illustrations which are promised will be a substantial addition to the text.

Mr. Franklin B. Hough, Chief of the Forestry Division of the Department of Agriculture, proposes, with sufficient encouragement, to issue on July 1 the first number of a monthly *American Journal of Forestry*, of which Robert Clarke & Co., Cincinnati, will be the publishers. The same publishers will have ready next month Hough's 'Elements of Forestry,' a large illustrated 12mo.

The *Athenæum* states that Mr. Darwin has left an autobiography behind him, together with a sketch of his father about as elaborate as that of his grandfather, though it may very likely be found less entertaining. In the autumn, the same journal says, will appear the earlier volumes of Lord Lytton's Life of his father.

A national one-dollar subscription in honor of the poet Longfellow has been opened at Cambridge, Mass., under the auspices of a Longfellow Memorial Association, of which Minister Lowell is President, and Mr. Arthur Gilman Secretary. The objects of the fund are to purchase the vacant ground opposite the old house and skirted by the Charles River, to convert it into a public park, and to adorn it with a suitable monument; and to preserve the house itself if it should ever pass out of the hands of Mr. Longfellow's family. Subscriptions should be sent to Mr. John Bartlett, Treasurer, P. O. Box 1590, Boston.

The Society of the Army of the Cumberland has undertaken to erect in Washington a statue or monument in memory of President Garfield, and bespeaks a national contribution, in sums of one dollar, on the approaching Decoration Day. The Treasurer is Adj.-Gen. H. C. Corbin, Washington, D.C.

On occasion of his sixtieth birthday, June 24, prox. (not February 23, by the way, as Vapereau gives it), it is proposed to honor the eminent Italian archæologist, G. B. de' Rossi, with a gold medal. His discoveries in the Catacombs and his published Roman Christian inscriptions commend his labors for grateful acknowledgment to a vast and not merely scholarly public. It is hoped that American subscriptions will not be wanting to this international testimonial. To each subscriber will be sent an album containing the names of the whole body of subscribers, and he will have the privilege of buying a bronze copy of the medal for three lire (or sixty cents). Contributions should be sent at once to Dr. Wm. H. Klapp, 2132 Pine Street, Philadelphia.

Macmillan & Co. send us a new edition of Masson's 'Compendious Dictionary of the French Language,' originally published in 1874. We remark no change in the contents except the insertion of a comparative table of weights and measures. The paper, however, is lighter, and the print less good, to meet the lowered price of the work. The peculiar feature of this dictionary is (for the sake of compactness) the omission from the French vocabulary of words spelled the same in French as in English, which is sometimes carried too far, when accents are involved. The admirable feature is the chronological tables of French literature—a most convenient summary of names and dates. In our frequent use of this handy and in the main excellent work, we have observed an occasional carelessness in the gender of nouns.

From Thalheimer's Manuals and Histories, Van Antwerp, Bragg & Co. have made up an 'Eclectic Historical Atlas' (8vo), which will be found a very useful companion for ordinary reading. Maps of the Thirty Years' War, of the battlefields between Paris and Berlin, of the War of 1812, of the Rebellion, etc., are interspersed with those of the several European States, ancient and modern, the Persian Empire, etc.

In the illustrated Rolfe edition of Shakspere's plays, "Timon of Athens" has just been published by the Messrs. Harper.

Guide-books multiply as the travelling season draws nigh. 'Osgood's Pocket Guide to Europe' (Boston) has double the pages of Mr. Knox's, noticed last week, and, unlike it, is provided with interleaved maps, a short vocabulary of familiar words and expressions, etc., while the arrangement is rather by countries than by routes, or, in other words, rather for those who linger than for those who hurry through. It may be described and praised as an abbreviated Baedeker. The print is excellent.

'Sketches from the *Harvard Lampoon*' is a quarto volume of 122 pages, gathering together designs, large and small, from the back volumes of that lively periodical, from which one or two books have been already made. A more rigid selection would have left out much that is crude in the drawing and flat in the humor; but, on the whole, the result both represents the average quality of the *Lampoon* and is creditable to college wit and draughtsmanship. The themes are not simply local. Pure fun better than the illustration on p. 74, "Influence of Gymnastics on Sculpture"—where a vandal, supported on the back of another, is chipping off the face of a Caryatid—is seldom met with in comic journalism.

J. W. Bouton has received the 'Catalogue Illustrée' of the present Salon, a sufficient proportion of whose 4,936 pieces are sketchily represented on 287 pages. The array is curious and perforce interesting. Literature has no such graphic method of recording the ideals and standards of a given period; Mr. Stevens's proposed catalogue by facsimile titles-pages would of course give no idea of the character of the books of the year. It can hardly be said that, for what relates to design and choice of subject, this sample of the Salon—and presumably of the best of the May exhibition—is flattering to the present stage of French art.

On the same day with the commencement of the meeting of the American Association at Montreal—August 23 next—will begin the fifty-second annual meeting of the British Association for the Advancement of Science. The Association meets this year at Southampton, and the President-elect is Dr. C. W. Siemens. The several sections of the Association, with their respective Presidents, are the following: Mathematical and Physical Science, Lord Rayleigh; Chemical Science, Professor Liveing; Geology, R. Etheridge; Biology, Professor Gamgee; Geography, Sir R. Temple; Economic Science and Statistics, G. Sclater-Booth; Mechanical Science, John Fowler. The meetings of the Association will extend over a week.

Acta Comparationis Litterarum Universarum, the curious polyglot semi-monthly published at Klausenburg, Transylvania, of which mention was made in No. 826 of the *Nation*, is now in its seventh volume. We notice in its long and very cosmopolitan list of contributors Prof. R. Anderson, of Madison, Wis., and Miss A. Woodward, of Philadelphia. Its contents are as varied as ever, the last two numbers at hand offering the choice of articles and poems in German, French, Italian, Hungarian, Rumanian, Armenian, Icelandic, in the Transylvanian Gypsy dialect, and even in Japanese.

The name of the author of the Russian work reviewed by us last week should have read "Lopukhin."

—The magazines for June, of course, bring tributes in prose and verse to Longfellow. In *Harper's*, Mr. Curtis remarks upon his having lived in the very heart of the New England Transcendental movement and been "as untouched by it as Charles Lamb by the wars of Napoleon"; and upon that other sign at once of independence and of even merit, that "he was not intimidated by his own fame," but went on producing and being admired up to the day of his death. An admirable likeness of the poet, engraved by Thomas Johnson, accompanies this article, and is in striking contrast with the feeble performance on steel which makes a frontispiece for the *Atlantic*. The most curious of several interesting illustrated papers in this number of *Harper's* is Mr. Sylvester Baxter's "The Father of the Pueblos." Readers of the daily press have had their attention caught by the recent ceremonies in Boston harbor, by which, under municipal auspices, as we may say, a delegation of Zuñi Indians, from New Mexico, replenished their sacred vessels with sea water. Their leader, a white man, Mr. Frank H. Cushing, had got himself adopted into the tribe in order to pursue his aboriginal studies, and the most extraordinary of all the scenes described by Mr. Baxter is, considering its surroundings, Cushing's room in the pueblo at Zuñi:

"A writing-table, a case of book-shelves, with the books necessary to his studies, and the volumes of valuable notes that recorded his investigations—a stool, a student-lamp, and a hammock—completed the inventory of the civilized furnishings. But there was the wonderful addition of a telephone, . . . constructed out of a couple of old tin cans and several hundred yards of twine, to prove to the Zuñis the truth of what he had told them about the triumphs of American invention. The telephone was connected with the house of one of the caciques on the opposite side of the pueblo, about a quarter of a mile away."

Another sight is that of women, children, and dogs ascending and descending the ladders—the first carrying water-jars on their heads and not touching the ladders with their hands; still another, the nightly fires on the housetops. Mr. Baxter was fortunate in witnessing the great dance, some of whose features are almost identical with those of the Mandan exercises described by Catlin. The mimicry of one of the impersonators recalls Darwin's observations on this faculty in savages, apropos of the Fuegians. "We shouted out to him [the Echo God] in English, and, although ignorant of the language, he proved himself a remarkably clever imitator. But when one of us whistled, that was beyond his mimicry, and it seemed to disconcert him not a little." In the Editor's Easy Chair, praise is deservedly bestowed on Mr. Abbey's charming Herrick design in this number ("Delight in Disorder"), and the expected announcement is made that it and its fellows in the same series will make a holiday volume.

— In Mr. Eugene L. Didier's *Harper* article on "The Social Athens of America," meaning Baltimore, it is mentioned that the visit to New York of Mr. and Mrs. Gilmor, expressly to see the Garcias in Italian opera in 1826, was thought worthy of notice in the newspapers. This incident would furnish a piquant foot-note to Mr. Grant White's book on 'Opera in New York,' of which we have the concluding instalment in the June *Century*. The "critics, at home as well as abroad, whose acquaintance with New York was made 'since the war,'" get a parting reminder of their ignorance of the long and high training of our musical public; and numerous judgments, both sound and questionable, are hazarded of singers yet with us and on the stage, or who come within that fifteen-year limit be-

yond which the average New Yorker cannot express his mind without presumption. The main article in this number is Mr. C. Kegan Paul's account of Cardinal Newman, which is unexceptionable in point of attitude, and is based on ample knowledge at first hand. For those to whom the personality of Dr. Newman means nothing, as is the case with most American readers not churchmen, the interest in the Tractarian movement and in "Tract XC." particularly can hardly be more lively than in Chartism, for example. The peculiar theological, social, and political effervescence, in the Lesser and the Greater Britain, in the period from 1825 to 1845 or thereabouts, seems like the expiring demonstration of a world on which modern science was just beginning to dawn with benumbing effect, and in which the comparative sparseness of population, and the obstacles to transportation and the spread of intelligence, created a condition favorable to surprises, panics, and great "movements" of faith, innovation, and renovation. Mr. Kegan Paul writes as a Liberal of the Liberals, but with strong feelings of attachment to Cardinal Newman. Incidentally he has a cutting allusion to Mr. James Anthony Froude's contribution to the 'Lives of the Saints,' which was avowedly a work of the imagination. "Mr. Froude," he says, "has not alluded to it in his recent account of the Tractarian movement at Oxford; but the matter is not without interest, and may perhaps throw some light on his whole method of writing history and biography." Cole's masterly engraving of the Cardinal's likeness is a study in itself, but would be still more highly instructive if compared with the etching by Rajon, which it follows by translating black line into white. The specimens, by the way, of wood-cutting for the last *Century* prizes given in this number are most promising. We conclude our notice with a reference to the short paper, by Mr. Robert W. Welch, on "Marble Mining in Carrara," which is a model of exhaustive brevity.

—The *Atlantic* for June opens with a poem on Longfellow, by Dr. Holmes, of a somewhat conventional character. The most forcible lines in it are those in which the expression of regret at the cessation of his "Dorian flute-notes" is emphasized by contrast with the

> "——harsher strain,
> "The Mænad's scream, the stark barbarian's cry,"

which have succeeded them. What Messrs. Swinburne and Walt Whitman, and the other "whirling dervishes of song," to use Mr. Longfellow's own designation of them, will think of this allusion, which certainly deserves to be called to their immediate attention, we hardly care to think. Mr. Hardy adds five chapters to his remarkable "Two on a Tower," and complicates the situation of his characters by involving Lady Constantine and Swithin St. Cleeve in astronomical relations of which no jealous husband would approve. A rising tide of generosity indicates the possibility of a tenderer emotion as the cause of it; but when a married woman makes a present of an equatorial—to say nothing of the tower on which it stands—to a young scientist whom she barely knows, it looks as if society ought to interfere. Mr. Harrison, in his instalment of "Studies in the South," gives an amusing account of the exalted position to which the new commercial and industrial activity in that part of the world has elevated the humble "drummer." He describes the Southern drummer—and so much, we believe, is true of him everywhere—as invariably "kind and obliging"; but he has more reason for displaying these amiable traits in the new South than elsewhere, owing, no doubt, to the fact that his activity and ubiquity are "hailed with pride" by the community as a gratifying sign of returning prosperity. He is "commonly treated better than anybody else on the road." Mr. Harrison mentions, as a rather startling illustration of the position held by this favored class, that at Montgomery, Ala., the hotel clerk, on learning that he was not a drummer, immediately added fifty per cent. to his bill. Most of these drummers are, it seems, young and "somewhat peculiar." Their peculiarity consists in the fact that the consideration and respect with which they are everywhere treated leads them to regard themselves as the principals in the business which they represent, and to look upon the houses which employ them as "mere subordinates or agents, employed by the drummers to put up and forward the goods sold on the road." They discuss, with their customary good humor and frankness, "the various methods by which they could so conduct business as to bring the principal profits to their own pockets," speaking of the trade as belonging to themselves, talking of the business which they "control," and resenting any improper treatment by threatening to "carry the trade over to another house." They usually have the best room, and best meals, and when several of them meet at a hotel they sometimes partake of little suppers together. To one of these Mr. Harrison was invited by a somewhat drunken drummer, who, to encourage him, added, "An' we're just as glad to see you 's if you were sober." The article contains a very satisfactory report as to the rapid development of manufacturing industry at the South. As we read the long list of articles now produced in Southern mills and factories, and reflect, too, that they are made by white labor, we feel how entirely new the whole system of life in the Southern States really is, and how completely vanished is the old South of a generation ago, with its quiet, sleepy life, its lavish aristocratic hospitality, its degradation and squalor, its provincial romance and sham sentiment, and its fixed social castes, its St. Clairs, Legrees, Uncle Toms, Dandy Jims, and all the other old familiar types. According to Mr. Harrison, the condition and character of the Southern operatives are better than those of the corresponding class at the North.

—Mr. Philip Robinson contributes a paper on "The Poets' Birds," in which he complains that the whole tribe of English poets are grossly unfamiliar with the habits of many of the birds with whom they make most free in their verses, and that they are ignorant of the very existence of a great variety of species and genera of which they might make excellent poetical use. Out of three thousand known to science, poetry takes cognizance of a bare hundred; of these only two-thirds are in common demand and use; the tropical species are entirely ignored, and "in fact Asia, Africa, and America might not exist for all the advantage their bird-wealth has been to British poets, while Europe, except where its species are British species also, is similarly neglected." Mr. Robinson makes these statements on the strength of an examination of the works of no less than eighty poets, and he shows in detail what unfair treatment these eighty have given birds. They attribute to them all sorts of traits which they do not possess, and frequently cover up their ignorance by epithets which are rather abusive than descriptive. Some of the charges are vague; but it is safe to say that the British poet has been fond for many a long year —certainly down to the time of Tennyson, whom Mr. Robinson excepts from his indictment—of pretending to know a good deal more about nature, animate and inanimate, than he ever really did. Besides the articles we have mentioned, this number of the *Atlantic*, which is the best that we have seen for at least five months, has some posthumous verses on Decoration Day by Mr. Longfellow, a clever notice of Daudet by Mr. H. James, jr., a tribute to Mr. Darwin by John Fiske, and another to Mr. Longfellow by Mr. O. B. Frothingham. An article on "The Rapid Progress of Communism," by Mr. Edward Atkinson, embodies and elaborates a rather ingenious fancy, that the people who are doing most for the general diffusion of wealth and happiness and comfort—*i. e.*, the great capitalists of modern times—are the true Communists. Hence we ought to speak of Vanderbilt and Jay Gould, not as monopolists, but as forerunners of the economic millennium which Justus Schwab preaches. As a fancy, this is very good, but when Mr. Atkinson goes seriously to work to demonstrate that Vanderbilt is really and truly a Communist, he shows that he confides too much in his readers' sense of humor—a mistake which serious economic writers often make.

— "Kol Kron" contributes an entertaining paper to *Lippincott's* about bicycles and bicycling. He declares that the act of acquiring a mastery of the "wheel" is "merely a mental process, like the act of learning to swim"; and that "whenever a man thinks he can do it, he can do it"; but this, it seems, does not really mean much more than the delusive encouragement sometimes given to beginners in French, that if they can pronounce "monsieur," no other French word will present any difficulty. The time that is required to bring a rider to the point at which he "thinks he can do it" varies, according to "Kol Kron," from a few minutes to several weeks. Mr. Bagg speaks with authority about the "wheel." He gives from twenty-five to fifty miles as his usual day's work, and says that he has done seventy-five "without special effort." With regard to the difficulties presented by the roads in this country, he declares that "there are many sections of the United States where good riding may be had almost continuously for a hundred miles at a stretch, and where, by the aid of a train or boat, much longer tours may be readily laid out." He gives several such trips. Felix L. Oswald has an article on traps, which contains a good deal of the kind of information about animals that boys delight in. Indeed, it may be said generally of *Lippincott's*, that, more than any other magazine not avowedly juvenile in character, it provides material for the young of both sexes.

—A long article in the *Agricultural Review* for May, from the pen of Mr. J. B. Grinnell, of Grinnell, Iowa, on "The Cattle Industries of the United States," shows the writer to be an enthusiast on the subject of stock-raising, and fitted by practical experience to speak authoritatively upon it. "I have waited in vain," he says, "for one with more leisure than is allowed me to supply an urgent want, and now yield with diffidence to the earnest solicitations of those enthusiasts like myself whose valued friendship is less distrusted than their judgment." The prospectus of the article says that "it reads like a romance," and that, perhaps, is the main criticism which we should make upon it. Passing over much fine writing about the advent of European horned cattle, we come to the year 1873, when "a hiatus (*sic*) in the history of our cattle industry quite overshadowed all past controversies, and is yet a theme of wonder." This "hiatus" was the so-called "Campbell sale," near Utica, N. Y., the record of which, Mr. Grinnell says, "considering the personages assembled and the fabulous prices paid, will ever cause it to be regarded as the great sale of history." Prices, indeed, are fitly characterized as fabulous when eleven cows and one bull bring a total of $250,800, or an average of more than $20,000 per head.

After briefly sketching the history, in this country, of various imported breeds—the Short-horn, Devon, Hereford, Holstein, and others—and discussing their relative merits, Mr. Grinnell makes an excursion among the cattle-raisers of the Western plains, and epitomizes the experience of a score or more of them. He deprecates the rude life, both of them and their stock, and recommends school-houses and social advantages to the one, and hay-fields and shelter against the winter's storms for the other. Improvements in this direction will no doubt come in time, but probably the conditions of Iowa farming will never be found practicable in regions where, at present, the stock-raiser requires a range of from ten to seventy acres per head of stock. To buy this land at the Government minimum price of $1 25 per acre, and then fence it in a treeless region, would make a serious inroad even in the estimated profits of enthusiasts like the writer. The suggestion that the railroads should transport for the cattle-raiser windmills at a nominal rate, and bring in breeding bulls free, would, we fear, have seemed too liberal even to the late Mr. Oakes Ames, whom Mr. Grinnell characterizes in a note as the "noblest of Americans."

—In spite, however, of a tendency to rhetorical flights, inducing a certain obscurity, which is observable in much of our agricultural literature, the article is full of interesting and suggestive facts. It seems strange, however, that in its fifty or sixty pages only two short paragraphs should be devoted to the vital necessity of prompt legislation by Congress for the prevention of the spread of contagious diseases. Even in these, what is really of the greatest national importance—the prevention of the introduction of contagion among our vast mixed herds on the Western plains, by a rigid inspection of all improved stock sent among them every year by rail—is not even mentioned. According to the figures obtained during the special examination of the meat industries under the census of 1880, the number of cattle of all ages reached nearly forty millions (at $25 per head, $1,000,000,000), of which a third are in the States and Territories west of the Mississippi. The greater part of this region is practically unfenced, and must remain so for a long time. Should pleuro-pneumonia or a kindred contagious disease once be introduced, no isolation being possible, it would sweep the cattle from the face of the earth, as the similarly situated herds of Australia were destroyed by disease introduced by a single animal; and, from meat exporters, we should perhaps again become importers.

—In the June number of the *North American Review*, Mr. Isaac L. Rice, in an article entitled "Has Land a Value?" adds himself to the number of those who have broken a lance against Ricardo. To ask whether land has a value is the same thing as asking whether there is any such thing as rent. No, answers Mr. Rice, there is no such thing as rent—what is called rent is interest on the capital actually put into or upon the land. Ricardo says that "rent is that portion of the produce of the earth which is paid to the landlord for the use of the original and indestructible powers of the soil." Mr. Rice attacks this proposition with the thesis that there are no original and indestructible powers of the soil. The researches of agricultural chemistry, he tells us, have completely invalidated this conception. "It is now universally admitted that the soil is but the storehouse of certain chemicals, and that some of these chemicals are removed with every crop, or, as Liebig puts it, 'the field is sold with the crop.' After a certain number of harvests every field becomes exhausted and barren unless these chemicals are replaced. . . . And so the owner of the soil obtains no value whatever from nature as a free gift." This doctrine was advanced by Henry C. Carey some forty years ago, and was afterward woven into a sort of poem, or beatitude, by Bastiat, in his 'Harmonies Économiques.' Carey went somewhat further than Mr. Rice goes. He contended that the whole value of the land of any country was not equal to the sum which had been laid out in bringing it into its existing state of cultivation—which, as Stuart Mill remarked, was equivalent to saying that if an area of land equal to that of the British Isles should rise out of the North Sea, it would not be worth while to bring it under cultivation, since the profits of the operation would not be equal to the ordinary rate of interest on capital. Mr. Rice would not go quite so far; he would hold it to be a matter of indifference whether such land should be reclaimed or not. It might pay the ordinary rate of interest or it might not. The argument drawn from agricultural chemistry is obviously erroneous, for while there may be some crops that are capable under bad farming of completely exhausting the fertility of land, there are others that have no such tendency. A crop of trees, for instance, can be raised from year to year by judicious cutting without limit as to time, and without any impairment of the original powers of the soil. In point of fact, Germany is provided with fire-wood and timber in this way. The same may be said of some of the most nutritious grasses, which renew themselves from year to year without labor, and which are all the better for being nibbled down by sheep and cattle. As to cereal grains, all that agricultural chemistry teaches is that there must not be too prolonged a pull at the chemical constituents of the soil without rest and refreshment. Agricultural chemistry teaches also that the rain, the atmosphere, and the sun are constantly supplying a large portion of what the cultivator abstracts from the soil, and that it is only the excess abstracted by cropping that must be restored by the farmer in order to keep the land up to its original fertility. The question of rent concerns itself only with that portion of the productiveness of the soil which does not require renewal by human labor. This is all that Ricardo contended for. Mr. Rice denies that there is any such portion. We apprehend that he has not had much to do with farming as a practical business.

—About two months ago Dr. Siemens, of London, read before the Royal Society a paper on the conservation of solar energy which has the merit of originality at least, and may well tend to perturb the complacency with which astronomical physicists have, of late years, come to rest in the belief that the contraction of the solar globe satisfactorily accounts for the maintenance of its heat. Dr. Siemens recapitulates the fundamental conditions of his theory as follows: (1) That aqueous vapor and carbon compounds are present in stellar or interplanetary space. (2) That these gaseous compounds are capable of being dissociated by radiant solar energy while in a state of extreme attenuation. (3) That these dissociated vapors are capable of being compressed into the solar photosphere by a process of interchange with an equal amount of reassociated vapors, this interchange being effected by the centrifugal action of the sun itself. If these conditions could be substantiated, we should gain the satisfaction that our solar system would no longer impress us with the idea of prodigious waste through dissipation of energy into space, but rather with that of well-ordered, self-sustaining action, capable of perpetuating solar radiation to the remotest future.

—The discovery of the ultimate nature of tubercular disease, which has recently been announced as having been made by Dr. Koch, Government Adviser in the Imperial Health Department of Berlin, acquires a special significance at the present time other than that derived from purely physiological or therapeutical considerations. It demonstrates more conclusively than any amount of argument the practical importance that attaches to experimentation on living animal bodies. As might have been expected, the opportunity has been advantageously used by the devotees of vivisection for promoting the interests of their cause; and in England, where physiological inquiry is in great measure hampered by the existence of a so-called anti-vivisection law, several prominent experimentalists have come boldly to the front and pointed out the moral. Dr. Koch's discovery can scarcely be said to be surprising; indeed, it can but barely be considered new. The fact that various diseases have their origin in the development of microscopic organisms within the tissues of the subject has long been established, partly through the labors of Koch himself, but more particularly through the classical researches of the French chemist and physiologist, Pasteur. That such organic developments were in some way or other connected with tubercular growths—the germ theory of formation—has also long been recognized, but it has been reserved for Dr. Koch to determine the exact nature of the organisms so connected, and to demonstrate that the *vera causa* of tubercular malformation is simply the rapid multiplication—at the expense of the tissues—of the infesting parasite, if so it may be termed. This was found in all cases examined to be a species of *bacillus*, allied to, but yet specifically distinct from, the *bacillus anthracis* of splenic fever, whose habitation in the tissues appears to be entirely independent of any predisposition on the part of the latter, whether through disorganization or otherwise, toward its reception. Hence, it is concluded, tubercular malformation is not primarily a disease *de ipso* of the tissues, but one that is induced through contagium. Perfectly healthy animals (rabbits, guinea-pigs) that had been inoculated with the vegetable virus artificially cultivated, and consequently fresh, were rapidly affected with loss of flesh, death in those infected being invariably the result of tuberculosis.

—Prof. Tyndall, commenting on Koch's discovery, says: "In no other conceivable way than that pursued by Koch could the true character of the most destructive malady by which humanity is now assailed be determined. And, however noisy the fanaticism of the moment may be, the common sense of Englishmen will not, in the long run, permit it to enact cruelty in the name of tenderness, or to debar us from the light and leading of such investigations as that which is here so imperfectly described." While the importance of the discovery, which will doubtless be confirmed by other investigators, cannot be denied, it is questionable if, judged from a humanitarian standpoint, the advocates of vivisection have in this particular instance made a very strong case for themselves. For, since tuberculosis is directly the outgrowth of germ-developments which are practically, at least as far as present knowledge is concerned, beyond either medical or physical control, and, indeed, respecting which precise biological information is still comparatively limited, it may be doubted whether a treatment for the disorganization could be advocated more rational than that which is implied in the regeneration of the tissues, or the one that is being actually followed at the present time. The interesting problem of hereditary transmission, with development of the disease only in after-life, presents itself in this connection.

—Part 1 of the second volume of Buchholz's 'Homerische Realien' has recently been published by Engelmann of Leipzig. It bears an appropriate dedication to Mr. Gladstone, who, in the third volume of his 'Homer and the Homeric Age,' discussed many of the subjects treated here. Buchholz's first volume was also in two parts. The first, appearing in 1871, described the Homeric cosmography and geography; the second, two years later, the zoölogy, botany, and mineralogy. The physical world having been thus disposed of in the first volume, the world of man becomes the subject of the second. The present part is concerned with the public life of the Homeric Greeks, including the organization of the state and the single departments of public activity—agriculture, gardening, care of cattle, hunting and fishing, trade, manufactures, music, warfare, weapons. A systematic arrangement makes reference easy, and excellent indexes in this and the previous volumes put within the student's ready command a mass of learning about the world as Homer knew it which is not easily accessible elsewhere.

—A year ago, Otto Maass, of Vienna, began the publication of a German weekly paper devoted, as its name (*Amerika*) indicates, entirely to American affairs. Thanks to the large number of Germans who have relatives in this country, it seems to meet with success. The great increase in the number of emigrants has caused the German Government organs systematically to misrepresent America, and the correction of such misstatements seems to be one of the principal aims of this paper. An article in the last number points out that the American newspapers are to a large extent responsible for many of the erroneous notions current among Germans in regard to this country. For instance, the exaggerated ideas about the lawlessness prevalent here are due to the long and detailed accounts given in our papers of every murder and other crime that happens in any part of the country within reach of telegraphic communication. German papers dispose of such crimes in a few lines in the police reports, except in cases of great sensational interest.

ALEXANDER HAMILTON.

Alexander Hamilton. By Henry Cabot Lodge. [American Statesmen.] Boston: Houghton, Mifflin & Co. 1882.

It is difficult for a new biographer to add anything to the story of Hamilton's life, and Mr. Lodge has done all that was possible in telling it anew, briefly, and in an attractive way. Time as it goes on does nothing but add to the lustre of his fame, and in laying down the book the reader's chief feeling is that his career is one about which there is no room for any difference of opinion; that he must always be regarded as one of the great statesmen and legislators of the world; that as long as modern society endures he will be remembered as one of the men who thought most profoundly and accurately about the principles which underlie government, the forces which give it stability and coherence, and the causes which shape, modify, and change it. As to the actual Government of the United States, it is hardly too much to say that it owes its existence to Hamilton more than to any other one man. Had the Constitution been defeated in the New York Convention, the formation of a permanent Union would have been, if not prevented, at any rate, long delayed; and it is to Hamilton's wonderful powers of persuasion, more than to any other one thing, that the change from a strongly adverse to a favorable majority in New York was owing. Had it not been for the 'Federalist,' which still remains the best modern exposition of the art of government in the language, this result would certainly not have been reached.

It is when we compare Hamilton with his contemporaries that his great powers stand out most clearly in relief. A large part of his life was spent in a struggle for the direction of the Government with Jefferson. Jefferson was the leader and mouthpiece of the party which considered Hamilton's views of government fraught with danger to the country. Jefferson was victorious in the struggle, drove Hamilton from the field, and his party succeeded in giving the development of the Government a new direction. Jefferson's name is still used to conjure with as a party catch-word, and he is believed by large masses of voters to have formulated certain eternal principles of polity which, if preserved in their purity and carried out faithfully in practice, will always keep the country in the true path of constitutional progress. But what are these ideas? Can anything more be said of them than that, in the last resort, they amount to a profession of confidence in "the people"? What valuable principle of constitutional law, what contribution to the art of popular government, do they contain? Not one. In their day the two men were great rival leaders, and the popularity and power which Hamilton lost, Jefferson and his followers in great measure won. But Jefferson merely directed and helped to justify a popular and to a considerable extent an irrational movement. Hamilton's mind was one of the main sources of the very system of government under which we live, his voice was the most persuasive of its adoption, and it was under his direction that its course was so shaped that we are to-day still travelling the journey marked out by him.

Though Hamilton made mistakes in the course of his life which he had great occasion to regret, it is very hard now to name any point in his career as a public man at which his scheme of government for the United States could have been substantially altered with advantage to the country. He undoubtedly did what he could to make the Government strong in every sense of the word, and he had a firm belief in the necessary association of wealth and property with power. He would have liked to give property the combined authority and responsibility which he thought produced such excellent results in England; and hence he was called "British" during his life, though, as Mr. Lodge very clearly shows, the political terms drawn from European politics and applied to Americans of the last century ought to be regarded rather as party terms of abuse than as properly descriptive. Hamilton was, at bottom, intensely American. He was indifferent as between England and France, "except so far as he loathed the bloody anarchy of the one, and respected the stability and order of the other." He saw, as Washington did—indeed, probably before Washington perceived them—the wide-reaching political and commercial advantages to be attained by an early assumption of a position of complete neutrality in the quarrels of the Old World. Mr. Lodge's remarks on this subject, however, appear to us to go altogether too far:

"This was really the central point of the whole policy of Washington and Hamilton, and was one of the great landmarks established by the Federalists for the guidance of the republic. There is no stronger example of the influence of the Federalists, under the lead of Washington, upon the history of the country than this famous proclamation, and in no one respect did the individuality of Hamilton impress itself more directly on the future of the United States. So little was it understood at the time that when thirty years later the same principle, in an extended form, was enunciated by Mr. Monroe's Administration, it was hailed as a new doctrine, and incorporated as a leading article in the political creed of the United States. When adopted and put forth by Washington, this truism of to-day was hardly appreciated. The colonial spirit, which was the spirit of the past, made it seem impossible that the United States should be wholly apart from the affairs of Europe. The Federalists acted on the principle thus laid down while they held the power, maintaining a bold and strong neutrality, and ready to strike the first nation, no matter which it was, that dared infringe it. After the fall of the Federalists this doctrine slipped out of sight. For a vigorous neutrality, ever on the alert and ready for war, was substituted a timid, exasperating policy of peace, protected by commercial warfare. Ten years of bitter political conflict, including three years of foreign war, was the result, and by this harsh process the colonial spirit was finally exorcised. Then the national foreign policy, formulated, devised, and adopted by Washington and Hamilton, was popularly accepted under the Administration of Monroe." (P. 163.)

While there is no doubt that the neutrality policy of the first Administration was originated by Hamilton quite as much as by Washington, Mr. Lodge appears here to confuse two widely different things. Washington's neutrality was simply founded on a determination that the new Government should not be involved in any of the quarrels of the Old World then going on; that, as between France and England in particular, neither the United States nor its citizens should interfere in any way. Genet, the French agent, tried to use this country as a base of naval operations against England, just as the Confederate States used England three-quarters of a century later against us. His first act was to fit out privateers at Charleston, and proceed, as Mr. Lodge says, "with a sort of triumphal procession northward to Philadelphia." Jefferson was nearly forced to resign from the Cabinet on account of the *Little Sarah*, a privateer which Hamilton wished to have stopped on her way to sea, but which, through Jefferson's reliance on the promises of Genet, got away. No such matters as these are involved in the Monroe Doctrine, which grew out of a protest against any interference by Spain with the independence of her quondam subjects in this country. The neutrality policy of Washington was a proclamation that the country would not in any way have anything to do with European quarrels. The Monroe Doctrine was an announcement that Europe would interfere with the existing status of the governments of the New World at her peril.

It is not too much to say that in all the three departments of the Government, executive, legislative, and judicial, it was Hamilton who, at the outset, planned, explained, and vindicated the course that must be pursued by them. We are accustomed to attribute to Marshall the establishment of the judiciary as the supreme source of law, and to the credit of the actual work Marshall is, of course, entitled; but behind Marshall there are always the essays of the 'Federalist,' themselves the fountain from which Marshall's own views of the scheme of government which he expounded so ably were drawn. In his argument on the subject of the national bank, Hamilton satisfied Washington of the constitutionality of the scheme by an argument founded on the implied powers of the Constitution. In the case of McCulloch *vs.* Maryland, Marshall went over precisely the same ground, and, as Mr. Lodge very justly says, "the able and luminous decision of the Chief Justice adds nothing to the argument of the Secretary and takes nothing from it, nor is the work of the latter inferior to the opinion of the Judge in clearness and force of expression."

Mr. Lodge's volume is an excellent bit of compendious biography. It presents on the whole a very fair picture of an extraordinary man. Hamilton's genius seems to have been forced into

a precocious maturity by the exciting character of the events which began to shape themselves about him at the time when his life opened. Like Napoleon, Pitt, and so many others of his great contemporaries, Hamilton, instead of working his way slowly up, established his hold upon the government and direction of affairs from the day that he was admitted to a share in them, and leaped at a bound into a position which in quieter times men attain only after long years of patient struggle. His influence seems to have been due in great measure to the remarkable sincerity of his mind. His nature was profoundly truthful, and Mr. Lodge's biography is valuable as bringing out in a strong light this fundamental trait. He had, too, a great opportunity. He had an almost virgin political soil in which to apply and test the truths which speculation had convinced him were necessary and permanent. Hamilton believed in popular government, but he had no illusion that it was a sacrosanct institution, or that "the people" in the aggregate are wiser than the aggregate wisdom of the individuals who compose the mass. Above all, he never lost sight of the fundamental fact that, whatever the source of government, it is not an end in itself, but a means to the attainment of general prosperity, well-being, and order; that it must always be founded in the last resort on force. With the rose-water, sentimental view of government, Hamilton had no sympathy. He insisted that the doctrines of Rousseau in France, and Jefferson in the United States, tended merely to anarchy. He was right as to their tendency; if he failed to make full allowance for the numerous counterbalancing conservative forces, and thought that the Government, once in Republican, or, as we should say, Democratic hands, must go to the dogs, it was a mistake of a kind into which almost all strong party men fall, when they allow themselves the dangerous luxury of prediction.

MAX MUELLER'S KANT.

Kant's Critique of Pure Reason. Translated into English by F. Max Müller. 2 vols. London: Macmillan & Co. 1881.

"THAT Kant's 'Critique' will ever become a popular book, in the ordinary sense of the word, is impossible; but that it will for ever occupy a place in the small tourist's library which every thoughtful traveller across this short life's journey will keep by his side, I have no doubt." Hitherto, however, the English tourist has not been able to procure a copy of the guide-book adapted to his needs. Haywood's translation, prepared forty years ago, before the critical study of Kant had advanced far, is now antiquated, through a frequently imperfect understanding of the original. Meiklejohn's, published in Bohn's Library, is a creditable piece of literary work, showing a due comprehension of the difficult text and an English style no worse than the German. That its renderings are felicitous few persons who have benumbed their brains over its unsuggestive sentences will admit. Kant may not have written easily, but none the less he made some exceedingly hard reading. Meiklejohn has but a slender sense of the need of laying out simpler roads through the labyrinthine sentences. Dr. Stirling, in his recent 'Text-Book of Kant,' attempted to put the first half of the 'Critique' into a speech nearer the vernacular; but it proved to be the speech vernacular to Dr. Stirling, and not to the great body of English speakers. Up to this time, therefore, a book which has probably exercised a deeper influence than any other which the last century produced has never been rendered into easily readable English.

The cause is to be found in the book itself. Kant was a German professor, and one who exaggerated all the faults of his species. He is said to have been an agreeable lecturer, treating generally in the class-room only the more apprehensible aspects of his subject. What was deeper he considered unfit for public oral statement. He lectured extemporaneously from a few outline notes, using simple language. It is possible he may have permitted himself too broad a distinction between the requirements of those who hear and those who read, and that the distinction has worked as much to the disadvantage of his subsequent students as it is said to have benefited those who crowded his lecture-room. Philosophical Germany has been slow to learn that a writer is a teacher too, and stands in need of all the teacher's art for quickening sluggish attention. A style like that of Schopenhauer, or even of Lotze, of Sigwart or of Otto Pfleiderer, has become possible only since Germany left her chimney-corner and became a citizen of the world. Kant, isolated in an obscure provincial town, alone in that bachelor-home where no allusion to his philosophical system was allowed, writing in months what had been meditated in years, produced a jungle of sentences which no honest translator can render attractive. Had outward circumstances even been more favorable, the very nature of the task which he set himself—of being a philosophical Copernicus—must have prevented popular success. In the laborious twistings of his paragraphs may be read the birth-pangs of thought. He who talks of what was never talked of before must employ an uncouth terminology.

We do not then disparage Max Müller's labors as in anywise useless when we acknowledge that even he has not been able to give us a 'Critique' which reads as if written by a modern Englishman. "It is difficult," he well says, "to translate the hymns of the Veda and the strains of the Upanishads, the odes of Pindar, and the verses of Lucretius; but I doubt whether the difficulty of turning Kant's metaphysical German into intelligible and construable English is less." He has aimed at "a literal translation," and "thought far less of elegance, smoothness, or rhythm than of accuracy and clearness." And he has had a good measure of success. His translation is not a masterpiece. Probably it is not the one with which English students will finally rest content. Kant's sentences often retain their original unwieldy length (pp. 90, 236, 409, 494). No attempt is made to explicate technical phrases. Where one of them—*Dinge an sich*—was already beginning to be at ease in English as "things in themselves," the new barbarism is introduced of "things by themselves." Occasionally a slight clumsiness appears, as if the writer were giving but half his attention to the idiom of the language used. Kant mentions the opposing views of naturalists upon the question of the origin of species, and points out that there is a logic in the case deeper than either party detects. Müller renders, "But they need only consider the nature of the object, in order to understand that it is far too deeply hidden for both of them to enable them to speak from a real insight into the nature of the object." Yet, after all deductions are made, it still remains true that a page of Müller costs the reader less effort than a page of Meiklejohn—the best previous rendering—and that it generally gives Kant's meaning with superior precision. It is no inconsiderable advantage that the language from which and that into which Max Müller translates are both alike his own. To English readers his work is sure to bring Kant home better than anything we had before; and even those who read German readily will frequently gain something by looking up Max Müller's understanding of an obscure passage. His translation "serves in some passages even as a commentary of the original." For the first time, too, we have the 'Critique' as it was originally written. Meiklejohn followed the second edition. The present rendering, occupying the whole of vol. ii., follows the first. The extensive additions made by Kant in the second edition fill about a third of vol. i. Unfortunately, the variations in single sentences are nowhere noted.

An attractive portion of the first volume, and one contrasting agreeably in its sprightliness with Kant's crabbed treatise, is the translator's long preface. Max Müller's enthusiasm for philosophy is genuine, and his expression of it vivacious. The special studies upon language which have made him famous have, he says, been merely attempts to work out one of the problems supplementary to Kant's system. "Kant's 'Critique' has been my companion through life." "Having once learned from Kant what man can and what he cannot know, my plan of life was very simple—namely, to learn, so far as literature, tradition, and language allow us to do so, how man came to believe that he could know so much more than he ever can know in religion, in mythology, and in philosophy. This required special studies in the field of the most ancient languages and literatures. But though these more special studies drew me away for many years toward distant times and distant countries, whatever purpose or method there may have been in the work of my life was due to my beginning life with Kant." One who has spent forty years in so naïve a devotion to a teacher may well be allowed a little garrulity in commending that teacher to others. Personal explanations take on a charm delivered in English so flexible and spirited as this. We readily assent to the translator's belief that he was peculiarly fitted for his task as we read the easy sentences in which that belief is stated. Up and down the pages passages occur which tempt the pencil to mark and the reader to turn back either for instruction or delight. "No one can admire more than I do the dashing style in which some of the most popular writers of our time have ridden up to the very muzzles of the old philosophical problems; but if I imagine Kant looking back from his elevated position on those fierce and hopeless onslaughts, I can almost hear him say what was said by a French general at Balaclava: 'C'est magnifique—mais ce n'est pas la guerre.'"

Max Müller rightly judged that "a pedigree of philosophical thought showing Kant's ancestors and Kant's descent" would form a valuable introduction to the 'Critique.' Distrusting his own ability to draw up this outline, he applied to Prof. Ludwig Noiré. He expresses great gratitude for the 360 pages of "Historical Introduction" which his friend furnished; but it is a scandalous performance—trite, turgid, and inaccurate. Locke is stated to have introduced the distinction of primary and secondary qualities into philosophy (p. 227). In the mediæval period, nearly all the citations are at second-hand. Schopenhauer's 'Parerga' is the main authority for Berkeley. There is no reference to Berkeley's own works. In treating of Malebranche, no notice is taken of the *étendue intelligible*, curious as the analogies of that doctrine are with Kant's space as a form of thought. Pages 57-64 present a good specimen of the author's skill in philosophizing on his own account. Where brevity is necessary, exactness and lucidity are necessary too. But Noiré produces paragraph after paragraph like the following: "If only the power of the intellect is sufficient, and the love of truth pure and vigorous, then, though often after a thousand pains and travails, truth rises to the light, or rather becomes itself

a light, illuminating the world, and changing the pale and indefinite glimmer of the moon into the brightest splendor of the sun. If this is not so, if the power of the striving intellect fails, then a chasm remains open—philosophy succumbs to scepticism, though always waiting and watching for a coming deliverer." If philosophy is to be a serious pursuit, an introduction to it so pretentious as this should be denounced.

The publishers issue the volumes handsomely: the paper is excellent, the type large, and the margins wide. The absence of an index is a serious defect.

RUSSIA AND THE RUSSIANS.—I.

L'Empire des Tsars et les Russes. Par Anatole Leroy-Beaulieu. Tome i. Le pays et les habitants. Paris: Librairie Hachette et Cie.; New York: F. W. Christern. 1881.

THERE is hardly an exaggeration in saying that the number of books on Russia is increasing from day to day, but good works on that empire are yet as rare as, say, sound and impartial works on the United States. Mackenzie Wallace's 'Russia,' a production of incomparably lighter calibre than Tocqueville's 'Democracy in America,' is still equally exceptional. Leroy-Beaulieu's 'L'Empire des Tsars' is evidently destined to become for a time *the* book on the subject. Among studies of countries by foreigners it cannot fail to take place in the very foremost rank, owing to unbiassed observation on the spot, diligent research among the best authorities in the national literature and press, a vast corrective correspondence with well-informed natives, and a minute sifting of results by a mind conscientiously critical. It is too extensive, and presupposes too much preliminary knowledge on the part of its public, to become as popular as Wallace's pleasing composition, and it nowhere equals that original play of genius with problems apparently novel which charms us in Tocqueville's 'Democracy'; but it surpasses the latter in breadth, and the former both in breadth and depth, and, if less attractive than either, it not only enlightens the reader by its slow but lucid demonstrations, but delights him by its felicitous illustrations and a diction worthy of the best periods of French literature. In a word, it is a great work. It disarms the reviewer's critical propensity, and allows him only to follow the author closely in some of his salient generalizations and summings-up. It is to consist of three, or possibly four, large volumes, but only the first is as yet before us.

The author considers the shape and extent of European Russia, and asks himself: Does it really form a part of Europe, differing from the rest only in proportions, in the scale of dimensions? or does its prodigious widening fully distinguish and separate it from Occidental Europe? Are not the conditions of civilization modified by the vastness of the area? Are Russia's geographical structure, its soil and climate, European? Entire Europe forms a peninsular triangle, the broad base of which rests completely on Asia and is bodily joined to it. Thus joined to Asia, Russia preserves that continent's configuration. Europe proper is distinguished from all other portions of the globe by two main traits, which have rendered it the natural seat of civilization: it is cut into parts by seas, peninsular, articulated—to speak with Humboldt—and it has, for its latitude, a surpassingly temperate climate. Russia, on the contrary, is one of the most compact, the most continental, countries of the globe. She has none of Europe's maritime climate; hers is continental—extremely cold in winter and excessively hot in summer, and almost untempered by seasons of transition. The Gulf Stream does not reach her; the seas lave only her flanks, so remote from each other; arctic ice and winds hold her in bondage through most of the year; the flatness of the soil keeps her open to blasts both from the Polar circle and the parched deserts of Central Asia; she has no sheltering mountain ranges—the broken Ural hardly forms an exception—no sheltered valleys. Russia is horizontal and uniform not only geographically, but also geologically; the flatness of the surface is the result of the regular parallelism of the subterranean strata. Without seas and without mountains, she sadly lacks humidity, especially in her eastern parts. All these conditions place her in complete physical opposition to Occidental Europe; or, rather, naturally considered, Europe, resting on Russia as an Asiatic base, begins only where the continent becomes contracted by the Black Sea and the Baltic.

Is Russia, therefore, Asiatic? Is she to be classed among the sleeping or stationary nations of the remote East? By no means. She is no more Asiatic than European. By the *ensemble* of her natural conditions she differs from historic Asia just as much as from Europe proper. It was not an accident which prevented her from developing an Asian civilization. On both sides of the Ural, Russia forms a particular region, with special physical features, embracing all the northern plains of the old continent, all its colossal depression—the Lower Europe and Lower Asia of Humboldt. Rather than to either Occidental Europe or old Asia, she is to be compared to North America, which she adjoins in Siberia. Russia is one of those terrestrial regions which boundless extent and asperity of climate disqualify from becoming cradles of civilization. Incapable of nourishing civilization in its first days, she is admirably adapted to receive it and raise it. Like North America, she offers to Europe, outside of her extreme belts, an immense field for the development of human activity on a vaster scale. Her climate is inclement, her forests are meagre, her steppes treeless; but what man needs is less richness of the soil than the facility of subduing and using it. Russia's fauna is poor, her flora is poor; there is no variety, no display of power, nothing grand—except the vastness of the land; but neither has her living nature, in its debility—in its lack of fecundity and robustness—any strength to oppose to man. The soil is tame and docile. Unlike Brazil or Hindostan, where man becomes the petty slave of a luxuriant, glowing, wondrous, and unconquerable nature, the vast territory of Russia is made for free labor; it needs no African negro, no Chinese cooly. The Russian soil does not use up its cultivator; it does not threaten his race with degeneracy; it bears no creoles.

The Russian people, the *muzhik*, is the main colonizer, almost the sole colonizer, of the Russian lands. This fact, apparently so simple, hides difficulties and inferiorities of all kind. Instead of the most enterprising men of the most advanced countries of Europe, such as are colonizing the United States and Australia, we find here a people kept back by nature and history—a people of peasants, who yesterday were serfs; instead of freedom, independence, and individual sovereignty, we see an autocratic government, a pestering administration, communal bonds tying man to man and the tiller to the ground. Russia's colonizing expansion is crippled by standing armies, a long military service, a narrow centralization, an omnipotent bureaucracy. These galling drawbacks have repelled European immigration, and will continue to repel it. Russia will in vain offer to the immigrant admirable lands waiting for the plough—her very next neighbors of Scandinavia prefer to wander beyond the ocean to the northwest of the United States.

And Russia is a country in process of colonization. Though old, she is still forming. She is at the same time an empire of a thousand years and a colony of a century or two. She may be likened to the United States and also to Turkey. She is a country both new and old; a semi-Asiatic monarchy and young European colony; a Janus with one face old and worn out and the other adolescent, almost infantile. This duality is the source of striking contrasts whithersoever we turn in Russia: contrasts in private life, in character, in the state; contrasts so frequent that they form the rule, a law of contradictions. Everything has contributed to produce them: a position between Asia and Europe—so to say, astride of both; a blending of races—Slavic, Finnic, Tartaric—far from complete; a historical past formed by the contests of two worlds, by violently alternating phases. From these contrasts spring the different judgments passed on Russia, the falsity of which lies very often in exhibiting only one side. The law of contradictions is further discoverable in society, whose classes, high and low, are divided by a wide chasm; in the political field, where liberalism is often attempted, but generally weighted down by inveterate inertia; even in the individual, in his ideas, sentiments, and manners. The contrast is both in form and in essence, in the single man as well as in the nation. The state, a military monarchy and young colony at the same time, has the weakness of either, and the full force of neither. With deserts to people and clear, Russia is doomed by her contact with Europe to bear military and financial burdens like the oldest and most civilized of nations. Her tasks are those of both Europe and America, while her instruments are inferior to those of either. She resembles an actor forced to play before having learned his part—a man trying to acquire his first education amid the toils and struggles of mature age.

The least Slavic of all the Slavs, the Great-Russian, has been the Slavic colonizer *par excellence*. Treated by his enemies as a Turanian, a Mongolian, an Asiatic, his national origins are found in the West: on the Dnieper, between the Dnieper and the Düna, at Novgorod. His march has been from Europe to Asia; from White Russia to beyond the Ural, the Caspian, and the Caucasus. His destinies are imaged in the great river, the course of which he has followed from its source to its delta: like the Volga, he has run his course from Europe to Asia. When, under Ivan III. and Ivan IV., and later under Peter the Great, he turned as a foe toward the Baltic and the West, he only retraced his steps toward his European base. His history is the history of a struggle with Asia. The centuries of Tartar domination never made him forget his European origin. Victorious over Asia, he yet, during his advance from the Dnieper to the Ural, became both morally and physically changed by his contact with the populations subdued and absorbed. There is in the Russian more heaviness, both of body and mind, than in Slavs of less mixed blood; Aryan beauty is there more rare. The Great-Russian often betrays Finnic descent by his flat face, small eyes, and prominent cheek-bones. To Finnic influence and Tartar oppression he owes greater harshness, but also greater robustness, than marks other Slavs. He has less independence and individuality; he has more patience and consistency. He has not that mobility which has been the bane of the Pole. The extreme ductility of the Slav has in him been tempered by foreign, chiefly Finnic, alloy; the loss of purity is compensated for by a gain in solidity. The fusion of race, as elsewhere, has been productive of vigor at the expense of re-

finement. But Finnic and Tartar blood has not transformed the Great-Russians into Finns or Tartars. They are not Aryans and Slavs merely by language and historical development. They are much more properly Slavs than the French or Spaniards are Latins. A considerable portion of their blood is Caucasian, Slavic. The proportion can hardly be determined; it varies according to region and class. In the bulk of the nation Slavic blood probably preponderates.

The Head-Hunters of Borneo. A Narrative of Travel up the Mahakkam and down the Barito; also, Journeyings in Sumatra. By Carl Bock. With thirty colored plates, map, and other illustrations. London: S. Low & Co. 1881. Pp. xvi.-344. Cr. 8vo.

THIS work is a semi-official document, as the author was appointed in 1879, by the Dutch Government, to visit Koetei, one of its tributary states, "and to furnish the Government with a report upon the native races of the interior, and to make observations upon, and collections of, the fauna of that part of the island." The Sultan of Koetei enjoys a nominal sovereignty over all the country drained by the river Mahakkam, which flows in a southeasterly direction for some 600 miles, and empties into the Straits of Macassar. The country, though exceedingly fertile, and apparently rich in mineral wealth, is thinly peopled with a mixture of races, including the aborigines, the Dyaks, Malays, Chinese, and Boegis. The latter are an unruly people, emigrants from the neighboring Celebes, who have settled in considerable numbers near the coast. They are much given to running-a-muck. "In Macassar and other large towns the native police are armed with a long, two-pronged fork of bamboo, something like the humble 'clothes-prop'; and when they see an 'amok' Boegis, they place the fork against his throat, and hold him at bay till he can be secured." During the author's stay at the capital "one night one of these excitable gentry killed no less than three men, and wounded five others, before he himself fell a victim to a well-directed blow from a mandau." The Sultan, "one of the most intelligent rulers in the Malay Archipelago," showed himself favorable to the objects of the expedition, and not only furnished the necessary means for ascending the river, but accompanied the traveller to the end of his journey. He combined with his official duties the business of money-lending, cock-fighting, and gambling. He had "over sixty large fighting-cocks, each of which is kept in a room in the palace, under an oval wicker cage. . . . The effect of sleeping in close contiguity to a select company of sixty of the finest, strongest, heartiest, and gamest of the game-cocks of Koetei may be imagined." The voyage up the river, made in a prau hollowed out from the trunk of a single tree, was entirely without incident. The country was so desolate that sometimes a day passed without meeting a boat or seeing a dwelling, while the banks were clothed with a vegetation so dense that it was "impossible to penetrate into the forest more than a few yards from the river-side."

A hundred miles or more to the north, on a branch of the river, was the important Dyak town, Long Wai, where Mr. Bock stayed seven weeks, studying the people and making collections. Here he had the good fortune to meet several "of the tribe or race known as 'Orang poonan,' or Forest People," supposed to be the aborigines of Borneo. "These people live day and night in the open air, almost entirely naked, with no more shelter in showery weather than that afforded by an attap mat, which they then place over instead of under them when they lie down on the ground to sleep." Their weapons are mandaus, short swords obtained from the Dyaks, and "the *sumpitan* (blowing-tube) and poisoned arrows, in the manufacture and use of which they are all expert." They proved themselves valuable collectors for Mr. Bock, and, though excessively shy, being friendly to the Dyaks but holding no communication with the Malays, he at last prevailed upon them to take him to one of their forest homes. By this means he had a most favorable opportunity for studying their modes of life and especially their women, whom no European had ever before seen. There are some striking pictures in this volume, from sketches made by the author during this visit, which give a very graphic idea of this little-known race.

The Dyaks of Long Wai were celebrated for their bravery and their success in head-hunting, but the Dutch have so nearly suppressed this barbarous custom in their own dominions that it was difficult to detect any traces of its existence. The skulls were hidden from view, and the only visible sign was an occasional leaning-post or "monument that a party has been out head-hunting and returned with one or more heads." This practice, "as carried on by all the Dyak tribes not only in the independent territories, but also in some parts of the tributary states, is part and parcel of their religious rites. Births and 'namings,' marriages and burials, not to mention less important events, cannot be properly celebrated unless the heads of a few enemies, more or less, have been secured to grace the festivities or solemnities. . . . It is a rule among all the tribes that no youth can regularly wear a mandau, or be married, or associate with the opposite sex, till he has been on one or more head-hunting expeditions." Further in the interior he found the Tring Dyaks, who added to this custom that of cannibalism, which is probably confined to this tribe, and the author says: "I noticed that the other Dyak tribes did not go near the Trings during their stay at Moeara Pahou, not disguising their fear of them and their disgust at their cannibal practices." A still more interesting people, of whom he heard much during the course of his journey, though unfortunately he was unable to see any of them, were the "Orang boentoet—literally, tail-people." He was assured by one of the Sultan's servants "that he had himself some years ago seen the people in Passir. . . . As to the all-important item of the tail, Tjiropon declared with a grave face that the caudal appendage of these people was from two to four inches long; and that in their homes they had little holes cut or dug in the floor on purpose to receive the tail, so that they might sit down in comfort." This man was sent with an escort to the Sultan of Passir, with the request that some of these people might be sent to Bandjermasin, the Dutch capital of southern Borneo. It is hardly necessary to say that he returned without success, though still persisting in the truth of his story. Accordingly, a second mission was sent, accredited by the Dutch Resident, which finally brought back word from the Sultan "that the only *Orang boentoet* he had ever heard of were those, so called, forming his suite." It appears that his personal attendants were known as the "*Orang boentoet di Sultan di Passir*—literally, the tail-people of the Sultan of Passir."

Among the curious customs which Mr. Bock describes is that of the elongation of the lobe of the ear, which reached in one woman, whose ear he carefully measured, 4.75 inches, the total length of the ear being 7.1 inches. Tattooing is also very generally practised, and oftentimes the patterns are very elaborate and beautiful. He confirms the testimony given by other travellers that the climate of Borneo is not especially unhealthy nor the heat unbearable, though it lies under the equator. "Smallpox occasionally makes serious ravages among the people. As a safeguard against this disease they have a sort of vaccination system, wherein faith or belief plays a greater part than medical science." It appears to consist of simply burning several places on the arm or thigh. But the depopulation of the country must be largely due to head-hunting, and though in the Dutch provinces the inhabitants are increasing in numbers, the Dyaks seem to be gradually dying out. The North Borneo Company, with a view to encourage Chinese emigration, have just appointed Sir Walter H. Medhurst, formerly Consul at Shanghai and the author of one of the best books on China yet written, their agent in the East. The concluding chapters of Mr. Bock's work, which for the excellence of its typography and illustrations deserves a special word of praise, describe a previous expedition to Sumatra for the purpose of making a collection of its fauna. In this he was very successful, though, unfortunately, the larger part of his acquisitions was lost in the Red Sea.

Studies in Mediæval History. By Charles J. Stillé, late Provost of the University of Pennsylvania. Philadelphia: J. B. Lippincott & Co. 1882. 12mo, pp. 473.

THE title of Mr. Stillé's book is somewhat misleading: by "studies" one generally understands the detailed investigation or elaboration of special points, it may be wholly disconnected with one another. But the book before us is a systematic presentation of mediæval history, originally a course of lectures, and still preserving most of the characteristics of lectures. They are, as historical lectures should be, rather a commentary upon history than history itself, and as such they will be found very acceptable. They contain a clear, well-connected sketch of the leading characteristics of the Middle Ages, presenting for the most part accepted and familiar views, but put in a way to be seldom commonplace, and often very suggestive. Facts are so grouped and brought into relation with one another as to give the effect of considerable novelty of treatment.

The chapters are sixteen in number, beginning with "General Characteristics of the Mediæval Era," and ending with "The Era of Secularization"—two chapters which show the author at his best, as giving good opportunity for the elaboration of general views. An appendix contains a well-selected list of books of reference (rather of "reading" it should be, for very few of them are really designed for reference). No two persons would make the same list, and it is always easy enough in such lists to find omissions; nevertheless, we are surprised to miss so excellent and recent a book—and the production of Mr. Stillé's own State—as Coppée's 'Conquest of Spain.' There are some strange misprints: *Knighton* for *Kingston* (Frederic II.); *Donol* for *Doniol* (*Classes ouvrières*); *Worn* for *Worms* (*Ligue Hanséatique*); while Professor Rogers's book should be given as 'History of Agriculture and Prices.'

When we take up the consideration of details, particularly in the chapters on institutions and political history, we cannot always agree with the author, and in some cases there appear to be positive errors. We question (p. 42) whether it is correct to call the Germans before the invasions of the fifth century "wanderers"; it seems evident that they had passed out of the nomadic stage before the time of Tacitus. At any rate, if they were wanderers, they did not live in "what are called 'village communities,'" for these are wholly incompatible with the nomadic

stage of society. We believe, indeed, that, in what may be called "the primitive Teutonic system," while having passed out of the nomadic stage, they had not yet settled so completely as to form village communities; we have no objection to the view that the Anglo-Saxons had the village-community system at the time of the migration (p. 201). Inaccuracy rather than positive error is found in such statements as these: The lands of the Anglo-Saxons "were all charged with the burden of *trinoda necessitas*" (p. 206); it is regarded now as proved that this was a burden on all freemen, but not on all land (see Lodge, 'Anglo-Saxon Law,' p. 61). The date of Egbert's reduction of Northumbria, and therefore of the beginning of the kingdom of England (so far as it is now established), was 827 (p. 208). The division "into great provinces," abolished by William the Conqueror (p. 219), was Danish, not Saxon. When (p. 225) of the two "fundamental propositions concerning government" of Magna Charta, it is said that "they have always been retained in England," it is forgotten that the provision with regard to scutages and aids was omitted in the charter of Henry III., and that this right had to be wrested again from Edward I. William the Conqueror is said (p. 229) to have refused to render homage to the Pope, alleging that "his fathers before him had refused to do so." But none of his "fathers" had been kings of England; his words were, *antecessores meos*. St. Bernard is called (p. 355) one of the principal agents in the Albigensian Crusade; he died 1153, and would have been at the time of this crusade about one hundred and twenty years old.

The interesting chapter (xiv.) on the "Laboring Classes" presents some views with which we do not wholly agree. In the first place, it may be observed that the *latifundia* were not exclusively sheep-pastures (pp. 19, 389). What is more important, the *collegia* suppressed during the civil dissensions of Rome were not guilds of artisans, but political clubs, *collegia sodalicia*, nominally religious in their organization, having generally the local cult of the *lares compitales* for their gathering-point. The description of the *coloni* is given correctly (p. 392), and we hoped to find a discussion of one of the most important and difficult questions in social history when we read the words: "Let us mark the transition from the Roman *colonus* to the Teutonic serf or villain; for the last relation grew out of the first as a consequence of the invasions." But the question, although started, is not discussed. In the last words, however, we think there is a fundamental error. Mediæval serfdom is not the outgrowth of the *colonatus*, except in so far as the descendants of a large proportion of the *coloni* became serfs. Nor is the condition of the two classes identical, although their legal status is no doubt essentially the same. It was a fundamental feature of mediæval serfdom that the land occupied by the serf was paid for, in part at least, by labor performed upon the lord's estate or demesne. This is the source of the oppressive *corvées* (wrongly defined, p. 403; the exactions here described fall under the definition of *banalité*). The *coloni*, on the other hand, cultivated their estates on their own account, paying for them the so-called *canon*—generally, one-half the produce. This is the source of the modern *métayers* (*medietarii*) of southern France and Italy.

The account given of the origin of serfdom (p. 393) is correct if, instead of power "originally" resting upon possession of land and difference of rank, we read "in feudal times." The original Teutonic system did not rest upon land, but upon personal freedom. The description which follows, of the nature of the grievances of the peasantry and the process of emancipation, while very suggestive, as emphasizing a point of view which is generally overlooked, is nevertheless inadequate. Mr. Stillé describes this process as consisting essentially in "the substitution of a contract for fixed service for the arbitrary and capricious demands of the feudal superior." But when we read of Edward III. "selling manumissions," we ought to note that long before the time of Edward III. the obligations of the serfs were precisely fixed, and recorded, with their value in money. Sugenheim ('Aufhebung der Leibeigenschaft,' p. 116) describes emancipation as consisting essentially in successive and individual ameliorations (*Erleichterungen*) of the condition of the serfs; one abuse after another being *bought* by the individual serfs or by communities.

The account of the peasantry is followed by a description of the municipalities and their institutions. This contains an admirable brief description of the trade-guilds, and a correct statement of their relation to the municipal government. This came, however, rather late in the Middle Ages. For the origin of the municipalities we must look to a different class. Three features of this movement are mentioned (p. 397): the municipal governments, the trade corporations, and the "gildes or confréries, composed of artisans usually, but not always nor necessarily forming part of the trade corporations." We think the author's attention is here too exclusively directed to France, where alone the *confréries* were, as a rule, independent of the trade-guilds. Nor even here were they of much importance in *municipal* history. On the other hand, he omits the merchants' guild, or *Hanse*, which was fundamentally different from the trade-guilds, or *Zunfts*, and which in England and Germany, and to some extent in France also, was the starting-point of municipal life.

While we thus take exceptions to some of Mr. Stillé's positions in regard to the industrial history of the Middle Ages, we heartily welcome this part of his work, as treating sympathetically and with much genuine insight a greatly neglected department of social history.

Life in Hawaii. By Titus Coan. New York: A. D. F. Randolph & Co. 1882. 12mo, pp. viii.–340.

Mr. Coan's narrative is the record of a life that has been full of unusual experience; and we may premise that the record is a fuller one than the title promises, for it includes the writer's whole life from childhood to age, excepting only that part of which he had already published an account in his 'Adventures in Patagonia' (New York, 1879). Titus Coan was born in Killingworth, Conn., on the 1st of February, 1801. There was no augury of a missionary career in his earlier days. The military spirit that had been kindled by the events of 1812–15 lingered throughout his youth even in staid Connecticut, and in 1821 young Coan was an ambitious lieutenant in a regiment of militia. Then came the epoch of the religious revivals under his cousin, Asahel Nettleton. Mr. Coan left the militia regiment, and, after several other tentative experiments in life, began his studies for the ministry in 1831. Two years later he was sent on a missionary exploring tour to Patagonia, barely escaping from the savages of that inhospitable country. In 1834 he was married, and shortly afterward embarked with his bride for Honolulu, where they arrived after a six months' voyage around Cape Horn. Mr. Coan was assigned to the districts of Hilo and Puna, which include a hundred miles of the coast line of Hawaii, and there he has since resided.

The purely "evangelical" side of Mr. Coan's labors has been familiar for many years to that part of the public who take interest in mission-work. It has been striking from its magnitude, the large majority of the adult population of Hilo and Puna having been gathered into Mr. Coan's church within a few years after his arrival. We will not enter into the question of the positive quality of these conversions; for better or for worse, they were essentially of the same nature as those which are now wrought in a Western "revival," and their effects were at least as deep and as durable. The circumstance of their being wrought upon such seemingly different material—upon heathens whose chief divinity was Pele, and whose paradise was the pit of raging fire in Kilauea—made surprisingly little difference in the phenomena presented. And this, to our thinking, gives the chief interest to this part of Mr. Coan's record—the undeniable fact, namely, that a religious revival in Polynesia is almost absolutely the same thing as a religious revival in the United States. The same excitement is observed, the same cries and tears, the same revulsions of joy, and the same outcome of the process as those which occur under the ministrations of Moody and Sankey. The phenomena are identical. In no other region outside of Polynesia that is known to Protestant missionaries has this close correspondence been observed. The success of American Protestant missions has been not exactly confined to Polynesia, but it has been far greater in Polynesia than anywhere else; and it is not unreasonable to find in this common ground of emotion and susceptibility between the Polynesian and the Anglo-Saxon something more than the "providential" explanation of the success of missions in the Pacific. The facts afford a presumption, hitherto, we believe, unnoticed, in favor of the doctrine already advocated by ethnologists, that the Polynesians and the Anglo-Saxons are descended from an assignable common parentage.

This question is not, we hardly need say, broached in the autobiography, which is a direct and simple narrative, told with a quaintness in the style which reminds us at times of 'John Woolman's Diary.' A passage descriptive of Mr. Coan's perilous crossing of torrents in freshet, while making his arduous foot-tours, may be quoted. When the streams, he says, were not too swift,

"I mounted upon the shoulders of a sturdy aquatic native, holding on to his bushy hair, when he moved carefully down the slippery bed of the river, bearing up-stream against a current of ten knots, and moving one foot at a time sideways among the slimy boulders in the bottom, and then bringing the other foot carefully up. Thus slowly feeling his way across, he would land me safe, with a shout and a laugh, on the opposite bank. But this is a fearful way of crossing. The cataracts are so numerous, the waters so rapid, and the uneven bottom so slippery, that the recovery from a fall is often impossible, the current hurrying one swiftly over a precipice into destruction. . . . I once crossed a full and powerful river in this way, not more than fifty feet above a cataract of 426 feet in height. A missionary brother of another station, seeing me landed safely, and knowing that this crossing would save about six miles of hard and muddy walking, followed me on the shoulders of the same bold native that took me over. But before he had reached the middle of the flood he trembled and cried out with fear. The bearer said: 'Hush! hush! be still, or we perish together.' The brother still trembling, the native with great difficulty managed to reach a rock in the centre of the river, and on this he seated his burden, commanding him to be quiet and sit there until he was cool (he was already drenched with rain and river-spray), when he would take him off. This he did in about ten minutes, and landed him safely by my side."

Roads suitable even for a horse-track were not constructed in Mr. Coan's parish for twenty years or more after his arrival, and the athletic missionary made his way on foot throughout the

long extent of coast and among the mountains which his parish included. Kilauea, the greatest volcano in the world, lies within his field, and his visits to it and to the summit craters of Mauna Loa have been frequent. Of their eruptions he has probably seen more than any other observer. We make room for the following account of the fire-fountain as it appeared when he gained the heights of Mauna Loa, in advance of his guides, on the 27th of February, 1852:

"At half-past three P.M. I reached the crater, and stood alone in the light of its fires. It was a moment of unutterable interest. I was 10,000 feet above the sea, in a vast solitude untrodden by the foot of man or beast, amidst a silence unbroken by any living voice. I was blinded by the insufferable brightness. . . . The hills smoked and the earth melted, and I saw the gushings from the awful throat of the crater burning with intense white heat. I saw the vast column of melted rocks mounting higher and still higher, while dazzling volleys and coruscations shot out like meteors in every direction, exploding all the way up the ascending column of 1,000 feet, with the sharp rattle of infantry fire in battle. There were unutterable sounds as the fierce fountain sent up the seething fusion to its utmost height. It came down crashing like a storm of fiery hail in conflict with the continuous ascending volume, a thousand tons of the descending mass falling back into the burning throat of the crater, where another thousand were struggling for vent."

This tremendous action, it may be noted, was so uniform and regular that Mr. Coan approached the lava fountain within forty yards on the windward side.

Doubtless the main result of missionary labor upon the Polynesians has been to hasten the destruction of the race—a circumstance which we may be permitted to regret. But of this the individual laborers have not been conscious, and we can hardly hold them responsible. It was one of the fatalities of philanthropy that the Hawaiians should perish. Mr. Coan's own share in the work has been that of a kindly and single-hearted laborer, and his record has a charm that will be felt even by those who condemn the entire work of missionaries among the Polynesians as a race-destroying blunder. 'Life in Hawaii' has found a careful editor, if we may judge from the initials appended to the introductory note, in the son of the author.

Purcell. By William H. Cummings. Scribner & Welford. 1881.

MR. CUMMINGS is a prominent member of the Purcell Society, which was founded in London in 1876 "for the purpose of doing justice to the memory of Henry Purcell, firstly by the publication of his works, most of which exist only in MS., and, secondly by meeting for the study and performance of his various compositions." He has edited Purcell's "Yorkshire Feast Song," which was published four years ago; and it would have been difficult for Mr. Hueffer to find a more competent biographer of Purcell for his "Great Musicians" series. And yet it cannot be said that Mr. Cummings has succeeded in writing an interesting book. It contains too many facts and details that are simply correct without being instructive or entertaining; and many of them fairly come within the sphere of the Society for the Suppression of Useless Knowledge. The series for which this volume was written aims at giving the general public some information regarding the leading composers of various countries. But, surely, no one but a musical antiquary cares to read a hundred pages of details concerning compositions of which he has never heard the names, and which there is but little chance of his ever hearing in a concert hall. The author might plead that so little is known about the life of Purcell that nothing was left for him to do but write a sort of descriptive catalogue in chronological order. This, to a certain extent, is the case with Schubert and other composers whose lives have been uneventful; but the biographer of Schubert has the advantage that most of the works he writes about are well known to the reader, who will therefore be glad to know something about the time and circumstances of their origin.

Perhaps Mr. Cummings is less to blame in this matter than the editor, Mr. Hueffer. Instead of devoting a whole volume to Purcell, it would have been better to associate with him three or four other prominent English composers. Waiving this point, however, Purcell doubtless more than any other English composer deserves the honor of being ranked with the "Great Musicians." He is not only rated as the greatest English composer by his own countrymen, but Von Dommer, the German historian, says that he is "the only true musical genius England has ever produced." He flourished in the second half of the seventeenth century (1658–1695), and during that time exercised a great influence on the taste of the English people, no less by his own music than by fostering an appreciation of the more noble and artistic Italian music of that period as against the frivolous and superficial French music cultivated in court circles, and thus paving the way for the appreciation of his successor, Handel.

The most striking features of Purcell's genius were his great productivity and versatility. According to Chrysander, Handel's biographer, he was surpassed in every single point by some other contemporary writer, Lully and Corelli being better composers of instrumental pieces, Steffani of duets, Scarlatti and Keiser of arias and recitatives, and the Italians in general of symmetrical and singable choruses; but he surpassed them all, thanks to his genuine dramatic instinct, in combining these various features in one and the same work. His first opera, "Dido and Æneas," was written in his twenty-third and not his seventeenth year, as is generally asserted, and there is a tradition that he himself sang and acted one of the parts in it, written for alto voice. Had he received more encouragement as a dramatic composer, and not died at the early age of thirty-seven, he would doubtless have anticipated some improvements made by later operatic composers, if we may judge by what he did accomplish and by the following passage, which occurs in the preface to "The Prophetess" (1690), and which shows that he correctly estimated the advantages music gains by a union with poetry:

"Musick and Poetry have ever been acknowledged Sisters, which walking hand in hand supports each other; As Poetry is the harmony of Words, So Musick is that of Notes: and as Poetry is a Rise above Prose and Oratory, so is Musick the exaltation of Poetry. Both of them may excel apart, but sure they are most excellent when they are joyn'd because nothing is then wanting to either of their Perfections: for thus they appear like Wit and Beauty in the same Person. Poetry and Painting have arriv'd to their perfection in our own Country: Musick is yet but in its Nonage, a forward Child which gives hope of what it may be hereafter in ENGLAND, when the Masters of it shall find more Encouragement. 'Tis now learning ITALIAN which is its best Master, and studying a little of the French Air, to give it somewhat more of Gayety and Fashion. Thus being farther from the Sun we are of later Growth than our Neighbour Countries, and must be content to shake off our Barbarity by degrees."

Garfield's Place in History: An Essay. By Henry C. Pedder. G. P. Putnam's Sons. 1882.

THE burden of "placing" our contemporaries "in history" may with a good conscience be devolved upon posterity, whose placing is the only one that will stick. Mr. Pedder recognizes this so far as to discuss it at the end rather than at the beginning of his essay; and rather inconsequentially concludes that it is possible "at this early day to properly define his [Garfield's] place in history" because "the calm, dispassionate view of the historian" will probably not be the same as "that warm and living appreciation which time is apt to diminish." From this it appears that we should understand by his title the place which Garfield ought to have in history; and this place, he assumes, is beside Washington and Lincoln.

Now, just as no one on the eve of the first Chicago Convention would have ranked Lincoln with Washington, no one, we venture to say, would on the eve of the second have joined Garfield with either in a deliberate judgment of our national indebtedness to him. It will not, of course, be pretended that his behavior or public utterances during the canvass and after his election, or his brief administration of four months, added anything to his previous title to so exalted a place on the roll of American worthies. His cruel fate, again, bravely met as it was, was as purely extrinsic as that of Lord Frederick Cavendish. So that one is at a loss to explain the selection of Washington and Lincoln as the obvious peers with whom to associate him in gratitude as well as in memory for all time. Mr. Pedder fails to make clear the grounds of such an association, or to substantiate his dictum that "the estimate of a man's own time, though not always reliable, is quite as likely to be correct as the verdict of posterity"—in which case, it need hardly be remarked, there would be no motive for forestalling that verdict.

It happens that an anonymous writer quite as warmly and more aggressively disposed to uphold the reputation of the late President, and who makes the same collocation of great names in a little pamphlet essay on "The Idea of Garfield" (Chicago: Jansen, McClurg & Co.), confesses that "it is chiefly as the possessor of great qualities that we must remember and honor Garfield. . . . It is to a great extent as an idea, not in realized works, that Garfield remains with us." And, attempting himself also to fix Garfield's place in history, he says—with true forecast, as we believe: "The greatest work of Garfield's career will be hereafter reckoned his strong and intelligent finance speeches, made when the inflation craze was sweeping the country, and when politicians of both parties were eager to adopt an irredeemable currency." Mr. Pedder would probably not be content with this, any more than he would be to rest Lincoln's Washingtonian greatness on his debates with Douglas in Illinois; but the moral is plain, that if two admirers, "of a man's own time," cannot agree more nearly on the grounds of reverence for their hero, they are not likely to discredit the value of time, perspective, and silence in ordering the judgments of history.

Noah Webster. By Horace E. Scudder. Boston: Houghton, Mifflin & Co. 1882.

THE second volume of "American Men of Letters" is devoted to Noah Webster, and very fitly. He was not great in belles-lettres; but there is no American who has devoted himself more completely to book-work, or left a deeper mark by it on the English language, or won a wider fame. Mr. Scudder's book is not a common biography. It does not trace the life of Webster from year to year and from place to place; nor is it an attempt to present an elaborate picture of him at his literary work, such as we have of Southey and Gibbon, and of his brother lexicographers, Johnson, Grimm, and Littré. It is more like a very long magazine article on Webster and his times. A good many important

facts in his life are given in one place or another, too often without dates, and they are told in a pleasant style, and in such order and form as to be interesting to a casual reader, if not altogether satisfactory to a statistician. There are somewhat extended descriptions and estimates of his principal works. A large part of the book, however, consists of discussions of the literary and scholarly condition of New England and New Englanders, and other matters which might belong to a description of the times of Webster, but which are so little connected with him as to look like padding, and to make the impression that the writer has found Webster himself rather a meagre subject. This effect is increased by the attitude and tone of the author. Mr. Scudder writes of Webster and his times with a certain playful condescension. Webster distinguished himself at Yale College. President Stiles's mention of this leads Mr. Scudder to say: "Each college made believe very hard that its students were scholars, and its scholastic life the counterpart of historic universities." That is hardly a graphic description of Yale and Harvard. In 1812 Mr. Webster betook himself to Amherst with his apparatus, and devoted himself wholly to researches for his dictionary. The ten years that he spent there were the great years of his literary life. Mr. Scudder's description of it is: "He had withdrawn himself into the wilderness." That is hardly a graphic description of Amherst. Webster records that he was musician in a college military company which escorted General Washington from New Haven; whereupon Mr. Scudder:

"The last sentence is a faint hint at an amusing and pardonable little vanity of Webster's, who, as the reader will discover later, liked to think he had a hand in pretty much every important measure in the political and literary history of the country in those early days, and remembered that when the great Washington appeared, Webster was ready with the prelusive fife."

Webster graduated in 1778, nineteen years old. His father was a descendant of Governor Webster, of Connecticut, and still lived on the family farm. His mother was a descendant of William Bradford, the Plymouth Governor. They sent Noah to college, but after he graduated he had to teach school for a while. Mr. Scudder pursues him through life with pleasantries and criticism turning on his being a schoolmaster. He gives him faint praise as a statesman, though Jefferson mistook his work for Hamilton's. He says "such men as Belknap and Hazard [Mr. Scudder's representative authors of the day] looked with disdain upon him; they felt rather than said that Webster was not one of them." "So, when living in Hartford, Webster was not identified with the circle of Hartford wits." One of Webster's latest works was an edition of the Bible "purified from obsolete, ungrammatical, and exceptional words and phrases"—as to which Mr. Scudder tells us:

"He is a schoolmaster in this business, squaring Elizabethan English to suit the regularity and uniformity of language which have been the dream of all schoolmasters." "He had not, in such a work as this, the qualifications of a scholar; he had simply the training of a schoolmaster."

"I wonder if one of those scholars [the recent revisers] who signed the non-committal endorsement of Webster's Bible may not, in the midst of his recent labors, have contrasted in his mind the learned company to which he belonged with the schoolmaster who offered a Bible 'purified from the numerous errors.'"

In taking this attitude and tone toward American life and toward the hero of his book, Mr. Scudder does not seem to be influenced by any unhappy temper or by want of knowledge. He has fallen in, shall we say? with the fashion of depreciating the greatness of our history and the qualities of our people. It is the fashion also for biographers to assume the air of specialists pronouncing impartial judgments from lofty heights above their subjects—an ungracious fashion. Theair of a great specialist may be assumed, but the substance of his utterance cannot be. Cautious and moderate praise of our great lexicographer from Curtius or Whitney would do him honor; condescending commendation from Mr. Scudder is belittling to him. An old-fashioned enthusiastic account of Webster by a thoroughgoing hero-worshipper would make a more truthful impression of his character and his relations than this volume by Mr. Scudder.

BOOKS OF THE WEEK.

A Reverend Idol: a Novel. Boston: James R. Osgood & Co.
Art, L'. Vol. xxviii. J. W. Bouton.
Autobiography of Luther Lee, D.D. Phillips & Hunt. $1 50.
Baker, J. Montesquieu's Grandeur and Decadence of the Romans. D. Appleton & Co.
Ballantine, Serjeant. Some Experiences of a Barrister's Life. Henry Holt & Co. $2 50.
Bancroft, G. History of the Formation of the Constitution of the United States of America. 2 vols. D. Appleton & Co.
Bartlett, J. Catalogue of Books on Angling. Cambridge, Mass.
Blauvelt, A. The Present Religious Crisis. G. P. Putnam's Sons. $1.
Braddon, Miss M. E. Mount Royal. Harper's Franklin Square Library. 15 cents.
Eclectic Historical Atlas: a Handbook for Students and General Readers. Van Antwerp, Bragg & Co.
Essays and Dialogues of Giacomo Leopardi. Boston: J. R. Osgood & Co. $3.
Foote, L. H. A Red-Letter Day, and Other Poems. Boston: A. Williams & Co.
Freeman, A. C. The American Decisions. Vol. xxxiii. San Francisco: A. L. Bancroft & Co.
Freeman, E. A. The Reign of William Rufus, and the Accession of Henry I. In 2 volumes. Oxford: Clarendon Press; New York: Macmillan & Co.
Gardner, D. Quatre-Bras, Ligny, and Waterloo: Campaign in Belgium, 1815. Boston: Houghton, Mifflin & Co. $5.
Gautier, T. The Romance of a Mummy. Philadelphia: J. B. Lippincott & Co. $1 25.
Gorringe, Lieut.-Com. H. H. Egyptian Obelisks. New York: The Author, 32 Waverley Place. $15.
Gray, J. C. The Biblical Museum. Old Testament. Vols. viii., ix., and x. Isaiah-Malachi. A. D. F. Randolph & Co. $1 25 per volume.
Green, Anna K. The Defence of the Bride, and other Poems. G. P. Putnam's Sons. $1.
Gross, J. B. Sin Reconsidered and Illustrated. Philadelphia: J. B. Lippincott & Co. $1.
Hallmann, W. N. Primary Helps: Being No. 1 of a New Series of Kindergarten Manuals. Syracuse: C. W. Bardeen.
Hale, E. E., and Miss Susan. A Family Flight through France, Germany, Switzerland, and Norway. Boston: D. Lothrop & Co. $2 50.
Halsey, C. S. An Etymology of Latin and Greek. Boston: Ginn, Heath & Co.
Harte, Bret. Tales of the Argonauts. Boston: Houghton, Mifflin & Co. $2 50.
Hatton, J. The Queen of Bohemia. Harper's Franklin Square Library. 15 cents.
Havergal, Frances Ridley. Red-Letter Days. A. D. F. Randolph & Co. 85 cents.
Heine, H. Religion and Philosophy in Germany. Boston: Houghton, Mifflin & Co. $3.
Hodgdon, Miss J. Whittier Leaflets: For Homes, Libraries, and Schools. Illustrated. Boston: Houghton, Mifflin & Co. 60 cents.
Holtzendorff, Dr. F. von. Schottische Reiseskizzen. Breslau: S. Schottlaender.
Irving, P. Life and Letters of Washington Irving. Vol. i. G. P. Putnam's Sons.
Jebb, R. C. Bentley. [Morley's English Men of Letters.] Harper & Bros.
Jerrold, B. The Life of George Cruikshank. In 2 volumes. Illustrated. Scribner & Welford.
Jones, C. H. History of the Campaign for the Conquest of Canada, in 1766. Philadelphia: Porter & Coates.
Judd, D. W. Life and Writings of Frank Forester. In 2 volumes. Orange Judd Co. $1 50 per volume.
Knox, T. W. The Pocket Guide for Europe. C. T. Dillingham.
Lecky, W. E. H. History of England in the Eighteenth Century. Vols. iii. and iv. D. Appleton & Co.
Leland, C. G. The Gypsies. Boston: Houghton, Mifflin & Co. $2.
Newcomb, S. Elements of Plane and Spherical Trigonometry. Henry Holt & Co. $2.
Pettingell, J. H. The Life Everlasting: What is It? Whence is It? Whose is It? Philadelphia: J. D. Brown. $2.
Phelps, C. H. Californian Verses. San Francisco: California Publishing Co.
Porter, Rose. Summer Gleanings. White & Stokes. $1 75.
Rand, E. A. All Aboard for Sunrise Lands. Boston: D. Lothrop & Co. $2 25.
Redford, G. A Manual of Sculpture: Egyptian, Assyrian, Greek, Roman. Scribner & Welford. $2.
Reed, S. R. The Vicksburg Campaign. Cincinnati: Robert Clarke & Co.
Rolfe, W. J. Shakespeare's Comedy of the Two Gentlemen of Verona. Harper & Bros.
Roosevelt, T. The Naval War of 1812; or, The History of the United States Navy during the last War with Great Britain. G. P. Putnam's Sons. $2 50.
Samson, G. W. The Text Used for the Revised New Testament shown to be Unauthorized. Cambridge, Mass.: Moses King. 50 cents.
Satchel Guide to Europe. Boston: Houghton, Mifflin & Co. $2.
Schodde, G. H. The Book of Enoch: Translated from the Ethiopic, with Notes. Andover, Mass.: W. F. Draper.
Seton, Monsignor. Essays on Various Subjects, chiefly Roman. Catholic Publication Society.
Simcox, Edith. Episodes in the Lives of Men, Women, and Lovers. Boston: J. R. Osgood & Co. $2 50.
Sketches from the *Harvard Lampoon*. New York: White & Stokes. $1 50.
Smith, T. L. Elements of the Laws, Civil and Criminal, in Force in the United States, and in the several States. Philadelphia: J. B. Lippincott & Co. $1 50.
Spalding, J. L. Lectures and Discourses. Catholic Publication Society.
Stieler's Hand-Atlas. Parts 29, 30. B. Westermann & Co.
Swaine, S. A. The Religious Revolution in the Sixteenth Century. Cassell, Petter, Galpin & Co.
Sylva, C. Jehovah. Leipzig: Wilhelm Friedrich.
The Revolt of Man. [Leisure-Hour Series.] Henry Holt & Co. $1.
Tiele, C. P. History of the Egyptian Religion. Boston: Houghton, Mifflin & Co. $3.
Treatise on the Game of Twenty Questions. Henry Holt & Co. 90 cents.
Trollope, A. Why Frau Frohmann Raised her Prices, and Other Stories. Harper's Franklin Square Library. 10 cents.
Trollope, A. The Fixed Period: a Novel. Harper's Franklin Square Library. 15 cents.
Vernon-Harcourt, L. F. Treatise on Rivers and Canals. In 2 volumes. Oxford: Clarendon Press.
Walden, T. An Undeveloped Chapter in the Life of Christ. Thomas Whittaker. 50 cents.
Wallace, W. Kant. Philadelphia: J. B. Lippincott & Co. $1.
Watson, Prof. J. C. Tables for the Calculation of Simple or Compound Interest and Discount, and the Averaging of Accounts. Ann Arbor, Mich.
Wherry, E. M. A Comprehensive Commentary on the Qurán. Vol. i. Boston: Houghton, Mifflin & Co. $4 50.
Willson, H. B. Currency; or, The Fundamental Principles of Monetary Science. G. P. Putnam's Sons. $1 50.

HENRY HOLT & CO.

HAVE READY:

The Revolt of Man.

"The anonymous author of the satirical romance has achieved a very remarkable success. . . . Ought to be read by every one who has the wit to appreciate it, with a great deal of pleasure and amusement. There is certainly no living writer of English fiction who might not sign it with a great deal of satisfaction."—LONDON SATURDAY REVIEW.

"It projects the reader at once a hundred years ahead of the present generation, into a state of things in which woman is supreme. . . . This entertaining and skilful burlesque . . . must rank among the best literary conceptions of its kind."—LONDON ATHENÆUM.

MR. SERJEANT BALLANTINE'S

Some Experiences of a Barrister's Life.

Large 12mo, with portrait, $2 50.

PROF. SIMON NEWCOMBE'S

Mathematical Course:

Trigonometry. $1 50.

Trigonometry, with Logarithmic and other Mathematical Tables and Hints on the Art of Computation. $2.

Logarithmic and other Tables, etc. $1 40.

Elements of Geometry. $1 60.

College Algebra. $1 75.

The SCHOOL ALGEBRA will be ready in August.

☞ Either of the above Mathematical books sent to teachers, post-paid, FOR EXAMINATION WITH A VIEW TO INTRODUCTION, upon receipt of ONE-HALF the retail price.

HENRY HOLT & CO., New York.

The Nation.

NEW YORK, THURSDAY, JUNE 1, 1882.

The Week.

THE deadlock in the House of Representatives was broken on Monday by the adoption of a new rule, which prevents the blocking of business by dilatory motions when the consideration of contested election cases is in question. The Democrats tried to cover their discomfiture, which every sensible man predicted would overtake them, by a protest against the new rule, in which the latter is, of course, denounced as revolutionary, and subversive of "one of the great monuments of the representative system," meaning the power of a factious minority by obstructive tactics to keep a member of their party in a seat in the House to which he is not entitled. In the preamble to this protest the signers of it allege that they "resisted the efforts of the majority to consider the case of Mackey against O'Connor, because a proper hearing had not been granted to the contestee by the Committee on Elections as to the allegations of forgery and fraud in the evidence submitted by the contestant." Here the Democrats admit themselves that they have resisted not a decision of, not a snap-judgment on, the case, but the consideration of it, although this consideration is the very thing they should have desired as an opportunity for showing that their allegations against the Committee on Elections are true. They will have that opportunity now, and all that is required to fill the measure of their distress is a failure to make good their charges, which is very probable.

The plan of harassing an enemy by mentioning some dead man who would be deeply grieved, or, as the phrase is, would "turn in his grave," could he see what was going on, is one very familiar to newspaper warriors, but it generally indicates that the supply of ammunition is nearly exhausted and that peace is near. We, consequently, may fairly treat the London *Standard's* suggestion that the fact that Story and Wheaton and Kent were American jurists makes the demand of the American State Department for a trial for American suspects "a pitiable spectacle," as a sure sign that no legal answer to the demand is forthcoming. It is made the more significant by the fact that there is not in either Story, Wheaton, or Kent a scintilla of support for the doctrine that a government which in a time of profound peace does not find its judicial machinery working satisfactorily, may, instead of amending the machinery, give up trial altogether, lock up on suspicion as many foreigners whom it finds within its borders as it pleases, keep them confined indefinitely without trial, and refuse to answer all inquiries as to the nature of their offence. There is no support in any writer, American or foreign, for such a wild pretension. The mention of Story, Wheaton, and Kent in connection with it is simply a form of vituperation. That Earl Granville or Mr. Forster should have advanced such a pretension shows the bewildered condition into which the Irish problem has thrown the English mind. The only change which the difficulty that the British Government finds in getting Irish juries to convict or Irish witnesses to testify would justify, in the forum of international law, is the institution of more summary modes of trial, or the expulsion of obnoxious foreigners. War only can create such powers as Mr. Forster has been treating himself to.

Several Western politicians have admitted to the *Herald* their solemn conviction that a Western man should be put in Mr. Lowell's place. None of them mention any American citizen whose rights Mr. Lowell has failed to protect. What they complain of is apparently that he has not shown the Court of St. James's the kind of rage he would get into if the rights of an American citizen were infringed—like the showman's elephant, who,

"When he's irritated, makes the following noise."

Mr. Williams, of Wisconsin, says "the woods are full of such men"—that is, of possible Western successors of Mr. Lowell, who would represent "the sturdier elements of American society." Mr. Orth, of Indiana, spoke with much feeling of what he had seen at Vienna of the tendency of American representatives abroad to "cultivate with fervid avidity social relations with foreigners." He would have them stand apart, "grand, gloomy, and peculiar," and not go chattering round the gilded saloons of the Continental capitals, as they do now, in foreign languages, neglecting their own tongue and their own people.

Mr. Springer wants Judge Jerry Black to represent us in London, but we do not think this would be wise from the "sturdy" point of view. The Judge is "sturdy," but he is a lawyer, and he would get in with the English lawyers and junket with them, and when the dungeons began to be filled with Americans would take legal views of his duty, or, in other words, sell us out for dinners and receptions. In fact, this is a matter on which it is hard to know whom to trust. Many will say, "Why not send Mr. S. S. Cox?" but he is intelligent and perhaps susceptible to flattery, and is literary, and when the British critics got round him and puffed his books he would forget his hatred for the Crown and the aristocracy. In fact, there are few men, East or West, who can resist the blandishments of a great wicked city like London. Western politicians think they can stand it, but we know them better than they do themselves. London peanuts and ice-cream are more seductive than they imagine. They beard the British lion far better on the prairies than they do in his home in the Tower of London.

Washington despatches state that Senator Beck has proposed in the Finance Committee an amendment to the National Bank Bill, providing that if any bank "discriminates against silver," its charter shall be annulled. We trust that it will be made sufficiently clear in the amendment what act or acts constitute "discrimination against silver." Probably Senator Beck has in mind a resolution adopted by the New York and Boston banks some two years ago, to the effect that they would only receive silver on deposit from parties who would agree to receive it back in payment of checks. This is called by some people "discriminating against silver," whereas its object is merely to put the banks on the same footing as their depositors in the matter of silver. In other words, it aims to prevent the public from making the banks a common dumping-ground for silver by depositing it and then not taking it back, or raising a fuss about it when the banks tender it in payment of checks. Of course, a bank could legally force silver on those who present checks for payment, but the attempt to do so would make trouble at once. The idea of Senator Beck is that everybody should have the right to discriminate against silver except the banks. His amendment, if passed, would have no sort of effect, for the reason that it is no discrimination against silver to require people who deposit it to receive it again. All that it would be needful for the banks to do to avoid even the appearance of discrimination would be to pass another resolution, declining to receive gold on deposit except from persons who would agree to receive it in payment of checks. Then the situation would be in appearance exactly what it is now in fact, and there would be no discrimination for the law-making or the law-executing power to put its hands upon.

The freetraders had a large dinner on Friday, at which there was much interesting speaking, but the most interesting topic of all—the prospects of free trade—was treated by Mr. David A. Wells. He was hopeful about free trade on account of the actual spread of free-trade ideas in the public mind, but more on account of the labor crisis which he thinks protection is undoubtedly preparing for us, and which, when it comes, will be very serious. We are gathering into this country, as he pointed out, a vast body of foreign laborers of a very low class, whose wages, under the protective system, must necessarily be small, and whose turbulent discontent we have no proper means of coping with. They are turning out increasing quantities of goods, to the consumption of which our own population is inadequate, and we have no foreign markets, and our tariff prevents our finding any, for our surplus. The chances are, therefore, that the final and complete breakdown of the protective system will come through the suffering of the laborers, for whose comfort protectionists pretend that the tariff is framed.

In an interesting letter to the *Evening Post* some time ago Mr. John Roach contended that he, as a shipbuilder and engine and boiler maker, could not compete with European constructors because the laborers of his own beloved land demand higher wages

than are paid to the people of the down-trodden nations of the Old World. He therefore insisted that high tariffs and prohibitory navigation laws were necessary to put him upon an equality with his foreign rivals. But we have had occasion more than once to direct the attention of Mr. Roach to the fact that he is not always and everywhere so responsive to the demands of workingmen as he is in the newspapers and when he goes before Congressional Committees. He has just shown again that he can at times harden his heart to the appeals of the laborers of his own beloved land. The boiler-makers of this city have asked for more pay, and are enforcing their request with a strike. According to the story of one of them lately published, there is substantially but a single obstacle to their success. There is only one man, he says, "that we have really to fight, and he will fight us longest." Will it be believed that this solitary and stubborn person is none other than Mr. John Roach, that patriotic citizen who insists upon the continuance of restrictive legislation in order that the demands of American workmen for high wages may be granted? A high tariff enables Mr. Roach to make and sell boilers at a price beyond what they could be bought for from the pauper-employing manufacturers beyond the sea. He does this, we have been led to believe, not in his own interest, but for the sake of the workingmen. We might expect, then, that Mr. Roach would be the first to accede to the demand of the boiler-makers for an increase of wages instead of being the first and last to oppose it. It is painful to hear one of them saying that he is "the only man we have to fight," and predicting of this champion of highly protected labor that "even he must yield."

The prosecution of General Curtis for collecting political assessments has terminated in a verdict of guilty on two counts of the indictment. This result can hardly fail to have an excellent effect, not only as an example to other Government officials, but in settling the question that wringing money out of Government clerks, under what amounts to a threat of the loss of their positions if they refuse, is an illegal extortion, which the Government does not encourage or wink at, but undertakes to suppress. With such a deep-rooted abuse as that of political assessments the great difficulty in the way of reform is that it at length begins to wear the air of a lawful and laudable custom, so that the victims do not resist or resent its continuance, but regard it as part of an established order to which they must necessarily submit. One of the most amusing features of the trial of General Curtis was that some of the money collected appears to have been entered on a victim's check-book as paid "pro bono publico." The verdict will no doubt do something to encourage the unfortunate Custom-house clerks to remember that the District Attorney does not take this view of the character of such assessments.

Some newspapers are trying to persuade themselves and their readers that the conviction of General Curtis will not have much effect in stopping the levying of assessments, because the party managers will hereafter evade the statute by having the money collected by officers who have been confirmed by the Senate. But this view overlooks the fact that the statute makes the payment of money for political purposes to "any other officer or employee of the Government" an indictable offence. An officer or employee who has been confirmed by the Senate may under the statute ask for and receive money for political purposes, but no officer or employee who has not been confirmed by the Senate can lawfully pay it to him, so that all such officers and employees will now have to bear in mind that if they pay an assessment for political purposes to any officer of the Government, high or low, they expose themselves to prosecution and a fine of $500. We think we may add, too, that in this city at least no effort will be left untried by the friends of reform to bring all such offenders to justice. Of course the collection of assessments may be done by persons not in the Government service at all, but as a general rule they do not offer themselves for this work with alacrity, and do not perform it efficiently. It is the requests of brother officers that employees have most to fear. Before long we trust the persecution of the clerks in Government offices for money by anybody whatever will be prohibited also.

The Geneva Award Bill, having passed both houses of Congress, will become a law in a very few days unless the President vetoes it. The principal objection to it is that it provides for the payment of claims which have no legal validity, and makes no provision for the payment of the claimants to whom the fund actually belongs. We may suggest, moreover, that there is a political objection to the bill which deserves consideration apart from this. The "war-premium" claims provided for in it are claims against Great Britain for money paid as "war rates" by owners of ships and cargoes in excess of what would have been paid had not all maritime risks been greatly increased during the Rebellion by the Rebel cruisers fitted out in England. Now, these claims were presented at Geneva and ruled out by the Tribunal as being altogether too remote to be considered. The bill just passed must be based on the idea that though ruled out by the court they got into the verdict in some unexplained way, and thus it amounts to a formal declaration that claims against a neutral of this character are not too remote, but must be paid; and not only this, but that our war-premium claims actually *have* been paid by Great Britain. In any future European war the United States will probably occupy its natural position as a neutral, and if any cruisers escape from our ports and prey on the commerce of any of the belligerents—for instance England—we shall unquestionably be confronted with "war-premium" claims similar to those which were presented at Geneva. Our Secretary of State will then, of course, in reply to them, remind the Government which makes the demand that these claims were ruled out at Geneva; but to this it will be answered, "How can that be, when you took the money and paid your war-premium claimants with it?" Considerations like these may seem altogether too unpractical for the Senate and House, but they ought to have some weight with the State Department and the President.

Boss Cameron's doings seem to be troubling his friends very much. His indiscreet threat henceforth to fight the protective tariff if the manufacturers fail to support him, has, according to all accounts, made even Stalwart business men angry. Now, he has also, for the purpose of nominating a candidate for Congressman-at-large, caused the old Convention to be called together again. The President of that Convention, Mr. Lear, loudly declares that, since the Convention adjourned without day, it is absolutely defunct and cannot be revived; and that if a Convention is to be called at all for the purpose indicated, it must be called in accordance with the rules laid down in the reform platform recently adopted at Harrisburg, and ostensibly accepted by Mr. Cameron and his friends. To call the old Convention together again, Mr. Lear thinks, would be a clear repudiation by the Stalwarts of the reform platform, and dissolve all the bonds of good-faith and fellowship between them and the rest of the party. A new break is therefore eminently probable. Troubles seem to be accumulating to such an extent that Mr. Cameron may soon wish he had never been boss.

The confession of Fitzgerald, the banco swindler, who is now on his trial in Boston for defrauding Mr. Charles Francis Adams by enticing him into a gambling-den and extorting checks from him in payment of pretended losses, is full of instruction as to the reason why this kind of knavery flourishes as it does in all our large cities. The fellow was extraordinarily impudent and confident when making it in the presence of the detective in the office of Mr. Adams's lawyer, and the reason of his impudence and confidence was plain. "In these cases," he said, "there was generally a struggle at the beginning, but these checks were always paid"; and he added that "he was as sure this one [Mr. Adams's] would be paid as if he had the money in his pocket." In other words, he counted, with a certainty derived from experience, on the unwillingness of the victim, or the victim's family, to seek justice, at the cost of having his weakness or folly exposed in court. A very large number—by far the largest number—of these frauds are perpetrated on elderly men or simple-minded professional men from the country, whose memory for names or faces has begun to fail, and whose geniality makes them unwilling to repudiate any person of decent appearance claiming acquaintance with them. The rest follows as a matter of course. In this case the knaves were not sufficiently careful in the selection of their victim. The condition of Mr. Adams's faculties was such as to make him an easy prey, but this very fact also made it easy to bring the matter into court, even if his sons were not probably the least promising persons in the United States for a scoundrel to try to extract hush-money from. Fitzgerald could hardly have been a Bostonian, or he would not have cherished that childlike confidence which he so freely

expressed, in the readiness of the "Adams boys" to negotiate with him.

The news comes again from the Indian Territory that "Oklahoma Payne" and twenty-nine other "colonists" who attempted to invade the Indian Territory and to effect a settlement there have been arrested by the military and "taken back to Kansas," and that "the authorities have not yet decided what to do with them." The same vagabond has been arrested for the same offence and "taken back to Kansas" nearly half a dozen times, and the authorities have never known "what to do with him." Why not? Because the law provides only that white persons found invading the Indian Territory for unlawful purposes shall be put across the line; and in case of a repetition of the offence, they shall be fined a certain sum of money. But as Payne and his fellow-colonists are of the impecunious kind, and no fine can be extracted from them, they are time and again punished only by being "taken back to Kansas," where the authorities always "find themselves unable to decide what to do with them." The upshot is that "Oklahoma Payne" makes the invasion of the Indian Territory his regular business, finding all the time new dupes who "go in" with him for the founding of settlements on the Indian lands. Ever since these invasions commenced, Congress has been urged in the most pressing manner to put an end to these disgraceful and ridiculous proceedings by enacting a law making the offence punishable with imprisonment, so that "the authorities may know what to do" with the ruffians caught in the act. Until such a law is enacted, Oklahoma Payne will continue to invade the Indian Territory once or twice a year merely to be "taken back to Kansas."

The humors of the James affair in Missouri do not cease. Frank James, Jesse's "wayward brother," for whom he used to pray at prayer meetings when he joined the Baptist Church in Texas, is anxious to give up robbing and lead a quiet life, and is negotiating for this purpose with the Governors of Missouri, Texas, and Minnesota. What the negotiation is about does not clearly appear. In all negotiations properly so called, each side has something to offer in return for what it expects to receive; but Frank James apparently has nothing to offer, except his giving up a life of crime to live quietly on the proceeds of his crimes. Nor does it appear even that he proposes to give it up because he is tired of it. His real reason seems to be that he is suffering from a wound in the lungs received when he was robbing a bank at Northfield, Minnesota, and wishes to pass the summer at an Eastern watering-place. The Missouri despatches say that pending the negotiations with the Governors, which are carried on under a "flag of truce," there is an "armistice" between the belligerents, during which James is residing in St. Louis, which city apparently lies within his lines. Mrs. Frank James is in the meantime visiting her father, Colonel Ralston, who lives in "the Ralston Mansion" in Independence, Mo. She eloped with Frank in 1875, her young imagination being touched by his robberies and murders. She is accompanied by her son little Jesse, so called after his late lamented uncle. Mrs. Jesse, it was at first said, had joined a circus company, but this is now contradicted. The latest news is that she has contracted with an eminent literary man, George Riches, of South Pueblo, Col., for twenty lectures on her late husband's career, and he is to deliver them in the area over which Mr. James robbed and murdered, Mrs. James sitting on the platform with her two children as one of the attractions. It seems as if Colonel Ralston, of the "Ralston Mansion," might also profitably offer himself to the lyceums with a lecture on Frank, and some account of the feelings of a father whose daughter has married a distinguished highwayman.

The Rev. Dr. Newman, the well-known Stalwart minister, who says he is a "Stalwart" from intellectual and religious conviction, but resolutely refuses to tell anybody what a "Stalwart" is, on Sunday preached a sermon on "The Nation's Dead." It was on a Sunday morning, be it remembered, and he was in church, not at a Stalwart dinner, nor on the stump, but in the pulpit, with the Bible open before him, and in the middle of Divine service, with the most solemn obligations to be truthful and accurate in his statements resting upon him which can rest on a human being. Nevertheless, he gave this account of the doings and sayings of the civil-service reformers:

> "This republic had erected monuments, it had provided generous pensions to widows and orphans. But there are a class of miserable, sickly sentimentalists, quasi-civil-service reformers, who say that the noble soldier should be thrown out from the civil service because he could less accurately locate the North Pole and the equator than some other who stayed home and learned these things. Every clerical office in the country, so far as practicable, ought to be filled by men who served in the late war, and by their widows and orphaned daughters."

What is oddest in all this is not so much that the Newmans should talk in this way in their pulpits, but that there should be so little anxiety among religious people about the effect of their talk on religion.

The *Times* publishes three pages of opinions on Southern politics. They have been gathered with evident care, but it may be doubted if the information is as trustworthy and valuable as that concerning the crops which the same journal printed some time ago. The *Times* finds that the letters taken as a whole "do not furnish any evidence of substantial dissatisfaction in the Southern Democracy with the Democratic party as a national party." The value of the evidence depends to a degree upon the authorship of the letters. They were written by the editors of Democratic newspapers in county towns. Perhaps no better source of information than this was within easy reach; but, while the local journalist ought to know what local opinion is, in politics his views are apt to be those of an optimist. Usually it is his duty and desire to promote union and harmony within his party. It is natural for him to believe that the union he wants really exists. He is greatly tempted to report, not what is, but what he thinks ought to be. One way to secure harmony is to assert that perfect harmony prevails. The country editor, however intelligent, is usually a strong partisan, and it would be a marvel of ingenuousness for him, if he suspected that there was dissatisfaction in his party, to disclose the fact to a leading newspaper of the opposite party. The worth of these letters might be more accurately estimated if they were offset with letters from other journalists—Republican editors, Independent editors, discontented Democratic editors.

The Egyptian crisis has been moving through so many different phases with such rapidity that all comment on it seems idle. The ostensible cause of the present phase of the trouble between Arabi and the Khedive, is that the latter commuted the sentences passed by a court-martial on some Circassian officers convicted of a conspiracy against Arabi's life. The Ministers, who are Arabi's creatures, thereupon resolved to call the Notables together to depose the Khedive, therein exceeding their powers. At this point both sides began to prepare for war, and, as anarchy was spreading over the country, the two Powers at last peremptorily intervened. Their policy was pretty clearly foreshadowed by M. de Freycinet in a recent speech in the French Chamber. He said in substance that France and England were in perfect accord, and would remain so; that the other Powers were satisfied to leave the settlement of the Egyptian difficulty in their hands, and they would settle it. He did not say plumply, but he did indicate pretty clearly, that under no circumstances would Turkey be permitted to meddle in the affair. The Sultan has long been dying to interfere, and, if the matter had been left to England alone, might possibly have been allowed to do so; but on this point France is apparently inexorable, having in mind the trouble he has given her in the Tunisian question. The English and French agents then presented an ultimatum to the Ministers, calling for the removal of Arabi Bey from the country, but leaving him his rank and pay, on receiving which the Ministers resigned. Then there was a rising of the Army and the Notables, which put Arabi back as Minister of War, with the whole power of the Government really in his hands, and the Khedive surrendered to him almost without a word. Arabi then set the Powers at defiance, denying anybody's right to intefere with him except the Sultan, and the Powers came to the conclusion that the Sultan was egging him on, while apparently condemning him, in the hope of being finally called on to intervene. In the meantime, anarchy, or something very like it, reigns at Cairo, and the Europeans are flying with their valuables, the soldiers having apparently got out of hand. The allied fleets are at Alexandria, and can demolish anything within range of their guns, but they cannot reach Cairo, and Arabi and his men will not come within range. The ships can only land 300 men, it is said, to assail his 3,000, and no others are near at hand. The latest news is of an identical note said to have been presented to the Sultan by the English and French Ministers at Constantinople, calling on him to summon Arabi to explain his conduct in person.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

THE Administration has begun in earnest to use the patronage of New York State for the advancement of the Stalwart interests. On Thursday James W. Bentley and John A. Luby were nominated for the offices of Collector of Internal Revenue and Surveyor of Customs of the port of Albany respectively. The present incumbents of these offices have filled them in a satisfactory manner, but they are not in sympathy with the Administration. It is thought that this is but the beginning of a "crusade" against the "Half-Breeds" in New York State.

Circulars from the National Republican Campaign Committee have been received by the employees at the Capitol in Washington, in which each employee is informed that he will be expected to contribute two per cent. of his annual salary toward the campaign fund which is to be used next fall. These circulars impose an assessment of $25 on each doorkeeper and about $10 on the page boys.

The Senate has passed a bill to distribute $200,000 among the officers and crew of the iron-clad *Monitor*, which was engaged in the fight in Hampton Roads, on the 9th of March, 1862.

The Senate Finance Committee has practically decided that the House requirement of ninety days' notice for the retirement of the national-bank circulation shall be stricken out of the Bank-Charter Extension Bill and a new provision inserted in its place. This new provision is to allow deposits of currency for the purpose of releasing security bonds and retiring circulation to a maximum amount, not exceeding three million dollars per month; the release of the bonds to be made in all cases in the exact order of the reception of the deposits by the respective banks within the proposed maximum.

The Mackey *vs.* O'Connor election case has occupied the House of Representatives for the last week. This case arose out of a contest from the Second Congressional District of South Carolina, which was submitted to the Committee on Elections, who found that there had been fraud in the election, and that Mackey, Republican, was entitled to the seat in the House in the place of Dibble, Democrat, the successor of O'Connor, deceased. At the election to fill the vacancy caused by the death of O'Connor, which resulted in the election of Dibble, the Republicans refused to vote, alleging that there was no vacancy, as O'Connor had never been entitled to the seat. The majority of the Committee on Elections having found as above, the Democrats began a long filibustering to prevent the consideration of the case, on the ground that the charges of forgery and fraudulent interpolation had not been properly investigated by the Committee on Elections. A deadlock resulted, which was only broken on Monday by the adoption of an amendment to the rules shutting off dilatory motions in such cases. The debate on the amendment was exciting, and resulted in a scene of disorder, the Speaker being totally unable to control the House. The Democrats have signed a protest against the ruling of the Speaker which made possible the passage of the amendment to the rules.

The Attorney-General has decided that ex-Secretary Kirkwood is ineligible for appointment as a member of the Tariff Commission.

Secretary Teller has decided that the claim of certain Chippewa Indians to the Turtle Mountain district lying to the north and west of Devil's Lake in Dakota, is invalid. This decision opens up nine million acres of the finest land in Dakota, and has caused great excitement in Dakota. Thousands of settlers are ready to rush in as soon as it can be formally opened.

The one hundred and fourteenth call for the redemption of bonds of the loan of March 3, 1863, continued at three and a half per cent. from July 1, 1881, was issued on Saturday.

The Secretary of the Treasury has prepared a circular to collectors of customs prescribing the form of certificate to be delivered to Chinese laborers departing from this country, entitling them to return under the provisions of the Act recently passed. It is provided that the certificate shall be printed on bank-note fibre paper so as to guard against counterfeiting.

Vice-Admiral Stephen C. Rowan, who has been selected by Secretary Chandler as Superintendent of the Naval Observatory in Washington, has formally accepted the office.

The Census Office has issued a bulletin showing that by the census of 1880 the number of persons in the United States was 50,155,783; the area in square miles, 2,900,170; the number of families, 9,945,916; the number of dwellings, 8,955,812; acres to a person, 37.01; persons to a dwelling, 5.60; and persons to a family, 5.04.

The State Convention of the Independent Republicans of Pennsylvania met in Philadelphia on Wednesday. Senator Mitchell was chosen temporary chairman, and made a speech in denunciation of "bossism" and in advocacy of civil-service reform. The platform adopted declares attachment to the principles of the Republican party; deplores the fact that the calamity of Garfield's assassination has been followed by the overthrow of the reforms his election signified; denounces the spoils system, "boss" rule, and "Machine" control of the party; demands the reformation of the civil service by law, and declares in favor of reforms in the party rules. The ticket nominated is as follows: Governor, State Senator John Steward, of Franklin; Lieutenant-Governor, Levi Bird Duff, of Allegheny; Secretary of Internal Affairs, Mayor George W. Merrick, of Wellsboro; Congressman-at-large, Colonel William McMichael, of Philadelphia; Justice of the Supreme Court, George Junkin, of Philadelphia. The ticket is generally considered a strong one, and the Stalwarts are said to be much troubled by the strength the movement shows.

The National Committee of the Greenback-Labor party has adopted an "address to the American people" denouncing monopolies of all kinds; a platform opposing telegraph and railroad monopolies, and calling for the substitution of greenbacks for national-bank currency; and a petition to the President requesting him to veto the bill for the rechartering of the national banks, should it pass the Senate.

The Straight Greenback State Convention of Maine met at Bangor on Tuesday. Resolutions were adopted asking that the Government buy bullion with greenbacks, demanding the abolition of all banks of issue, and approving the acts of the National Committee. Solon Chase was nominated for Governor.

At a meeting of the New England Woman Suffrage Association in Boston on Tuesday a letter was read from Governor Hoyt, of Wyoming Territory, pronouncing woman suffrage in Wyoming an unqualified success. Resolutions were adopted regretting the death of James T. Fields, Ralph Waldo Emerson, S. S. Foster, and other friends of woman suffrage.

The General Assemblies of the Presbyterian Church, North and South, in session at Atlanta, Georgia, and Springfield, Illinois, on Saturday, appointed delegates to attend each other's Conventions next May.

It is probable that one of the most extensive lockouts in the history of the iron industry will begin on the 1st of June. In the Pittsburg district alone fully 40,000 men will be thrown out of employment. The employers and the Amalgamated Association have been unable to come to any terms. The Association proposes to start stores to deal out groceries, etc., to the strikers in case the grocers and others decline to sell on time to the members of the Association.

The annual report of the Board of Trade of Cincinnati shows a growth of the manufacturing interest. The total value of the goods manufactured in the city during the year is $204,079,867—an increase of thirty per cent. over the previous year. A feature in connection with this growth is the fact that the number of manufacturing establishments has been reduced, showing that the business is being monopolized by the large houses.

It is stated that Mr. Reed, Guiteau's counsel, applied to Justice Gray, of the Supreme Court, on Friday last, in Boston, for a writ of habeas corpus for his client, and that Judge Gray refused to grant the writ until the case had been presented to his associates.

The arguments on the motion to quash the indictments in the Star-route cases were concluded on Monday, and Judge Wylie overruled all the points made against the indictment by the defence. Unless further dilatory manœuvres are successful, the trial of the conspirators will begin on Thursday next.

The Supreme Court of Ohio on Tuesday declared the Pond liquor-tax law, which has aroused much opposition from the liquor-dealers, unconstitutional, on the ground that it is of the nature of a license.

The Honorable Lionel Sackville West gave a large dinner at the British Legation in Washington on Wednesday evening in celebration of the Queen's birthday. The members of the Cabinet, with the exception of Mr. Folger and Mr. Howe, Senator Davis, Speaker Keifer, the Diplomatic Corps, and many other prominent men were present. Secretary Frelinghuysen proposed the health of Queen Victoria and responded to the toast of the President of the United States.

The St. Paul (Minn.) *Pioneer-Press* has printed crop reports from about sixty points on the Chicago, Milwaukee, and St. Paul Railroad not covered by recent reports. Nearly all agree that the weather is very favorable both to wheat and coarser grains. From the river division, which runs through a heavy wheat country along the Mississippi, reports of condition and prospects vary. Wheat is generally looking well, though it is backward on account of cold rain, and on some cold soils it looks thin and poor. In other places it already begins to show the need of more rain. The Cincinnati *Commercial* has information from nearly all the counties of Ohio, Indiana, and Kentucky as to the condition of the growing crops. Wheat throughout these three States has rarely looked better in May than it does now. The frosts of the middle of April have proved a benefit rather than otherwise.

One of the worst accidents that have happened in the Schuylkill, Pennsylvania, coal regions for a number of years occurred on Wednesday afternoon at the Kohinor Colliery at Shenandoah. Six men were killed and three so badly injured that they may not recover. The accident was caused by some of the miners uncovering their safety lamps, which, as the mine was very full of gas, caused an explosion.

Lieutenant Danenhower, Dr. Newcomb, Cole, and Long Sing, four survivors of the *Jeannette* Arctic expedition, arrived in New York on Sunday.

Despatches from Arizona announce that some of the Apache Indians are on the warpath. They have attacked several ranches in the valleys and driven the stock into the mountains. The miners in the mountain ranges are alarmed, and have organized for defence.

FOREIGN.

There has been a crisis in Egypt. England and France sent an ultimatum to Mahmud Barudi demanding the temporary removal of Arabi Bey from Egypt, with retention of rank and pay, and the resignation of the Ministry, and giving the Government twenty-four hours to come to a decision. On Saturday it was announced that the Ministry had resigned, after refusing the demands of England and France and referring them to the Sultan. Upon resigning, the President and Council of Ministers sent two notes—one to the Khedive and one to the agents of England and France

—in both of which they took the ground that the intervention of the foreign Powers in the present instance was an infringement of the right of the Sultan of Turkey. The British and French Consuls-General then called on Arabi Bey and declared that they held him personally responsible for the maintenance of public security. The Khedive announced to the officers and other Notables that he would personally assume supreme command of the troops and maintain strict discipline. The officers replied in insolent language, and declared that they would never accept the ultimatum offered by England and France, nor recognize the right of interference of any power except Turkey. Shortly after this the military commander at Alexandria, the Notables, Ulemas, and other military officers demanded the reinstatement of Arabi Bey. The Khedive refused the request, and said that the Porte supported him in his refusal. On Sunday, however, the Khedive was forced to yield and reinstate Arabi Bey, as he was informed that an armed force was in readiness to make him a prisoner if he refused. Before he was restored to power, Arabi Bey gave assurances to the diplomatic agents of Germany, Austria, Italy, and Russia, who had declared that they held him responsible for public security. It is said that England and France are convinced that the Porte has openly encouraged the Khedive while secretly countenancing the action of the Army, the object being to bring about Turkish intervention, and that England and France have accordingly threatened the Porte with foreign intervention unless the watchword of immediate and complete submission is given to the Egyptian Army. The immediate despatch of a Turkish squadron to Egypt with an Imperial Commissioner is probable.

Lord Dufferin and the Marquis de Noailles, the English and French Ambassadors at Constantinople, presented to the Porte on Monday an identical note recommending the summoning to Constantinople, from Egypt, of the three military leaders and the ex-President of the Council, to answer for their conduct.

Tuesday's despatches from Egypt were of a contradictory character. Arabi Bey is said to have been circulating statements that he had received a telegram from the Sultan announcing the deposition of the present Khedive and the nomination of Halim Pasha to succeed him. The British community at Alexandria has appealed to the British Consul for greater security against the disorderly soldiery. The joint English and French fleet, though able to silence the forts of Alexandria, can only spare 300 men to meet the Egyptian garrison of 3,000, who are daily becoming more and more exasperated.

A despatch from Tunis says that the French authorities are greatly irritated by intelligence that Turkish troops have disembarked near the frontier, between Tripoli and Tunis, in order to reinforce a camp already existing. The submission of the insurgent Arabs is now regarded as improbable.

There was an exciting debate on the Repression Bill in the House of Commons on Wednesday. Mr. Gladstone denounced Mr. Dillon for approving outrages by refusing to assist the Government in carrying the bill. Mr. Dillon replied that he had always denounced outrages. In regard to the objection of the Irish judges to the supersession of juries, Mr. Gladstone declared that if Parliament were to allow the judges to interfere in the framing of the bill, they would abandon one of the most important functions of the Government. He said he thought the institution of a special tribunal was necessary, but this question could be discussed in committee. He deprecated a long discussion of the bill, and said no good could come of it, as it would engender animosity between England and Ireland. Sir Stafford Northcote said that whatever fault might be found with the Government's Irish policy, the Conservatives ought to give a solid vote for the bill in the interests of peace and order. On Thursday Mr. Parnell made a very moderate speech. He said he regretted the Government had not confined itself to the Arrears of Rent Bill, which would have brought about a settlement of Irish affairs. Fresh coercion would simply play into the hands of the secret societies. Mr. Trevelyan made a speech, in which he admitted that the Government sent simultaneously messages of conciliation and coercion, but pointed out that the messages were not sent to the same address. He also said that the powers granted by the Repression Bill in regard to public meetings would only be exercised where meetings were part of the machinery of violence and disorder. Mr. Cowen offered an amendment to the bill declaring that while the House is desirous of aiding the Government in the detection of crime, it disapproves of restrictions upon the free expression of public opinion in Ireland, which was rejected by a vote of 344 to 47.

A memorial signed by forty-seven Liberal members of Parliament has been presented to Mr. Gladstone, urging a reduction of the period in which the Repression Bill shall be in force, and a modification of the clauses in regard to intimidation, public meetings, and the press. So much opposition has been shown to the Prevention of Crime and the Arrears Bills during the last week that there seems to be little prospect of either measure becoming a law before a late period in the session, and the rules for regulating the procedure of the House will therefore probably be put off till next year. Should the forthcoming debates indicate any factious spirit of obstruction to the Prevention of Crime Bill, the Government will make a declaration of urgency in order to hasten forward the measure.

Lord Salisbury, speaking at Stratford on Wednesday night, dwelt on the importance of constituencies preparing for a general election, which, he said, must speedily occur. He severely censured the Kilmainham compact, and described the Arrears of Rent Bill as a measure for paying the debts of persons from a fund on which they have no claim.

A letter from Mr. Davitt to Bishop Nulty, of Meath, violently denouncing landlords and demanding Home Rule, has been published. Bishop Nulty read the letter to the assembled clergy of his diocese, who received it with enthusiastic applause. In this letter Mr. Davitt says the Irish have been accused of not giving the Land Act a fair trial, but that the truth is they refuse to give landlordism any more trials. He also says that the Repression Bill is an act for the better encouragement of secret societies.

Archbishop McCabe was enthroned with imposing ceremonies at the Catholic Cathedral at Dublin, on Sunday. In replying to addresses after his enthronement, the Cardinal expressed his belief that, in spite of the ominous shadows now cast on Ireland, there was yet a bright future in store for her.

The London *Standard*, discussing the correspondence between Mr. Lowell and Secretary Frelinghuysen touching the Irish suspects, says it is a pitiable spectacle to witness the Foreign Office of the nation to which Story, Wheaton, and Kent belonged repudiating the elementary principles of international law at the bidding of a few Irish rowdies in New York and electioneering wirepullers.

In the House of Commons, on Thursday, Sir Charles Dilke said that confidential conversations had taken place between Lord Lyons, the British Ambassador to France, and the Mexican Minister at Paris regarding the resumption of diplomatic relations between England and Mexico, but that they had thus far proved fruitless.

A movement has been started in England to raise a memorial to the late Charles Darwin, by establishing a fund associated with his name, the proceeds of which will be devoted to the furtherance of biological science.

An official denial of the engagement of the Princess Beatrice to the eldest son of the Landgrave of Hesse has been published.

The race for the Derby Stakes at the Epsom summer meeting on Wednesday was won by the Duke of Westminster's chestnut filly Shotover. Lord Bradford's Quicklime was second, and Mr. Pierre Lorillard's Sachem third.

A despatch from London announces that Herr Neumann has nearly concluded arrangements for a visit to America with his German Opera Company early in 1883, to perform the "Ring of the Nibelung" and other operas by Wagner.

The Czar of Russia, "desirous to appease the people," as the despatch puts it, has decided to grant reforms. Two commissions will be constituted to consider the question of central institutions and the share in the administration to be given to the people. There is a committee at present sitting to examine local institutions. General Melikoff is made supreme head of all three commissions. A manifesto will soon be issued stating that the Czar desires to celebrate his coronation by granting reforms, but that he is compelled to postpone the ceremony for a year, because of the impossibility of completing the preparations sooner.

The St. Petersburg *Official Messenger* announced on Wednesday that by order of the Emperor the Government is firmly resolved to punish inexorably all who commit outrages against the persons and property of Jews. Governors and other authorities are therefore commanded, on their personal responsibility, to take timely measures to prevent such outrages, and any remissness in carrying out this order will be followed by dismissal from office. The *Messenger* also publishes the regulations agreed upon by the Committee of Ministers and approved by the Emperor. They provide that Jews shall henceforth be prohibited from settling outside of towns and villages except where Jewish settlements already exist. Jews are prohibited from trading on Sundays and on Christian holidays. All contracts of purchase or tenancy with Jews are provisionally suspended. These regulations are to apply only in governments where Jews are permanently settled. Notwithstanding the Emperor's order, however, outrages continue. The Governor of Kieff has issued a proclamation to the inhabitants of Balta, declaring that the authors and instigators of outrages upon Jews will be tried by court-martial, and that if the number of police is insufficient to prevent outrages, the military will be used. The Chief of the Balta police has recommended the Jews to "remain calm," and has assured them of the immediate repression of attempts at outrages.

A despatch to the Vienna *Presse* from Brody says that the Jews there are without bread, and their children almost starving. On Monday evening they noisily demanded bread and means to continue their journey. The authorities were compelled forcibly to restore tranquillity.

A despatch from Paris says that a duel took place on Wednesday evening between the Chief of the Department of Central Administration in the Ministry of Finance and M. Dreyfus, private secretary to M. Wilson, Under Minister of Finance. Both were wounded, but neither seriously. The causes of the duel were violent articles in the *Lanterne* newspaper against the Finance Department, which were written by M. Dreyfus.

Several hundred Communists made a demonstration on Monday in the Cemetery of Père-la-Chaise. Louise Michel was among the speakers. The tomb of Blanqui was visited and adorned with flowers.

A despatch from Madrid says that the revenue receipts of the last nine months show an increase of 22,000,000 pesetas over those of the same period of the previous fiscal year.

TUESDAY, May 30, 1882.

THE TRUE COURSE FOR INDEPENDENTS AND "HALF-BREEDS."

THE President's removals of Mr. R. P. Lathrop from the Internal Revenue Collectorship, and of Mr. W. N. S. Sanders from the Surveyorship of Customs at Albany, to make way for "Johnny" Luby and "Jimmy" Bentley, have almost every element of badness which it is possible for a removal to have. There is no theory of the civil service which supplies a defence for them, and least of all the President's own theory, as propounded in his late message to Congress. They oust faithful and competent officers without cause before the expiration of their terms. They put in their place tricky and disreputable political adventurers, best known as tools of the notorious John F. Smyth, whose misconduct as Superintendent of Insurance was so gross that Governor Cornell, when he renominated him, under party pressure, two years ago, found it impossible to get a faithful Republican Senate, even during the Conkling reign, to confirm him. They offend deeply that portion of the Republican party which proved to be the strongest at the last Presidential Convention and at the last Senatorial election in this State, and which, no one doubts, is strongest at the polls. In fact, it would be impossible to find a man in public life, from the President down, who could consistently defend them. Of course defenders of them can be found, but they are men who do not care about consistency, and are ready on a pinch to lie themselves out of any ordinary "corner." You might call up in succession a representative of every variety of Republican at present in existence, and show him these appointments, and though several would say they liked them, not one would say that he knew of any publicly propounded view of the mode in which administrative offices should be filled which would justify them. In fact, the only defence of them which is attempted is that old one of the late Mr. William M. Tweed, which consists in asking, "What are you going to do about it?"

The denunciation of the appointments is not of course, under these circumstances, confined to civil-service reformers, properly so called. Even that portion of the "Half-Breed" press, like the New York *Tribune*, which has no confidence in the plans of the reformers, and believes in the spoils system (under the name of "practical politics"), inveighs against the appointments in the language of reform, and with tones and gestures of indignation worthy of Mr. Dorman B. Eaton. The reasons it gives for disliking them are almost identical with those which one might hear at the rooms of the Civil-Service Reform Association. This is not surprising, considering how rapidly the public during the past three or four years has begun to perceive that public business, being the business of a body of moral, industrious, and rational beings, cannot greatly differ in its nature and methods from that of moral, industrious, and rational individuals. The perception of this now colors unconsciously nearly everything which even politicians say in describing the evils of the present system. The Half-Breed papers, in fact, in their diagnosis of the disease, cordially agree with the professed reformers, and make it known vigorously in discussing the President's present policy.

Thus far, however, they say nothing about a remedy, or, if pushed, talk about it in what must be considered a very impractical and visionary way. In fact, the only remedy to which they make any allusion is that old nurs ery panacea of "being good." They would like the President to be good, and stop removing good officers, and John F. Smyth to be good, and not push bad men for office, and "Johnny" Luby and "Jimmy" Bentley to be good, and not seek offices for which they know they are too wicked and incompetent. In fact, like Smyth, and Conkling, and Platt, and Logan, and Cameron, and all the rest of them, they seem to think it necessary, in order to get good tax collectors for the United States, to raise the whole nature of man several feet, though they always decline to say where the jackscrew is to be found which is to perform this gigantic operation.

We would now ask them once more, while their grief is still fresh and their minds impressionable, under this great Albany affliction, whether they have ever heard of any great political change for the better being effected by the simple improvement of human character, without aids in the shape of laws and regulations? Has a single governmental abuse of long standing ever been removed in any country by a simple improvement in the moral perceptions of the men who practised it or lived by it? Was slavery abolished by the slaveholders? Was the British Parliament reformed by the growth in grace of the owners of rotten boroughs? Were the scandalous abuses which formerly attended the granting of charters in this State done away with by the resolve of legislators to be pure, and of the promoters of corporations to use only honest means to accomplish their ends? Questions like these seem almost silly, and yet when one reads the comments of the Half-Breed press on the President's doings they seem almost necessary. The answer to them is obvious. Political abuses do not cure themselves. Improvement in human character does not cure them. They have to be cured by legislation, or, in other words, a mode of cure has to be provided by legislation. There never will be any end to the performances by which the President is now surprising the whole country as long as it is left in his power to make and fill vacancies as he pleases, because, as long as this power exists, the power to dismiss without cause will surely be exercised. We have now had experience enough to satisfy any reasonable person of the folly of relying on any President's good intentions, and of the absolute necessity, if we wish for a cessation of these scandals, to provide a mode of entering the service which no one can control or pervert to personal ends. This will take away the great incentive to removals without cause; for be it remembered that Messrs. Lathrop and Sanders would still be in their places if "Johnny" Luby and "Jimmy" Bentley could enter the service only through competition, and could become collectors and surveyors only by promotion. This is the moral of the whole affair. It contains no lesson about human nature, but it does contain a striking reminder of a defect in our laws.

THE REPUBLICAN INDEPENDENTS IN PENNSYLVANIA.

ALL accounts agree that the State Convention of Independent Republicans which took place in Philadelphia on May 24 was a very respectable body, in numbers as well as character; that in it almost every district in the State was represented; that it contained many Republicans of great political influence; and that it exhibited much genuine enthusiasm and unyielding determination to break down the dictatorship of the Camerons. The platform it adopted might have been more explicit, but it is a good platform as platforms go, its real value depending upon the intelligence and spirit of the men who stand behind it. The demand for civil-service reform which it contains, was cheered by the Convention with especial fervor. The Convention put forth a complete State ticket, composed of very respectable names, to run against the candidates nominated by the Cameron Convention, who claim to represent the regular Republican organization. The movement is distinctly one of revolt against boss rule, which in Pennsylvania has made itself especially obnoxious. It was not originally inspired by the desire to put into practice a definite and well-digested scheme of reform; but, the demand for such a reform scheme growing from day to day in extent and urgency, it naturally drifted into taking up that demand, and the peculiar significance of the Convention is that it made this particular object its principal one. The campaign it has initiated may therefore acquire considerable importance, if it is made one not only of exciting, but also of instructive agitation. The real capacity of the movement to leave behind lasting benefits will have to show itself in the first place in this direction.

As to the strength of the revolt, it is evident that it will be much greater than that of the "bolt" led by Mr. Wolfe last year. He polled about 50,000 votes, and would have defeated the Cameron candidates had not the Democrats weakened their own vote by turning a part of it over to Mr. Wolfe. But Mr. Wolfe was not supported by many prominent and influential Republicans who took an active part in the Convention on Wednesday. In fact, the present candidate of the Independents for the Governorship was last year one of those who deprecated Mr. Wolfe's "hasty" movement, and gave a reluctant but effective support to the "regular ticket." It is easy to see that with such accessions the Independents muster very much greater voting strength than they did a year ago, and that, although they will not be able to elect their own candidates, which, a few enthusiastic men excepted, they do not expect, they will have more than enough votes to defeat Mr. Cameron's candidates, thus permitting the election of the Democratic ticket. The Independents do not blink this issue, but frankly declare their determination to deliver the party of boss rule, and thus to regenerate it, at the expense of temporary defeat.

Some time ago Senator Mitchell of Pennsylvania asked President Arthur to withdraw the appointments asked for by Mr. Cameron, for the sake of peace in the party, but the President is said to have replied that

he had been a "practical politician" for twenty-five years, and did not understand and appreciate "abstract politics." He therefore stood by Mr. Cameron, the beau ideal of a practical politician. We wonder whether the President and Mr. Cameron, when they look at this very formidable revolt in Pennsylvania, do not begin to feel some misgivings as to the practical value of the practical politics which bring forth such very curious practical results. Here is the Senator's own colleague, Mr. Mitchell, not at all a restless theorist and innovator, nor a natural defier of the powers that be, but rather a mild and yielding sort of man, not at all inclined to step out of the regular track; and there is State Senator Stewart, an "earnest Republican," who until recently was willing to sacrifice ever so much of his personal pride and his liberal inclinations to preserve the Republican party from harm; and there are a host of others of like disposition, all, at last, actually driven to the declaration that this kind of "practical politics" must cease, and that they stand ready—earnest Republicans though they be—to defeat the Republican party again and again, until it does cease. Can it indeed be a really "practical" kind of politics that brings forth such fruit? Mr. Cameron has also occasion to reflect that when this strong opposing force, provoked by him, has actually overthrown him, which now seems inevitable, his "practical" statesmanship, confined to the manipulation of the patronage, will be entirely exhausted, and will leave him absolutely no resource to put him on his feet again. And President Arthur, studying this remarkable event, may further reflect that such movements are contagious, and that the masses of the party are just in that temper which would evolve like results from like "practical politics" in every State of the Union. There is already a little muttering of a storm observable in Massachusetts not unlikely to break out as soon as the "practical politician" of the Cameron school undertakes to put himself forward in the politics of that State.

It is reported in some of our contemporaries, we do not know upon how good authority, that when President Arthur next visits this city he will "look over the ground" with a view to many "important changes" among the officeholders, which will "make it hot" for the Half-Breeds and "renegade Stalwarts," and bring on "a lively time generally." We are curious to see what "practical" view President Arthur will take of the political situation here, for, as to the general tendency of "practical politics" to produce a "lively time," the State of New York would probably prove no exception. Some premonitory symptoms of it were observable a year ago, and there seems to be now more electricity in the air than there was then.

It is very doubtful whether the President and Senator Cameron will conceive a less contemptuous opinion of "abstract politics" than they now entertain as long as they are in office. But it is quite certain that they will when, after the expiration of their terms, they take a retrospective view of what was and what might have been. It will then certainly occur to them that "practical politics," treating the offices of the Government as political perquisites and tools of power, and concentrating that power in the hands of a few leaders—thus not only debasing and demoralizing the whole machinery of the Government, but also driving into desperate opposition a large number of men of character and influence who would prefer to be loyal partisans—are not very practical after all. Further, that the "abstract politics," which would have suggested a candid inquiry into the real needs and interests of the public service, and respectful and harmonious coöperation with that public sentiment which demands conscientious care for those needs and interests, would not have been so very "abstract" after all; but that their acceptance would have been the really practical thing, for it would have saved those who pushed it aside with contempt much trouble and humiliation, besides effectually promoting the public good.

THE REASONS WHY MR. LOWELL SHOULD BE RECALLED.

The outcry raised by some newspapers against Mr. Lowell has some very peculiar features. They demand his recall on the ground that he has not been sufficiently strenuous in defending the rights of American citizens, but they are wholly unable to name any American citizen whose rights have suffered through his negligence or timidity. Not one of them ventures to say that O'Mahoney, or McSweeny, or McEnery, or Slattery, or Brophy, or Gorman, the six American suspects, is an American citizen in good and regular standing, whose interests have not been properly looked after by Mr. Lowell, and for whose liberation we should be willing to go to war or make reprisals. This, we believe, is something unprecedented in diplomatic history. It makes the attack on Mr. Lowell very like indicting him for the murder of O'Mahoney, not because he had been murdered, but because he (Mr. Lowell) had not displayed sufficient horror at the thought of his being murdered. Mr. Lowell has not displayed any want of zeal in defence of American citizens, but he has expressed serious doubts about the bona-fide citizenship of certain persons claiming American citizenship. It is this doubt which has made all the trouble, and the funny part of the story is that his assailants share the doubt. They do not believe in Citizen O'Mahoney or Citizen McSweeny any more than he does. Nor do they maintain, as they ought to maintain in order to be consistent, that an American Minister ought not to question any man's American citizenship, and ought to accept every Irishman's "papers" as conclusive proof of his title to a certain amount of excitement on his behalf toward the British Government, in case it deprives him of his freedom. They acknowledge that no one is entitled to the patriotic fury of the American Minister in London until he has shown that he is a real and not a sham citizen, an honest man, bent on lawful business, and not a scheming knave, bent on crime.

"Oh," but they say, "Mr. Lowell offered these men a bribe to induce them to waive their claims, such as they were, to his patriotic fury and go home to the United States, this being the last place to which this class of citizens ever want to go. He actually proposed to give these estimable persons forty pounds apiece to leave their dungeons and return to their beloved country. Was anything so shamefully un-American ever done before? Think of trying to bribe the O'Mahoney, of Ballydehob, to return to the dear old land from which he had been absent during thirteen years of his fifteen years' citizenship, owing to his being engaged in the hateful business of a British taxpayer, officeholder, and grogshop-keeper." Mr. Lowell did make this offer, it is quite true, but if he was wrong in doing so, the wrong lay in being over-generous and over-ready to spend good money on very unworthy objects. His fault here was, in short, the fault, not of a diplomatist, but of a simple-minded philanthropist. In other words, he proposed to pay them for doing what the British Government had a perfect right to compel them to do, if they were American citizens, but had no right to compel them to do if they were British subjects. If the American suspects were really American, the British Government had the right to expel them peremptorily under the law of nations. All the authorities, American as well as others, are agreed on this point. Mr. Bancroft acknowledged it in his correspondence over the German-American naturalization question in 1875. In the well-known Passenger Cases decided by the United States Supreme Court, the right of sovereign States as a police power, resting on what Judge Grier called "the sacred law of self-defence," to expel "persons dangerous to the peace or morals of the community," or persons "with incendiary purposes," was acknowledged incidentally by all the nine judges. This was not the point raised in the cases, which was, whether this power was among those reserved by the States under the Constitution; but that a sovereign State had it, and could not as such deprive itself of it, all were agreed. That no treaty with a foreign power was considered by us as capable of depriving a Government of this right is shown by the fact that the Act of Congress of June 25, 1798, authorized the President to expel such aliens as "he shall judge dangerous to the peace and safety of the United States, or shall have reasonable cause to suspect are concerned in any treasonable or secret machinations against the Government thereof." This was an unpopular law, but it was not considered an unconstitutional law, or a violation of international obligation, for a treaty had been concluded with Great Britain four years before (1794) which gave the inhabitants of each country full liberty to go and come, and "remain and reside, without any limitation of time," in the other country. So that whether the American suspects were or were not American citizens, Mr. Lowell's offer of money to them to pay their expenses to the United States was at worst mistaken charity. He ought to have thought of many better uses for forty pounds than giving it to O'Mahoney and McSweeny to pay their way to these shores, because he might easily have foreseen that even if he had got them to come out here they would not have remained very long. They would in three months have been claiming again the protection of the flag in Ireland.

The "true inwardness" of the whole outcry has been very happily revealed in some interviews on the matter with Western politicians, reported by the *Herald* on Thursday. Senators Farley, Conger, Coke, and Representatives Willis and Jay Hubbell, all Western men, condemned Mr. Lowell's conduct, without describing it, but they all suggested the same remedy—giving the place to a Western man. Senators Logan and Angus Cameron were not prepared to condemn Mr. Lowell outright, but were very sure that if he was recalled his successor ought to be a Western man. The relations, commercial and other, between New and Old England are, they think, too close to make it proper to have us represented by a New Englander in London. He makes us too friendly with Great Britain. The post should be given to a man of less culture, from Illinois, or Colorado, or Kentucky, who would "make things hum" and beard the lion in his den. What this all means is of course plain enough. They doubtless hold, with Mr. Moore, of Tennessee, that a Union widow makes a very good post-office clerk for a while, but that "the existing peculiarities of our human nature" require that she ought to give way within a reasonable time to your wife's brother. In other words, they want a "new deal," and think it is time for the West to have the London mission, too long reserved to the Eastern "littery fellers." It is this which really makes O'Mahoney, of Ballydehob, seem a victim.

THE LIBRARIANS AT CINCINNATI.

ALTHOUGH the Convention of Librarians at Cincinnati may not have produced anything absolutely new, it shows a progress both in the technicalities of the art and in the higher branches of the profession. The *Saturday Review* is continually surprised to find the tiresome details of cataloguing and classification so much discussed on such occasions, forgetting that those who show this interest pass their lives in struggling with the difficulties of the art, and are naturally eager to have puzzling problems solved. In this line the most noteworthy was a very well-written and well-thought-out paper on the principles of classification, by Mr. Larned, of Buffalo. The far more important work of the Convention consisted in emphasizing the importance of the connection between the libraries and the schools, a connection which has often been spoken of during the last decade, the library being called the People's Museum, but until within five years has been rather theoretical than real. That it has come to be an actual power for good is, in a great measure, due to the experiments tried by the Public Library of Worcester, Mass. The head of that library, Mr. Green, was at Cincinnati, and in an enthusiastic address, full of interesting details, showed how the library had been made not merely to continue the literary life of the scholars after graduation—that is not new—and not merely to afford assistance to the teachers; but actually to take part in the school work, by visits of the pupils during the school hours, as a regular part of their studies on certain subjects.

The account was doubly interesting, first, as an example—one of many—that in sociology the best things do not start into existence full grown, but result from the slight progressive improvements which occur to the man who is always on the watch to supersede the good by the better; and, secondly, that an entirely new era of usefulness is dawning upon public libraries, if only men can be found capable of seizing the opportunity. It needs enthusiasm to undertake and persevere, caution not to undertake too much at the beginning, learning, tact, and a liking for the young to carry it on successfully. These qualities are rare, especially rare in combination; and without them any remarkable success is impossible. But partial success is better than nothing, and they are not likely to be so conspicuously absent as to lead to positive failure. Hereafter, if the work spreads, their possession will be one of the qualifications looked for in a librarian by those appointing bodies who think anything about qualifications.

The experiment has worked excellent results in Worcester. Excepting that Mr. Green cannot be duplicated, one does not see why the same should not be done in scores of our public libraries. It is true that this will introduce an entirely new function into the activity of public libraries, that it will add, to a work that is already somewhat expensive and is viewed with jealous eye by grudging taxpayers, another work which requires in the librarian an even higher order of ability, and will call imperatively for a greater number of assistants. But in the communities which believe heartily in education this will not be a weighty objection. Many of our cities are willing enough to pay for buildings and teachers. In this new work the librarians will be teachers, and the additional expense might well be borne by the school boards. But it will not be necessary to call upon them. When the library thus increases the range of its visible good works, it is likely that there will be less rather than more disposition to find fault with its cost.

A profitable part of these conventions has always been the private interchange of opinion and experience. On the present occasion this revealed the contrast between the Eastern and Western librarians in regard to the tenure of office and the influence of politics. In too many places in the West no length of experience, no degree of fitness for his duties, no amount of devotion to his work will retain the librarian in his post if a new party comes into power. Strangely enough, this does not seem to have prevented the choice of good officers, if one may judge by those who were present at Cincinnati; and the generally steady supremacy of the Republican party of late has allowed them a sufficiently long tenure of office to learn their trade; but we heard of one case where the Republicans succeeded the Democrats, and an officer of worth was expected to yield his place to a man without knowledge either of literature, language, or librarianship, simply because he had always "voted the Republican ticket." Fortunately the Republican papers themselves protested against the blunder and prevented it. As the result of a little inquiry among those present, it appeared that with nearly every one politics had led to his appointment or had nearly led to his dismissal, or was likely to lead to it, or had given him an incompetent school board. In the West, it should be remembered, the public libraries are generally under the charge of the school board, an arrangement which is theoretically laudable, as recognizing the connection that ought to exist between the public system of education and the public's collections of books, but practically very objectionable, as committing the charge of libraries to a body of men who care little and know less about them—men, too, who are elected for another purpose, which too often is simply that they may further the cause of the party by the use of their patronage.

THE ASSASSINATIONS IN DUBLIN.

THE EVENTS WHICH LED UP TO THEM.

LONDON, May 12.

THE expected Irish crisis was long delayed, but when at last it came, it came with a suddenness and violence which startled even those who had been best prepared. And it has not yet passed over, nor shown what its results will be. In this letter I can speak only of its earlier scenes.

For some weeks before the 2d of May it had been felt that some change in the Irish policy of the Government must take place. The Land Bill had been for six months in operation, yet outrages went on increasing, and the condition of the peasantry was in many parts of the country no better than before. Thousands were being evicted, many of whom were no doubt unable to pay up the arrears of rent incurred during the bad seasons that had preceded. As many as six hundred persons were in prison without a trial, under the special provisions of the Preservation of Person and Property Act; yet the country was no more peaceful than when that act was passed, indeed less so. The No-Rent party in the House of Commons, although deprived of the leadership of Mr. Parnell, were as bitter and aggressive as ever; the Tories complained of the Government for not keeping order in Ireland; among the Liberal majority there was a growing feeling that either the Coercion Act itself, or Mr. Forster's administration of it, or both, had been a mistake, and ought no longer to be continued. In short, everybody was disappointed and discontented, prepared for a change, though the greatest difference of opinion prevailed as to the direction in which the change should be made.

The first symptom of the coming outbreak was seen in the demand which the representative organ of the advanced section of the Liberal party made for the retirement of Mr. Forster. The next was the liberation on parole of Mr. Parnell, which, although made for a few days only, and nominally for the purpose of enabling him to attend the funeral in Paris of his sister's child, was generally taken as having some further significance. The third was the resignation of Lord Cowper, the Lord Lieutenant of Ireland, and the appointment in his place of Lord Spencer, who, as having been Lord Lieutenant in former days, and as a member of the Cabinet, would naturally take a far larger share in the actual government of the country than Lord Cowper had done. Meantime a bill had been brought in by Mr. Redmond, one of the Parnellite section, for dealing with the tenants in arrears, and had been advocated by him in a speech more moderate than had for a long time been heard from any member of that section. Mr. Gladstone replied in similar tones, acknowledging the difficulty and importance of the question, as well as the conciliatory spirit evinced by the promoters of the bill, and promising that the Government would take the matter up, in the hope of helping these poor tenants—if necessary, even by loans from the national exchequer—out of their distress.

This was on the 25th of April, the day of Mr. Darwin's funeral. Two or three days later the Government announced that they would on the 2d of May, the day for which a motion by a Tory member arraigning their administration of the Coercion Act had been fixed, make a declaration regarding their Irish policy. By that evening public curiosity had been roused to the highest point. It was known that something remarkable was to take place, and the unusual incident of a Cabinet Council held in one of the rooms behind the Speaker's chair in the House of Commons at the very hour when the houses were assembling, showed that a final decision was being postponed till the latest possible moment. This decision, as you know, was that

Messrs. Parnell, Dillon, and O'Kelly, confined in Kilmainham since October last, should be forthwith released, and the Coercion Act suffered to expire on the 30th of September without being renewed. Mr. Gladstone intimated that information with regard to the views and intentions of Mr. Parnell and his friends had reached the Government which had had some influence in bringing it to this conclusion. But the most important part of his statement was that Mr. Forster had declined to share the responsibility of his colleagues in releasing the suspects and letting the Coercion Act drop, and that he had therefore resigned his office of Chief Secretary to the Lord Lieutenant.

This announcement, which was accompanied by a statement that when the rules of procedure had been despatched new Irish measures would be brought in, was received with very different feelings by different parties. The Parnellite faction, which had pursued Mr. Forster with unceasing bitterness, and charged all the faults of Irish administration upon him, was in ecstasy. The more advanced half of the Liberal party, who had always disliked the Coercion Act, and would not have voted for its renewal, were scarcely less pleased to be delivered from the necessity of separating themselves from the Government, and to see a prospect of reconciliation with the Irish party opened up. The Tories were, of course, indignant. The change of policy —for such, in spite of Mr. Gladstone's disclaimer, they insisted, and not without reason, on considering it—appeared to them a surrender. To open the doors of Kilmainham Jail to the leaders of the No-Rent party while outrages were still rife in Ireland; to proclaim that the Coercion Act would not be renewed, although there was no security for life and property over the island, seemed to them folly little short of criminal. And in these feelings a certain section of the Ministerial party joined—a section which had always valued Mr. Forster's services, and now conceived that he, in whose hands the administration of Ireland had lain for two years, was more likely to be right on so vital a question than his colleagues. However, they professed to be willing to suspend their judgment till they heard Mr. Forster's own explanation of his views and conduct—an explanation which, according to an ancient rule of etiquette, he was not at liberty to give till he had obtained the consent of the Crown. This was the first scene in the drama: it left everybody anxious—firstly, as to what the Government meant to do; secondly, as to what had been the substantial points of difference between them and their late Irish Secretary; thirdly, as to who would be appointed to fill his place and carry out the policy of the new departure. It was commonly supposed that Mr. Chamberlain, who, as the most advanced Liberal in the Cabinet, was credited, though certainly on no sufficient grounds, with being the author of the change of policy, would be entrusted with it. The Irish members openly expressed their wishes for him, the Tories were filling vials of wrath to be discharged on his head and Mr. Gladstone's.

Thus the Wednesday of this fateful week wore away, amid hopes and fears, and varying rumors, which a burning curiosity caught up. There was a great party that night at Mr. Gladstone's house, the official house, in Downing Street, of the First Lord of the Treasury. The Prince of Wales was there, and the Crown Prince of Denmark. Mr. Gladstone looked, in spite of the anxieties crowding on him, strong and hopeful. Mr. Forster, who had come to show that his separation from the Cabinet involved no breach of private friendship, was greeted with sympathy even by those who had disapproved his policy. Lord Frederick Cavendish was there, with no shadow of doom on his frank and kindly face. Distinguished Irishmen were heard expressing their belief that the condition of the country would, for a time at least, improve; some even hoped that the measures for strengthening the ordinary law in Ireland, at which the Government had hinted, might be found unnecessary. An atmosphere of hope was beginning to take the place of the gloom which had so long hung over men's minds. Next day it was announced, about noon, that Lord Frederick Cavendish had been appointed Irish Secretary. Everybody was surprised, and nearly everybody, it must be added, was disappointed. Of Lord Frederick's character and abilities I shall say something presently. Those who knew him best, knew that they justified the Prime Minister's choice. But the House of Commons, which, like every talking body, overvalues gifts of speech and manner, knew him only as an industrious and painstaking Secretary to the Treasury, a modest official who rarely spoke except in committee on matters relating to the estimates, and who spoke sensibly indeed, and with full knowledge of his subject, but neither easily nor fluently. "How," men asked, "will he defend the Government in that constant guerilla warfare which the Parnellites carry on? What administrative experience will he bring to the details of Irish work, where magistrates and police have to be instructed and controlled in duties of unexampled difficulty?" Those who defended the appointment defended it as meaning that Mr. Gladstone, who was attached to Lord Frederick by a specially close friendship, meant to be his own Irish Secretary, and bear the weight of Irish debates in Parliament.

That Thursday evening saw Mr. Forster in the House of Commons, though no longer on the Ministerial bench, and saw every corner of the House of Commons filled as it had not been on any preceding occasion since the election of 1880. The session opened by a painful passage between Mr. Dillon, who, liberated from Kilmainham on Tuesday night, had returned to take his seat, and Mr. Gladstone, with reference to the terms on which he and his two fellow-prisoners had been released, and a string of close and passionate questions pressed on Mr. Gladstone by the Tory members on the same subject. Then Mr. Forster rose to make his statement of the reasons which had caused his resignation. You know its substance. I need write only of its manner and the sentiments it evoked. He was cheered at first by the Liberals as well as the Tories, the Parnellite party alone showing their hatred by their silence. When, after declaring that he would have agreed to the release of the three "suspect" members, had it been accompanied by measures of repression, he observed that in his judgment those measures ought to have had precedence of the resolutions for reforming the procedure of the House, the remark was caught up rapturously by the Tories, whose dislike to the proposed introduction of the power of closing a debate by the majority is intense; while Mr. Gladstone gave a start of surprise and turned half round toward his late colleague behind him. When toward the close of his speech he dilated in terms of growing strength on the danger of concessions to agitation, and warned the country against paying blackmail to violence, he was cheered to the echo by the Conservative Opposition, while his own side of the House preserved for the most part an ominous silence. Mr. Gladstone then, with a calmness that had something melancholy in it, indicated the intention of the Government to bring in, as soon as the procedure resolutions were settled, measures for dealing with secret societies and generally in aid of the powers of the law, as also a measure for the relief of tenants in arrears; while Mr. Parnell, who had walked into the House during Mr. Forster's speech, in his peculiarly quiet, dry, precise manner, denied that he had been released upon any conditions whatever, and claimed for himself and his friends full liberty to deal as they thought fit with any proposal the Ministry might make. It is long since a scene so dramatic has been witnessed in our Parliament—not only because the leaders were visibly struggling to conceal their excitement, nor because the passion of the rank and file of the Tory party vented itself in interruptions which the Prime Minister was repeatedly forced to check, but because every one felt what great issues and results lay behind this sudden alteration of the attitude of parties. The Parnellites, who had for the last few weeks been joined in a scarcely-concealed alliance with the Tory party, now turned fiercely upon them and protested their friendliness to the Government, declaring that now, at last, when Mr. Forster was away and the coercion policy abandoned, all would go well in Ireland. The advanced Liberals, irritated by Mr. Forster's speech, seemed half inclined to agree with them.

But what the Government gained in one direction it was evidently likely to lose in another. No one could mistake the cloud that had settled down on the faces of what is called the Whig section of the Ministerialists, the "moderate men," the landholders, or moneyed people, who accepted with regret the Land Act of last session, and think that the rights of property are in danger. They had trusted Mr. Forster, they regretted his retirement, and held, with him, that the release of the suspects was an unworthy concession to disorder and sedition. They disapproved of any communications, anything like a negotiation, between the Ministry and the suspects. Next day their discontent took shape in the formation of what, in our political slang, are called "caves"—groups who disapprove the conduct of the Ministry, and are inclined to withdraw their support from it. Besides one from the Tory side, several Liberals gave notice of motions calling on the Government to disclose at once their measures for strengthening the law in Ireland. It was reported that the Government, recognizing the strength of this feeling, was about to soothe it by declarations to be made in the debate which the Opposition had demanded for Monday. But before Monday came, everything was changed by news which shook England as nothing has shaken it within the memory of living men—the news of the murder of the new Chief Secretary and the Under Secretary for Ireland, on the very day when the former and Lord Spencer had landed in Dublin amidst the acclamations of the people. Y.

THEIR EFFECT ON PUBLIC FEELING.

LONDON, May 13.

SUNDAY, May 6, was a day the like of which has not been known in England this century or last. We have long been so accustomed to conduct our political disputes in a peaceable way, never putting people to death, seldom even trying them for treason or sedition, wholly unused to the sight of arms and blood, thinking of all such things as lying far back in the past, that to hear of two high officials—one of them the brother of the nobleman second in command in the Liberal party—being murdered by political assassins on a summer's evening, in a public park, under the very windows of the Viceroy's residence, seemed no more credible than if we had been told that the chiefs of the Opposition had lost their heads on Tower Hill. Although policemen have for some months past watched the houses of the Prime Minister and Irish Secretary, we never could bring ourselves to think

them seriously in danger. This terrible news, therefore, was at first received with incredulity. It was not till it came with something of circumstance that its truth was admitted. It reached London on Saturday night, about 10 o'clock, but was not generally known in England till Sunday forenoon. Generally, no news, however important, makes its way on a Sunday; for few people out of London, and not many there, read a Sunday newspaper. But this was so startling that every one who heard it made haste to spread it. Most people heard it leaving church at half-past 12 o'clock; by 2 every one in the towns was apprised, and till evening the streets were in most towns full of people, moving hither and thither, thronging round the newspaper offices to inquire if anything more were known, stopping to form groups to speculate on the manner of the deed (which at first was not known) and the chances of seizing the murderers.

The first feeling was one of amazement and horror; next came anger, which increased as the horrible circumstances of the attack became known. Many people feared a general outburst of fury against Ireland and the Irish. Fortunately, we escaped this; and we escaped it not only because the English are a sensible people, capable of self-control, but also because it was plain to any one who thought about the matter that the crime must have been committed in the hope and with the wish of destroying any reviving friendliness and good feeling between the two countries, of turning the Government back from their policy of conciliation, and of thereby driving the mass of the people more and more into the arms of the desperate faction by which the murder was perpetrated. This was quickly felt; it was expressed by most of the leading organs of liberal opinion through England and Scotland; it was stated with an earnestness no one could doubt by Mr. Parnell, Mr. Dillon, and Mr. Davitt in the manifesto which they issued to the Irish nation. One may say, on the whole, that the English people bore the shock with a calmness and firmness worthy of their history and their freedom. But there were also in some quarters furious cries raised for general and reckless vengeance, for martial law, the proclamation of a state of siege in Dublin, and other such desperate and useless remedies. One prominent organ went so far as to make the assassination the ground for a political attack on the Government, and many Conservative papers held that it justified Mr. Forster's view of the situation, though they forgot that the Coercion Act was still in force, and that the crime, so far from being done in the interest of the three members who had just been released against Mr. Forster's advice, was obviously the greatest misfortune that could have befallen them and that more moderate section of the Nationalist party to which they belong. Nothing did more to allay the passion which the first news had excited than the calm and pathetic attitude of the nearest relatives of the murdered Chief Secretary. They were the first to entreat that the crime should not be charged on the Irish people as a whole, and to express the hope that England would not gratify the assassins by letting herself be turned from the path of sympathy and conciliation A letter, written by the widow of Lord Frederick (a daughter of the late Lord Lyttleton, and a niece of Mrs. Gladstone), which Lord Spencer, the new Lord Lieutenant, read to a meeting at Dublin, produced a profound impression, and deserves, for its simple dignity and noble self-forgetfulness, to go down to posterity with the narrative of these strange and terrible events.

Of Lord Frederick Cavendish himself, whose tragic end would give him a place in history, even had his abilities been far inferior to what they were, a few words must be said. He was a retiring and modest man, whose apparent diffidence of his own powers made people rate him below his real value. He was not a fluent speaker, and in the place he filled was seldom required to make set speeches, so that the world at large, and even the House of Commons, knew him but slightly. Every one who saw something of him in society, or had to do business with him, could not but like him, there was something so genuine and upright in his character—so much simplicity, so much kindliness, such an evident desire to do what was right irrespective of any personal interests. He was very careful and thorough as an official, understanding his work perfectly, and discharging it with steady, unobtrusive zeal. But the quality which chiefly recommended him for the difficult post of Irish Secretary was the singular fairness of his judgment. With him it was a moral as well as an intellectual quality, and being united with great candor and self-forgetfulness, it would have enabled him to learn how things really stood in Ireland, and to keep from falling into the hands of any one set of advisers, while at the same time his sterling goodness of heart would have made itself appreciated by those who came in contact with him. It is not, therefore, merely that compassion and sorrow which now naturally gather round him that have made men feel how much was lost in his death, but a recognition of the presence in him of qualities which would have been more helpful in the actual administration of the country than eloquence or skill in debate.

His funeral in the churchyard of Edensor, a tiny village close to Chatsworth, in Derbyshire, the famous country seat of his father, the Duke of Devonshire, was the most remarkable England has seen since the burial of the Princess Charlotte. The valley in which Chatsworth stands is one of the loveliest in England, and on this bright May day all the trees were in fresh and tender green, and a spring sun was bathing the hillsides in the richest and softest light. Three hundred members of the House of Commons, with some peers and the officials of the Treasury, had come down from London, 140 miles, by a special train, which was greeted with silent marks of respect and sympathy at every station which it passed, the people crowding the platforms and even climbing on the bridges to watch it sweep past. In Chatsworth Park a prodigious crowd of people—some estimated the number at 50,000—had gathered from the towns of Lancashire and Yorkshire, and lined the path which the funeral procession took from Chatsworth House to the church, all standing bareheaded and perfectly silent. Scarcely a policeman was to be seen, for no such gathering had been expected; but the most perfect order and decorum reigned. It was a real national mourning for men who had fallen in the service of their country just as truly as if they had been defending its shores against an invader. The very depth and universality of the feeling displayed seemed to sober men's minds, and since that day less violent language has been heard, and people have come to feel that the Irish question must be dealt with in a cool and judicial way. The sympathy shown in America has been gratefully received, and though there have been discordant manifestations in some parts of Ireland, the great mass of the Irish people seems to be filled with indignation and shame. No words have been used there similar to those which we have been astonished to read reported from the Irish meeting in New York, nor is this owing merely to the fact that men might be afraid to express their true sentiments too openly on this side the ocean. The extreme section of the Nationalist party, the section which advocates assassination, and, as we now learn, uses it, is believed to be extremely small in Ireland, and might almost be disregarded if it were not encouraged and supported from abroad.

The very night of Lord F. Cavendish's funeral saw the recommencement of our party strife here; but this, with the singular scenes of the present week, is a subject too long for the present letter. Y.

THE CORRESPONDENCE OF GEORGE SAND.

PARIS, May 12, 1882.

THE first volume of the 'Correspondence of George Sand,' the only one which has yet appeared,* extends from 1812 to 1836. It enters at once *in medias res;* there is not a word of introduction, not a biographical notice, not even an indication of the name of the person who has undertaken the work of collecting and publishing the letters. With the French public, to be sure, George Sand needs no introduction. She has lived before our eyes, so to speak; she has lived in her works, as her novels are the mirror of her changing passions and emotions. What a worker she was! The collection of her works contains no less than 105 volumes; and all these 105 volumes were written, in one sense, with her blood—they are all full of her emotions, of her hopes, of her fancies, of her troubles.

The 'Correspondance' begins in 1812, when Mlle. Aurore Dupin was eight years old. The letters are written at Nohant, which is near La Châtre; it was then the estate of Madame Dupin de Francueil, and it became afterward the favorite sojourn of Madame Sand. Mlle. Dupin was married very young to M. François Casimir Dudevant, and she had her first child, Maurice, in 1823; her eldest sister was married to a M. Cazamajou. In 1825 she made a journey to the Pyrenees. Her love of nature was there well satisfied: "Such is my enthusiasm over the Pyrenees that I shall think for the rest of my life of mountain torrents, grottos, precipices." She makes long descriptions for her mother, in which you can already find the writer. We find also her character already developed in many letters. For example, speaking of a friend who led a bad life: "—— will always be dear to me, however unfortunate he may become. He is already unfortunate, and the more so he becomes, the less interest he will inspire—such is the rule of society. As for myself, I shall repair his misfortunes as far as in me lies. He will find me when others turn their back on him; and, even if he sank as low as his brother, I should still love him from compassion, after having ceased to love him from esteem." This is the true George Sand already—a heart open to compassion, capable of great faults, but, on the whole, noble and generous. "If I were a man," said she, "I would, having the will to serve him, answer for him; but, being a woman, what I can get from him is nullified by the difference of sex, of position—by a thousand things which thwart my intentions." This letter certainly shows an active sort of charity. Madame Sand was, in truth, always a good and devoted friend; she sinned more against herself than against others.

The society of La Châtre, where Madame Sand spent the winter, was very exclusive. "You know," she writes to a friend, "that there are here seven or eight sets which never mix together. You know, also, that Périgny and myself, who make a pretence of being philosophers, invite everybody. I do not receive this year; but he has begun. The first evening passed off tolerably well, except that the most *huppées* [the proudest] were stupefied at seeing themselves amalgamated with what they call the *canaille*,

* 'George Sand. Correspondance. 1812-1876.' Paris: Calmann Lévy; New York: F. W. Christern.

though this *canaille* is as good as they. The music-master and his wife, who is very nice, caused a great indignation, and the good souls said that Périgny was polite to the musician in order to economize five francs for his soirée." She goes on to say that at the next soirée nobody came except herself and the music-master. Such a society was a little too narrow for a person like Madame Sand.

She had a daughter, whom she named Solange; and her son Maurice, whom she educated herself at first, was coming to the age when he must have a tutor. She chose M. Jules Boucoiran, who remained ever afterward an intimate friend of the family. Boucoiran was still a very young man; and Madame Sand's letters to him, when she was away from Nohant, are very interesting, full of good sense, of good advice, and of affection. She treated him like a mother, and in fact she always was motherly toward all men, even toward those who afterward became her lovers.

The Revolution of 1830 caused a great agitation at Nohant, for Madame Sand had relations in Paris. She had an uncle who was inspector of the King's household. This uncle was married, and had a daughter. So far, she had taken no interest whatever in politics; she was essentially domestic, though she was not provincial; she had friends, and was devoted to them. She was afraid at first of the Revolution of 1830; her pacific *pays* was agitated: there were troubles at Bourges, at Issoudun, even at La Châtre. Still she writes to her mother: "I am not disposed to be afraid of the dark future which is painted for us. Fear magnifies everything; and these sanguinary men are, seen from near, half the time mere drunkards, who become merry with wine, and who will kill nobody. They make much noise and do little harm; still, I am glad you are not in Paris."

She took more interest in what was then called the Romantic movement, and she wrote "Romantic" epistles to her friends, ridiculing the style of the new school. In September, 1830, there came a great crisis in her life. Up to that date we see no allusion in her letters to any domestic differences with M. Dudevant, her husband; but in a letter to M. Jules Boucoiran, of the 3d of December, 1830, we learn that in looking in her husband's secretary she found a package to her address. There was written on it: "Open only after my death." "I had not," said she, "the patience to wait till I should be a widow. With a health like mine, I cannot hope to survive anybody. Besides, I imagined my husband dead, and I was curious to know what he thought of me during his lifetime. The package being addressed to me, I had the right to open it without indiscretion." This is very strange reasoning, and Madame Sand says more than she intends when she makes such a confession. Her curiosity was rewarded. "Good God!" says she, "what a will! Maledictions, and that was all. He had concentrated there all his ill humor, all his anger against me, all his reflections on my *perversity*, all his sentiments of contempt for my character." She drew her conclusions rapidly: she said to herself that it was needless for her to live with a man who had for her neither esteem nor confidence. She took her decision "irrevocably." She said to her husband: "I want a pension. I will go to Paris; my children will remain at Nohant." "This," she adds, "about the children was a feint. I have not the slightest idea of abandoning my children." She proposed to live six months of the year in Paris and six months at Nohant. "Hitherto he has treated me as if I were odious to him. Now that I am sure of it, I am going away." But she wished to return whenever it suited her and whenever the children required it. She implored Boucoiran to leave Paris, where he had a good place, to return to Nohant and take care of her little Maurice.

She arrived in Paris in January, 1831. She had the consolation of knowing that the good Boucoiran had returned to Nohant, and was acting there the part of a mother. She launched herself at once on the stormy sea of literature. She was not rich, she wanted more money, and she had something in her which could not be controlled. This is the time when the acquaintance of Madame Dudevant with Jules Sandeau began. Sandeau was younger than she. They wrote together, Sandeau signing the articles. She soon adopted his name, Sand, as she did not wish to write anything under the name of her husband. The letters to Boucoiran are full of her projects, of her hopes, of her disappointments. "I am resolved to follow the literary career. Though I am often disgusted, though days of laziness and of fatigue interrupt my work, I feel that my existence is now fixed: I have a task; I have a passion." She wrote for the *Revue de Paris*, for the *Mode*, for the *Artiste*, for *Figaro*. "If you knew what it is! But one is paid seven francs the column; and with that one eats, drinks, and even goes to the play." She had truly the soul of an artist, of a Bohemian: she amused herself everywhere. She had no expensive tastes; she simplified herself, as the Russians say. In April, 1831, she made a visit to Nohant, and she lived there for about two months; then she returned to Paris. We see her now more and more interested in politics; she saw chiefly men, and men who had their fortunes to make, and who were in the Opposition. Her elastic nature took the bent of her *entourage*. There was also in her a born rebel; she hated instinctively all social laws and all control.

In September, 1831, we find Madame Sand again at Nohant, where she took the part of a preceptor for the children, and continued to write novels. She returned to Paris in April, 1832, taking her daughter Solange with her. 'Indiana' appeared in July, 1832. "The success of 'Indiana' frightens me. Until now I had thought my work of no consequence and not deserving any attention. Fate has ordered otherwise; I must now justify the unmerited admiration of which I am the object. This disgusts me with my career; it seems to me that I shall have no more pleasure in writing." The success of 'Indiana' was indeed extraordinary. This novel is full of the warmest descriptions of passion. The glorification of love—of material as well as ideal love—had never been so candidly made. The style was magnificent, rich, abundant; it had something of the best style of Rousseau. The philosophy of 'Indiana' was the philosophy of self-indulgence: love justifies itself, and it ought not to be controlled. Madame Sand professed the "droit à l'amour" as the Socialists afterward professed the "droit au travail."

After 'Indiana' she began 'Valentine,' which is in the same mood. She worked with a sort of curious ardor mixed with disgust. "I have to put all my heart and all my energy on sheets of paper. My soul is at the printer's, my faculties are in the proof-reader's hands. Dreadful life! the days when I live in this way I cannot live for myself. It is perhaps my good fortune; for, abandoned to myself, I should live too much. In two days I shall finish 'Valentine,' or I shall be dead." She sold 'Valentine' for four thousand francs. The *Revue des Deux Mondes* bought it. "I have sold myself to the *Revue des Deux Mondes* for a yearly rent of four thousand francs—thirty-two pages of writing every six weeks." This arrangement made her a slave, but it gave her material independence. It was possible in 1832 for a woman to live in Paris on four thousand francs a year. With all her defects, Madame Sand was proud, and determined to earn her own living. She was now famous. 'Valentine' placed her at once at the front of the Romantic school.

Correspondence.

THE SHIRT AND FORK QUESTION.

To the Editor of The Nation:

Sir: I have a friend who is in the habit of saying that when the *Nation* has exhausted every other form of invective it ends by accusing a man of having no sense of humor. Does not Mr. Matthew Arnold call for this last resort by way of castigation when he takes the *Nation's* statement, that not one man in a hundred thousand in America changes his shirt more than once a week or eats with a fork, as a piece of statistical information? I.

Baltimore, May 24, 1882.

[We think he does. The statement was a hyperbolical illustration, and as applicable to England as America. But we have all along been ready to make large concessions in the way of increasing the proportion of men who change their shirts more than once a week—to make them one in a thousand for instance—in answer to respectful remonstrance from any quarter.—Ed. Nation.]

MR. ISAAC L. RICE ON RICARDO.

To the Editor of The Nation:

Sir: I cannot refrain from expressing my astonishment at the extended and respectful consideration which the *Nation* has thought fit to bestow on Mr. Isaac L. Rice's childishly ridiculous attack upon Ricardo's doctrine of rent, in the June number of the *North American Review*. Certainly he has been handled with a very un-*Nation*-like gentleness; and if the matter in question were a personal or unimportant one, this would make little difference. But I feel that a journal of the weight and standing of the *Nation* does much harm in admitting by implication that such an argument as Mr. Rice's has anything in it which deserves to be seriously considered; just as a merely respectable weekly would do harm among the masses if it were quietly and respectfully to examine the arguments brought forward by one of the periodical disbelievers in the rotundity of the earth.

I do not wish to commit the very error I have just been deprecating, but I think it will not be amiss to quote one passage—out of very many—which may serve to measure Mr. Rice's clearness of vision in the field of political economy:

"But Ricardo himself has a confused notion of his own fundamental proposition. After repeatedly calling attention to the fact that, when he speaks of rent, he invariably speaks of what is paid to the landlord for the use of the original and indestructible powers of the soil, and after declaring emphatically that what is paid for the use of the capital which has been employed in ameliorating the quality of the land is not rent, he flies in the face of all this by asserting, in a note to chapter xviii. of his work, that as for the capital which has been expended in the 'improvement of a farm' and is 'inseparably amalgamated with the land, and tends to increase its productive powers, the remuneration paid to the landlord for its use is strictly of the nature of rent, and is subject to all the laws of rent.' By what magic this capital is converted into an original and indestructible power of the soil Ricardo fails to explain."

Of course Ricardo fails to explain; rightly judging that any one who could not perceive, by his own unaided powers, that what has been

"inseparably amalgamated with the land" thereafter affects landlord and tenant in precisely the same manner as if it had pertained to the land from the beginning of the world, would hardly be fitted to profit by an explanation.

Yours, very respectfully, X.

BALTIMORE, May 28, 1882.

[Our correspondent will, we trust, bear in mind that the periodical in which Mr. Rice's article appeared is not an obscure weekly newspaper whose opinions are *prima facie* to be rated as frivolous and inconsequential. Mr. Rice's article in the columns of a Greenback-Labor organ would call for different treatment from that accorded to the same article appearing in the pages of the *North American Review*.—ED. NATION.]

MR. LOWELL AND THE AMERICAN SUSPECTS.

TO THE EDITOR OF THE NATION:

SIR: In the controversy over the proposed recall of Mr. Lowell, some of the newspapers have displayed the most unpardonable carelessness in putting forward declarations of alleged principles of international law, and statements of fact, which the most cursory examination will show to be absolutely without foundation. A country weekly, without the resources of a large library at its command, may perhaps be pardoned for vague generalizations upon this subject for want of the means of verifying or correcting its assertions. But that a representative of the metropolitan press should be found laying down as general principles statements which an examination of the records of our State Department and the authorities on international law show to be absurd, is inexcusable.

The *World*, for example, in the citations by which it pretends to support the allegation that Mr. Lowell has proved himself "ludicrously ignorant of the first principles of public law," displays itself an ignorance which is not only ludicrous, but highly culpable in a paper which prates, as the *World* does, with an air of authority, upon diplomatic practice and the law of nations. Take, for instance, the assertion that Mr. Lowell, by offering to pay the return expenses of an imprisoned "suspect," on his acceptance of a release upon condition of his returning to the United States, was guilty of an attempt to bribe an American citizen to forego certain of his rights. In point of fact, the proposed settlement was in accordance with repeated diplomatic practice. When Bergen and Ryan were arrested in Ireland in 1848, their release was finally accepted on condition of their leaving Ireland. In the famous Koszta dispute with Austria in 1853, which Mr. Cox, of New York, cites as "a valuable precedent and brilliant illustration" of what he calls "the staunch diplomacy of the past," the basis of compromise was an agreement that Koszta should be shipped to the United States, Austria reserving the right to proceed against him in event of his return. We insisted upon the right of conditional release only, in 1863, when Francis Carroll, a British subject confined on suspicion of complicity with Rebel plots, was released only on his agreement to leave the United States, or give bonds for his conduct. Finally, Mr. Seward himself suggested this course in his instructions to Mr. Adams, in 1866, when he wrote:

"You will be expected to suggest to Lord Clarendon the expediency of the exercise of clemency to the extent, at least, of releasing all of the American citizens, native or naturalized, who are in confinement, upon the condition of their returning to the United States. . . . While such a proceeding on the part of the British Government would seem to be an entirely safe one, it cannot be doubted that it would have a tranquillizing effect here."

If the *World* will take the trouble to examine our diplomatic correspondence during the years when questions of disputed nationality have arisen between the United States and other countries, it will find that it has been our custom to pay the expenses home of such prisoners, when released upon condition of their returning to the United States, and when they did not themselves have the means to pay. (Dip. Cor. 1868. Mr. Adams to Mr. Seward, April 22, 1868.) It should be remarked, by the way, that Mr. Lowell's offer of £40 to such of the "suspects" as might accept a release on these terms was made *after* he had received instructions from the Secretary of State, "if requisite, to draw on the Department of State for $200 per man for all such American citizens as might be released and might need the means of reaching home." (Mr. Frelinghuysen to President Arthur, May 22, 1882.)

A great outcry has been made because of the "monstrous notion upon which Mr. Lowell owns to having acted as a minister, that an adopted citizen of the United States cannot 'prolong' his residence in the land of his birth 'without an extinction of his acquired and a renewal of his original allegiance.'" What Mr. Lowell really said, in his despatch to Secretary Frelinghuysen, May 4, 1882, was this:

"The United States have from the first justly insisted on and have finally established the principle of the right of expatriation; but when a man has completed the process of expatriating himself and returns to the land of his birth, I should be glad to be instructed how far his residence there may be prolonged without an extinction of the acquired and a revival of the original allegiance."

The language used by Mr. Lowell in this request for instructions shows plainly enough his familiarity with that portion of the diplomatic history of our Government bearing upon the point toward which his query is directed, and of which, it is to be inferred, his assailants are entirely ignorant. After the discussion that followed the Fenian arrests of 1866–7, and the submission of the report of the Banks Committee to the House of Representatives in 1869, we entered into treaty stipulations with various powers relating to questions of nationality. Many of these treaties, notably those with the North German Union (1868), Mexico (1871), and Norway and Sweden (1869), included clauses aimed at just such a state of facts as that covered by Mr. Lowell's inquiry, in which it was agreed that a renewal of residence by the naturalized person in the mother country without the intention of returning should work a renunciation of the acquired and a renewal of the native allegiance; and that two years' such residence should be accepted as presumptive evidence of the intent to abandon the acquired naturalization. Such a contingency, moreover, was suggested to our Government, and opinions given upon it, by the members of General Grant's Cabinet in 1873. The President submitted to the principal officers of each of the executive departments, in that year, a series of questions relating to the proper attitude to be assumed by the Government toward such persons as might claim its protection in a foreign country as citizens of the United States. One of those questions read as follows:

"IV. Ought the Government to hold itself bound to extend its protection, and consequently exert its military and naval power for such protection, in favor of persons who have left its territories and who reside abroad without an apparent intent to return to them, and who do not contribute to its support?"

To this the Secretary of War replied:

"Such a residence abroad, accompanied by no avowed, known, or apparent intent to return, would constitute a *prima-facie* case of expatriation which would justify the Government in withholding its protection until explained away and overcome by counter satisfactory testimony." (Opinions relating to Expatriation, etc., p. 40. Government Printing Office, Washington, 1873.)

The answer of the Attorney-General, concurred in by the Postmaster-General, was to the same effect, and the gist of the opinions delivered by the rest of the Cabinet was to the effect that acts on the part of the naturalized citizen, sojourning in a foreign land, inconsistent with the idea of a return to the United States, freed this country from the obligation of protection.

Many other facts and official declarations of such a character as ought to influence diplomatic conduct might be cited in support of Mr. Lowell's position on these two points at least. But I think I need not trespass further upon your space and your good nature by the offer of cumulative evidence to prove the inaccuracy, to use no harsher term, of the statements alluded to above. I trust I shall not seem impertinent when I venture to suggest that the *World*, the *Sun*, and perhaps the *Herald*, too, would do well to consult the following, by way of preparation, before pursuing this discussion further: Opinions relating to Expatriation, etc., Washington, 1873; United States Diplomatic Correspondence for 1861, '63, '65, '66, '67, and 1868; and United States Consular Regulations, sections 109, 110, 111.

GEORGE WALTON GREEN.

NEW YORK, May 29, 1882.

Notes.

PORTER & COATES, Philadelphia, will print an American edition of 'Three in Norway, by Two of Them,' an illustrated volume.

A. Williams & Co., Boston, have in press a large pamphlet, elegantly printed, embodying the proceedings of the Massachusetts Historical Society with reference to the deaths of Longfellow and Emerson. Photographic portraits of both these eminent men will accompany it, and the edition will be small.

Ginn & Heath, Boston, publish immediately a third edition of "The True Key to Ancient Cosmology and Mythical Geography," a thin pamphlet, by President W. F. Warren, of the Boston University.

'Harper's Handbook for Travellers in Egypt and the East' has at last burst the bounds of a single volume, and is now much more commodiously distributed in three, of which the first and third are well grouped, geographically and for purposes of travel; the second containing, besides Switzerland and the Tyrol, Russia, Spain, Denmark, Norway, and Sweden, or the less-visited parts of Europe. The already abundant supply of maps and plans has been enlarged, and the customary annual revision made. Though space has been left for additions, it is less easy to make these than corrections in the stereotyped plates. To this circumstance, perhaps, we owe (to choose a trifling example) the failure to insert in the text any mention of the Alexandrian obelisk on the Thames Embankment, or even to indicate its location on the map. But this work, being now in its twenty-first year, has come of age, and is exempted from minute research for flaws. A peculiarity of it is its recommendation, not only of hotels, but of tradesmen—a delicate service, but a real one when the traveller's interest and not the tradesman's is consulted.

From the Messrs. Appleton we have the latest volume of their 'Annual Cyclopædia,' that for 1881. It can hardly be necessary to characterize afresh this convenient and, we might say, indispensable summary. All the States of the Union and all the leading countries of the globe

have articles devoted to their yearly progress, and on this side the Cyclopædia becomes a current gazetteer. Then there are biographical notices consequent on sudden eminence, such as Gambetta's short-lived Premiership, or on death, as in the case of President Garfield. Obituaries supplement this department. Astronomy, Chemistry, Engineering, Physiology, etc., group the salient discoveries and achievements under each head. The religious denominations have their articles, and under Presbyterians one may read of the persecution of Professor Robertson Smith. Literature, American and foreign, is reviewed. The debates of Congress are digested, and certain public documents printed in full. The Bimetallic Conference; the Atlanta and Paris (Electrical) Expositions; the London Medical Congress; the New Testament Revision; the Panama Canal; the Electoral Count; Guiteau's Trial, with articles on Presidential Inability and Disability, and on Insanity as a Defence for Crime, are specimens of the topics which represent the past year in this chronicle. Besides portraits of President Arthur, Mr. Blaine, and Gambetta, there are numerous colored maps, illustrating the population statistics of the late Census.

In compliance with a request from the collectors' committee of the Longfellow Memorial Association, the Publisher of the *Nation* will receive, and transmit to the Treasurer, any dollar subscriptions that may be forwarded to him for that purpose.

J. C. Morison & Co., 86 South Street, send us a tasteful souvenir of the ill-fated *Jeannette*. A view of the ship itself, apparently from a water-color drawing, is surrounded by eight photographic portraits of officers and other members of the expedition, the whole reproduced by the artotype process.

In the *Bibliographer* for May (J. W. Bouton), Dr. W. A. Greenhill makes a contribution to the bibliography of Browne's 'Religio Medici'—MSS. and printed books. He feels doubtful if he has named all the American editions; and in fact, both here and in his charming edition of the work published by Macmillan in 1881, there is no allusion to Roberts Bros.' (Boston) edition of 1878.

The Mercantile Library of Peoria, Illinois, having been consolidated with the Public Library of that place, the latter now reckons some 20,000 volumes, and, as a sign of new life, has begun the publication of a monthly bulletin called the *Library News*. Its bibliographical portion shows the influence of the discussions and consensus of the body of librarians of this country since they began to have an organization and a mouthpiece.

Some of our readers may not need to be reminded of the existence and worth of the bi-monthly *Revue Historique* (Paris: Germer Baillière et Cie.), one of the most learned, candid, and serious historical journals published anywhere. Besides its original essays and elaborate book reviews, and its *bulletins* for the several countries, a singularly valuable department is the summary of the (historical) contents of periodicals. Here we are not put off with a barren list of subject and author, but to each article is appended in parenthesis a brief characterization —sometimes a word, like "bon," "important," "intéressant," sometimes a sentence of several lines by way of criticism or of special indication. The *Revue* is now in its 19th volume.

Parts 28–31 of Ebers's 'Egypt,' translated by Clara Bell, complete the two volumes of this beautiful and delightful work, the offspring of profound learning and of exceptional literary gifts; popular in its style, yet too costly in its manufacture for the many. The magnificent illustrations are unstinted to the end. Dr. Samuel Birch furnishes an introduction to the translation, essaying a rapid sketch of Egyptian history and of the revival of Egyptology as a result of the French conquest. Prof. Ebers himself adds a preface to the second volume, referring to the recent political transformations, and saying what good word he can for Ismaïl Pasha, and speaking hopefully of the present Khedive. Indexes, title-pages, etc., are furnished with these last instalments.

Koolman's slow-moving 'Wörterbuch der Ostfriesischen Sprache' (Norden: Braams) arrives, with its fourteenth and fifteenth parts and 720th page, at the word *pîrer*. A large proportion of the words in these numbers have intimate relations with English forms, and, as usual, the etymologies are suggestive even when frankly hypothetical. That of *paradîs* (paradise) may be compared with Skeat's in his new 'Etymological Dictionary,' and in his correction in the *Academy* some three months ago. The proverbial and colloquial illustrations are again numerous and often of a quaint humor. The following rule of conduct hardly needs a gloss for English readers: "Beter junk lôpen un old faren, as junk faren un old lôpen."

Die Wespen, one of the best comic papers of North Germany, edited by Julius Stettenheim, now appears as a weekly supplement to the Berliner *Boersen-Courier*.

—The Palmer family is to meet again at Stonington this summer. Last year the gathering was almost impromptu; now there is a Palmer Reunion Association, with a full list of officers, including a Treasurer, a Chaplain, and a Grand Marshal. The membership is open to any respectable descendant, "paternal or maternal," of the Palmer lineage, and there is nothing in the constitution to prevent the collateral descendants, of either sex, from being chosen to direct the Association; but the present Board is wholly male and Palmer. The permanence of the spirit of reunion is greatly favored by the charms of Stonington and its vicinity as a seaside resort. The Western branches, who naturally seek the salt water in the heat of summer, will doubtless time their flight to Newport, Westerly, Watch Hill, or New London, so as to have a share in the Palmer hand-shaking and picnicking. Moreover, the proceedings of last year have all been set down in a book of some 300 pages (Jamaica, L. I., N. Y.: Noyes F. Palmer), where also are to be found artotype illustrations of places and persons—a veritable portrait-gallery—brief biographies, much genealogical information, and even a necrology of Palmers deceased since the first meeting. There is an "alphabetical arrangement of places where some of the descendants of Walter Palmer have lived," and a list of "celebrated Palmers," classified by occupation—as, General Grant among the Army officers, Senator David Davis among the judges, General John M. Palmer and Senator Pendleton among State governors; Professor D. C. Eaton, the sculptor Palmer, the maker of Palmer's artificial limbs, the inventor of the Gatling gun, ex-Speaker Elisha Grow—the wealthy, the long-lived, the large-family Palmers (twelve children was the example of the founder, Walter Palmer), and so forth. "Grandmother Palmer" passed away in January. She was the ultimate cause of the reunion, though her own habits were so far unsocial or ungaddish that "during the period of a quarter of a century she left her house to visit her neighbors but two or three times." Her grandson doubts "if she beheld a locomotive more than two or three times, though hearing the whistle daily." She was brought up in the Baptist faith. "Near my birthplace," wrote this old lady, "were high ledges of huge rocks, which mother said were rent asunder when Christ was crucified, which in our infancy [*circa* 1800] created no little interest for the great God of Heaven and Earth." There is much else that is curious and instructive in this volume.

—After the death of Freiligrath, six years ago, it seemed probable that the interesting library of Germany's "poet of democracy" would share the usual fate of dispersion by auction, and in 1878 a catalogue was printed preparatory to a sale. Mr. J. M. Sears, of Boston, arranged for the purchase of the entire collection, and soon after its arrival in this country entrusted the making of a suitable catalogue to the care of Mr. J. L. Whitney. Mr. Whitney has just completed his task, and the result is an unusually attractive specimen of this sort of bibliography ('Catalogue of the Library of J. Montgomery Sears, including the poetical library of Ferdinand Freiligrath.' Cambridge: John Wilson & Son, pp. vi., 330. 4to). Its alphabetical arrangement by authors, a clear typography, and hand-made paper set off its contents very handsomely. Freiligrath was no bibliomaniac, and consequently his library was not composed entirely or mainly of works of inestimable rarity—in the dealers' sense; indeed, his vicissitudes of fortune would hardly have permitted such indulgence. But he had a certain literary second-sight, which enabled him to foresee the future value of some books, perhaps lightly esteemed at the time. As a consequence, though always remaining a poor man, as book-buyers go, he gradually gathered about him an unusually valuable and desirable collection. Its chief strength lies in the works of German and English authors of the eighteenth and nineteenth centuries, particularly in the department of poetry. The catalogue gives the titles of one hundred and twenty-seven different editions of Goethe and Schiller, the difficulty of duplicating which any one acquainted with these matters can appreciate. While drudging at his clerk's desk in London, Freiligrath learned to know the poetry of Burns, and the result was not only some of his best efforts at translation, but a precious collection of the early editions of that poet's works. A look through the titles shows how fortunate he was in finding many rarities of Milton, Byron, Shelley, and some other poets. These shrewd purchases, and doubtless gifts from generous friends, besides carefully-preserved presentation copies from various sources, as far back as 1841 numbered fifteen hundred, and at the time of his death reached a total of nearly five thousand volumes—as a whole, an exceptionally fine gathering of literature for a man placed as Freiligrath was, and considering the intrinsic merit which his delicacy as a poet seemed to demand in a book. In this respect the absence of what are conveniently classified in the phraseology of catalogues as "Facetiæ" is very noticeable. These treasures he carried with him, wherever he chanced to be driven by the political agitations of his times. A genuine book-lover, Freiligrath could hardly have wished for a happier destiny for his cherished volumes than their present appropriate resting-place in this country, to which, it will be remembered, he had serious hopes of emigrating when he was recalled by the Revolution of 1848.

—The same refinement of taste that guided him in his choice of books is shown in the picture of Freiligrath's life and friendships presented in Wilhelm Büchner's two volumes ('Ferdinand Freiligrath. Ein Dichterleben in Briefen.' Lahr: M. Schauenburg. 1882. 2 vols. 8vo). The poet in his younger days always found the house of the Büchner family in Darmstadt an hospitable one, and there began an intimacy of thirty years' duration. Hence the work intrusted to him by Freiligrath's widow of giving order and consistency to the correspondence, and of making it

the groundwork of a biography, would seem to have devolved fitly upon Herr Büchner. He has, however, been somewhat unfortunate in his execution of this task, and shows a lack of good literary judgment in giving to his natural enthusiasm for the subject a certain adulatory effect, and in retaining too much of the unimportant correspondence—a common enough defect in biographies of this kind. But the letters themselves, of course, make the chief interest of the book, and the reader of them needs no assurance that letter-writing with Freiligrath was not an obligation which must be paid to a friend, in a half-hearted way, but a congenial labor, in which appear unreservedly all the moods of a poet's nature. Great as is the charm of looking into the domestic life of such a man, it is somewhat disappointing not to find more about his acquaintance with his contemporaries in literature, in particular during his long sojourns in London; but judging from the letters given, he passed these periods in much seclusion. This is strange, considering the friendliness with which he was regarded by the brightest literary men in England and America. It is a regrettable fact that, with the exception of some versions of single poems scattered through the *Athenæum* and through several of the English magazines, finally collected and edited by his daughter in 1869, Freiligrath's poetry has not been made known very extensively to English literature. The translator of some of our best poetry, he deserves to be judged in the language of the land of his refuge, as he calls England, by his lyrics, thought by one critic (Justin McCarthy) to be the most picturesque poetry of our age; and also by his stirring patriotic verses, on account of which he narrowly escaped imprisonment. Goethe's fear that the politician may absorb the poet was not confirmed in Freiligrath's case, for he continued his literary pursuits even after his honorable retirement at Cannstadt. Perhaps these new volumes, unsatisfactory as they are in some respects, may freshen the interest in his writings, as they can hardly fail to do in the manly record of his life.

—From a printed circular lately received, we learn that each year, as the result of a bequest to the Royal Netherland Academy of Sciences (Academia Regia Disciplinarum Neerlandica) for that purpose, a prize of 200 florins is offered for the best Latin ode of not less than fifty lines. This ode must be original, and must be handed or sent in, by the 1st of January, 1883, to Johan C. G. Boot, of the "Ordo litterarius" of this Academy, at Amsterdam, in Holland. A motto or sentiment is to be added to the ode, and repeated in a sealed envelope containing the name and residence of the writer. The contesting poems will be opened and read in the following March, and the one winning the prize and any others worthy of honorable mention will, with the consent of the authors, be printed, while the remainder will be destroyed (*comburentur*). The contest appears to be open to all comers. On the 15th of March last, at a meeting of the "Ordo litterarius," ten poems were offered in competition. Of these one was ruled out for its brevity, five others were mediocre, and a seventh not much better; the eighth was commended as an ode likely to please the man of literary tastes; the ninth was regarded as worthy of the prize, but was excelled by one other, from Freiburg, Switzerland, which accordingly took the palm.

—The language of ancient Etruria, the Etruscan or Tuscan, of which only exceedingly scanty remains exist—in inscriptions, mostly sepulchral, containing little more than names, and on a pair of ivory dice, on which the first six numerals can be read—has long challenged the ingenuity of philologists in regard to its classification. It has been classed by different critics as Italic, Celtic, Germanic, Slavic; others, like Stickel in 1858 and Isaac Taylor in 1874, contesting its Aryan, or Indo-European, origin, have endeavored to establish its relationship to the Semitic or Turanian branches of the human speech. Corssen, in a great work, 'Die Sprache der Etrusker' (2 vols., 1874–75), resumed the advocacy of the Italic theory. Another great authority on the subject, W. Deecke, combated the arguments by which it was supported in his 'Corssen und die Sprache der Etruscer' (1875), and, like Ottfried Müller before him, recommended an attitude of reserve as to a final decision, though pointing out decided analogies to non-Aryan, especially Finnic, grammatical forms. The same general opinion he expressed in the article "Etruria" in the 'Encyclopædia Britannica,' of which he wrote the linguistic portion, in 1878, and in other writings. This negative view seemed so decisive that A. Kirchhof, for instance—in a note to his edition of Peschel's 'Völkerkunde' (1881)—had no hesitation to declare Corssen's attempt a failure. Deecke himself, however, continuing his Etruscan researches with great zeal and diligence, gradually began wavering in his opinion. In 1879 he acknowledged the existence of great resemblance between Etruscan and Aryan words, for which he could not account. In 1880 he still considered all such words as borrowed from Aryan nations, and their frequency made him suspect the Etruscan to have been a mixed language, like the English or Neo-Persian. Since then he has made the last step in the new direction, decidedly declaring in the second number (1882) of the *Etruskische Forschungen und Studien*, which he edits jointly with Pauli, that the Etruscan was an idiom of the Italic branch of the Aryan languages, and thus returning to the old view of Passeri (1767), for which Corssen had elaborated a strictly scientific basis.

—A recent writer (Mr. H. Stonehewer Cooper) calls attention to the *copra* trade in the South Pacific as a source of considerable present and of greater prospective profit. Copra is now the chief export of the Fiji and of some other South Sea Islands. It is the prepared kernel of the cocoanut. The best is that which is dried whole before breaking the nut. A floored shed in which to stack the nuts is necessary; if they are allowed to touch the ground, they will germinate instead of growing. The tough husk which envelopes the shell must not be removed, else the *kalulu*, a sort of cockroach, makes its way through the one vulnerable point or eye in the shell and regales itself upon the water contained in it. It takes three months for the water to disappear. Meanwhile, the kernel has become as dry and tough as glue. The husk and the hard shell are now removed, and the hollow, shrunken shell of kernel is broken up into fragments to reduce its bulk. In this state it will keep forever. Copra is also cured by opening the fresh nuts and sun-drying the meat for three days, or more if the weather is cloudy. The article thus prepared is never, however, equal to that which is dried in the husk, the process being too rapid. Besides this, rain injures it, and if artificial heat is used in the drying, the copra always breeds animalcules which destroy it. Cocoanut oil, in much demand as a lubricator, is extracted from copra, and the refuse is worked up into cocoanut biscuits, or used to enrich cattle food. Copra is worth about £14 per ton in Fiji, and from £21 to £23 in London; the fibre is worth a little more, but at present most of it is thrown away. The trees bear all the year round in the South Pacific. Each tree will average 100 nuts per annum; about 6,000 nuts go to make a ton of copra, and they can be bought from the Fijian natives at 25s. per thousand. In those islands some 10,000 acres of cocoanut trees are now under cultivation. During the year 1878 this group alone exported copra to the value of £122,194. The Samoan cocoanuts are even larger than those of Fiji, but the manufacture is not yet developed in Samoa.

—Another article of export, scarcely heard of in our market, is the *bêche-de-mer*, or large sea-slug, which is in great demand upon the tables of the rich in China, where it is known as *tripang*. It is chiefly found upon the beaches of the coral islands and reefs in the South Pacific, and is one of the most important articles of commerce obtained in these waters. The animal belongs to the class *holothurides*, and consists of an elongated sac, of a gristly consistence and incredibly elastic: "if slung by the middle across a pole, he will, by his own weight, stretch to several times his normal length." It has no eyes, but its triangular mouth is furnished with three teeth. "Its life seems to consist in taking water and sand in at one end, and squirting it out at the other." There are four kinds of *bêche-de-mer*—the gray, the black, the red, and the leopard. The gray is the most valuable; it grows to be eighteen inches long, and nearly as much in circumference. The black *bêche-de-mer* is sometimes thirty inches long, and as thick as a man's leg; it lives in the still lagoons, and can be dived for when the weather is too stormy to gather the other varieties upon the reef. The fishing is often done by companies of Polynesian men and women, brought under contract to the uninhabited islands where the tripang abounds. During the afternoon the morning's catch is split open and steamed in the Polynesian earth-oven, a pit heated with red-hot stones and covered with earth and leaves. This is done in an hour; then the fish are removed to a smoke-shed, and exposed to smoke from a fire of damp wood. In two or three days the gelatinous creature is completely dried. If it is cured thoroughly—and without this it will not bear long transportation—it will "rattle like a bag of chestnuts." *Bêche-de-mer* brings in the Chinese markets from £60 to £80, or even £100 per ton. Whole cargoes of it are sometimes lost on the way to China through defective curing. The business is one which offers, in Mr. Cooper's opinion, excellent profits to persons willing to venture a small capital in the South Pacific. The argument of his interesting book ('Coral Lands') is mainly to show the promises of European traffic with these islands.

—The performances of Wagner's "Nibelung" Tetralogy now taking place in London are of interest in more than one way. When this work, so difficult to understand and execute, was first produced at Bayreuth in 1876, few were sanguine enough to hope that it would, in the course of half a dozen years, establish itself in more than a dozen leading German cities, and even make a flying visit across the Channel. An attempt to produce it in London with local artists would have ended in complete failure, from an artistic point of view, because the vocalists assembled there mostly belong to the Italian school, and are unable to do justice to the Wagnerian dramatic style. But this style has been assiduously cultivated by the most prominent German vocalists during the last ten years, and the engagement of many of these, besides a German chorus and orchestra, in addition to some of the original Bayreuth scenery, insured a faith fulinterpretation of the work in London. Full reports of the first cycle are now at hand, and they are eminently satisfactory. Notwithstanding the high prices of admission, the house was full every evening and the audiences enthusiastic. As London, on account of its large foreign population, may be

really classed among the German capitals, it might be said that this favorable result was largely due to Teutonic influence. But the attitude of the press shows that the English themselves are prepared to appreciate to a considerable extent the grandeur of Wagner's latest works. With the exception of the *Times*, Wagner's ablest champion in England, the papers find more or less to object to in the Tetralogy; but these criticisms merely concern points of detail and general form, the numerous orchestral, dramatic, and scenic beauties in the work being willingly conceded. Only a few years ago the whole London press was most violently opposed to everything remotely suggestive of Wagner, and the present change in the general tone of criticism can only be compared to a similar change which took place in Berlin when the Tetralogy was first produced there. But it is always so with Wagner. People in their ignorance will continue to abuse him until they hear his works properly rendered, and then they usually try to compromise matters by admitting that his music is not so bad after all, but that he is nevertheless an odious, impertinent, and horrid man.

—Wagner's music-dramas, like all works of art, have their faults, but it is not for us to insist on these. The first duty in the case of a work that "teems with beauties indescribable, and abounds in magic sounds never before heard by mortal ears," is to call attention to these beauties and endeavor to help everybody to an opportunity to hear them. Future generations will then be able to balance its merits and demerits and assign it its proper place among works of art. The peculiarity of contemporaneous criticism is that fault is usually found with those very things in which posterity finds most to admire. This was the case even with Rossini, whose reforms in Italian opera were violently opposed at first; and it was the case with Wagner's early operas, which are now accepted as almost orthodox, while Jahn and most other critics at the time of their first appearance attacked them with amazing violence and venom. English critics will find that ultimately Wagner's claims to immortality will be largely based on precisely those features of his works which they now condemn—their "ultra-realism," the substitution of dramatic declamation for lyric song, the predominance of the orchestra and actor over the solo-singer, the characterization of events and persons by leading motives, etc. Some of the criticisms betray a lamentable want of dramaturgic insight. There are too many "painful discords," it is said. But surely a tragedy does not call for sweet music of a molasses-candy flavor. Conflicts of emotions can only be expressed by discords in music as well as in literature. The *Saturday Review* wants to know "whether the truest enjoyment of stage music is to be got from work which of its nature involves so close and constant a strain upon the attention." The *Saturday Review* ought to know that "the strain upon the attention" becomes less after every repetition, and that if Wagner had written his works down to the average intelligence of his contemporaries, posterity would have never heard of them. The funniest objection of all, however, is that the characters in Wagner's Tetralogy are such a wicked set of fellows. This remark shows the disadvantage of being a specialist. For if the musical critics who make it were occasionally sent to see a drama without music, they would discover that good characters do not exactly abound in the best dramas of Shakspere and other tragedians. Indeed, Schopenhauer regards the prevalence of good people in a tragedy as a sure sign of the author's inferiority and untruthfulness.

— We have received the first number of a new quarterly Italian periodical published at Palermo, and devoted to folk-lore, the title of which is, *Archivio per lo Studio delle Tradizioni Popolari*. The names of the editors, Messrs. G. Pitrè and S. Salamone-Marino, are a sufficient guarantee of the high character of the publication, which is fully evinced by the contents of the first number, a handsomely printed book of 172 pages. A letter from Max Müller forms a fitting introduction, and lays down some general principles in regard to the value and mode of collection of popular tales. The contents are as diversified as possible, including customs of the Sicilian peasants, proverbs from the Marches and Bologna, ballads from the Abruzzi, children's games from Montferrato, songs from the former French Department of the Moselle, etc. In addition to the above there are copious reviews of recent works, and a summary of articles in periodicals. We can warmly recommend the *Archivio* to all interested in folk-lore in general, and in that of Italy in particular, to which the new publication will naturally devote most of its space.

FROUDE'S CARLYLE.

Thomas Carlyle: A History of the First Forty Years of His Life, 1795–1835. By James Anthony Froude, M.A. In two volumes. New York: Charles Scribner's Sons.

THESE volumes cannot be said to add a great deal to the picture of Carlyle already given in his 'Reminiscences.' They do something, however, to complete and fill it out. They also let us still further into the secret of his domestic life, and give us ample means of making close acquaintance with the character of his wife. The readers of the 'Reminiscences' have already seen how much Carlyle owed to her: how the gloom of his life was brightened by her vivacity and unselfish cheerfulness; how her ingenious devotion to his interests rendered his poverty endurable; and how very much as a matter of course the great man took it all, until in the end, worn out with privation and excessive work, she died, and left him to mourn her loss with an unaffected selfishness of grief that threw a strong reflected light back upon their married life. The correspondence printed by Mr. Froude in these volumes reveals the psychological details of the process by which Miss Welsh was brought to the point of marrying a man who she evidently knew from the outset was utterly unfit to make her happy. On Carlyle's part there seems to have been no pretence of anything like sentiment. He had a great contempt for "love," as the following extract from his wife's notebook with regard to his opinions on this subject shows:

"What the greatest philosopher of our day execrates loudest in Thackeray's new novel—finds indeed 'altogether false and damnable in it'—is that love is represented as spreading itself over our whole existence, and constituting the one grand interest of it; whereas love—*the thing people call love*—is confined to a very few years of man's life; to, in fact, a quite insignificant fraction of it, and even then is but one thing to be attended to among many infinitely more important things. Indeed, so far as he (Mr. C.) has seen into it, the whole concern of love is such a beggarly futility that in an heroic age of the world nobody would be at the pains to think of it, much less to open his mouth upon it."

But he saw very clearly that Miss Welsh had qualities of mind and heart that would make her an excellent wife; and though he did not wish to be bored with love himself, he had no objection to her loving him. She was, according to her own confession, not in love with him, though she admired and respected him greatly. Nor had she any illusions with regard to the life at Craigenputtock, which he proposed to her. She knew it was a "desert," and that the life would be one of exile, made worse by poverty. Nevertheless, we see from the first that she is going to yield, and it was here that Carlyle's profound contempt for everything feminine stood him in very good stead. He simply insisted, as if the counter-arguments advanced by the future Mrs. Carlyle were only made to be overthrown; and as he did not allow them to have any weight with his judgment, nor to make any impression upon his heart, he was in the end victorious. Most men would have shrunk from the idea of what he knew perfectly well he was going to subject his wife to; but with Carlyle the supreme importance of his being able to carry out his scheme of life exactly as he had planned it, gave his own wishes almost the authority of divine commands.

To the reader of the biography the marriage appears, necessarily, a most ill-assorted union. Carlyle's views of matrimony were those of the class from which he had sprung. He had been accustomed from his childhood in his father's home to the spectacle of the women of the family performing those household duties which in the class of life to which his wife belonged always fall to the share of servants. That a lady of refined and sensitive tastes ought not to be made a household drudge by her husband, probably never occurred to him, or, if it did, it never made any impression upon his conscience. His perpetual "Ay, di me!" over her remains is the only sign he gives of remorse, and that came rather late.

If we turn from his domestic to his literary life, we cannot say that the volumes contain much of interest. To tell the truth, Carlyle was not, properly speaking, a literary man. He felt that he had a moral message to deliver to the world, and for the purpose of delivering it he invented an extraordinary literary vehicle which he used with great effect. But his interests were all ethical. His contempt for all the best known of his literary contemporaries in England is so exaggerated as to be amusing. In 1832 we find him recording in his note-book: "Singular how little wisdom or light of any kind I have met with in London! Do not find a single creature that has communicated an idea to me; at best, one or two that can understand an idea." Macaulay he speaks of as an "emphatic, hottish, really forcible person, but unhappily without divine idea." Rogers struck him as "an elegant, politely-malignant old lady." Moore he sets down as "a lascivious triviality of great name"; and Bentham as "said to have become a driveller and garrulous old man." Again: "Two objects would reduce me to gravity had I the spirits of a Merry-Andrew—a death's-head and a modern London wit. The besom of destruction should be swept over these people, or else perpetual silence (except when they needed victuals or the like) imposed upon them." And he sums up his notes on Lockhart, Hogg, Allan Cunningham, and a few other contemporaries, in this compendious way: "Literary *men!* They are not worthy to be valets of such." Undoubtedly, criticism conceived in this spirit is valuable in a certain sense, and there is plenty of it to be found in Mr. Froude's volumes; but it is based too exclusively on contempt to be of much use for purely literary purposes. Contempt, in the last resort, dictated a large number of those prejudices of Carlyle's which passed during his life for opinions, and, indeed, it dictated even the method he selected for expressing them. His style, in his early days simple enough, grew, as his authority increased, more and more grotesque, and, whatever may be said for its picturesqueness, no one who had not a contempt for most human traditions on the subject of lan-

guage could possibly have had the audacity to adopt it consciously.

Mr. Froude devotes a chapter to an analysis of Carlyle's religious belief. So far as dogma was concerned, it was mainly sceptical and negative. He did not believe in the scheme of Christian redemption; he did not believe in miracles; he rejected the literal narrative of the sacred writers. We find him, toward the end of his life, telling an inquiring correspondent that he believed in prayer; but he qualified even this confession of faith by the admission, "Words of prayer, in this epoch, I know hardly any"; and added, characteristically, "On the whole, silence is the one safe form of prayer known to me in this poor, sordid era." There is something very amusing in the habit into which Carlyle fell in his later years of recommending everybody to be silent on all possible occasions. As he gained more and more the reputation of a philosopher who could solve for humble inquirers the grave riddles of life (and this he did, in a sense, profess to do), more and more questions were asked which he found it very difficult to answer, and the announcement of his law of silence was a most convenient way of preventing any unnecessary or tedious discussion. Almost invariably he tells the inquirer that the best thing for him to do is to hold his tongue, mainly because he cannot answer his question.

To turn to the positive side of his religious faith, Mr. Froude says of him, very neatly, that he was "a Calvinist without the theology." He believed profoundly in the depravity of man's nature, if he did not believe either the historical account of his fall or in his salvation through a mediator and redeemer; he believed in the permanence and eternity of "the law," and that the law was identical with the will of God. His fatalism was a species of predestination. He despised everybody about him, because he saw that the modern world took a more optimist view of life than his. They believed, fools that they were, "in expediency, in the rights of man, in government by majorities, as if they could make their laws for themselves. The law, did they but know it, was already made; and their wisdom, if they wished to prosper, was not to look for what was convenient to themselves, but for what had been decided already in nature's chancery."

"Many corollaries followed from such a creed when sincerely and passionately held. In arts and sciences the authority is the expert who understands his business. No one dreamed of discovering a longitude by the vote of a majority; and those who trusted to any such methods would learn that they had been fools by running upon the rocks. The science of life was no easier—was harder far than the science of navigation; the phenomena were infinitely more complex; and the consequences of error were infinitely more terrible. The rights of man, properly understood, meant the right of the wise to rule, and the right of the ignorant to be ruled. 'The gospel of force,' of the divine right of the strong, which Carlyle has been so often taunted with teaching, merely meant that when a man has visibly exercised any great power in this world, it has been because he has truly and faithfully seen into the facts around him—seen them more accurately and interpreted them more correctly than his contemporaries. He has become in himself, as it were, one of nature's forces, imperatively insisting that certain things must be done. Success may blind him, and then he mis-sees the facts and comes to ruin. But while his strength remains he is strong through the working of a power greater than himself. The old Bible language that God raised up such and such a man for a special purpose represents a genuine truth."

This is the best that Mr. Froude can do to make a consistent system for Carlyle. His success cannot be called great. We trust an expert as to the longitude because there are sciences called trigonometry and astronomy, which, as anybody may satisfy himself if he pleases, enable experts to calculate the longitude. We trust to the vote of a majority for the very reason that in human affairs there is no such thing as a "science of life" which experts can master, so as to tell their fellows what they ought to do; because rules of conduct must be established and be based on force, and because it has been found by experience that these rules of conduct, when established by a majority vote, are more readily obeyed than when they are established by "strong men" without regard to popular opinion or wishes. Strength will always make itself felt, whether it is the strength of the individual or the strength of numbers; and if force is an indication of the presence of the Deity, it should not be forgotten that "the heaviest battalions" can claim the sanction of divine presence with fully as much reason as the "strong man" in whose name they take the field. If strength and tyranny are of themselves things deserving of admiration, as much may probably be said in favor of the "tyranny of the majority" as for the tyranny of the heroes sung by Carlyle and his disciples.

Mr. Froude may congratulate himself on having very nearly destroyed the authority of his master. It was essential to the preservation of Carlyle's hold upon the affection and respect of the present generation that they should believe that he did understand the "science of life" or "the law" about which he talked so vociferously. But these volumes do not show that he saw much further into it than his contemporaries, and they do show that many of his opinions about it were the outgrowth of a by no means amiable character, and were open besides to the charge of being what he was himself fond of calling "mere wind." If there is not a science of life, there is at any rate an art of biography which Mr. Froude would do well to pay some attention to before laying his hand upon any more dead reputations.

STALLO'S PHYSICS.

The Concepts and Theories of Modern Physics. By J. B. Stallo. [International Scientific Series.] D. Appleton & Co. 1882. Pp. 308.

THIS volume makes an imposing first impression. It is admirably written, with copious and interesting quotations from the literature of several sciences during several centuries and in several languages, especially German. The author commands his resources ably and well, and has written a book which will no doubt prove of exceptional value and interest to the very many non-experts who deliberately prefer comprehensiveness to depth and accuracy of view. Its many-sidedness is puzzling to the critic. The writer constantly modulates from physics to logic, chemistry, astronomy, mathematics, and other sciences; his drift, or purpose, so far as he may be assumed to have a positive one, nowhere expressly appears in explanation of his almost purely negative, destructive aim. He seems outside all the traditional lines of the schools. He is often positivistic, and, in his keen scent for ontological survivals, writes occasionally quite in the vein of Göring, Laas, and Dühring; but then he excoriates Mill, does not idolize facts or things as fetishes, and has no allusion to Comte even where it would admirably serve his purpose. He is not an evolutionist, rejecting the nebular hypothesis in favor of the theory of meteoric aggregation, and refusing homage to the Undifferentiated of Mr. Spencer. He is not an idealist, at least in the traditional sense; for he abhors metaphysics, and apologizes for a youthful publication in 1848, in the vein of Hegel and Oken, while materialism is for him quintessential absurdity *per se*. Wisely declining to take any of the "through-lines" of thought, our author may be catalogued—for those who insist on labels—as a psychological relativist, with a strong tendency to take his creed now in too absolute, now in too eclectic a sense.

The drift of what we may call the first part of the book is as follows: The mechanical theory, which reduces everything to mass and motion, as disparate and constant, in holding that atoms are simple, and therefore equal, is "in utter and irreconcilable conflict" with the theory of Avogadro—that equal volumes of all substances, in a gaseous state, with like pressure and temperature, contain the same number of molecules. While atoms cannot be elastic, because that implies variable distance between their parts, it is yet admitted that in gases at least they must be highly elastic—a contradiction which no theory of vortexes, rotation, or envelopes has yet been able to solve. If, as mechanists say, all physical action is by impact, and there are no pulls but only pushes, then gravity and all action at a distance are inexplicable. If motion be indestructible, all energy is kinetic, and there can be no potential or virtual energy due to position, but only a reciprocity of molar and molecular motion. Impenetrability is not a datum of experience; the light-bearing ether at least cannot be discontinuous or granular; the atomic theory has lost its simplicity—only pulverizes facts and explains nothing; and the kinetic concepts are "repugnant to all scientific sobriety," because they explain the familiar by the unfamiliar.

In the second part we are told that the mechanico-atomic theory is a metaphysical survival of mediæval realism (p. 150). Matter is only the most generic concept in classifying bodies, like substance or Hegel's pure being, all alike indistinguishable from nothingness. Precisely the same is true of pure force, which is not a fact, but a generic concept, and not necessarily a counterpart of reality (conceivability being no test of truth), but only a counterpart of experience. By another metaphysical error, these most generic and latest-formed concepts are said to preëxist, and all things to be derived from them in evolution by addition of attributes. By a third error, we affirm solidity and impenetrability of atoms, because we knew solids long before gases, although the former is far more complex, familiarity being confounded with simplicity, and the genesis of concepts with the order of the genesis of things. Hardness is a prejudice: why not soft or fluid atoms? Finally, motion, rest, time, weight are only relations, and there is no absolute thing, standard, space, etc. The transcendental geometry, so-called, only hypostatizes space by the "reification of its concepts."

This résumé affords an exquisite illustration of the insuperable difficulty which an adult mind, of unusual candor, learning, and ability, experiences both in uprooting youthful convictions and in fully grasping the fundamental ideas of science by solitary reading. In his love of potencies and energy of position, which makes his notion of the kinetic theory so superficial; in the ideal, almost dialectic, relativity of what we have called the second part; in the repugnance to atomism, based, perhaps, far more than Judge Stallo is conscious, upon the chasm it causes between the organic and inorganic, Schelling, Hegel, and Oken would still recognize their own leaven of ideal, monistic identity. The many ancillary hypotheses, too, which investigators have found useful to meet special exigencies of research—enchainments, thermalizations, valencies, and various dynamisms, etc.—are confessedly not unanimously agreed upon, and there is much residual obscurity which is, of course, increasing as the field of science widens. This circumstance gives ample

scope to the vicious dialectic habit of subtle verbal minds of setting facts by the ears and bumping friendly heads together, or even to a logician who prefers exiguous consistency between the parts of a theory to its flexile and serviceable adaptability to facts of many and diverse orders, and refuses to see that a material, a working, and an ultimate hypothesis must be subjected each to its own radically different test of logical canonicity. Judging our author's own processes by this method, we might call attention to his self-contradiction in rejecting the kinetic theory because it explains the familiar by the unfamiliar, which is precisely what he requires us to do in explaining solids by gases; or we might ask how knowledge itself can ever be explained, if we must always explain the less known by the more known, or convict him of absolute idealism from the principles of the second part. As a "contribution to the theory of cognition" for which it is designed, the work is not in the line of modern progress in that direction, and adds nothing whatever. Science is at bottom metaphysics, with a persistent tendency to "reify" its concepts, which must then be extirpated as ontological survivals —is his drift.

Another capital error which pervades the first part of the book is, that the atomic theory is defined as a physical but criticised more as a chemical theory. It is physicists who are more inclined to reduce everything to mechanism, and no one but a pure theorist would ever think of asserting that any great body of chemical facts, save only thermal and kinetic ones, have yet been even approximately explained mechanically. For physics atomism is a more material and relatively simple theory, while for chemistry it is more formal and complex. After asserting "utter anarchy" concerning it, our author yet manages to recruit a very comprehensive set of propositions which "command universal assent." Yet, although he has unwittingly changed his view from the physical to the chemical aspect, both statements are alike extravagant. From both aspects, but especially the latter, atomism is a didactic, formal, explanatory device, so serviceable that, as L. Meyer well says, a confessedly wrong auxiliary hypothesis often continues to be of great use. The chief unanimity concerning it is not in the form our author calls axiomatic, but as a symbolic and later a graphic system, which might be almost visualized illustratively for specific purposes, but which should not be too grossly conceived, and from which deductions should be very sparingly made for fear of catastrophes. Atomism is the oldest and most widely accepted of all scientific theories; it has created chemistry out of chaos, and given provisional order where it could give no other, and made manifest in a hundred ways that there is nothing so practical as a good theory. It is a complex grammar of facts, or rather a language in which thought instinctively expresses and grasps them, and, like language, its very inconsistencies are often the most valuable and suggestive.

Still more than the kinetic theory, our author fails to comprehend the important formal, analytic, and still more important psychological results which have slowly unfolded from Gauss's fruitful idea of the measure of curvature. He deals almost entirely with the illustrative elements of the problem, the injudiciousness of even attempting which is now generally admitted by mathematicians. Erdmann, whose attempt to rectify this tendency has been widely endorsed by them, seems "simply puerile" to our author, and, although he cites Stumpf, he has not grasped the psychological problem involved in a geometry without the axiom of parallels.

Our author's employment of the word *mass* to mean weight, inertia, or even matter, when it has no sense till one has been assigned it for a specific purpose, may perhaps be taken as a type of a general error, fallen into often even by scientific men, and of which especially chemists complain, by which a theory, or even a working hypothesis, is taken concretely as a basis of deductions, or materialized into dogma. If the philosopher would get perfect command of the facts in a field, and restrain his reason where he has not done so, he might be of great service in making common cause with those scientific men who strive, often in vain, against their own co-laborers, to keep a "fine lucidity" of hypothesis from lapsing into either empiricism on the one hand or dogmatism on the other. If, on the other hand, he only retails the residual but tedious truism of idealism, that things are really thoughts, and that whenever we say matter, cause, time, space, or *quod libet* we are in fact dealing with objects mysteriously more subjective than we dream; or if he would dispense with the brain because it is not a perfect platonic mathematic sphere, or, like our author, with the atomic hypothesis because it does not conform to all the text-book tests of logical consistency, because its "record" does not show infallibility, or authorities differ, or because, as all admit, there are great possibilities outside, then philosophy is discredited, labor that should be better spent is lost, and the thoughtless or immature are misled by vigorous works like this, which, though somewhat less comprehensive than Hegelism, does almost nothing, because it attempts so much. Had he really comprehended the newer problems and understood the laboratory function of an hypothesis, both of which tend so strongly to make the theoretic part of science more and more flexible, transparent, formal, and practical, he would have tried to aid this process along, which is precisely the work science now so wants and needs and wants men of psychological acumen to do, instead of feeling complacency in reviving a method applied repeatedly a decade or two ago in this field—viz., crassifying, developing contradictions, and then sublating or volatilizing into concepts. In the vast scope of his plan; in the dialectics of the second stage of the above process (which is greatly facilitated by the absence of discrimination among authorities, Helmholtz and Maxwell being in no wise distinguished for his readers from the fanatical Dühring and Zöllner, or from the dreamy Spiller); in the fundamental assumption that these matters can be treated in the study; and probably in the latent animus of anti-atomism, it is not hard to see Hegelism, so pervasive as to be, perhaps, unconscious, venturing forth again into the light of day, tastefully arrayed in the choicest finery of popular science.

RUSSIA AND THE RUSSIANS.—II.

L'Empire des Tsars et les Russes. Par Anatole Leroy-Beaulieu. Tome i. Le pays et les habitants. Paris: Librairie Hachette et Cie.; New York: F. W. Christern. 1881.

NATURE in Russia presents two opposite aspects —vastness and vacuity. Her enormous territories are devoid of variety of form and variety of color. Animate as well as inanimate nature lacks grandeur and power. The picturesque is almost imperceptible. Travel through the Russian plains produces a feeling of satiety almost like a sea-voyage. You open your eyes after a night's sleep in a steamer or a railway-train, and perceive no change of place. The grandeur of the rivers diminishes their beauty: the finest banks are lowered into insignificance by distance. Everywhere you see the same animals, the same plants, the same trees. The cultivated fields vie in monotony with the forest and the steppe. There are no hamlets, no isolated farms. The Russian seems to dread solitude in the boundless space which surrounds him. The community of property which prevails among the peasants adds to the defect of nature. Here none of those capriciously multiform hedges are seen which embellish the rural landscapes of England or Normandy; the land is level, featureless, sombre. The Russian's fondness for property in common and association in labor is probably owing less to race instinct than to the immensity of space, under a rigorous climate, in which man in isolation feels himself powerless and as if lost.

From the same sources springs an inclination in the opposite direction: the taste for adventure, travel, and vagabondage—an intense migratory propensity. It is easy to explain the peasant's lack of fondness for agriculture, of attachment to the ungrateful and almost mournful soil of old Muscovy; but this disposition has in great part been nurtured by the institutions, by serfdom and the modes of possession. The northern nations have in general less attachment to the soil than the nations of the south, and rural Russia is, besides—from the hut of the peasant to the church and seigneurial manor—a country of pine habitations, "a Europe of timber," again and again visited by the destructive and dispersive scourge of conflagration. Every dwelling becomes sooner or later a prey to fire: why should one cling to so fragile an abode? why embellish it so as to love it? Many a Russian leaves his village for parts unknown as soon as "the red cock" has crowed on his roof.

To this fondness for going ahead in a venturesome way corresponds a moral tendency—the readiness of the Russian mind to plunge into the most reckless speculations; a disregard of obstacles which fears no temerity, philosophical, social, or religious; an astonishing indulgence for temerity in every field. The Russian's thought, like his rural horizon, knows no bounds—it loves the unlimited; it pushes right ahead toward the extreme, at the risk of reaching the absurd. And side by side with this propensity we discover an almost general lack of individuality, of originality, of creative power. A backward civilization is partly responsible for this defect, but its main source is the want of variety and power in the surrounding nature. To the poverty of the latter is owing in great part the sterility of Russian thought. This country offers no images to the poet, no color to the painter, no freshness to impressions or ideas. Hence the vigorlessness and lifelessness of the ancient mythology of the Russian Slavs, as compared with the myths of the Greeks or the Scandinavians. It was amid the grand scenery of the Caucasus, at the very extremity of European Russia—whither a suspicious police has exiled so many literary talents—that Pushkin and Lermontoff found poetical inspiration and a lofty romanticism.

What there is of diversity, picturesqueness, and beauty in rural Russia is derived more from time than from space, from the alternation of seasons rather than from scenery. In the south, especially in tropical lands, the earth glows with tints, but the seasons are hardly distinguishable. In a northern continental country like Great Russia the seasons are strikingly unlike each other; they robe the earth in markedly new colors. The thus varying aspects of nature restore to the Russian the variety of impressions and sentiments which the soil refuses him. Without leaving his village, he sees alternations of climate and aspect such as others witness in passing and repassing through thirty degrees of latitude between the pole and the equator.

These alternations act upon character and temperament, upon the imagination and the mind. In Russia every season has its labors, its holidays, its pleasures, different songs, and even different dances. To the violent alternations of the seasons, which temper him for all climates, the Russian owes a peculiar flexibility and elasticity of organs—a facility of passing from one sentiment or idea to another. To the same cause may be attributed much that in the Russian appears unbridled, eccentric, rough. If he has little intellectual originality and a poorly-developed inventive faculty, he is very often original in his tastes, manners, and expressions. He sometimes evinces a *bizarrerie* closely bordering on insanity. Ivan the Terrible, Peter the Great, and Paul are examples of it among his sovereigns. Like his climate, he easily goes from one extreme to the other: his changes of mood, thought, or feeling are striking; the oscillations of his intellect and heart embrace a wide range. He rapidly passes from activity to torpor, from tenderness to rage, from joviality to moroseness, from enthusiasm to apathy, from submission and resignation to revolt; he displays in rapid turns all the variations of heat and cold, calm and tempest. In the individual, in society, in the Government, this propensity to move and act by fits and starts is equally perceptible. Periods of inertia, languor, and despondency are abruptly succeeded by periods of ardor, energy, and confidence. Doubt and conviction, indifference and fanaticism, strangely relieve and almost blend with each other.

The climate, by its rigor and exigencies, renders the Russian inclined to realism, to practical common sense; the grandeur, monotony, and poverty of his boundless plain create in him a disposition to mysticism and sadness. This conflict or alliance of tendencies is illustrated by various striking phenomena—among them by Nihilism. Like most theories which move the Russian mind, Nihilism is an importation from the West. From Europe, chiefly from the philosophical nurseries of Germany, came the first seeds of that spirit of negation and revolt which we see thrive so amazingly in the shade of absolute autocracy. The radical epigoni of Kant and Hegel were the masters of Hertzen and Bakunin. French revolutionists and socialists have done their part in developing Nihilism, which is but the Russian form of the destructive spirit of the age. That this general disease has become endemic in the lowlands of the Neva and Volga; that it is there more virulent, and accompanied by special symptoms, is owing to the mental constitution and diet of the people. Nihilism is not a growth of a decade; it existed many years ago, and it has assumed various shapes. There is an active and violent Nihilism, which conspires and assassinates; an older variety—theoretic, vague, and unconscious—permeates the schools and society, penetrating into the very salons and chanceries. Nihilism breathed everywhere, was the fashion, was the creed of students and of all short-haired school-maidens, long before the murderous attempts and deeds of 1878, 1879, and 1880 (and, let us add, the catastrophe of 1881) unveiled it to the world in all its destructive power.

But though an offspring of Occidental metaphysical speculation, Nihilism is not a system, like Schopenhauer's pessimism or Comte's positivism, or a new form of ancient scepticism or naturalism. As a philosophical theory, it is an unscientific, coarse materialism; as a political doctrine, it is a socialistic radicalism, bent less on improving the moral and material condition of the masses than on annihilating the social and political order now existing. Nihilism constitutes no party. Its name, by which we generally designate the doctrines of Russian revolutionists of all shades—federalists, terrorists, anarchists, communists, etc.—is rejected by most of them. But Russian radicalism deserves it both by its scientific nullity and its destructively negative attitude toward civilization—toward Christian and classical culture, as developed by the Germano-Latin races. The Russian, half a century ago, adored that culture with the ardor of a neophyte; he swore by the liberal principles it had proclaimed since 1789; he has discovered its shallowness and hollowness, and, with the mobility which carries him from one extreme to the other, with the bitterness of a cruelly deceived and undeceived believer, he blasphemes the object of his former worship; he vows to destroy the proud temple erected to those modern idols which, under the usurped names of liberty, equality, and fraternity, give sanction to error, discord, and the sordid bondage of poverty. This is, indeed, a sad self-emancipation of the Russian conscience; a violent reaction against the intellectual, social, and scientific supremacy of Europe. The part of initiator and savior is henceforth to be acted by the people till now left in ignorance; light is to come from the dweller in darkness. Having lost his faith in Europe, the Russian has again begun to believe in Muscovy. He finds his despised country superior to others on account of its very inferiority. This is logical. Modern civilization being once condemned, that country is best adapted for future creations in which the past has left the freest field to the present; where modern culture and art have built so little and have penetrated so slightly beneath the surface that the necessary clearing and uprooting are most easy. The Russian people, having the least to lose by destruction, thus becomes the chosen people of radical revolution. And thus, through the negations of nationality and fatherland, the Russian revolutionist returns to the glorification of country and people, which are exalted in his eyes by their nudity and poverty.

Last Days of Knickerbocker Life in New York. By Ab am C. Dayton. George W. Harlan. 1882.

THE title of this unpretending volume is misleading, for it has very little to say of the origin or the traces of the enduring stamp left by Holland on the fashions and ways of her colony. It is a slight gossipy sketch of the outward aspect of New York, to one who shows no special pride of ancestry in it, about the year 1830, when it had ceased to look Dutch and not begun to look metropolitan—the sort of New York which Mrs. Trollope saw without liking or understanding it. Those of its people who talked about it at that time had a habit of calling it Gotham. Though commonplace enough in that transition period, it was hardly so dull as to deserve a nickname borrowed from the Nottinghamshire village the stupidity of whose rustics provoked a proverb to fit it.

Those quiet years of New York five decades ago, seeming full of life to those who moved and had their being in them, were really a period of dead water between two tides. They came after steamboats and before railroads—after the Erie Canal and before the flood of immigration. The United States Bank and the Missouri Compromise preceded them; the panic of 1837 and the Abolition Party followed. The old Naval war was a memory—the new Mexican war had not arisen. While the *Herald* was unborn, the *American* flourished. The city was narrow in limits, plain in architecture, of small population and simple fashions, separated by a day from its sister towns, by a month from Europe, and by a fortnight from the Mississippi, which was the western boundary of its interests. Telegraphs, propellers, and California were all to come. We can hardly narrow our minds back into the range of that day of small things. The writer has performed an easy task in giving a faint and imperfect picture of the superficial features of the town when every one in it knew every one else by sight at least. Its streets, churches, hotels, exchange, and the people who filled them are simply described, without any attempt to go below the surface, or connect its existing state, even by historic threads, with its past or future. The brilliant sketches of Sealsfield, published some twenty years later, treated the subject as picturesquely and with far more variety of suggestion and life of associations. Much space is given to theatres and horse-racing, with hardly a line for commerce, the professions, or the press. A modest sermon against the spendthrift whirl of to-day follows naturally upon a careful description of quiet domestic life in the old time. But even this does not show us a Dutch interior, nor touch the scene with any peculiar Knickerbocker color. The book might fairly be called a portrait of New York fifty years ago with its inherited Dutch features omitted.

Nor were those at all the last days of Knickerbocker life. There was every reason, drawn from conquest, commerce, and immigration, why New York should have ceased to be distinctively Dutch, fifty years after the Revolution, long before Boston was anything but an English town or Philadelphia had outgrown the serene state of a Quaker one. Yet that Batavian seed, starting early into so goodly a growth, still yields its sap and vigor to the best of New York life. Knickerbockerism never died out here, because, except within very narrow social precincts, it never degenerated into Chauvinism. As the English colonized abroad, so the Dutch of New Amsterdam colonized at home, by intermarriage with strangers, transmitting the virtues of the mother stock in the mother line; and in hundreds of families where the names of Holland have vanished, the blood of Holland survives. So it is, that though Irish seize the offices, and Germans usurp the shops, and Hebrews rage furiously together on the exchange, the Dutch element, strengthened by English alliance, still holds in New York the churches, the charities, the colleges, the professions, and, ruling through a thousand subtle social influences, keeps the kernel of our people sound.

Physical Education; or, The Health-Laws of Nature. By Felix L. Oswald, M.D. D. Appleton & Co. 1882. 12mo, pp. 257.

WHAT manner of physiologist and thinker Dr. Oswald is, may be gathered from the following question and answer in this book:

"What is the natural food of man? As an abstract truth, the maxim of the physiologist Haller is absolutely unimpeachable: 'Our proper nutriment should consist of vegetable and semi-animal substances which can be eaten with relish before their natural taste has been disguised by artificial preparation.' Cooking, spicing, heating, and freezing our food are, strictly speaking, abuses of our digestive organs."

This view is endorsed, as Dr. Oswald notes, by such authorities as Dio Lewis and by Bronson Alcott, whose "full table of human innerments" may be remembered by readers of the *Nation* (No. 704). It is, in a word, the transcendental or ontological physiology of the visionary reformer, who deduces his maxims from an assumed ideal state of nature, and rejects what is not given in his own consciousness as truly "natural" in regimen, exercise, clothing, sleep, and recreation. Dr. Oswald takes us again over the weary byways of the vegetarian and the tee-

totaller, rapidly disposing of controverted points by the *à-priori* method (as on p. 46), and apparently unconscious, for the most part, of what has been done in chemical and physiological science during recent years. All medicines are for him poisons; all religions, and nearly all civilizations, are race-calamities from which we are to return *en masse* to "nature," under the lucid guidance of works like the present one.

These theses are enforced from a large miscellaneous reading, in which Dr. Oswald displays a more catholic misunderstanding of science, history, and "nature" than we have come upon for years in a book of the present scope. Even when his criticism is at bottom just, as in his censure of Buddhist and Christian asceticism, his authority vanishes before the heat of his style. With books made up of visionary generalizations we are familiar, and with authors who are surer of a thousand difficult matters than those who have given special study to them. Dr. Oswald shows, in addition, a violence of asseveration that is out of keeping with scientific discussion and with the literary good breeding which befits an educated man and a physician. His matter is sometimes interesting; his manner recalls that of the Professor of Philosophy in Molière's "Bourgeois Gentilhomme."

The Index Guide to Travel and Art-Study in Europe: A Compendium of Geographical, Historical, and Artistic Information for the Use of Americans. By Lafayette C. Loomis, A.M. Charles Scribner's Sons. 1882.

THIS attractive and original volume is divided into three parts—viz., the Index proper, whose alphabetical titles refer to art, scenery, history, legends, and myths; a select Catalogue of the noted works of art in the principal galleries of Central Europe; and Routes. The book would be worth purchasing if only for the abundant maps of cities, plans of galleries, and charts of railway and river routes, to say nothing of the art illustrations, which are both numerous and of good quality. The execution of parts 2 and 3 is highly to be commended, that of part 1 with some qualifications. In the first place, Spain and Greece and southern and western France are entirely left out of account; one looks in vain for Athens, or Madrid, Blois, Marseilles, Avignon, Carcassonne, Nismes; for the Parthenon, for the Alhambra, for the Pont-du-Gard (under *Aqueducts*), for the Maison Carrée. Even in northeastern France neither Caen nor Laon is deemed worthy of the tourist's visit; and in Italy the omission of Verona, with its amphitheatre and all its mediæval monuments, and of Rimini seems capricious.

If these defects, however, indicate the author's restricted experience—as, for example, that he has never been in Sicily—it may be said, on the other hand, that he tells only of what he knows, and is therefore the more trustworthy. Still, even so, the execution of his plan is unequal. He has general titles for Scotland and Ireland, but, so far as we have observed, for no other country. Scotland, indeed, appears to be favorite ground with Mr. Loomis. He gives a title to Darnley, but none to Rousseau, though he has much to say about Geneva, and mentions the Frenchman's (or the Switzer's) statue there, while denying him a place under *Distinguished Persons* (residences and tombs of). Michael Angelo's "Moses" is admitted into the alphabetical arrangement, but not his "David." Mr. Loomis gives a useful list of hotels, and another of painters by schools; but he might well have added one of cathedrals and another of châteaux. In general, foreign names and expressions are accurately printed, but "*Dames Seul*" and "*Fur Damen*," in one line, on page 563, leave something to be desired. Still, after all our criticism, the value of the 'Index Guide' is incontestable.

A Parisian Year. By Henry Bacon. Illustrated by the Author. Boston: Roberts Brothers. 16mo, pp. viii.-225. 1882.

A DOZEN readable papers, each one related more or less in theme to the months in their succession, form the contents of Mr. Bacon's little book. The subjects touched upon are mostly connected with the life of American art-students in Paris, and there is enough of society talk to commend the book to members of the "American Colony" and others. Mr. Bacon can be amusingly satirical on occasion; as when, for instance, he describes his call upon the American Minister (his name is not given), for permission to study at the École des Beaux-Arts:

"I was shown into his presence at once, but I had to wait, as his Excellency was spelling out some despatches in French with the aid of a younger man. At last I was told with a smile that my wish would be granted, but I must first bring an introduction from some well-known person to the Minister. Then I smiled, took from my pocket a large folded paper, the first passport I had ever carried; it cost me ten dollars, and I knew the worth of the spread-eagle; and then those comforting words, 'In case of need to give him all lawful aid and protection.' His Excellency examined the document, looked at the eagle with the harp in its mouth, and the rays and stars about it; it was curious and worth looking at, and I was not surprised at his examining it, but I was astonished when he smiled again and said: 'This is not sufficient. You must bring me a letter from some resident in Paris.' I could not convince him of the importance of an introduction from the Secretary of State."

Mr. Bacon's difficulties in the matter were too intricate for us to follow; but his account of them is pleasantly acidulous.

A new slang word appears in the book—one which the editor of the Philological Society's new dictionary may be interested to note—the "swabble" (etymology, *ensemble*) of a picture. Mr. Bacon might have told us that the word has a considerable vogue among American students in Paris, and that it originated in an atelier much frequented by them, that of Carolus Duran.

Art Work in Earthenware. Pp. 70.—*Art Work in Gold and Silver.* Pp. 64. By Henry B. Wheatley, F. S. A., and Philip H. Delamotte. New York: Scribner & Welford. 1882.

THESE are concise outlines of the history of the arts treated of respectively. They contain references to the best authorities, and supply illustrations enough to make the text intelligible. They are handsomely printed, and may well serve as introductions to more extended study, while they afford in themselves a very serviceable general knowledge of the subjects. The work on Earthenware treats of Ancient Pottery (following the classification of M. Jacquemart), of Mediæval Pottery, of Majolica, French Faïence, German and Dutch Pottery, and English Earthenware. That on Gold and Silver treats of Early Coins and Medals, Ancient Art, Egyptian, Greek, Etruscan, Roman, Pompeian, Byzantine, and Early Christian Art; Gold-work of the Lombards, Spanish Art, Early French Art, the Eleventh Century to the Renaissance, Monastic Artists, Ecclesiastical Art, Shrines, Chalices, and Celebrated Goldsmiths.

BOOKS OF THE WEEK.

Abbot, Lieut.-Col. H. L. Report upon Experiments and Investigations to Develop a System of Submarine Mines for Defending the Harbors of the United States. Washington.
Appletons' Annual Cyclopædia, for 1881. D. Appleton & Co.
Barrett, R. S. Character-Building: Talks to Young Men. Thomas Whittaker. 50 cents.
Barrili, A. G. The Eleventh Commandment: a Romance. Wm. S. Gottsberger.
Beard, G. M. Sea-Sickness: Its Symptoms, Nature, and Treatment. E. B. Treat. $1.

HENRY HOLT & CO.

HAVE READY:

The Revolt of Man.

"The anonymous author of the satirical romance has achieved a very remarkable success. . . . Ought to be read by every one who has the wit to appreciate it, with a great deal of pleasure and amusement. There is certainly no living writer of English fiction who might not sign it with a great deal of satisfaction."—LONDON SATURDAY REVIEW.

"It projects the reader at once a hundred years ahead of the present generation, into a state of things in which woman is supreme. . . . This entertaining and skilful burlesque . . . must rank among the best literary conceptions of its kind."—LONDON ATHENÆUM.

MR. SERJEANT BALLANTINE'S

Some Experiences of a Barrister's Life.

Large 12mo, with portrait, $2 50.

PROF. SIMON NEWCOMBE'S

Mathematical Course:

Trigonometry. $1 50.

Trigonometry, with Logarithmic and other Mathematical Tables and Hints on the Art of Computation. $2.

Logarithmic and other Tables, etc. $1 40.

Elements of Geometry. $1 60.

College Algebra. $1 75.

The SCHOOL ALGEBRA will be ready in August.

☞ Either of the above Mathematical books sent to teachers, post-paid, FOR EXAMINATION WITH A VIEW TO INTRODUCTION, upon receipt of ONE-HALF the retail price.

HENRY HOLT & CO., New York.

ROBINSON'S

English Institutions.

LITTLE, BROWN & CO.

PUBLISH THIS DAY:

HISTORY OF THE HIGH COURT OF Chancery and other Institutions of England, from the time of Caius Julius Cæsar until the Accession of William and Mary (in 1688-'9). By Conway Robinson. Volume I., 1,252 pages. Price, in law sheep, or in two parts, cloth, $7 50 net.

A Series of

TEN GEOLOGICAL PLATES,

27½ x 36 inches, containing Fifteen Diagrams designed for use in Schools and Colleges. Edited by A. S. Packard, Jr., Professor of Geology and Zoölogy, Brown University, and Editor of 'The American Naturalist,' author of 'Zoölogy,' etc.

The diagrams are to be accompanied by a Text-Book, FIRST LESSONS IN GEOLOGY, 128 pages, 8vo, by Prof. Packard.

The series of diagrams are arranged in the form of landscapes, and contain a number of original restorations of American, Silurian, and Devonian animals, especially Carboniferous, Jurassic, and Tertiary Vertebrate animals, by Prof. E. D. Cope, H. F. Osborn, and the Editor; with restorations in the text.

Price for the ten diagrams and book, postage paid, $6. Address all orders to THE PROVIDENCE LITHOGRAPH CO., Providence, R. I.

GAS FIXTURES.

Archer & Pancoast M'f'g Co.

67 Greene and 68 to 74 Wooster Streets, New York, make a specialty of furnishing dwellings and churches with GAS FIXTURES adapted in style and finish to the architecture and interior decoration.

NORTH GERMAN LLOYD

STEAMSHIP COMPANY,

FOR SOUTHAMPTON AND BREMEN.

The steamers of this Company will sail every Saturday from Bremen Pier, foot of Third Street, Hoboken.

RATES OF PASSAGE TO LONDON, HAVRE, AND BREMEN.

First Cabin, $100; Second Cabin, $60. Steerage, $30; Prepaid Steerage Certificates, $27.

For freight or passage apply to

OELRICHS & CO., AGENTS,
Bowling Green.

Fine Elizabethan Chimney-Piece,

FROM AN OLD HOUSE IN YORKSHIRE.

Well-carved details of strap work, masks, and panelling, characteristic of the style.

RICH OLD OAK.

Choice old Beauvais and Flemish Tapestries, Moorish Cabinets, Spanish Embroideries, and Antique Furniture and Faience.

All *just* imported by

JOHN CHADWICK,
Household Art-Rooms, 3 E. Nineteenth Street.

Johns Hopkins University,

BALTIMORE, MARYLAND.

Programmes of the courses offered to University students for the next academic year may be obtained on application.

DAVID G. FRANCIS,

17 Astor Place, Eighth Street, New York,

DEALER IN NEW AND OLD BOOKS.

PRICED CATALOGUES, containing valuable standard literature, as well as rare, curious, and out-of-the-way books, are issued from time to time, and will be forwarded to any address.

BOOKS PURCHASED.

*IN any family, whether large or small, but es*pecially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Professor J. B. Fonssagrives's 'Mother's Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1 25 for two volumes

Address Publisher of the *Nation*.

OFFICE OF THE

Atlantic Mutual

INSURANCE COMPANY.

NEW YORK, January 25, 1882.

The Trustees, in conformity to the Charter of the Company, submit the following Statement of its affairs on the 31st December, 1881.

Premiums on Marine Risks from 1st January, 1881, to 31st December, 1881.....		$4,039,487 10
Premiums on Policies not marked off 1st January, 1881.....		1,587,534 47
Total Marine Premiums.....		$5,627,021 57
Premiums marked off from 1st January, 1881, to 31st December, 1881.....		$4,110,176 72
Losses paid during the same period.....	$1,775,882 80	
Returns of Premiums and Expenses.....	$924,227 02	

The Company has the following Assets, viz.:

United States and State of New York Stock, City, Bank, and other Stocks.....	$8,965,758 00
Loans, secured by Stocks and otherwise...	1,729,500 00

NEW YORK, THURSDAY, JUNE 8, 1882.

The Week.

MR. FRELINGHUYSEN has taken up the task of abrogating the Clayton-Bulwer treaty, but much more deftly and effectively than Mr. Blaine. The solid and substantial reason which Mr. Frelinghuysen advances for tearing up the treaty is that the agreement was made thirty years ago with reference to the construction of a canal by the Nicaragua route; that from that time to this no such canal has ever been built; that consequently the engagements of the treaty cannot be considered of binding force on either party. No such treaty can be expected to remain in force forever unexecuted. After thirty years' talk about a canal when there is no canal, the continuance of negotiations for a joint or universal protectorate of it seems idle, and a treaty for the purpose gets to be obsolete. Mr. Frelinghuysen might have made this part of his letter stronger by dwelling less upon the particular route designated by the Clayton-Bulwer treaty, and more upon the failure to construct a canal by any route. The article of the treaty which evidently gave him most trouble was the eighth, which declares that the Governments of the United States and Great Britain, "having not only desired, in entering into this convention, to accomplish a particular object" (to wit, the Nicaragua canal), but also to establish a general principle (that of an international protectorate), "hereby agree to extend their protection by treaty stipulations to any other practicable communication, whether by canal or railway, across the isthmus." It is this provision of the treaty, Mr. Frelinghuysen says, "which has occasioned this correspondence." It is this provision, at any rate, which has occasioned the main difficulty in carrying it on. It does undoubtedly show that in 1850 what we meant to do was to secure the canal, by whatever route it might run, by a general guarantee of the maritime powers. But here, again, there is no canal, and no general guarantee by means of additional "treaty stipulations" has been obtained, although Mr. Fish, only five years ago, made an attempt to carry out this branch of the treaty.

The more Mr. Frelinghuysen's despatch is examined the more clearly will it appear that the gist of his objections to the treaty is that it is a dead letter, owing to the fact that nothing has been done under it, and might as well be treated as such by both Governments. The various other arguments advanced by him do not strengthen his position, but give an opportunity for ingenious counter-arguments, which of course will be beside the point, but for which there was no necessity for making an opening. He says, for instance, that the treaty is "of course voidable at the pleasure of the United States," because Great Britain has been violating it by extending her "sovereignty" in Central America. He says that "the impression prevails that since the conclusion of the treaty of 1850 the English inhabitants of that district have spread into the territory of the neighboring republics, and now occupy a large area of land which, under the convention, belongs to one or the other of the two republics, but over which the Government of Her Majesty assumes to exercise control. Such dominion seems to be inconsistent with that provision of the treaty which prohibits the exercise of dominion by Great Britain over any part of Central America." This is a strong point, although not absolutely necessary to the argument. If Great Britain is actually doing anything of the kind, she is not merely violating the Clayton-Bulwer treaty, but she is violating the Monroe doctrine, which, according to Mr. Frelinghuysen's own definition of it, "at least opposes any intervention by European nations in the political affairs of American republics." But, as we have already said, the gist of his objections is that the treaty is obsolete. If we desire to withdraw from it, there is no reason why we should not, and Mr. Frelinghuysen's despatch extricates the Government from the awkward position in which Mr. Blaine placed it perhaps as well as could be expected.

We have been hoping for some days to see, in the columns of the *Herald* and *Sun*, something in the nature of a handsome apology to Mr. Lowell for the reproaches they have been heaping upon him for what they were pleased to term his "ignorance" in asking his Government for instructions as to the length of residence in his native country necessary to exhaust the American citizenship of a naturalized citizen. A correspondent of the *Nation* showed last week, in a very neat way, that the rumpus over this was all due to the ignorance of Mr. Lowell's assailants of the history of the expatriation question here, and thus the apology to him became at once due—that is to say, on Friday last. The *Sun* does not make this apology to Mr. Lowell, but tries to excuse itself by saying that what our correspondent showed the other day was simply that the several members of General Grant's Cabinet had expressed the opinion "that a renewal of residence by a naturalized citizen in his mother country should effect a renunciation of his acquired citizenship here." "But our Government," adds the *Sun*, "in its treaties with Great Britain, has never recognized any such view, and this Mr. Lowell ought to have known without making any inquiry of the Secretary of State on the subject." Error and injustice again, Esteemed Contemporary. The question on which the members of Grant's Cabinet expressed opinions was not whether the renewal of residence, etc., should "effect a renunciation of citizenship," but whether it should not be considered by this Government a release from the duty of giving its protection through the Army and Navy, and this question does not need a treaty for its decision. Great Britain has nothing to do with its decision. It lies wholly within the discretion of this Government; and when Mr. Lowell asked what view this Government was now taking of its duty in the matter, he made a perfectly proper and sensible inquiry, and did not fall into the error of supposing, like our contemporary, that we bind ourselves by treaty with foreign powers to give a certain amount or kind of protection to our citizens. We do nothing of the kind. On the contrary, by such treaty we simply bind foreign powers to respect certain claims of ours, if we choose to make them. So that the apology to Mr. Lowell is still due on this head, and we recommend at the same time an apology also for abusing him for asking for the release of the suspects, on condition that they would come home, this also being perfectly justified by our own precedents.

The Western case against Mr. Lowell grows darker every day. He is not only a scholar, a gentleman, and a man of civil demeanor in the transaction of business, who wears his trowsers outside his boots, but he has, according to the Dubuque *Herald*, become "liable to severe punishment, under Section 200 of the United States Revised Statutes," which provides that naturalized citizens shall receive the same protection as native-born citizens, and "provides for the punishment of any man guilty of collusion with a foreign government." "The statute," says the Dubuque publicist, "renders Lowell liable under this charge to a fine of $5,000 and imprisonment for three years," which, it justly observes, "is not a very agreeable thing to face." It only remains now, apparently, for the East to ask that in bringing him home for trial proper regard be paid to his age and to the position he has occupied in the United States service, and that he be allowed a cabin to himself, and be spared the indignity of irons, and that the goodness of his clothes, and general neatness of appearance, and his familiarity with English literature, be not used to prejudice his case under the statute. Many of the qualities, it must be remembered, which most damage him in Western eyes are congenital, and it would, therefore, be very un-American to punish him for them, or allow them to aggravate his punishment, in case he is found guilty of a violation of Section 200.

During the week the specie movement between the United States and foreign countries was unimportant, but at the close the indications were that some gold might be shipped for Italian account, particularly as under the recent law the Treasury will pay out fine gold bars on even terms for gold coin, and these bars are in London worth more than the coin. The crops have been the uppermost subject in Wall Street and mercantile circles, as on them to a large extent depend the profits of the railroads and the condition of business for the coming year. The weather has thus far not been favorable for corn. The winter-wheat crop, however, is well assured, and it is not venturesome to say that in quantity and quality it will exceed that of last year. It now looks as if the spring-wheat crop would be no larger than last year. The extensive strikes in the iron trade, the causes of which

we have discussed on another page, have had a depressing effect in all directions. The stock market was given over to the tender mercies of the bears, who raided one stock after another, and effected a decline ranging from 1@10¼ points. United States bonds declined ¼@⅜. The New York banks lost about $250,000 of their surplus reserve, but the loan market was very easy at low rates for borrowers. The bill which passed both branches of the Legislature, permitting call loans to be made at any rate agreed upon by the lender and borrower, became a law without the signature of Governor Cornell, who, however, had recommended such a law. This bill will, when money becomes worth 6 per cent., prevent rates from going up by jumps, as heretofore; instead of this we may expect to see the rate advance by half of 1 per cent. per annum—for instance, from 6 to 6½ per cent. Under the old law the next rate above 6 per cent. was 6 per cent. plus 1-64 of 1 per cent. per day, or about 11½ per cent. per annum. General trade is unquestionably dull; collections, however, are fair, and credits are not extended.

The recent exportation of some millions of gold from this country has led to numerous ejaculations in the press against the extravagance of our people, and to earnest suggestions that they ought not to buy so many things, especially foreign things. Exhortations of this sort may be very good for the moral nature of man, but they have no value in the discussion of questions of political economy. Convince a man that he cannot buy the article of luxury he wants, and you will make an impression upon him sufficiently strong to prevent him from buying it, but to argue with him that although he is perfectly able to have it, yet his buying it will lead to an exportation of gold, and that this will be a bad thing for some other person or persons, will, in nine cases out of ten, lead him to suspect that you are a little out of your mind. He will be perfectly content if you make your observations general, taking in whole classes of society, and especially if you point to the growing extravagance of bricklayers and boiler-makers and their wives. But to make a personal application to him, and to adduce a column of Treasury statistics to prove that he ought not to smoke such expensive cigars, and that his wife ought not to wear such costly bonnets, is in his view a gross impertinence. Even if he assents to the proposition that "national extravagance" is a bad thing, and that something ought to be done about it, he reasons that his abstinence would not amount to a drop in the bucket, and he reasons correctly. He may not carry the logical process so far as to conclude that if the individuals composing the nation can afford to live on a particular scale, the nation itself can afford it, but he will be pretty sure to resent any suggestion that *he* is responsible for the exportation of gold, even if he admits that the exportation of gold is a bad thing *per se*. And this he will do, whether his station in life be that of a banker or of a hod-carrier. There is no objection to the continuance of exhortations on this theme, but as they have never yielded any results heretofore, they will yield none now.

In response to a summons from Mr. Conkling, his friends who urged him to be a candidate for reëlection after his resignation, and to go to Albany for that purpose, have at last come forth. The *Herald* publishes letters from seven of them which agree in representing their sentiments as to what Mr. Conkling should do at the time, as unanimous. They agree also in stating that, at a sort of council of war held at General Arthur's house in this city, General Sharpe, who now says that he did not urge Mr. Conkling at all, was particularly fervid in advising that he should stand for a reëlection and go to Albany to manage his canvass. Whether General Sharpe will try to invalidate the testimony thus accumulating against him, and how he will try to do it, we are very curious to see. The public learn now, also, who it was that Mr. Conkling advised with when he was engaged in the greatest effort of his life. The meeting of which the letters speak took place in Vice-President Arthur's house. Present were Senator Jones, from Nevada, ex-Senator "Tom" Platt, United States Marshal "Lew" Payn, Mr. John F. Smyth, of Insurance Department fame, Police Commissioner "Steve" French, Mr. C. W. Dennison, an old "canal man," Mr. A. B. Johnson, of Utica, Mr. Conkling's faithful committee-man, and General Sharpe. This was the council of statesmen whose advice Mr. Conkling took when he did the foolishest thing ever done by an American politician.

The Senate has confirmed another appointment of an internal-revenue collector in Pennsylvania, made at the request of Senator Cameron, to fill a place vacated by the removal of an unusually meritorious officer, without the slightest pretence of a cause. The removal, of course also at the request of Senator Cameron, was made against a protest signed by 8,000 respectable business men of the district. The arguments with which Mr. Cameron is reported to have defended that removal in the Senate were very characteristic. He admitted that the removed officer had performed his duties in a very efficient manner; but it was absurd to suppose, he said, that no other man of integrity, capacity, and character would make just as efficient a collector. According to this, Mr. Cameron would make it a rule that as long as there is a man of integrity, capacity, and character in the district, the office must be kept going round and round, for it would not do to permit any individual to get warm in the place and to become thoroughly conversant with its duties. This is a jolly view of what a well-regulated public service should be. But everybody knows that Boss Cameron did not ask for the removal of the meritorious officer for the purpose of putting in a man of equal integrity, capacity, and character, but for the purpose of securing the power and influence of that office for one of his political henchmen, and that, if that henchman is at the same time an able and respectable man, it is a lucky accident. However, the Senate took Mr. Cameron's view of the case, confirmed his nominee, and thereby made the rupture in the Republican party in Pennsylvania still more incurable. Mr. Cameron had ostensibly accepted the "peace platform," which provided that there should be no removals from office without cause. By insisting upon a removal without the slightest cause, against the emphatic protest of the business community interested in the case, Mr. Cameron has only given new proof of his bad faith and poured a little more oil into the flame.

Mr. Blaine has declined an invitation from his friends in Maine to become the Republican candidate "for Congressman-at-large" in that State. The principal reason he gives is that, in justice to those who have even a stronger claim upon him than the "great constituency" in Maine, he has to devote himself to his "long-neglected private affairs." This reason may be quite true and sufficient in itself, but it is also true that his election as Congressman-at-large, if he accepted the candidacy, would be an exceedingly doubtful thing. And this Mr. Blaine knows very well. He has undoubtedly a large number of enthusiastic friends among the Republicans of Maine, but also a great many very determined opponents, not confined to the Democratic or Greenback party, who would work hard to defeat him. And their numerical strength and influence are so large that Mr. Blaine would not only not be the strongest, but one of the weakest candidates the Republicans of Maine could nominate. It would be highly inexpedient for Mr. Blaine to expose himself to a defeat which would finish his political prospects.

The temperance question has been making a world of trouble for the Republican managers in Ohio, and is now leaving them very much in the position of the Old Man and his Ass. The Legislature recently passed the Pond Liquor Law, which compelled every dealer not only to take out an expensive license, but to give a bond. This seemed likely to secure the temperance vote, which amounts to about 16,000, even if it alienated the German vote. But now the Supreme Court has declared the act unconstitutional, so that there is nothing to offer the temperance men in the way of legislation, and they ask for more in the way of declaration than any party dare give. In the meantime the Germans are so much exasperated by the law that its nullification by the courts does not satisfy them, and they are disaffected to the party on the ground of radical unsoundness on this issue. The Republican Convention meets as we go to press, and it is very difficult to devise anything effective for the platform. The prospect is said to be rendered all the more gloomy by the widespread dissatisfaction caused by the apparent "proscription" of the Garfield officeholders by President Arthur. The "war" which he has been carrying on against these gentlemen may be fun for him, but it is a serious matter for Republicans who have to carry State elections without the assistance of "the boys" in New York.

The Roman Catholic Bishop of Cleveland is at odds with some of the women of his diocese. It seems that the Parnell Land League there has a ladies' branch. Bishop Gilmour has his own views of Irish wrongs and reme-

dies, and, in "a card" to the *Catholic Universe*, refers to his "late lecture" on the subject. Difference of opinion in this matter, however, is not the cause of the trouble. He intimates that if the local Land League had "confined itself to male membership," there would have been no difficulty. But as it tolerates a female branch, he denounces "the presidentess thereof" and her associates as "brawling politicians"; and his "card" concludes with a formal excommunication of these women and all others who shall attend any of their meetings. He denies them the guidance and consolation of the Church, not because they advise tenants not to pay rent, or encourage them to shoot their landlords, or because they have opposed the Land Act or connived at the Dublin murders, but because they hold meetings for the discussion of the Irish question at all. When they do this they become "brawling politicians," and "assume the brazen unwomanliness of female politicians." "Female modesty must be maintained," exclaims the Bishop, "let the cost be what it may!" "Woman must be woman," must "live within the modesty of the family circle," must "not be tainted with the noisy brawl of the virago." It will be seen that something more than the Irish question is involved here. According to the Bishop's card, any Roman Catholic woman who attends a public meeting, for the discussion of any subject whatever, becomes a "brawling politician" and a "virago," and incurs the penalty of excommunication.

The most curious "correction" probably ever addressed to the press has come from the pen of Mrs. Dunmire, Guiteau's former wife. She desires, she says, to participate in any movement that may be made to procure a commutation of his sentence, and wishes to say that "we"—presumably she and her present husband—"are not in favor of him being hung," the newspaper reports to the contrary notwithstanding. This is a very tender but very unusual mode of recognizing the force of old, though long dissolved, matrimonial associations, and it must touch Guiteau, hardened though he be.

At the Ministers' Conference of the Baptist Church in this city on Monday, the Rev. William Harris, of St. Joseph, Mo., sought to exonerate the Missouri Baptists from the charge of sympathy and fellowship with Jesse James. He denied that James was a Baptist church member at the time of his death, but admitted that he had been one, and that his father had been a Baptist minister, and that his mother was a Baptist church member now, but maintained that all good Missouri Baptists were glad of his death, though they did not like to have him killed in the way "the Ford boys" killed him. He had himself refused to perform services over his body at St. Joseph, and the task was performed by another minister elsewhere, who had, however, refrained from eulogizing the defunct. We cannot help thinking that a minister, Baptist or other, who, on such an occasion, spoke his mind out freely about the defunct, and painted him as the dreadful scoundrel and cut-throat that he really was, would not only perform his simple duty as a minister, but greatly improve the occasion. We admit, however, that such a discourse would in Missouri perhaps lead to a row among the mourners, which might either compel the minister to fly precipitately or resort to the arm of flesh for his own protection.

Despatches from Quincy, Illinois, report the shooting of Dr. Hoffman, editor of the *Germania*, by Dr. Spear and "the Hellhake boys," but do not make the motives of the crime as clear as could be wished. It seems that the article which "is supposed to have led to the shooting speaks kindly of all the persons mentioned in it." A eulogistic editorial notice of this kind seldom leads to murder in the East, and it is difficult to see why it should in Illinois. The publicity of praise may be disagreeable to persons of extremely sensitive natures, and a friendly puff may be so exaggerated as to cause pain; but the account given of the two Hellhakes does not show them to be "boys" of exaggerated sensibility, or, in fact, different from other Illinois "boys." To the sociologist such cases look as if crime in the West was produced by different causes and governed by different laws from those which exist in other parts of the Union.

Franklin J. Moses, some time Governor of South Carolina, has been sent to the Penitentiary for six months, for petty larceny. It is only ten years since he was in office, with the United States Army and Navy at his back, and defending himself against arrest on judicial process with a guard of negro militia, and enjoying the support of a considerable portion of the Republican press at the North. His career furnishes a deplorable example of the kind of white man which the social revolution at the South brought into prominence after the war. Most of the others have disappeared into obscurity, and are only too glad to be forgotten. Moses was less lucky or less shrewd, and had the misfortune to be a drunkard. He has led a precarious existence as a petty swindler here for several years, but impunity made him too bold. It is, however, pleasant to remember that he was not a Northerner or a carpet-bagger. This unique specimen of a Governor was a native South Carolinian and an ardent Secessionist, and bore a prominent part in the attack on Fort Sumter. He then became a "repentant Rebel," but appears to have repented too rapidly and too much.

The new Tichborne claimant, who has been getting up his case in California, is going over to England very soon to establish his right to the title and estates. His backers are a gardener named Lane and two "Catholic instructors," with whom, however, he has not yet had an interview. His case therefore cannot be considered as carefully prepared, and is not so strong at the outset as that of the original claimant, who was recognized as Sir Roger by the latter's mother. On the other hand, he is said to be a "highly educated man," and his claims upon our interest are heightened by the fact that he is a "one-handed man," having lost one of his hands as a soldier in a New York regiment during the Rebellion. When a one-handed soldier crosses the ocean to assert his rights against the aristocracy of England, the judges, the Lord Chancellor, and the Queen, supported by her land and naval forces, backed only by a gardener and possibly two Catholic instructors, we cannot but sympathize with him quite as deeply as we have done with McEnery and Dr. Lamson in their trials. Is he not entitled to have his case pressed by our Government?

The Repression Bill is being pushed steadily through the Committee of the Whole in the House of Commons, all attempts of the Home Rulers to amend it having been defeated by heavy majorities. Thus far, however, it is only the constitution of the new courts, and the inclusion of treason-felony and treason committed on foreign soil in their jurisdiction, which have been the objects of attack. When the clauses are reached which give the Lord Lieutenant and the magistrates power to suppress newspapers and public meetings, the onslaughts of the Irish will undoubtedly come nearer success, if they do not attain it, as there is a strong dislike of these provisions among the English Radicals. In the debate, Sir William Harcourt, whose discomfiture the House always enjoys, seems to have got the worst of it in a set-to with Mr. Healy. He made the very extravagant statement that the clause making treason committed on foreign soil justiciable in Ireland was necessary to meet such cases as O'Donovan Rossa's, who ought to be punished even if he had only one reader on the other side of the water. This gave Healy the opportunity of saying that O'Donovan Rossa was as necessary to Sir William Harcourt as Sir William to O'Donovan Rossa, in which there is a great deal of truth. O'Donovan Rossa owes much of the prosperity of his paper and his own notoriety to his having apparently shaken the nerves of the English Home Secretary, and, on the other hand, whenever Sir William is hard up for an argument in favor of Irish coercion he always says, "Look at O'Donovan Rossa."

The solution of the Egyptian problem has made very little progress. The conference of the Powers will probably soon be held, but the date is not fixed, and the Sultan has issued a circular opposing it *in toto*, on the ground that it is not necessary, inasmuch as he will settle the whole matter himself, if permitted. His dislike of European conferences is quite comprehensible, inasmuch as they rarely meet without stripping him of something or imposing some new and disagreeable duty on him. He has sent orders to Arabi Bey to stop throwing up earthworks around Alexandria, which he has been doing, it appears, within five hundred yards of the British and French fleets. The Admirals have, however, been somewhat indifferent to the process, knowing that Arabi has no guns to arm the works with, which could survive a single broadside from the ships. But he is enjoying a certain appearance of power and impunity, owing to the fear of the British and French that if they employed force against him, even on a small scale, it would expose the foreigners at Cairo to a popular Mussulman outbreak, which would certainly endanger their property and might endanger their lives.

SUMMARY OF THE WEEK'S NEWS.

DOMESTIC.

THE great strike of the members of the Amalgamated Association of Iron and Steel-Workers was fairly begun on Thursday. The morning of that day found twenty-six iron rolling-mills of Pittsburgh silent, and 25,000 workmen out of employment. Despatches from Milwaukee, Cincinnati, Chicago, and many other cities announced that the strike had also begun in those places. The Association professes to have a million dollars in the treasury at Pittsburgh. The proprietor of one of the mills at Pittsburgh which was closed by the strike, and who is said to be one of the best-informed men in the business, was interviewed on Friday, and is reported to have said that he thought the strikers would succeed, for the reason that the manufacturers were not prepared to fight the Association, and there was no union among them.

The total number of immigrants that arrived in New York during the month of May was 86,677, as against 78,359 for the same period in 1881. The total number of arrivals since January 1 was 227,325, an increase of 39,843 over the corresponding period of last year. Of those arriving during the month of May, the Germans take the lead, with 30,047, followed by the Irish, with 13,453.

A request having been made that the eight-hour law should be enforced in the Navy-yards, Attorney-General Brewster has written an opinion on the matter, taking the ground that the existing laws on the subject are conflicting and defective, and that further legislation is required. It is understood that the President will send a special message to Congress on the subject.

The Army Appropriation Bill was passed by the Senate on Tuesday. The compulsory-retirement clause makes the retiring age sixty-four years.

In further compliance with the Senate's resolution of December 12 of last year, calling for copies of the instructions to our Minister in London, in regard to the proposed modification of the Clayton-Bulwer treaty, the President, on Monday, submitted to the Senate a copy of a despatch sent by the Secretary of State to Mr. Lowell and dated May 8, 1882. The points made in the despatch are in substance as follows: 1st, the Clayton-Bulwer treaty is no longer binding upon the United States, because England herself has violated its provisions. The treaty forbade both the United States and Great Britain to extend their authority in Central America. This stipulation England violated in the case of Honduras; 2d, the great object of the treaty was to hasten the construction of a canal on the Nicaragua route. This object failed, and therefore all agreements with Nicaragua concerning the maintenance of neutrality have ceased to be in force, and cannot be revived for the benefit of any other scheme. In regard to the suggestion made by Lord Granville, in his note of January 7, that the United States should take the initiative in an invitation to other Powers to participate in an agreement based upon the Convention of 1850, Mr. Frelinghuysen says that the President "is constrained by the considerations already presented to say that the United States cannot take part in extending such an invitation, and to state with entire frankness that the United States would look with disfavor upon an attempt at a concert of political action by other Powers in that direction."

The consideration of the Mackey-Dibble contested-election case was resumed in the House of Representatives on Wednesday. The resolution from the Committee on Elections declaring Mackey entitled to the seat was finally adopted. On Thursday, the contested-election case from the Second Florida District was called up, and Mr. Bisbee, the Republican candidate, was seated by a vote of 141 to 9. On Friday the Lowe-Wheeler case from the Eighth Alabama District was taken up and the day consumed in its discussion. On Saturday Mr. Lowe, the Republican candidate, was declared entitled to the seat, by a vote of 149 to 3.

An exhaustive report was made to the House of Representatives on Tuesday in response to a resolution intimating that undue influence and haste were used in passing the Bonded Spirits Bill. The report denies that the bill was passed hastily, and says that the Commissioner of Internal Revenue made no suggestions except when asked to do so by the Committee.

On Tuesday, on motion of Mr. Kasson, the House unanimously adopted resolutions eulogizing General Garibaldi, and expressing sympathy with Italy in her bereavement.

A memorial was presented to the House on Monday from the American Meteorological Society and others, with regard to the establishment of standard time. The memorial asks that Congress adopt such measures as may be necessary to bring about an international conference for the purpose of selecting a prime meridian and securing its universal adoption as a standard of reference for the regulation of local time.

A Republican caucus will be held on Wednesday evening, to decide on a programme of business for the rest of the Congressional session.

The President has approved the act for the reëstablishment of the Court of Commissioners of *Alabama* Claims and for the distribution of the unappropriated moneys of the Geneva Award.

The President has spent most of the week in New York, and is reported to have had consultations with the leading politicians of the State, preparatory to the nomination of Secretary Folger for Governor, and the inauguration of a campaign to be conducted on strict Stalwart principles.

A despatch to the New York *Tribune* on Tuesday stated that the renewed rumors of Mr. Lowell's return are without foundation, and that there is excellent authority for saying that Mr. Lowell has not been recalled and has not resigned, and that no name is being considered for his place.

A large number of prominent and influential Maine Republicans, aggregating several thousands in all, addressed a letter, dated May 18, to Mr. Blaine, asking him to consent to be nominated for Congressman-at-large from that State. On Saturday Mr. Blaine wrote in reply that "neglected private affairs, from which I cannot at this time turn aside, except with injustice to those who have even a stronger claim upon me than the great constituency which in all these years has honored me with an earnest support and unwavering confidence," would make it impossible for him to consent to the use of his name.

The Fusion Greenback Convention met at Bangor, Maine, on Thursday, and chose a State Committee, and nominated Harris M. Plaisted for Governor.

A majority and a minority report in the matter of Judge Westbrook, of the Supreme Court of New York, were presented to the Assembly by the Judiciary Committee, which has had charge of the investigation of the Judge's acts, on Wednesday. The majority report "whitewashed" him, and the minority report recommended that he be impeached. The former was adopted by a vote of 77 to 35. This action of the Assembly has aroused a great outcry throughout the State. The Legislature, which adjourned on Friday, has earned, in the opinion of many, the reputation of being the most corrupt and dishonest Legislature since the days of Tweed's ascendancy.

The Rhode Island Legislature has passed resolutions appropriating $10,000 for an equestrian statue of General Burnside to be erected in Providence, provided $20,000 is raised by private subscription. $7,500 was also appropriated for a statue of Commodore Perry, to be erected in Newport. The Legislature will meet on June 13 to reëlect Senator Henry B. Anthony to the Senate.

A committee of the Louisiana House of Representatives has reported strongly against legalizing any more lottery companies, and, in the Senate, a proposed amendment to the Constitution, abolishing all lottery charters, passed two readings by a vote of 22 to 12.

General Sherman has submitted to the Secretary of War the report of a board appointed to investigate the loss in lives and property caused by the recent Indian outbreak in Arizona. From this report it appears that forty-two persons were killed and five wounded. The depredations committed, as reported to the board by citizens, involved a loss to stock and other property of about $30,250.

General Fuero, commander of the Mexican troops at Chihuahua, with four hundred Mexican cavalry, surprised and attacked a band of renegade Apaches, early on the morning of the 25th of May, near Bosque de Santiago. Thirty-seven Indians were killed and ten taken prisoners, and the entire camp outfit, including fifty head of stock, was captured. This is the second time that Mexican troops have inflicted severe loss on the Apaches, who are reported to be much demoralized, and will probably now keep quiet for some time.

Bishop Gilmour, of the Cleveland Catholic diocese, issued a card to the ladies of the Land League of Cleveland, threatening their excommunication unless they renounced all relations to the League. The ladies refused to comply, and "in plain words told the Bishop to mind his own business." On Sunday, the President of the Ladies' Land League offered for publication an open letter to Bishop Gilmour, in which she upholds the righteousness of the cause the Land League is engaged in, flings defiance at the Bishop, and wishes to know how "one Bishop, without authority from the fountain-head of the Church, can excommunicate any individual or society engaged in the freedom of their native land?" Bishop Gilmour not only refuses to answer this inquiry, but goes so far as to say that he will take no cognizance of it whatever.

The proposition which was made to remove the body of Thomas Jefferson from the old grave-yard at Monticello and place it in a cemetery in Washington has met with such widespread opposition in Virginia that it is extremely unlikely that the plan will be carried out.

A new Atlantic Cable Company has been formed, with a capital of $10,000,000. The general route of the line of telegraph is from New York city to some point convenient upon the coast of the United States, and thence to the coast of Portugal, Spain, or France.

Lieutenant Danenhower, of the *Jeannette*, has been directed to prepare at his leisure a detailed account of his experiences after separating from Engineer Melville.

The long-postponed Star-route trials were finally begun on Thursday. In the matter of challenging the jurors, the Court ruled that the prosecution was entitled to only three peremptory challenges, while each of the defendants was entitled to four, making a total of twenty-eight. Mr. George Bliss opened for the Government on Friday, and concluded his argument on Monday.

Mr. Reed, counsel for Guiteau, presented a petition to the District Supreme Court at Washington, on Friday, asking for a rehearing of the case of his client. The application was on purely technical grounds. On Monday the Court delivered its opinion, refusing to grant the petition. The Judges declare that a reargument would bring them to no other conclusion than that which they have already arrived at. On Tuesday, in the Criminal Court, Mr. Read read a motion that the record and judgment in the case be amended so as to show that President Garfield did not die in the District of Columbia as alleged. Judge Wylie denied the motion.

Franklin J. Moses, ex-Governor of South Carolina, was sentenced in New York on Tuesday to six months in the Penitentiary, for obtaining money on false pretences.

FOREIGN.

The event of the week in Europe has been the death of General Giuseppe Garibaldi, which occurred on Friday at his home on the island of Caprera. The event created a profound sensation throughout Italy. In Rome all the performances in the theatres were stopped when the news arrived. In the Italian Chamber of Deputies on Saturday President Farini delivered a panegyric on the deceased patriot, while the whole House remained standing. Bills were passed postponing the national fête until June 18, decreeing funeral honors, voting a monument to his memory, and pensions to his wife and children. Both the Senate and Chamber then adjourned. The French Chamber of Deputies also adjourned, as a sign of mourning. Movements are on foot in many Italian cities to erect monuments to Garibaldi's memory. The body, in accordance with the will of the deceased, is to be cremated on Wednesday, and the funeral will be attended by deputations from the Senate and Chamber of Deputies and the municipality of Rome, and representatives of the King and Ministry. Victor Hugo has accepted the honorary Presidency of the funeral, but has telegraphed that he cannot be present on account of his great age.

On Thursday it was announced that the representatives in Constantinople of all the Powers had counselled the Sultan to comply with the demand of the French and British Governments for a declaration by the Sultan in favor of the Khedive, and summoning the leaders of the *émeute* to Constantinople. The Porte sent a letter to Arabi Bey warning him that he would be held personally responsible for the preservation of order and the safety of the European residents. Arabi then issued circulars to the consuls, repeating his assurances that the European residents were safe. On Sunday a Turkish Commission sailed for Egypt with the object of endeavoring to effect a reconciliation between the Khedive and Arabi Bey, and the Porte sent a circular to its representatives abroad, expressing the opinion that the proposed conference of the Powers is no longer called for, as the Commission sent to Egypt will be sufficient to restore order. Meanwhile the aspect of affairs in Egypt has not changed much. Arabi Bey is doing his utmost to strengthen his position by sending out circulars denouncing the Khedive, organizing the Army, and deporting to the Sudan prominent persons hostile to him. The troops in the barracks at Cairo have held excited meetings, demanding that Halim Pasha be proclaimed Khedive. Arabi Bey has been throwing up earthworks and fortifying Alexandria. The British Government protested to the Sultan against these military preparations, and the latter telegraphed the Khedive to request Arabi Bey to discontinue them, but the telegram is said to have come too late, as the fortifications at Alexandria were already completed. The English and French fleets at Alexandria have been strengthened by recent arrivals, and the English commander is said now to be able to land 1,000 men in case of an emergency. The general feeling that the Porte has been playing a double part, secretly encouraging Arabi Bey while pretending to support the Khedive, has been strengthened by the events of the week. Arabi Bey openly boasts that he has been supported in his course by the Turkish Government.

The news from Egypt on Tuesday was that a meeting of the military leaders had been held at Arabi Bey's house, at which it was decided to observe an expectant attitude until the Turkish Commissioners had disclosed the Sultan's intentions. Should the Sultan attempt to maintain the present Khedive in power, the military party are said to be resolved to wreak vengeance on the Khedive, even at the cost of their lives. Advices from Constantinople state that the German Ambassador, after an audience with the Sultan on Tuesday, informed Lord Dufferin that the Sultan would sustain the Khedive loyally and energetically.

In the House of Commons on Thursday the Government made some statements on the Egyptian situation. Sir Charles Dilke, in reply to a question, said the Government, at the suggestion of France, had agreed to invite the other Powers to a conference for the settlement of the Egyptian question on the basis of the *status quo*. The Government, he said, had on February 6 proposed to M. de Freycinet to take the other Powers into their confidence. Mr. Gladstone said that what was feared by the European residents in Egypt, as likely to endanger their safety, was European military intervention. The Government considered itself pledged to uphold the present Khedive, because he had, so far as they could judge, behaved with perfect honor and good faith. In regard to the question of Turkish intervention, Mr. Gladstone said that it, rather than European intervention, was desirable, because there was danger that the latter would inflame fanaticism

In a debate on the same day in the French Chamber of Deputies, on the Egyptian question, M. de Freycinet defended the proposed European concert; any other course, he said, must lead to complications. The idea of French military intervention had no place in the Government's plans. M. Gambetta said he could not hear without a protest that France would not intervene, and M. de Freycinet then explained that he meant France would never agree to cut the Egyptian question by her own isolated action, but that in entering the European concert she had accepted the duties which the decisions of Europe might entail. An order of the day expressing confidence in the Government was then adopted by a vote of 298 to 70.

In the debate on the release of the suspects in the House of Lords on Monday evening, Lord Cowper, who was Lord Lieutenant of Ireland when the Irish members of Parliament were released, said that he had only signed the order for their release after obtaining an understanding that his action should be considered as a mere matter of official routine. He believed that the opinion of the educated classes was against the release, as the sudden manner in which it was effected gave the matter the appearance of a complete surrender to disorder.

Lord Spencer, on receiving a deputation from the Corporation of Limerick on Tuesday, the 30th, said he trusted shortly to be able to release the last of the suspects. Christopher Palles, Lord Chief Baron of the Exchequer in Ireland, in opening the Dublin Commission on Friday, said that fifty-six per cent. of the crimes in the city, and seventy per cent. of those in the country were undetected—a matter for grave reflection. As to the Phœnix Park murders, he understood there was no chance of bringing the perpetrators to justice. Mr. Brennan, Secretary of the Land League, who was released from prison on Friday, delivered a violent address in Kilkenny immediately after his release, in which he said his real jailers were Gladstone, Bright, Chamberlain, "and the whole crowd of pseudo-humanitarians and renegade Republicans who compose the British Cabinet." He hoped if the 800 suspects were called on for real sacrifice, they would be ready, if necessary, to die for their country.

Mr. Sexton, Member of Parliament for Sligo, addressing his constituents, said that the land movement had wrung the Land Act from a reluctant and ignorant legislature. He violently condemned the Repression Bill, and, in reference to the alien clauses, he expressed doubt whether the relations between England and the United States were so friendly as to make it worth while for the former to embitter them still further. The Irish party, he said, felt it their duty to meet the bill with stern and resolute opposition. There were no splits in the party, and the triumph of the land movement in a year or two was certain.

Messrs. Davitt and Dillon will sail for New York on Thursday next.

The House of Commons went into committee on the Repression Bill on Friday. The treason-felony clause was the subject of a warm discussion. Sir William Harcourt said the clause would apply only to offences committed after the passage of the act. Mr. Parnell said that this statement was satisfactory as far as it went, but that political offences ought to be entirely excluded from the bill. After further discussion a vote was taken on the amendment, excluding cases of treason or treason-felony from those to be tried by the Special Commission Courts, and the amendment was lost by a vote of 70 to 227, but about forty Liberals voted with the minority. Various other amendments were offered by members of the Irish party, but were all rejected. On Monday evening debate on the bill was resumed. In the course of the discussion, several Irish members expressed the wish that the Special Commission Courts be precluded from trying prisoners for treason in consequence of words spoken or written in a foreign country, but Sir William Harcourt insisted that British subjects who in England or elsewhere counselled invasion of England, or committed treasonable acts, ought on coming within the jurisdiction of England to be made amenable for such counsels or acts. The House, by a vote of 138 to 25, approved the Home Secretary's views. Mr. Parnell made a speech in which he said the Phœnix Park murders had produced a desire to assist in the enforcement of the law, but this feeling disappeared when the Repression Bill was introduced. He declared that the bill would tend to increase outrages. A division was then taken on the first clause of the bill, and it was passed in committee by a vote of 227 to 37. The second clause of the bill, which provides for appeal from Special Commission Courts to the Court of Criminal Appeal, was then adopted unanimously. The House in Committee passed the third clause, prescribing the manner of the constitution of the Court of Criminal Appeal, on Tuesday, by a vote of 82 to 29.

Great excitement is said to prevail in India over an order issued by the Marquis of Hartington, Secretary of State for India, for the immediate repeal of the Petroleum Act of 1881, and the substitution therefor of a new act allowing the importation of any oil, subject to the orders of the Viceroy. The Chamber of Commerce of Calcutta has presented an address to the Government, strongly deprecating the Marquis of Hartington's measure. The Indian Government will take a week to consider the matter.

A despatch from Vienna says that Herr von Kallay has accepted the portfolio of Imperial Minister of Finance with the Administration of Bosnia and Herzegovina.

In Committee of the French Chamber of Deputies on the appropriation for Tunis, M. de Freycinet said the policy of the Government was not the annexation of Tunis, but the establishment of a protectorate as defined by the Bardo treaty.

The *Napoléon*, the organ of Prince Jerome Napoleon in Paris, has suspended publication on account of a lack of popular support. Prince Napoleon has written a final letter to the editor, declaring that his sons will always represent true Napoleonic doctrines "despite perfidious appeals to the worst sentiments." This is supposed to refer to M. Paul de Cassagnac's efforts to secure the recognition of Prince Victor as the head of the Bonapartist party, to the exclusion of Prince Napoleon.

The Princess Louise arrived in Quebec on Sunday night on the steamer *Sarmatian*. She was received with much enthusiasm and appeared to be in good health.

TUESDAY, June 6, 1882.

THE CROPS AND THE STRIKES.

THAT the present disturbances in industry, especially in the iron and cotton trades, are directly traceable to the deficient crops of last year, there seems little reason to doubt. Everywhere the strikers complain that they cannot live on the wages they are getting. Money wages have not been reduced except in a very few cases, but the cost of living has increased. The wages will not go so far in procuring the necessaries of life as last year and the year before. On the other hand, the employers say that the market for their products has fallen off, that they cannot sell at last year's prices, and that to pay higher wages under such conditions is impossible. There is good ground for believing that both are correct. There being less to divide this year than last year or the year before, the parties to the division must take less. Struggle with each other as they may, they cannot increase the sum total of their share of the nation's wealth; therefore, they can add nothing to the two halves of it by strikes or lock-outs. Last year's drought inflicted an enormous loss upon the country. Wide as our area is, no part of it wholly escaped the visitation. It fell upon the wheat, the corn, the cotton, the hay, the potato, and the fruits. Everything that depends upon the rainfall was shrunken and diminished. Some of our richest agricultural districts did not produce enough grain and meat for their own consumption.

The principal difference between British and American manufacturing industry is that the former has for its customers the population of the whole world, while the latter restricts itself as far as possible to the population of the United States. It results from this difference that a bad harvest in the British Islands, although a serious curtailment of the national resources, has little effect upon other industries than agriculture. In the United States, on the other hand, a bad harvest falls with blighting effect upon every other trade. Our iron trade is prostrate to-day and our iron-workers are on strike because the crops of 1881 were below the average. The dependence of the one upon the other, or rather the dependence of all the others upon agriculture, explains why every man of business is now straining his eyes and ears to catch the latest information regarding the growing crops. Too much wetness, too much dryness, too much cold, too much heat, the chinch-bug, the grasshopper, the cotton worm, the army worm, rust and blight, pleuro-pneumonia, and hog cholera—whatever plays havoc with fields and pastures, has for us an interest transcending every other interest, because we all feel and know that our bread and butter is made at home, and that if agriculture comes short, everything else must come short. Broadly speaking, we have no other resource.

The harvest of Great Britain is grown in Minnesota, California, Russia, Hungary, India, Canada, Australia, and Egypt, as well as in England and Ireland. Too much rain or too little in one country affects her but slightly, because the area of her wheat fields is coextensive with the earth. The bread of her iron-workers, her spinners and weavers, her sailors, her craftsmen of every sort, is grown as well in Illinois, or in Spain, or in Poland, as in Hampshire or in Berkshire. The failure of crops in one country, while never a matter of indifference, causes her the least possible harm because she does not depend upon one country. Freedom of trade has virtually annexed to her all the wheat fields of the world, and it makes no difference to her manufacturers and artisans whether her food is produced at home or abroad. In the years 1878, 1879, and 1880, she had three bad harvests in succession. Her landowners and farmers were severely pinched, but her prosperity in the aggregate was scarcely impaired, because her wheat fields in Western America and other parts of the globe yielded abundantly. Three as bad harvests in the United States coming in succession would demolish every branch of industry between the Atlantic and the Pacific, except those of petroleum and the precious metals, and, in place of strikes, we should probably have bread riots of the most alarming description.

Why does Great Britain, with her limited area and uncertain climate, possess such advantage over us that the vicissitudes of seasons affect her lightly while they put us in the gravest peril? Plainly because she is able to offer to those who have an abundance of food when she has a scarcity, more of the things they want—more pounds of iron, more yards of cloth, greater quantities of manufactures in general—than we can. Her superiority consists neither in natural resources, nor in native or acquired skill, nor in accumulated capital. Our natural resources are, upon the whole, greater than hers; our skill is equal, and our accumulated capital, if not as great, is sufficient, and more than sufficient, for all purposes of competition with her. With 281 iron furnaces out of blast at this time (as the *Tribune* informs us), there cannot be any lack of capital to carry on the iron business. On the contrary, there would seem to be an inconvenient surplus. Our inferiority to England consists in a rapacious system of taxation called "protection to American industry," based upon the crude idea that if all trades are allowed to feed off each other's vitals, the result will be generally invigorating and fattening. Scarcely a week passes that we do not hear of some distressed industry appealing to the public authorities at Washington for relief, upon the ground that the duties upon its raw materials are greater than those upon its finished product—assertions which may be true or may not, but, whether true or false, serve equally well to illustrate the cannibal practices of our whole tariff system. We shall never be in a position to compete with England in manufactures; we shall never be sheltered as she is sheltered against the contingency of bad harvests and bad seasons, until we begin to strike off the self-imposed shackles which restrict our commerce with the world.

THE ADVISORY BOARD AND FITZ-JOHN PORTER'S CASE.

GENERAL LOGAN'S minority report on the bill restoring Fitz-John Porter to his rank in the Army lays great stress on the assumption "that the Advisory Board was an illegal body, unwarranted by law or by precedent," and from this draws the conclusion that the opinions of the members should weigh no more "than the opinions of any other three gentlemen." This is really the only novel or strong point in General Logan's position. His discussion of the evidence taken by the Board will only interest those who think the General himself a candid and impartial man, accustomed to weighing proofs, who approaches this case without prejudice. When he says, therefore, that "the assumptions of the Board are not borne out or justified by the records or the evidence," he simply says that General Logan does not agree about the Fitz-John Porter case with Generals Schofield and Terry and Colonel Getty. He does not throw any new light on the subject.

His objection to the authority of the Advisory Board on the ground that it was a body unknown to the law, will, however, probably strike a good many unreflecting people as something weighty, if not insuperable, and, in fact, has apparently made some such impression on the plastic intellect of our contemporary, the *Times*. But the fact is that the objection is not only without weight, but without relevancy. It has no bearing on the merits of the case whatever. It would be important, if Fitz-John Porter or the President claimed for the Advisory Board the character of a court, to which an appeal lay from the judgment of a court-martial, and which had the power to overrule such judgment. But nobody has ever maintained that it was a court of any kind, or that any appeal lay to it from a court-martial or any other court whatever, or that it was an organization known to the law, or that it had any judicial powers whatever. So that when any one denies all these things he denies nothing which is of the smallest consequence. The Advisory Board was simply what its name indicates—a board of officers, requested by the President to examine the charges against Fitz-John Porter, and the evidence on which they were based, and let him know what conclusions they reached. The notion that these conclusions are at all weakened by the non-official character of the Board is due to the entirely mistaken supposition that the legal authority and moral authority of a court are derived from the same source. They are not derived from the same source at all. A judge's decision has only as much *moral* weight as his mind and character give it; while it has as much *legal* weight as the law gives it. If Generals Schofield and Terry and Colonel Getty had sat as a court-martial, the practical effect of their opinions would have been different, but their force as pieces of reasoning would have been just the same. The reason why people respect their findings in the Porter case is, that they are considered to be military men of the highest standing and character, who have made a painstaking examination of it; and this is the very reason, and no other, which would make people respect their findings if they had sat as a court-martial.

They examined the case in order to advise the President. They have advised him, and he has taken their advice within his own sphere, and now recommends Congress to take it in its sphere. This conveys no reflection on the original court-martial. It simply

says that that court, though composed of upright officers, sat in the most exciting period of the war, when party passion and professional jealousy ran furiously high, and when much evidence which is now available was not forthcoming. Nothing was more likely than that such a tribunal, sitting at such a time, should do great injustice. Nothing can now completely protect it against this imputation except proof of its inspiration. Is this forthcoming? We imagine not. We believe all acknowledge that the influences which governed its action were purely human.

Moreover, it cannot be true that the opinions of such officers as composed the Advisory Board are of no more weight "than those of any other three gentlemen." They must be of more weight than those of any three civilians, and are probably of more weight than those of all soldiers of less experience and less capacity, and of all who have not examined the case. We must believe this, or give up all faith in the future of mankind. If Generals Schofield and Terry know no more about war and Fitz-John Porter than any other men, we can hardly avoid the conclusion that nobody knows more than anybody else on any subject, and that there is no reason why General Logan should not have been sent out to Egypt to observe the late total eclipse of the sun for the Naval Observatory.

GARIBALDI.

The man who more than any man of our time has furnished modern Europe with a specimen of mediæval romance has just died. He was old and broken, and the fitful fever of his life had ended years ago, and his latest ventures were not successful, but he nevertheless retained to the last such a hold on the popular imagination as probably no real hero has ever had before. To find any parallel for the way in which he has fed the fancy of our century one has to go to fable rather than to history. His match must be looked for among the Knights of the Round Table or the Twelve Peers of Charlemagne, rather than among the warriors or sea-rovers, generals or filibusters of real story. Cortez, Pizarro, Drake, Hawkins, Charles XII., Clive, Napoleon, Lord Dundonald, all had the resources of great states in some degree at their command when they made their contributions to the history of adventure by land and sea. Garibaldi had nothing but a dauntless courage, a passionate love of his country, and absolute simplicity of character. With these for his whole equipment, he literally went forth conquering and to conquer, like the White Horse in the Revelation. He found when he reached man's estate the progress of the revolution, which was finally to transform Europe, still checked by the weariness of the great wars which closed at Waterloo. In England and in France Liberalism had made some headway, and effected some solid gains, but over the rest of the Continent there was still but little sign of the working of that new force the advent of which Goethe had seen and announced on the field of Valmy. As Lord Beaconsfield said at a still later period, in his gaudy style, the world was still ruled by monarchs and statesmen in somewhat ostentatious indifference to the tides of popular feeling. Garibaldi's appearance at Rome, in 1848, was part of the resumption of the great process which was finally to cover the Continent with constitutions, and bring the mediæval régime at last to a close. He was beaten there, but his defeat by the French was really a help to his cause. It was for the French the first step on the downward road which ended at Sedan and made Italy really free and independent; for an Italy created or permitted by a strong, victorious, and exultant France would have had at best but a precarious and trying existence. The final overthrow in France of the detestable reaction in Church and State to which the French Republic lent itself in 1849 was in reality necessary to establish Italian nationality on a sure and lasting foundation, and to this the fall of Rome did more than its retention by Garibaldi and Mazzini, and their subsequent political experimentation, would have done.

For Garibaldi's fame his flights and wanderings after the triumph of the French and Austrians did everything. They increased his hold on the popular imagination. His adventures in misfortune proved that he had the real stuff of a hero in him, which success in fight does not always do. They spread his glory beyond Italy, and satisfied the workingmen of every country that he was something more than an Italian—that he was the champion of all who were desolate and oppressed, no matter under what flag they were born, or in what tongue they spoke. He showed, too, that a modern workingman could display all the qualities which history had from time immemorial reserved for the conventional gentleman. Nobody ever denied that Garibaldi was a gentleman from head to foot. None of the mediæval chroniclers had anything to tell of their military heroes which something in his character or career would not parallel. Bayard, and Du Guesclin, and Sidney were not braver, or gentler, or more uncomplaining, or more unselfish, or readier to show, in the hours which try men's souls, both how to live and how to die. The result was that when in 1859 the supreme moment came, he was all ready for that most marvellous of his exploits, the overthrow of the Neapolitan monarchy and the annexation of the Two Sicilies to Italy. His subsequent career illustrated his restlessness, and his patriotism and humanity, and also, it must be added, his want of judgment, but added nothing to his fame. But his very errors served to endear him still more to his countrymen and to the people everywhere. He became the spoiled child, not only of the new Italian kingdom, but of the European democracy. Everything was forgiven to him in consideration of his past services. His follies even had an indescribable charm—the charm of heroism of the antique type, the simple type which Plutarch has painted, but the reproduction of which in our time the newspapers are making less and less possible, because its largest element was its unconsciousness, and the modern hero finds it difficult to be unconscious.

This age certainly will not look upon Garibaldi's like again. Indeed, the circumstances which produced him were peculiar, and have wholly passed away. He was the product of conditions which exist no longer, and was born to overcome enemies with whom our society will never have to contend again. The old king and the old priest are gone, and will never return. What will take their place as hindrances to human happiness, who can foresee? But that Italy should have produced such a champion to combat them as Garibaldi, was one of the innumerable proofs her soil has afforded of its inexhaustible fruitfulness. The Italian race has in every age of its history, and every stage of its greatness or its degradation, managed to produce great men, and just the kind of great men the epoch seemed to call for, and on this mysterious fertility no length or depth of political or social misfortune or decay seems to have had much effect. That a country which had lived so long under the worst type of princelet and prelate, should have brought forth at the right time the generation which achieved Italian unity, and should have contributed to the last tableau in the story a figure in all ways so resplendent and picturesque as the gallant old man who has just gone to his rest, is surely a marvellous evidence of the way in which, among races as well as individuals, blood tells.

THE PREVENTION OF CRIME BILL.

London, May 25.

It is long since England has witnessed any period into which so much of dramatic as well as political interest has been crowded as the first three weeks of this May. Even without the terrible tragedy of the Phœnix Park, there have been surprises, explanations, recriminations sufficient to fill a whole year of Parliamentary history. Each of the leaders has been playing his part with the same sort of passion, expressing himself with the same sort of concentrated force, which one finds in one of Shakspere's historical dramas; even the visible incidents have been many of them well suited to the stage. What the permanent effect on the strength and relations of parties will be does not yet appear; in the meantime it is sufficient to convey to you some impression of the phases through which public feeling has passed.

The crisis began with the release of the three suspect members, announced on the 2d of May, and the resignation of Mr. Forster, which he explained and justified on the 4th. The first effect of these two changes was to displease the Tory party, to gratify the more advanced section of the Liberal party, and to alarm the more conservative Liberals, who had trusted Mr. Forster, and doubted whether his disappearance from the Cabinet did not mean the relaxation of efforts to maintain order and enforce the law in Ireland. They were further disposed to this belief by the fact that the Government had announced their intention to move more toward a conciliatory policy, and by Mr. Gladstone's reference to certain assurances which had been brought to the Government's knowledge, assurances proceeding from Mr. Parnell and his friends, and declaring their intentions to exert themselves for the prevention of outrages and the restoration of tranquillity in Ireland. Mr. Gladstone, while expressly denying that there had been any compact between the Ministry and the Nationalist leaders, had dwelt on these assurances as an important element in the situation which had led the Government to adopt a sanguine view. Mr. Parnell and his friends hastened to disclaim any obligations on their part, with an earnestness which made some people think the

Government had been beguiled into a piece of foolish leniency, and still more regret the secession of Mr. Forster. Thus it happened that combinations were formed among the Liberals to force the Government to declare at once by what measures for the repression of Irish crime it proposed to replace the Coercion Act, which was shortly to expire. The Tories threatened an attack with the same object, and the position of the Government was felt to be dangerous. Its hitherto faithful majority seemed on the eve of dissolving, and the support which the Parnellites might have given on a division would have ill compensated for the defection of those Whig landowners who form so influential a contingent in the Liberal army. Probably it would have bent to the storm, and given to Parliament an outline of its repressive measure, even if that measure had not yet been brought in. But the very day after these perils had shown themselves, the face of matters was suddenly and completely changed by the murders of Lord F. Cavendish and Mr. Burke. Although the English people bore the shock with dignity and calmness, there was a universal feeling that something must at once be done in Ireland; that before either Parliamentary procedure was set right or the question of tenants' arrears dealt with, secret societies, such as that from which the Dublin crime had proceeded, must be struck at promptly and vigorously. Accordingly the Government immediately announced that they would first of all bring in their Prevention of Crime Bill, and next their Arrears Bill, letting everything else stand over in the meantime.

Even the Parnellite members, horrified by the Dublin assassinations, scarcely protested against this course, for it was plain that whether the Ministry liked it or not, English feeling left them no option. When their intention was proclaimed people breathed again, and though some Conservative papers continued to demand nothing less than martial law, the general tendency was to acquit the Irish nation as a whole, and rather to hope that the sorrow and anger manifested in Ireland might lead to a better feeling between the two countries. Thus, while the partisans of Mr. Forster insisted that the murders proved how correct his view of the state of Ireland was, many people besought the Government to persevere with conciliation, and seek to use for permanent good the present revulsion of Irish sentiment. Among these varying voices the Government brought in upon the 11th, the night of Lord F. Cavendish's funeral, their bill for repressing Irish crime, and on the 19th obtained the second reading of it. It is a very stringent and comprehensive measure, which not only provides for the trial of a series of grave offences by a commission of three judges instead of by a jury, but also empowers the Lord Lieutenant to suppress pernicious newspapers, forbid public meetings, and grant general search-warrants enabling the police to enter houses to look for arms, while it also extends the summary jurisdiction of the magistrates, and creates several offences which they are empowered to punish. Such a measure startled everybody. The Tories and moderate Liberals received it with pleasure as evidence that the Government realized the gravity of the situation, and were prepared to grapple boldly with it. The more extreme Irish Nationalists regarded it as a new declaration of war by the Government, as putting an end to the prospects of reconciliation which the liberation of the three members had opened up. They prepared to give it a resolute, though hopeless, opposition—resolute, because they are, of course, obliged to meet the wishes of the more violent among their Irish constituents; hopeless, because they saw that when the Ministry is supported by the Conservative Opposition, and has also a pretty strong sentiment from England generally at its back, their resistance can do little, even when backed up, as in this instance it is, by a section of the Liberal party. Several Liberals sharply criticised the bill; some voted against it, while others abstained from voting. Were the Irish Nationalists more moderate in their language, they would receive a good deal of support from the advanced Liberals; but they seem fated to repeat the policy of last year, when nearly all those Liberals who had begun by sympathizing with them ended by joining the Government against them. We are now just entering the discussion of the bill in Committee, a stage which seems, from the number of amendments proposed, likely to occupy a long time. Already the Whitsuntide vacation has been cut down to two or three days only, and it is beginning to be clear that little but Irish business will occupy the remainder of the session.

More interesting to most people than even this remarkable series of developments in the policy of the Ministry toward Ireland have been the personal questions that arose out of the release of the suspects and the contemporaneous retirement of Mr. Forster. Your readers will recollect that when the Prime Minister announced that release he stated that it was made on the sole responsibility of the Government, but largely, or mainly, in consequence of information they had received as to the feelings and intentions of Mr. Parnell and Mr. Dillon. When interrogated as to the nature of this information, he answered that it was for those gentlemen to make their own statements regarding it. Mr. Parnell, on the second or third occasion when this answer had been given, rose and read a letter he had addressed from Kilmainham Jail to Captain O'Shea, member for Clare, who had been in communication with the Government regarding the Irish situation. In this letter Mr. Parnell's views and intentions were set forth. It was shown by Mr. O'Shea to the Government, and had gone a long way toward determining them to release the three members. When it was read in the House of Commons Mr. Forster suddenly asked whether what had been read was the whole of the letter, and on Mr. Parnell's answering that he had read all that was in the copy Mr. O'Shea had given him, but that there might have been another paragraph, Mr. Forster asked, and the House, by its manifestations of curiosity, insisted, that the whole should be read. Mr. O'Shea declared he had no other copy, but Mr. Forster dramatically, and in the midst of great excitement, thrust a copy into his hand, which he then accordingly read aloud. It contained an additional sentence in which Mr. Parnell expressed himself prepared, in case the Government proposed certain measures for the relief of the Irish tenants and further amendment of the Land Act of last year, "to coöperate with the Liberal Government in promoting Liberal principles." These words were laid hold of by the Conservatives as indicating that a bargain had in fact been made by the Ministry with Mr. Parnell for securing the support of him and his followers; and an angry debate followed, the next day, in the course of which one member went so far as to talk of the "infamy" of the Government, while others declaimed upon the dangerous precedent set for the future by what they called the "Treaty of Kilmainham."

Mr. Forster had a difficult part to sustain, and cannot be said to have sustained it successfully. He had exposed not only Mr. Parnell, but his own former colleagues, to sharp Tory criticism, by bringing out the omitted sentence in Mr. Parnell's letter: he had subsequently read a memorandum giving an account (the accuracy of which Mr. O'Shea denied) of an important interview he had held with Mr. O'Shea, and in which Mr. Parnell was represented as having offered to procure the assistance in stopping outrages of a person whom Mr. Forster declared to be a notorious organizer of outrages. He had taken the attitude of a man who would be no party to any negotiations or bargains with the Land Leaguers or other agents of disorder, and had been vehemently applauded by the Conservatives for conduct which it pleased them to contrast with that of the Government. All this greatly annoyed the Ministerialists, the more advanced and outspoken of whom, in the press as well as in Parliament, accused the late Chief Secretary of vindictiveness toward Mr. Parnell and want of loyalty to his own party. He who calmly reviews the whole matter will probably think that these charges are too severe, and that Mr. Forster, although he has certainly injured his friends, did not intend to do so, but was thinking partly of vindicating himself, partly of damaging Mr. Parnell, whose whole policy and conduct he condemns. Perhaps his chief mistake has been in not sufficiently recollecting that there are times when it is better to be silent than even to show that one has done right. And such an impartial observer will also be likely to conclude that far too much has been made of the "Treaty of Kilmainham" and the communications (which Mr. Gladstone will not allow to be called negotiations) that preceded it. If Mr. Parnell and his friends were going to behave quietly in future, nothing more natural than that they should say so—nothing more proper than that the Government, which had no right to keep them in prison untried unless they were dangerous to the public tranquillity, should take their statement into consideration. But it may be thought unfortunate that Mr. Gladstone should have laid so much stress on these communications as the principal ground which the Ministry had for their change of policy. Even without any declaration from Mr. Parnell, there were reasons, ample reasons, why the Coercion Act, which had obviously failed, should be dropped, the suspects liberated, and other measures taken to check crime and violence in Ireland. And it might have saved some recrimination if the Government could have secured that any communications not regarded by them as confidential should be made public at once, instead of being left to be extracted by a process of interrogation.

The incident is one which will no doubt be largely used by the Conservatives for some time to come; but it does not seem, judging from the large majority obtained by the Liberals at the election for Northwest Yorkshire a few days ago, to have much affected the opinion of the country. If Ireland now begins to quiet down, and outrages diminish, the Government may recover its prestige, and last till the next dissolution of Parliament, or longer. But it has certainly had a serious shake. So many apparent changes of attitude—for they are no doubt more apparent than real—within three weeks have disturbed the confidence of the public and diffused a sense of insecurity. Members who have once thought of openly combining against the Government are apt to be less close in their allegiance for the future. Indeed, it may be doubted whether without the personal loyalty to Mr. Gladstone which the advanced Liberals have, and the enthusiasm for him which the large constituencies have, the position of the Government would not be now a weak one.

Y.

THE TOBACCO MONOPOLY REJECTED.

BERLIN, May 17, 1882.

ON Saturday last, May 13, the tobacco monopoly was, on its first reading, defeated by the Reichstag by such an overwhelming majority

that the Chancellor will not be able to resuscitate it. Some eloquent speeches were made by the Opposition, but they contributed nothing toward winning a single vote, as every member had made up his mind beforehand. Only two speakers openly declared themselves in favor of the monopoly, and even among Bismarck's friends several spoke against it, while others will not vote at all. Two incidents, however, deserve to be especially mentioned: First, the leader of the Ultramontane party, Mr. Windthorst, declared flatly against the monopoly; so that, if words do not mean the contrary of what they are designed to convey, there is no possible chance of a retreat for the Centre, which commands about 100 votes. The last effort which Mr. Windthorst made yesterday to put off a decision has badly failed, as the object he had in view—that of once more trading and bartering with the Government—was too soon discovered. Next, there was a very significant speech by Mr. Vollmer, a Social-Democratic representative. Not that his deductions were of greater value than those of several other members, but in their practical tendency and in their unequivocal inferences they created quite a sensation among the adherents and followers of the Government.

"Theoretically," the honorable member said, "we accept the socialistic character of the monopoly as a payment on account of our claims, and as an acknowledgment of our just demands; but our democratic convictions are far from being lulled to sleep by the proposal of this measure. Social-Democracy is like dry sand: it absorbs liquids and remains unsaturated. It roots in democracy, and socialism is only a means to an end. Filled with the desire not only of realizing perfect equality before the law but of extending it to private life, a great many thinking minds have fallen upon the attempt to apply violence and force in carrying out their aims. The idea, however, of reducing this brute force from a rough and sporadic efficiency to a self-working and methodical system, has led some Democrats toward socialism, in the logical development of which they cannot stop to have labor, capital, and other means of production monopolized by the Government or private individuals. If a trade is carried on by the Government, it is socialism; confiscation of large means of production is an essential injury to private property, and on that account, although only as a means to a definite end, will be welcomed by my socialistic brethren. If, however, an aristocratic end, as in the present case of the consolidation and strengthening of large real-estate and manufacturing interests, is to be reached by the monopoly, we had rather disown our socialism than our democracy. We reject the tobacco monopoly, although it bears a socialistic character; we do so because it is not a democratic measure. We need not conceal our motives, but openly lay them before the people. You [addressing the Conservatives] are better riders than we are, but in running the race for the poor man we are and always shall be ahead of you. You will never succeed in catching the poor people, as you are moving on an inclined plane; but be assured, gentlemen, that the movement will not halt before reaching your manors."

This is a really fine perspective. With a rather diabolical delight the Social-Democracy observes and follows the disintegration of the idea of private property. It has every reason to welcome the prospect that others are sowing what it will reap. With us it is the Government which sows the principle that for the promotion of higher interests it can appropriate to its use the working capital of a large business. When the profits come in, the perception will also ripen that the state can annex more or all trades for its benefit, and that especially the confiscation of real estate can as easily, if not much more easily, be carried out than that of personal property. If a widely-spread and comparatively small manufacture, with a highly developed home industry, like tobacco, can be turned over to the state, why then should the latter not hasten to seize the large manorial estates, the great factories, and to work or have them worked for its own benefit? That no adequate damages are paid for the numerous losses which the private business men must suffer when left to the mercy of the Government is a matter of infinite gratification to the Social-Democrat. It is he who steps in for the principle that all real values ought to belong to the state, to the community, to the people at large, and ought to be returned to them without any ceremony. The Conservatives listened more attentively than others to this socialistic apostrophe. From old Count Moltke down to the smaller fry, Kleist-Retzow, Windthorst, and others, it seemed as if a melancholy and fatal prospect opened before their eyes. What this man said, in fact, amounted to the same theory which Bismarck's organ, the *Provinzial-Correspondenz*, does not tire of preaching every day to the Liberal middle classes. I tremble for my country when I think that all these wild doctrines may one day become reality.

To return to the tobacco monopoly: the Liberals wanted to have it discussed for the second reading in the House; but, in spite of the opposition, a special committee was finally appointed by about 170 to 120. It consists of twenty-eight members, twenty-three of whom are against and five for the monopoly. The Reichstag having adjourned for the holidays till June 6, the Committee on Tobacco will in the meantime make its reports, and will have to find the reasons which induced the Reichstag to reject the monopoly. Others expect that in one of its first meetings it will reject the first article, which makes tobacco a state monopoly, and then without further debate will send back the bill to the House, where it will be discussed very cursorily. Thus the final doom of the monopoly is sealed. Bismarck cannot dare to defy its enemies, nor can he gain anything by dissolving the Reichstag, as its successor would be still more inimical to it. What is left to him? He can and probably will in the next session introduce a new bill, which, in fact, will be an imitation of the present American system, and which may yield him a revenue of some 10,000,000 to 15,000,000 of marks over the 42,000,000 which tobacco pays at present. Whatever he may do hereafter, the noble and patriotic city of Bremen is saved from utter ruin, and the Reichstag has maintained its honor by refusing to saddle the people with a measure directed against the interest and personal dignity of every working citizen. This defeat of Bismarck's policy is heavier than any previous one, for even the masses begin to think that he is greatly mistaken in his tariff measures and tax laws, and that in future they will do better not to trust him too implicitly.

Of all crimes which in our time pass unpunished in Russia, none are more shocking and provoking than the atrocities from which the Jews are suffering in the middle and southern parts of that empire. Under the pretext that the Czar wishes it, an infuriated mob, led by soldiers and officers, plunders the houses of rich and poor Jews, wantonly destroys their property, and massacres babies, women, and men. Whole cities are sacked, as, for instance, last Easter Monday, Balta, where about 5,000 people were first robbed and then driven into exile. These mediæval horrors defy all description. It is as if another St. Bartholomew had become the order of the day. Your wild Indians cannot make sadder havoc among the peaceful people of a newly-grown settlement than these Russian brutes do. Arson, murder, violence, and rape, mutilation and burning alive belong to the every-day occurrences in Russia; and, what is still worse, we cannot yet see an end of these atrocities, as Ignatieff is at the bottom of them all. Thousands of these poor exiled people have gone to the neighboring shores of Galicia and Rumania; hundreds of thousands will follow, and millions would go if they commanded the means to leave the country. It is an exodus the like of which the history of emigration has not yet seen. The Puritans, the French Huguenots, and the Palatines were a mere handful of men in proportion to the emigrating Jews. The United States, of course, have the greatest attraction for them, and the compassion of your people for the homeless wanderers will at no distant day be severely tested. In the large European cities committees are formed for the purpose of alleviating the misery of the Russian Jews. London, Paris, Berlin, Vienna, Frankfort, and Amsterdam march at the head of these benevolent associations, which are coöperating with New York. Their object is a double one: (1) to send over as many as deserve it and will be able to become farmers; (2) to buy land for them and pay the expenses of their first settlement. While the execution of the latter part of this programme is left to the New York committee, the European coöperators devote themselves chiefly to its first part. The collection of at least $10,000,000 is intended. London has taken the lead; in Paris one of the Rothschilds is at the head of the movement. Here some 200,000 marks were paid in at the first announcement. The Paris banker Hirsch, a native of Munich, has contributed 1,000,000 francs; a rich Jewish merchant in Odessa even 500,000 rubles. On the whole, it is evident that the rich Jews are fully aware of their duties toward their co-religionists, and on the other hand it is a rather gratifying fact that among all creeds there is no difference of opinion as to the necessity of contributing as largely as possible.

The practical experience of those financiers who are at the head of the movement enables them to do real good and to lessen the sufferings of the Jews in a lasting and most effective manner. The European committees will wisely refrain from meddling with the business of settling the emigrants in America, and confine themselves to indicating to the New York committee their views on this important question. Their only objection is to having Southern lands selected; they prefer the new Northwestern States and Territories, as, for instance, the lands along the Northern Pacific Railroad line, as best adapted for the settlement of people who come from a country whose climate corresponds to that of the Northwest. As good business men, they do not propose to present the emigrants with land and an inventory, but they advance the necessary funds with little or no interest. Thus they will be enabled to continue the business from year to year, and send out regular columns from the same regions. In my opinion, 1,000,000 of Jewish settlers may be counted upon for the next ten years, for it is not only the poor and helpless element which is taken care of by the several committees, but the well-to-do classes of Jews from other parts of Russia will follow them as soon as they can dispose of their property, and seek a home in the far West. May they be well received by the people of the United States, who can best appreciate suffering for conscience's sake! In the beginning some miserable and shabby individuals may slip in, but on the whole your country will win an industrious and thrifty population; and besides, it has elbow-room enough to add to its old stock of inhabitants a new and prosperous element. † † †

Correspondence.

MR. RICE ON RENT.

To the Editor of The Nation:

Sir: Whatever opinion may be formed regarding my article, "Has Land a Value?" there certainly can be no doubt about its avowed

object to furnish a theoretical defence of private property in land against the reasoning of Mr. Henry George. What connection there can be between it and a "Greenback-Labor" organ I am at loss to discover.

As for the criticism of your correspondent, passing over the senseless abuse as beneath notice, I shall only remark that by his quotation from my article and his comments thereon, he has demonstrated his inability to comprehend even in what the subject-matter of the discussion consists, or he never could have delivered himself of the following piece of wisdom: "What has been 'inseparably amalgamated' with the land thereafter affects landlord and tenant in precisely the same manner as if it had pertained to the land from the beginning of the world." He would have known that my article, which is a professed reply to Mr. Henry George's "Common Sense of Taxation," deals not at all with relation of landlord and tenant, but with relation of landlord with the state. Mr. George, relying on Ricardo, maintains that the money paid by the tenant is paid for the use of free gifts of nature, is therefore not justly earned by the landlord, and ought to be confiscated by means of taxation. I, on the other hand, contend that the money paid by the tenant is interest on the capital applied to, and amalgamated with, the land, and therefore as justly earned as any other money, and ought not to be confiscated.

Any one who possesses a modicum of intelligence must perceive that in this issue between the landlord and the tax-gatherer it is of vital importance to know whether rent is paid, as Ricardo asserts, for original qualities of the soil —the free gifts of nature—or, as I claim, for the capital expended on the land, though it be ever so inseparably amalgamated with it.

I hope that the case is now put plainly enough for even Mr. X.'s powers of comprehension.

Yours very respectfully,

ISAAC L. RICE.

NEW YORK, June 5, 1882.

TO THE EDITOR OF THE NATION:

SIR: A correspondent chides you, in yesterday's issue, for lending importance to Mr. Rice's nonsense on the "rent" question by noticing it in your columns. But the policy of "silent contempt" for ignorant or fallacious writing may easily be carried too far—not only (as you have pointed out) because such writings often manage to appear in prominent publications, but also for two other reasons which I ask your leave to mention.

In the first place, it is a great mistake to assume that the mass of readers who are not specialists are at all sure to be protected by their own discrimination against the confusing or misleading tendencies of plausibly-stated fallacies and confidently-asserted "facts." It is enough for many that a writer goes through the "motions" of "demonstrating" something, and a little flavor of surprise or paradox does but make the *pseudo* "correction" or discovery just so much the more attractively *piquant*. It is true, of course, as Frederick Harrison has somewhere said, that one who has positive, systematic work to do should resist the temptation to stop by the way to fight objectors; but while this is so, and while the main army of science ought to march on in direct pursuance of the general plan of the campaign, that skirmishing corps of sharpshooters, the journalistic critics, have quite as clearly a peculiar and most important service to perform in looking after the enemy's guerilla bands. This very article of Mr. Rice's, curiously enough, has been recommended to me by more than one sturdy and "successful" American as containing a brilliant and conclusive "refutation" of the theory that rent can *ever include* payment for anything but the labor actually invested in the improvement of the land. In the March *Princeton* (a review held by many to be the first in America, and which includes among its contributors such men as Professor Sumner, of Yale) the leading article was one by Dr. Sturtevant—a "D.D., LL.D."—elaborately maintaining that the only way to defend society from Henry George's revolutionary scheme is to "deny" the correctness of Ricardo's law of rent!

Secondly, it seems to me quite clear that such fallacious writings often furnish the very best sort of "texts" for the lay sermons of the proper kind of teachers, especially in view of the fact that for many minds the polemical form of composition is the most attractive, intelligible, and suggestive one in which it is possible to treat a serious subject seriously.

CHARLES FREDERIC ADAMS.

NEW YORK, June 2, 1882.

THE NATIONAL BANK EXTENSION.

TO THE EDITOR OF THE NATION:

SIR: In your remarks on Hammond's amendment to the Bank Charter Extension Bill, which takes from the national banks the privilege of suing in the United States courts, unless where other banks could do so, you mistake entirely the bearing of the passage in the Constitution which defines how far the judicial power of the United States "shall extend." Under the precedents established by the Supreme Court in the case of the old Bank of the United States, it seems to be settled that any suit by or against a bank chartered by the United States may be considered "a case, in law or equity, arising under the Constitution, treaties, or laws of the United States." This seems odd, for in nine cases out of ten the questions arising in the course of the suit will be those of plain commercial law quite unmixed with any *casus fœderis;* and perhaps it was an accident that the doctrine ever grew up. However, it is now too well established to be shaken. But it by no means follows that every case to which the judicial power of the United States extends shall be tried, or even that it shall be triable, in those courts. Only in a very small class of cases does the Constitution itself confer jurisdiction on the courts. In all other cases the extent of the jurisdiction within the limits prescribed in the Constitution is left to the discretion of Congress, and has fluctuated at different times between very wide limits. Thus, the jurisdiction of the United States Circuit Courts, in cases arising between citizens of different States, or "where an alien is a party," has been always confined to those in which the sum or value of five hundred dollars at the least is involved; and, until lately, it was also required that one or the other party should be a citizen of the State within which the court was held. As there is no real ill-feeling anywhere against the national banks, and they are generally controlled and owned by citizens of the State in which they are located, the privilege which they heretofore possessed of choosing between the State and Federal tribunals was rather odious, and had no good ground to stand upon; and I do not wonder, therefore, that Hammond's amendment was adopted without division.

Whatever little prejudice against these banks was kept alive by the declamations of the Greenbackers and their allies will be put at rest now, when it becomes apparent that for twenty years at least they will be one of the fixed institutions of the country.

L. N. D.

LOUISVILLE, KY., May 28, 1882.

Notes.

THOMAS WHITTAKER will publish the 'Charles Dickens Birthday Book' prepared by the author's oldest daughter and illustrated by his youngest.

Roberts Bros., Boston, invite subscriptions to a reprint, without abridgment, in four volumes, of the *Dial*, plus an index, naming the contributors as far as possible, and an historical account of this periodical. The new matter will be from the hand of the Rev. Geo. Willis Cooke. The price of the reprint will be $15, but the index will also be sold separately for $1. 'Aschenbrödel' will complete the second series of the "No-Name Novels" published by this house.

G. P. Putnam's Sons will shortly publish a quarto "railroad" edition of 'Hood's Own Whims and Oddities,' with all the original illustrations; 'Social Equality: a Study in a Missing Science,' by W. H. Mallock; Leslie Stephen's 'Science of Ethics'; Edward Dicey's 'Victor Emanuel'; and 'The Political Conspiracies Preceding the Rebellion, with the true stories of Fort Sumter and Fort Pickens,' by Lieut.-Col. Thomas A. Anderson, U.S.A.

A. Williams & Co., Boston, have nearly ready 'Thaddeus Stevens, Commoner,' by E. B. Callender; and 'Sly Ballades on Harvard China,' *vers de société*, illustrated by Lambert Hollis.

Ginn & Heath, Boston, announce 'Elements of Physics,' by Alfred P. Gage; a classified 'Readers' Guide to English History,' by Prof. W. F. Allen, of the University of Wisconsin; and a 'Spanish Grammar,' for colleges, by Prof. Wm. I. Knapp, of Yale College.

The Providence Public Library's *Monthly Reference Lists* for May contains bibliographic references on "Darwin and his Scientific Influence," and on "Emerson's Philosophical Position."

The pretty little log-book, 'Across the Atlantic,' published by A. D. F. Randolph & Co., interleaves daily devotion with secular and nautical observations, and encourages the traveller to believe that at the most his voyage will not be protracted beyond the thirteenth day.

Mr. S. Russell Forbes's 'Rambles in Rome' (London and New York: T. Nelson & Sons) will be a rival of Murray's rather than of Baedeker's handbook, being intended as "an archæological and historical guide to the museums, galleries, villas, churches, and antiquities of Rome and the Campagna." The promise of the title-page is well carried out. The leading results of the excavations of recent years are given, and the addresses of resident artists down to the date of last March. The present work is on a larger scale than Mr. Forbes's earlier 'Rambles in Naples,' and it will be found of service to the leisurely tourist.

'Gabriel Conroy' is the latest volume of Houghton, Mifflin & Co.'s uniform and handsome reprint of Bret Harte's complete works.

Tibbits & Shaw, Providence, send us Mr. John Russell Bartlett's 'Letters of Roger Williams' (1632–1682), gathered from a considerable number of historical works into one quarto volume, and presented to the reader in a style that would do credit to any press in America. These letters abound in expressions of the noblest sentiments—justice for the Indians, the love of peace and of civil and religious liberty, the sacrifice of self-interest to the general good, and the hatred of every form of oppression. We are glad that even in a limited edition they are now made accessible to a larger public than the Narragansett Club, by and for which they were first published eight years ago. The publishers have been less than frank in removing from the book all traces of this previous issue—a proceed-

ing historically indefensible, and a concession to the popular prejudice in favor of the brand-new from which publishers and booksellers, as well as authors, suffer perpetually.

'Eve's Daughters; or, Common Sense for Maid, Wife, and Mother,' by Marion Harland (New York: J. R. Anderson & H. S. Allen) is a book of excellent principles and of much good intention, but the arguments are based upon extravagant estimates, for better or worse. Subjects which permit only the wisest and the most delicate treatment are so mixed up with the exaggerated and the declamatory, that a careful mother would be sorry to have it fall into the hands of her daughter.

'The Chemistry of Cooking and Cleaning,' by Ellen H. Richards (Boston: Estes & Lauriat), is a laudable attempt to enforce by scientific chemistry some facts long familiar to painstaking housewives. It bristles with chemical symbols, but this need not deter the reader, for the practical suggestions are simple enough for the comprehension of the uninitiated.

The May number of the *Magazine of American History* presents the first engraved portrait of the Chevalier La Salle ever made in this country. M. Gabriel Gravier, of Rouen, who furnishes the accompanying letterpress—a sketch of his hero's life—also furnished the photograph, from an original painting, which has been followed by the engraver. The face, in profile, is noble, and well calculated to stimulate the designer of the contemplated Texas monument to the explorer.

Col. H. Yule writes to the London *Athenæum*, in a sympathetic obituary notice of the late Dr. John Brown, author of 'Marjorie Fleming,' 'Rab and his Friends,' etc., that some seven years ago the sum of $30,000 was quietly raised for him on the initiative of his publisher, Mr. David Douglas—a kindred spirit, by the way.

The writings of Leonardo da Vinci—which fill about five thousand pages in the autograph manuscripts, but which have remained unknown owing to the difficulties of deciphering, and partly also to the fact that most of them have been hidden away—have of late been systematically investigated by Dr. Jean Paul Richter, who intends to publish the original texts accompanied by an English translation and by explanatory notes. This publication is to be issued in two volumes, toward the end of the year, and will contain Leonardo's writings on painting, sculpture, architecture; his observations on astronomy, geology, and geography; on anatomy; his humorous writings, philosophical maxims; his letters and miscellaneous notes, etc. The number of still existing original paintings by this great artist is supposed to be exceedingly small, but, fortunately, a very great number of drawings and sketches have come down to us. Of these the most valuable are preserved in the Royal Library at Windsor Castle. Dr. Richter's publication will be illustrated by 220 such original drawings in photo-engravings (Dujardin's process) and about 450 other facsimile reproductions. The subscription for the book has been started by the Royal Academy of Arts, London, with a grant of £100, and by the Crown Prince of Germany, and the list already contains the names of numerous connoisseurs and librarians of public institutions, etc. The price for subscribers is eight guineas (payable on the delivery of the whole work), but on the day of publication it will be raised to twelve guineas. Subscriptions are to be sent to the publishers, Messrs. Sampson Low & Co., 188 Fleet Street, London.

—The third annual report of the Executive Committee of the Archæological Institute of America shows the work of the past year to have been significant in point of achievement and rich in promise. At home, Mr. Bandelier, as heretofore, has been the chief explorer. Availing himself of the opportunity furnished by the Lorillard Expedition to Mexico and Central America, he interrupted his New Mexican researches in order to spend four months (March-June, 1881) at Cholula (near Puebla) in the former country. A synopsis of his report, which is now in press, gives two conclusions of Mr. Bandelier's: (1) as to the deity worshipped anciently at Cholula, Quetzal-chohuatl, that he was an historic character, of the Toltec race; (2) as to the so-called "pyramid," that it is "an artificially elevated, fortified pueblo," composed of ordinary material (adobe) from the neighborhood, and the work rather of many years than of a great multitude at one time. At Mitla, in Oaxaca, he subsequently made a study of the imposing ruins called "palaces," which he regards as "shelters at night and in bad weather," and refuges for the women and children in time of attack. The Assos excavations, on the other hand, have fully justified the moderate expense incurred in promoting them. Besides the determination of the plans of the various public buildings, some epigraphic discoveries of importance have been made, with sculptures that will be shared by casts with the Berlin Museum and the Louvre. The sum of $3,500 will still be needed to complete the work. With the third incident in the Institute's record—the founding of the American School of Classical Studies at Athens, by concurrent action of the leading colleges, and the appointment of Prof. Goodwin to be director for the first year—our readers are already familiar.

—The specialty of "time" and timepieces for which the Yale College Observatory has distinguished itself seems to have led to the formation at New Haven of the Standard Time Company, of which Marshall Jewell is President, and Leonard Waldo, of the Observatory, Secretary. This commercial enterprise embraces the designing and construction of "time-balls, time-guns, flashing and other signals for Government, observatory, and railroad time services," the manufacture of complete systems, the regulation of them, etc. The Company have the sole agency for the Yale College Observatory Time Signals, and are the sole owners for America of the (English) Barraud & Lunds patents for the automatic setting of clocks by electricity. This conjunction of science and business meets an imperative public need, and will facilitate the ultimate adoption of an international reckoning of time. We understand that the Company will shortly apply the Lunds patents to a complete system of 161 synchronized clocks in the stations of the elevated railroads of this city—a public convenience which will be widely appreciated.

—Mark Twain's jay who dropped acorns into the chamber of a log-cabin, under the delusion that he was filling up a hole in the roof, has his match in the California woodpecker. This bird (sometimes called the *carpintero*, from his dexterity), as we learn from a paper by Mr. Robert E. C. Stearns, in the *American Naturalist* for May, has a habit of boring holes in the bark of trees and then filling them with acorns, whether for the sake of the nut itself or of the grub to be found in it, is uncertain. Sometimes these holes are made in the wood, sometimes the acorn is stuck in a crack between boards, or again stored in the cavity of the boxed ends of the projecting rafters of the eaves; and the woodpeckers "not infrequently drop acorns down chimneys, where of course the result of their labor is without any advantage." "The jays and squirrels," observes Mr. Stearns, "are quite likely benefited by the acorn-storing habit of this species of woodpecker; and I have been told that the jay sometimes assists the woodpecker by bringing acorns for the carpintero to deposit in the bark; and further, that sometimes the jays put pebbles in the acorn holes 'to fool the woodpeckers'; but these latter statements, though perhaps true, need confirmation."

—At the Cincinnati meeting of the American Forestry Association in April, two papers by Mr. Stearns were read, on the forest-tree culture in California, and on the growth of certain of the forest-trees of that State. He reviews the ten years since the first ardent planting of eucalyptuses and acacias began there, and in regard to the former species particularly has something interesting to relate. Three-fifths of the eucalyptuses set out are blue-gums (*E. globulus*); the rest being *E. viminalis*, or *marginata*, or *rostrata*. The first named is the most rapid of growth, but its wood is inferior in point of hardness. Mr. Stearns considers six millions a moderate estimate of the whole number of eucalyptuses planted in 1872-82, a large proportion of them for purposes of adornment in streets, yards, and suburban neighborhoods—so large that their monotony has become unpleasant, while their shade and roots destroy all humbler vegetation within reach, and the odor of the blue-gum is offensive to many. Their value for timber cannot yet be determined, nor perhaps for another decade; for fire-wood their profitableness seems proved. Of a plantation partly planted and partly sown in 1869, twenty acres were lately cleared to make room for an orchard, and yielded a net profit of $3,866 04 in eleven years. Prof. Hilgard, of the University of California, says of the wood that it "is no softer or more porous than redwood; probably as durable and resistant of insects or decay. It is better fuel than cottonwood, and it is good for inner cabinet-work if not for outside." The Central Pacific Railroad Company have experimented with the eucalyptus on a large scale, including some species not already mentioned; but the *E. rostrata* and *viminalis* appear to be the hardiest. In his second paper Mr. Stearns suggests "that if, upon a given date, numerous trees were felled, so that we could have transverse sections of all of the principal species, such trees being located at various points in the State" and selected with reference to similarity of environment, we might find a "close parallelism between rings of maximum thickness and seasons of maximum rainfall." In this way we might determine whether or not there are wet and dry cycles, having a record of 70 to 150 years in the case of pines, 500 to 700 in the case of redwoods, and 1,200 to 1,400 in the case of sequoias.

—The death of Professor Wm. B. Rogers in Boston, on May 30, removes not only one of the foremost of our scientific men, but perhaps the one who had in the highest degree the faculty of presenting the claims of science on popular interest and respect with force and lucidity. He had a remarkable gift of expression, and an unusually winning and persuasive manner, both of which were supported by a character of the utmost purity and simplicity. His health has been delicate for some years, but, nevertheless, death came to him in what he would doubtless have considered its most welcome shape. He was spared all decay of his faculties, and was engaged at the moment he was struck down in addressing the audience at the Commencement exercises at the Institute of Technology, of which he was for some time President, about his own work in it. He, consequently, may be said to have literally died in harness; and not only this, but died when telling the story of what was the latest and perhaps most interesting episode in a long and honored career. It is given to but

few to reach the goal under circumstances of so much dignity and pathos, and but very few have as strong claims as Professor Rogers had to such a reward.

—Travellers now and then fall into mistakes by not using their guide-books, and by drawing too freely upon their own consciousness in explanation of what they see. A well-known writer, in a recent number of *Harper's Magazine*, gives a very interesting account of Toledo. He tells us that the Musarabic mass celebrated in the Musarabic chapel of the cathedral is "a seeming mixture of Mohammedan ritual with Christian worship," established by a compromise for the benefit of the subjugated Moors (fancy either party entering into such a compromise!); that "in front of the altar-steps was placed a richly-draped chest, perhaps meant to represent the tomb of Mohammed in the Caaba, and around it stood lighted candles," etc. The guide-book would have informed him that the compromise—if it may be so called—was between the old Christians with the Gothic ritual, who when Toledo yielded to the Moors were by treaty allowed to keep up their worship in six churches, and the incoming ecclesiastical authorities after the reconquest, who came with the Gregorian service, and who, less tolerant than the Moors, ousted the old Christians from their six churches, giving them instead the single chapel, in which the ancient service is still maintained.

—A French collector, who can exhibit more than 20,000 ornamental letters derived from old books, contributes to the May number of *Le Livre* a portion of an essay (which we hope will not be all) on the ancient ornamentation of books. He devotes himself entirely to the class which he styles Gothic, and gives a large number of examples of alphabets in three sizes or ranges. Some of these are of great beauty and ingenuity. Paul Lacroix makes an equivocal acknowledgment of Champfleury's recent subacid attention to him in this magazine, and, by way of correction, prints part of his inedited memoirs, in which he records his relations with Balzac. The story of the latter's ambitious enterprise as printer, type-founder, and publisher, and complete though unmerited failure, is told anew and bears repetition, for a singular episode it was. In the news department of this issue we read of the discovery of the existence and death of a daughter of Alfred de Musset's, a young girl who died in 1875 at Saint-Maurice in Saintonge, at the age of twenty-one. A miniature of her not much younger has been found and is described. Her tomb bears the name of Norma Tessum-Ouda, and several of her books contained dedications signed by her father, and addressing her as daughter and Norma. "Tessum" is Musset reversed; but Ouda, read backward or forward, is as yet unexplained. *Le Livre* reports the annual meeting of the Franklin Society, whose object is to found public libraries in France. It has raised more than $20,000 for military libraries (*bibliothèques de caserne* and *des hôpitaux*), and twice that sum has been expended in supplying popular or school libraries with nearly 100,000 volumes. These figures are not so large as we are accustomed to deal with. Mr. Bouton is the American publisher of *Le Livre*.

—We have received from Athens a pamphlet entitled "The Value of the Artillery of Greece" (Περὶ τῆς Ἀξίας τοῦ Πυροβολικοῦ τῆς Ἑλλάδος). It appears that during the recent excitement over the question of the Greek boundary, the Government made large purchases of cannon from the Krupp foundry at Essen. These purchases were made the occasion of a furious attack upon the Government by one Stephanos Xenos, who lauded to the skies the Armstrong guns while pouring contempt and abuse upon the Krupp cannon, and in fact upon everything of German manufacture. This roused the indignation of Dr. Michael Deffner, whose name has been recently mentioned in these columns as the author of a valuable work, 'Grammar of the Tsakonian Dialect,' and whose character and career well entitle him to the notice of scholars. He was a pupil of Georg Curtius, and turned his attention early in his university course to the modern Greek language. His studies completed, he went to Greece and established himself as a privat-docent at the University of Athens, where he has now become, we believe, an assistant professor. The pamphlet to which we have referred gives a detailed account of the establishment of Friedrich Krupp, and, by the testimony adduced as to the excellence of the Krupp guns, justifies the wisdom of the Greek Government in preferring them to others. At the same time, the writer takes the opportunity to make some pointed and needed observations upon the license of Greek pamphlet writers, and the injury which they do to the cause of stable government by their violent and seldom disinterested attacks. He expresses the hope that "no one will suspect that I serve party ends. For, although I am a Greek citizen, I abstain from all factious meddling with politics: first, because I lack the leisure for this, and, secondly, because I am perfectly aware that only on condition of strict abstinence from such things can a naturalized citizen retain a position under the Government!" Thus Dr. Deffner seems to be an example of that discreet and intelligent interest of the scholar in politics which is as much needed in Greece as in the United States.

—Not the least of the attractions offered to the large number of American tourists who are going to Europe this summer will be the performances of Wagner's new music-drama, "Parsifal," at Bayreuth, throughout the month of August. The tickets for the first two nights have already all been disposed of to members of the Society of Patrons, but for the other nights it will be possible to secure admission in any of the large German cities where arrangements for the sale of tickets have been made. At the first festival, in 1876, the admission price was a considerable item of expense—being seventy-five dollars for the four nights. This year the price of a ticket will be only seven dollars, or thirty marks, and as the worthy citizens of Bayreuth were during the last festival thoroughly aroused to a sense of their duties, there is reason to believe that this summer they will be able to provide a bed and a meal for every tourist who persists in the belief that man cannot live on music alone. There will doubtless again be that large assemblage of prominent musicians, artists, and authors which alone would have repaid a visit to Bayreuth in 1876; and that the performances will be models of perfection in every detail is a foregone conclusion, as in every department only the best of its kind has been secured. Wagner is original not only as musician and poet, but as scenic artist as well; and some of the scenic effects are said by those who have seen the sketches to be of marvellous beauty and ingenuity. The orchestra and the chorus, which is a prominent feature in "Parsifal," will be those of the Royal Opera of Munich, and as no other musicians and singers are so thoroughly familiar with all of Wagner's works as they, a better choice could not have been made. The list of soloists includes such names as Materna, Brandt, Malten, Vogel, Winkelmann, Jäger, Gudehus, Scaria, Siehr, Reichmann, etc., and the fact that each of the leading parts will be sung alternately by several artists will give an opportunity for interesting comparisons and study.

—Many are still troubled by the question why these performances should take place at a small town like Bayreuth, instead of in one of the German capitals, any one of which would, after the triumphant success of the "Nibelung" Tetralogy, be only too glad to accept its author's latest work. The principal reason is that nowhere else could Wagner so completely secure that accuracy and conscientious observance of all the peculiarities of his style which, as he himself says, alone can justify his deviation from the traditional practice of operatic composers. The initiated know that in any royal or stadt-theatre the manager would inevitably have some "suggestions" to offer in regard to the management of this or that detail, the selection of vocalists, etc.; and Wagner does not want to be hampered in his movements. Besides, the Bayreuth theatre is the only one in existence built in such a manner that the perspective and balance between the scenic, dramatic, and musical elements of his dramas can be perfectly preserved. At Bayreuth he is absolute monarch, and the devotion of all the singers to his principles assures him that not a single gesture will be misplaced, nor a single note misconstrued. It is Wagner's aim to make the Bayreuth theatre a sort of dramatic high school, where stage vocalists may assemble every year and learn the peculiarities of the new dramatic style by attending to his directions and observing each other. In a recent letter to Hans von Wolzogen he says that he should dread the labor of preparing a "model performance" of one of his earlier operas, because so many errors abound in the work of even their best interpreters at the present day. In "Parsifal," however, none of these errors will have to be eradicated, and visitors to the festival may therefore expect Wagner pure and undefiled. If newspaper reports may be trusted, Wagner considers "Parsifal" his best work, and, as the last work of most composers is their best, this seems quite probable. The dramatic text, which was published a few years ago, abounds in poetic passages of striking beauty, and is eminently adapted for musical treatment. The piano score, arranged by Joseph Rubinstein, has also just appeared, and a careful preliminary study of the leading motives in it will enable those who can attend only one of the performances at Bayreuth to derive much additional enjoyment from it.

JOHN STUART MILL.—II.

John Stuart Mill: A Criticism, with Personal Recollections, by Alexander Bain, LL.D. London: Longmans, Green & Co.; New York: Henry Holt & Co.

"STERLING," writes Mill, "told me how he and others had looked upon me (from hearsay information) as a 'made' or manufactured man, having had a certain impress of opinion stamped on me which I could only reproduce." This popular notion of Mill was not more than half true. It is, however, a sign of Mill's want of self-knowledge that he should not, when reviewing his own moral and mental development, have perceived that this current idea contained, in spite of its inaccuracy, a half-truth of the highest importance. James Mill threw the whole strength of a very strong will, and all the resources of a very acute intellect, into the effort to make his son the model of a thinker after James Mill's own heart. That, as far as his father's efforts could achieve the result, John Mill was intellectually and morally a "manufactured" man, warranted to reproduce, to ex-

plain and defend all the articles of the Benthamite creed, is a fact of which we have the best evidence. When John was not more than six years old, James Mill, whose health was shaken, wrote thus to Bentham:

"I am not going to die, notwithstanding your zeal to come in for a legacy. However, if I were to die any time before this poor boy is a man, one of the things which would pinch me most sorely would be the being obliged to leave his mind *unmade to the degree of excellence to which I hope to make it.* But another thing is that the only prospect which would lessen that pain would be the leaving him in your hands. I therefore take your offer quite seriously, and stipulate merely that it shall be made *as good as possible*, and then we may perhaps leave him *a successor worthy of both of us.*"

The words we have underlined give the secret of James Mill's ambition. He was a hard man; he was no sentimentalist, yet he had his romance. The dream of his life was to provide his son with a mind made "to the degree of excellence to which I hope to make it," and thus leave behind him a successor worthy of the prophets of Utilitarianism. This was James Mill's dream, and John Mill has recorded the infinite labor, talent, and energy expended by his father on bringing the dream to fulfilment. Circumstances lent themselves to the accomplishment of the dreamer's ends. John Mill exhibited just that combination of docility with talent which is rarely to be found in the disciples of energetic teachers. His teachableness and essential modesty were probably concealed from the mass of the world under the habits of logical combativeness fostered by his father's training; but friendly observers soon perceived that the boy was willing to learn and easy to teach. "Upon all occasions," writes Lady Bentham, "his gentleness under reproof and thankfulness for correction are remarkable; and as it is by reason, supported by examples, we point out to him that we endeavor to convince him—not by command that we induce him to do so and so—we trust that you will have satisfaction from that part of his education we are giving him to fit him for commerce with the world at large." A letter from John Mill to his father, written at the same date, notes "the great kindness of Sir Samuel Bentham's family in constantly, without ill humor, explaining to him the defects in his way of conducting himself in society," and contains the comment, "I ought to be very thankful." A boy of fifteen so ready to take reproof was material easily to be moulded by a person of unconquerable resolution, and the following passage from the correspondence between father and son affords painful proof of the dominion which the man had obtained over the youth: "I wish I had nothing else to tell you, but I must inform you that I have lost my watch. It must have been lost while I was out of doors, but it is impossible it should have been stolen from my pocket. It must, therefore, be my own fault. The loss itself (though I am conscious that I must remain without a watch till I can buy one for myself) is to me not great—much less than my carelessness deserves. It must, however, vex you, and deservedly, from the bad sign which it affords of me."

A pupil may be docile and yet not worth the trouble of teaching. An educator has failed in his object if his labors produce not a follower, but an imitator. James Mill had the rare good fortune to find in his son a disciple endowed with a will far less strong, but with an intellect not less remarkable than his teacher's. Hence the elder Mill realized, or all but realized, his day-dream: he lived to see his son's mind clearly "made" to the hoped-for "degree of excellence." He might fairly hope, at his own death, that he left behind him a successor not unworthy either of himself or of Bentham. Nor had he any reason to fear that the essential doctrines of the Benthamite school would ever be obliterated from his pupil's mind. There seems, indeed, to have been a good deal of divergence in sentiment between the father and son. John's admiration for Carlyle, his reverence for Coleridge, and his unbounded admiration for De Tocqueville, were not very congenial to the narrow dogmas of the old Utilitarian democrat. Still, on the whole, James Mill had good reason to be satisfied with his work: John Mill's mind was "made"; it had been cast in the Benthamite mould, and that mould it retained to the end. The teaching of his youth was to John Mill "the truth." His own views might, and did, expand and alter; but he could no more get rid of the essentials of his faith than a born and bred Calvinist like Carlyle could in reality shake off the feelings of Calvinism. The sentiment of a faith is a far stronger thing than its mere doctrines, and Mill never really cast off the sentiment of Benthamism.

His final adherence to the school in which he was trained was allied with that singular habit of overestimating the merits of his friends and teachers of which every page in his 'Autobiography' bears traces. That he should have thought "my father" to be one of those thinkers who could without being made ridiculous be compared for influence with Bentham or with Voltaire, is curious; but it is not so curious as that he should write of Mrs. Taylor as one "whose sensitive as well as her mental qualities would, with her gifts of feeling and imagination, have fitted her to be a consummate artist, as her fiery and tender soul and vigorous eloquence would certainly have made her a great orator, and her profound knowledge of human nature and discernment and sagacity in practical life would, in the times when such a *carrière* was open to women, have made her eminent among the rulers of mankind." A man who could calmly believe and write that a lady whom he admired and loved combined gifts and qualities which have never before been possessed in union by any human being, might with comparative reasonableness hold that James Mill was, "by his writings and his personal influence, a great centre of light to his generation"; and the pupil and son who so thought of his teacher and father was certain to remain true in the long run to lessons recommended to him by philosophic and parental authority.

When we ask why Mill clung tenaciously to the dogmas of Benthamism, we can hardly avoid answering that he was, with all his rare gifts and thirst for truth, a man "made or manufactured" in the Benthamite school, bound almost by the laws of his intellect to the creed in which he was trained. A singular passage of Mill's 'Autobiography' records that Carlyle at first hailed him as a "new mystic." "He soon found out," however, "that I was not another mystic, and when, for the sake of my own integrity, I wrote him a distinct profession of all those of my opinions which I knew he most disliked, he replied that the chief difference between us was that I 'was as yet consciously nothing of a mystic.'" Mill obviously recalls Carlyle's remark as an instance of mistaken criticism; yet, in fact, Carlyle displayed with regard to Mill that insight into individual character which is the marked trait of all his historical writing. There was something in Mill which, whether you call it mysticism or not, was of a totally different cast from his honestly-professed opinions. Between 1830 and 1840 he appeared, at least to others if not to himself, to be rapidly drifting away from the creed in which he was brought up. "Something led us," writes Caroline Fox, in reporting an interview with Carlyle, "to John Mill. 'Ah, poor fellow! he has had to get himself out of Benthamism, and all the emotions and sufferings he has endured have helped him to thoughts that never entered Bentham's head. However, he is still too fond of demonstrating everything. If John Mill were to get up to heaven, he would hardly be content till he had made out how it all was.'" Friends and acquaintances like Carlyle and Sterling, who themselves shared to the full the reaction against the philosophy of the eighteenth century, underrated the tenacity with which Mill adhered, both from intellectual conviction and from the force of early association, to the mode of thought in which he had been trained. But Mill's own writings bear indirect testimony to the fact that at one period he deviated further than perhaps he himself perceived from his inherited creed. All his intimate friends (and this with a man of Mill's intense susceptibility to personal influence means much) were persons who had felt the sway of Coleridge. Such men as Maurice, Sterling, Carlyle were not likely to keep alive Mill's early Benthamism. His reverence for his father was, as Mill himself admits, mingled with a great want of sympathy with his father's views of life and of men. It no doubt is true that Mill "never wavered in the conviction that happiness is the test of all rules of conduct and the end of life." To have done so would have been to commit deliberate apostasy from the true Utilitarian faith. But when you combine this conviction with the further dogma, that the only chance of happiness "is to treat not happiness, but some end external to it, as the purpose of life," and have resolved to "let your self-consciousness, your scrutiny, your self-interrogation exhaust themselves on that," you have taken a step which, as far as the conduct of life goes, a good deal diminishes the practical importance of speculative Utilitarianism.

But Mill went a good deal further than is necessarily implied in the rule, that happiness, like health, must be sought for by forgetting the ultimate object of your pursuit. We now possess in Caroline Fox's 'Journals' a picture, or rather a faint sketch, of John Mill as he appeared to sympathetic and religious friends in the prime of his manhood. We now see that Mill, when between thirty and forty, was a very different person from the Utilitarian propagandist who in early youth went forth prepared to fight the battles of Utilitarianism with all the fervor of fanatical conviction, and was also a very different person from the thinker who between sixty and seventy looked back over his own life and attempted with perfect honesty, though with very imperfect self-knowledge, to give its story a kind of philosophic coherence which an existence influenced at every turn by circumstances, associations, and personal sympathies had never in reality possessed. Of Mill's sincerity no one who knows an honest man when he sees him can doubt; and Mill, when among the Quakers at Falmouth, used the language rather of religion than of philosophy. This passage from Caroline Fox's 'Journals' is worth a hundred pages of retrospective autobiography. She is writing of a conversation in which "Sterling was the chief speaker and Mill would occasionally throw in an idea." The only defect of the report is that the writer does not always distinguish with perfect clearness between the words of Sterling and those of Mill.

"There is also," she writes, "a guide to the path you should take in the intellectual and active world. Carlyle says: 'Try and you will find it.' Mill says: 'Avoid all that you prove by experience or intuition to be wrong, and you are safe; especially avoid the servile imitation of any other, be true to yourselves, find out your individuality, and live and act in the circle around it. Follow with earnestness the path into which it impels you, taking Reason for your safety-lamp and perpetually warring with In-

clination; then you will attain to that freedom which results only from obedience to right and reason, and that happiness which proves to be such, on retrospection. Every one has a part to perform whilst stationed here, and he must strive with enthusiasm to perform it. Every advance brings its own particular snares, either exciting to ambition or display, but in the darkest passages of human existence a Polar Star may be discovered, if earnestly sought after, which will guide the wanderer into the effulgence of light and truth. What there is in us that appears evil is, if thoroughly examined, either disproportioned or misdirected good, for our Maker has stamped his own image on everything that lives.'"

Side by side with this passage read Mill's letters to Robert Barclay Fox. They are in substance perhaps a little disappointing, but they show how much more near than might be supposed from the 'Autobiography' Mill at one time came to sharing the interests of religious Christians. He reads, for example, with some admiration the notes of a Welsh sermon—"a really admirable specimen of popular eloquence of a rude kind"; he criticises the view of the atonement propounded by the preacher in terms which might have been used by Maurice, say, or Kingsley:

"I know not how dangerous may be the ground on which I am treading, or how far the view of the Atonement which is taken by this poor preacher may be recognized by your society or by yourself; but surely a more Christianlike interpretation of that mystery is that which, believing that divine wisdom punishes the sinner for the sinner's sake, and not from an inherent necessity, more heathen than the heathen Nemesis, holds, as Coleridge did, that the sufferings of the Redeemer were (in accordance with the eternal laws on which this system of things is built) an indispensable means of bringing about that change in the hearts of sinners the want of which is the real and sole hindrance to the universal salvation of mankind."

Something, no doubt, must be allowed for the legitimate desire of a sympathetic nature to be in harmony with beloved friends. But we should be very unjust to Mill if we supposed him to have used, when in intercourse with Caroline Fox and her brother, language which he could employ only in a very non-natural sense. The fair explanation of the relation between him and his Quaker hosts is, that at one period of his life Mill's sympathies, if not his convictions, were enlisted in favor if not of Christian beliefs, yet assuredly of Christian aspirations. It is, indeed, pretty clear that during the years when he was in communication with his Falmouth friends, he was under the influence of something like repulsion from the associations of his early life. He was careful to explain to guests at his house that no one need fear to criticise Bentham in his presence. He expressed at least once something like regret at the discipline of his boyhood. "His father used to make him study ecclesiastical history before he was ten. This method of early application he would not recommend to others; in most cases it would not answer, and, where it does, the buoyancy of youth is entirely superseded by the maturity of manhood, and action is very likely to be merged in reflection. 'I never was a boy,' he said, 'never played at cricket: it is better to let nature have her own way.'"

Here we have the secret of one-half of Mill's speculative career. Nature was not allowed to have her own way, and nature, after her wont, avenged herself by all but driving John Mill into revolt against his father's teaching. Yet, oddly enough, the influence of James Mill in the long run triumphed; and so strange are the turns of character and of circumstances, that James Mill's victory was, it may well be suspected, in great measure due to the unconscious aid of the very person who first shook his dominion over his son. The facts we already know of John Mill's life make one fact absolutely clear: the immense authority of his father yielded to the unbounded influence of Mrs. Taylor. As John Mill's devotion to her increased, his faith in his father declined. The natural result of this change of allegiance would, one might expect, be a complete alienation from James Mill's moral and political views. This result, however, did not follow. On the contrary, Mill's connection and marriage with Mrs. Taylor drew him off from the associates whose beliefs were fundamentally opposed to the dogmas in which he had been educated; and the lady who admittedly shared and influenced all Mill's later speculations aided and fostered that return toward early beliefs which is as natural and as usual as the return to first loves. This, at least, is the interpretation which, in the light of our further knowledge, a critic must place on more than one passage in the 'Autobiography.'

"In this third period," writes Mill, ". . . of my mental progress, which now went hand in hand with hers, my opinions gained equally in breadth and depth. . . . I had now completely turned back from what there had been of excess in my reaction against Benthamism. I had, at the height of that reaction, certainly become much more indulgent to the common opinions of society and the world, and more willing to be content with seconding the superficial improvement which had begun to take place in those common opinions than became one whose convictions, on so many points, differed fundamentally from them."

It is hardly necessary to trace further the extent to which the circumstances of Mill's life, and especially the authority of individuals whom he revered or loved, told on the formation of his speculative opinions. When once this is clearly perceived it is comparatively easy to understand how it is that theories expressed with all the clearness which can be given to philosophical exposition, and defended with all the acuteness of the most thoroughly trained logician of his age, exhibit, nevertheless, under an external appearance of perfect consistency, something very like a want of essential coherence. As, in short, you compare Mill's career with his system, the one explains the other. If Mill's system loses something of the impressiveness derived from unbroken intellectual consistency, he himself gains a good deal in human interest. "Dined at the Mills'," writes Caroline Fox: "a biennial jubilee; John Mill in glorious spirits, too happy to enter much into deep things. He alluded to the indescribable change and growth he experienced when he made the discovery that what was right for others might not be right for him. Talked of life not being all fun, though there is a great deal of fun in it." Those who like to know what a great man really was may learn more from these few lines than from the whole elaborate "criticism" of Prof. Bain.

THOMAS À KEMPIS.

Thomas à Kempis and the Brothers of Common Life. By the Rev. S. Kettlewell. 2 vols. G. P. Putnam's Sons. 1882.

To the great majority of persons the name of Thomas à Kempis is familiar only as the author of the most remarkable religious book yet produced by any Christian writer. The 'Imitation of Christ' has, in its countless editions in all the principal tongues of Christendom, brought comfort and solace to thousands to whom its authorship was of no more consequence than that of the Bible itself. It is probably owing to this very fact, that the book contains really the whole man, that so few attempts have been made to present in greater detail the incidents of his life. And, indeed, a struggle with the two ample volumes before us leaves one with a deep sense of having spent many unprofitable hours.

The life of À Kempis may be said to have passed almost without events. It was the very purpose of the order of Brothers to which he belonged to avoid mingling actively with the people of the world, while avoiding at the same time those errors of ascetic fanaticism which had weakened and degraded the older monastic orders. À Kempis threw himself with the ardor of a faithful, devoted nature into the fulfilment of this purpose. It would, therefore, have been of interest if a biographer could have traced for us clearly and sharply the lines of his mental and moral development until it found expression in his book. Whoever seeks such enlightenment from the pages of Mr. Kettlewell will, we fear, be disappointed. The first gift of the true biographer—the power of setting forth individual character in strong relief against the background of the age in which he lived—is wanting in his case. There is evident throughout a desire to be edifying which has, we venture to say, doubled the size of the book and contributed nothing to our knowledge of the man or of his surroundings. Nothing is allowed to pass without a homily from the author, disturbing always the thread of narration and dimming the very impression it aims to deepen.

Perhaps some explanation of the disjointed character of the whole work may be found in the last paragraph of the preface, where the author speaks of his work as "filling up many vacant hours while disengaged from other duties." Apparently, the product of these vacant hours, distributed, as he says, over many years, has never been subjected to thorough revision, or else the bulk of his work was a matter of no account to the author. So far as we can judge, each chapter was finished once for all, and laid aside until, in composing new ones, much that had been once said was repeated. For instance, in speaking of Gerard Groot(e), the founder of the Brothers of Common Life, this name is endlessly defined as meaning Gerard the Great, and this in spite of the fact that Gerard's father is spoken of as Werner Groote.

The greater part of the first volume is occupied by the sketches of the earlier members of the Brotherhood of Common Life, written by Thomas himself—dreary eulogies in the manner of the 'Acta Sanctorum,' filled with miraculous stories which our author gravely discusses, and with endless pious exhortations, which lead him on to similar effort. The ideal of Gerard Groot is evidently his ideal also. He regrets, and does not conceal his regret, that the good old times of the pure monastic life are gone. It would do him good to see the English Church encouraging such devotion to lives of contemplation. Yet he does not hesitate to express his preference for these brethren over the then existing regular orders, and touches somewhat lightly on the fact that within a very few years the Brotherhood suffered the usual fate of such institutions and became a mere feeder to an order of Canons Regular which had been developed out of itself. In this order Thomas also took the vows in due season, and remained during his life at the monastery of St. Agnes, near Zwolle, and not far from his birthplace, Kempen. Here his life was one of almost unbroken quiet, devoted to spiritual contemplation, to the composition of religious treatises, and to the instruction of youth. Our author justly emphasizes the purely spiritual character of all Thomas's work, as distinguished from the dogmatic tone of much of the theological writing of the day. With him the life was everything, the faith so much a part of the life that it must be presumed as the only foundation and condition of right living.

Mr. Kettlewell's lack of systematic arrangement in his subject is well illustrated by his treatment of the whole question of the 'Imita-

tion.' Though he claims to have settled in another work the controversy as to the authorship, he might well have spared some portions of his too ample space at least to recapitulate the main points of so interesting a discussion; but the reader seeks in vain for any comprehensive account of the evidence for authenticity. Here and there, scattered through the whole book, are, however, brief hints of detached bits of proof, which simply confuse without explaining.

In the second volume we have chapters on the general condition of the Church in Europe, which give a fairly correct impression of the great movement of events, though, as we have suggested, the author's historical sense is none of the keenest. But most interesting and suggestive is the attempt to connect the name of Thomas à Kempis with the outbreak of the Reformation. The connecting link is here a man universally recognized as the immediate forerunner of Luther, John Wessel of Gröningen, and now shown with some certainty to have been greatly influenced by personal contact with À Kempis. Such connections of persons and events, however, are somewhat too attractive to be altogether safe subjects for speculation. In a sense we may regard every upright and pure mind during the Middle Ages as prefiguring in itself the ideas which the leaders of the Reformation strove to realize. In John Wessel we find distinctly proclaimed the primary doctrines of Luther, only advanced with less assurance and under less favorable circumstances. À Kempis, on the other hand, was too much a moralist and too little a dogmatist ever to set himself in opposition to dominant systems.

We cannot refuse to the author the praise of diligence and enthusiasm. He has visited the most important scenes of the activity of his hero, and attempts to give picturesqueness to his account by describing them at considerable length. The portraits of Thomas receive due attention; but here, again, we seek in vain for comprehensive statements as to genuineness and accuracy. Much of this indefiniteness of impression comes from a careless profusion of words—at least, carelessness is the charitable word for the multitude of verbal sins which meet one's eye on every page. A few examples, taken at random, will illustrate: "The civil power in a country have liberties which the ecclesiastical authority have no just right, morally or religiously, to interfere with." "The Bishop of 'Matiskonensis'" !—although a note explains this person to be the Bishop of Macon. "The Duke of Savoy, called Felix V.," without a suggestion that this was his name *as Pope*. "I preach the Gospel with a plainness, that it might be comprehended by the humblest understanding." Luther is said to have written an introduction to the works of Wessel in 1552, six years after Luther's own death. The enormous number of such slips in a work purporting to represent the labor of a life cannot but shake our confidence in the method of its author. The book concludes with what Mr. Kettlewell might call "an account of the history of" his expedition to Zwolle, and of the edifying sensations produced by the sight of the skull and some small bones of the good man whose name has given to the little village its only title to celebrity.

HEINE ON GERMANY.

Religion and Philosophy in Germany. By Heinrich Heine. Translated by John Snodgrass. Boston: Houghton, Mifflin & Co. 1882.

To English readers Heine has hitherto been chiefly known as a great lyric poet. His songs have become familiar through numerous translations, and through their union with the music of the greatest German composers. One need not be able to understand, but only to read, German to discover that, though others may have excelled him in variety of topic and depth of sentiment, no poet of this century has written such smooth, graceful, and musical verse as he. What Heine says of Goethe's songs applies equally well to his own: "They have a coquettish charm that is indescribable; the harmonious verses entwine themselves about the heart like a tenderly beloved one; the word embraces while the thought kisses you." But Heine's prose is hardly inferior in interest to his poetry. His short, crisp sentences, suggestive antitheses, vivid imagery, and refreshing clearness and directness, suggest the imaginative poet on every page. Johannes Scherr claims him as the greatest satirist the world has seen since Aristophanes, Cervantes, Rabelais, and Swift; and he certainly is the most subtle and genuine wit Germany has ever produced.

Nevertheless, one of those works in which his wit, irony, and critical acumen are most conspicuously displayed has had to wait almost half a century for an English translator—probably as retribution for the malicious and caustic remarks he was in the habit of making about England and the English, whom he did not greatly admire. The short treatise on 'Religion and Philosophy in Germany' originally appeared in the *Revue des Deux Mondes* in 1834, and in the following year at Hamburg in a German version. The admirable English translation now before us was made from the German, because the translator believes that it was originally written in that language. The reason given for this belief is that although Heine had a good command of the French language, it was his custom to secure the assistance of some prominent French author in preparing a French version of his German works, whence it is probable that he wrote the present work too in his mother tongue. The different readings in the various German and French editions, whenever of importance, are given in an appendix or in footnotes. That the first German edition was greatly mutilated by the censor is not to be wondered at in a country where even at the present day a week seldom passes in which some journalist of repute is not sent to prison for having vaguely questioned the absolute perfection and infallibility of Bismarck or Kaiser Wilhelm. As Heine states in a preface, the passages omitted chiefly related to political matters, his religious heterodoxy having been apparently found less objectionable than his political. The consequence was that the aspect of the book was considerably changed, as in place of having a "patriotic democratic tendency," it now "recalled scholastic theological polemics." Heine believed that the German MS. had been destroyed in the great Hamburg conflagration of 1842; but it was found again, and the book as now printed correctly reflects the original views and language of its author. In the preface to which we have just referred, Heine ostensibly retracts the anti-religious sentiments expressed in the body of the book. It has been said of him that he would have suffered the direst consequences rather than suppress a witticism that pricked his tongue; and the present case shows how far he was ready to carry a frivolous joke.

Heine's object in writing this book was to give French readers a clear idea of the general drift of German thought from Luther to Hegel, and thus indirectly to correct some of the numerous wrong notions set afloat among them by Madame de Staël's work on Germany. It is not an erudite, systematic treatise on German philosophy and religion, adapted to the wants of college students; but it gives a picturesque bird's-eye view of its subject, and abounds in brilliant *aperçus* and incisive criticisms that are often more suggestive and edifying than whole chapters of dry and barren historical facts. It has been briefly dismissed by some critics as mere "pyrotechnics of wit," or as a book whose heroes are chiefly used as "pegs whereon the writer may hang his jests," somewhat like the manner in which Italian opera composers utilize their librettos to show off their melodies; but this is hardly a just verdict. Wit and sarcasm permeate the whole book, it is true, but the wit always "clings to the thought" and grows out of the subject; and no subject so readily yields itself to sarcastic treatment as German metaphysics. Call it a comic history of German philosophy if you like, but remember that in writing a history of German speculation it is often *difficile satiram non scribere*.

In noting Heine's estimate of the different German philosophers, nothing will be so apt to surprise the reader as to find that he calls Hegel the greatest German philosopher since Leibnitz, and places him even above Kant. The reason for this strange judgment probably lies in the fact that he personally attended Hegel's lectures in Berlin, and there caught the fever from the large number of deluded students who imagined in their enthusiasm that where there was so much metaphysical smoke there must also be much hidden light. His admiration for Hegel, however, does not prevent him from quoting the story of Hegel's deathbed observation: "Only one man has understood me; . . . and even he did not understand me." Heine evidently did not study Hegel with sufficient care to discover, what Trendelenburg and Ueberweg have pointed out, that the proposition on which Hegel's whole card-house is built (the identity of *Sein* and *Nichts*) is one of the most absurd instances of logical sophistry on record. The pages devoted to Fichte are very amusing reading. He compares his philosophy—which requires the Ego to observe its own operations during the act of thinking—to the monkey who seated itself on the hearth before a copper kettle cooking its own tail, because it was of the opinion that "the true art of cooking consists not merely in the objective act of cooking, but also in the subjective consciousness of the process of cooking." Although Heine recognizes the immense negative value of Kant's philosophy in so far as it destroyed philosophical dogmatism and brought the sacraments to a dying God, he cannot forgive him for having by his 'Critique of Practical Reason' neutralized, or at least weakened, the effect of his 'Critique of Pure Reason.' He either wrote the latter work on the principle of the student who smashed all the lamps in the street so as to get an opportunity to deliver a forcible lecture on the absolute necessity of lamps, or else he wrote the 'Critique of Practical Reason' out of consideration for his poor old servant, Lampe, who looked with consternation on the slaughter of the "ontological, cosmological, and physico-theological bodyguards," and who could never be happy without a God and a belief in immortality. Heine claims that Kant did not destroy the "ontological proof," which is beyond question the weakest of all. He does not explain the "how so," but the wherefore lies in his statement that it is equally valid for deism and for pantheism; and Heine was a pantheist. Goethe himself did not express greater admiration for Spinoza than Heine; and Heine, after characterizing pantheism in admirable language, takes great care to point out that it is not to be identified with atheism. He did not live long enough to read Schopenhauer's caustic remark that Spinoza's method of identifying nature with God was very much like

the proceeding of the monarch who wished to equalize all his subjects without hurting the feelings of the aristocracy, and accordingly arranged the difficulty by conferring the title of nobility on the whole populace.

Pantheism is one of the "leading-motives" that run through the whole book; but *the* leading-motive, which permeates not only this work, but much of Heine's poetry and other writings, is that the essence of Christianity lies in one idea —the annihilation of the life of the senses. "You demand simple modes of dress, austere morals, and unspiced pleasures; we, on the contrary, desire nectar and ambrosia, purple mantles, costly perfumes, luxury and splendor, dances of laughing nymphs, music and comedies." Catholicism, although it looked upon the flesh as being of the devil, allowed the enjoyment of sensuous delights, provided they were regarded as forbidden fruit and atoned for by confession and contributions to the Church funds. Protestantism was a reaction against this inconsistency, and, like all reactions, it went to the opposite extreme. Next to his poetic genius, it is his championship of the healthy life of the senses that establishes Heine's claims to our admiration; and if in his personal conduct he was advocating, this does not impair the value and beauty of such a work as this fragmentary treatise on 'Religion and Philosophy in Germany.' In conclusion, we cannot refrain from calling especial attention to the passages on Luther and Lessing, both of which are such perfect specimens of suggestive criticism and elegant style that every student of literature ought to know them by heart. Nothing certainly could be better than the following:

"Lessing was the living criticism of his time, and his whole life was a polemic. . . . As he himself avowed, conflict was necessary to his mental development. He resembled the legendary Norman who inherited the talents, the skill, and the vigor of the enemies slain by him in combat. . . . Yea, he struck off many a skull out of pure wantonness, and then was malicious enough to pick it up again and to show the public that it was quite empty. . . . By his polemic many a name has been snatched from well-merited oblivion. He has enveloped with the most spiritual irony, with the most delicious humor, not a few paltry scribblers, who are preserved for all future time in Lessing's works, like insects imbedded in a piece of amber. In the act of putting his adversaries to death he has bestowed on them immortality."

Bentley. By R. C. Jebb. [English Men of Letters.] Harpers. 1882.

Richard Bentley has a well-deserved place on the list of eminent Englishmen. The field of his labor lies indeed apart from the interest and the knowledge of most people, yet it is one in which intellectual ability can be trained and exercised as really and as thoroughly as in almost any other. If the power to grasp and retain in mind a vast number of facts, to select and combine those needed for a purpose, however widely scattered they may be, to penetrate the meaning of incidental statements and draw sound inferences from them, to weigh testimony and detect error with marvellous intuition—if the power to do these things attests intellectual ability, Bentley certainly possessed a high degree of it. Repeated testimony has been given by the leaders of scholarship in Holland and Germany to his being in their view the greatest man in classical learning that England has yet produced, and that, too, in spite of his having left so little finished work behind him. It is hardly possible to pursue critical study of classical antiquity far in any line without coming upon traces of his influence. If you study Homer, you are met at once by the digamma, which Bentley discovered for the modern world. If you study the history of the Greek drama, you find reference to Bentley's suggestions and combinations in the Phalaris essay. If you study Terence, you find Bentley quoted as the first to get hold of the key to his metre. If you study Kallimachos, you find Bentley's name among the restorers of his text. And so it is in Horace and Manilius and Plautus, and in Aristophanes and Nikander, and in varying degrees as to many other authors. Much of his wealth of matter lies scattered about in odd places, in contributions to other people's books, or in marginal notes on what he was reading. His own books have to be studied rather than read, because he is continually running off from his subject to correct an error in some other ancient author or to bring together items of tradition and set them in their true form and relation so as to establish some neglected fact. An excellent illustration is given by Professor Jebb (p. 124) from the letter to Mill. This indiscriminate pouring forth of learning seems to have been due partly to his own mental character, partly to the need of the time. He saw, as is well said by Jebb (p. 216), "that the very foundations on which they (his predecessors in scholarship) built—the classical books themselves—must be rendered sound, if the edifice was to be upheld or completed."

There have been three or four accounts of Bentley's life published, but this of Mr. Jebb's is not only the most complete and satisfactory for its size, but in every way an excellent piece of work. He is evidently in sympathy with his subject, and has thoroughly studied it. It is a lively subject, too, for Bentley was by no means a mere solitary student, the only events in whose life are a new book or a new theory. He had his literary quarrels, chief among which was the great Phalaris controversy, involving apparently the scholarly reputation of the two universities, calling out squibs and pamphlets from the literary men and wits of the day, known to modern readers by a chapter in D'Israeli's 'Quarrels of Authors' and by a brilliant passage in Macaulay's essay on Sir William Temple. Then came his long struggle as Master of Trinity with the Senior Fellows, which went on in one form or another for twenty-eight years, came before the courts and the Privy Council, and was variously influenced by the changes in the fortunes of political parties. This is not a pleasant part of Bentley's life. It shows him in a worse light than any other part of his history, and we heartily wish we could omit the traits it reveals from our conception of the great man. But it certainly does add variety and excitement to his story. The great triumph of Bentley's career, that by which he will be longest and most widely known, is his Phalaris dissertation. The wit, the overwhelming learning, the absolute mastery of the subject, make this a work of permanent value and interest even to modern scholars, and justify Porson's phrase, "the immortal dissertation." It seems as if it must have utterly crushed the other side, and yet, as Mr. Jebb clearly shows, there was not critical learning enough in England for a hundred years to make it generally recognized on which side the victory lay.

Studies of Modern Mind and Character at Several European Epochs. By John Wilson. London: Longmans, Green & Co. 1881. 8vo, pp. 444.

Mr. Wilson's volume of 'Studies' consists of fourteen essays upon different subjects of modern history and literature, most of which have already appeared in periodicals—chiefly the *Quarterly Review.* We have articles upon Guicciardini, Bruno, and Galileo, Swift, Junius, and Voltaire; then follows a series upon recent French history, followed by an article entitled "Bismarck, Prussia, and Pan-Teutonism."

Of the earlier group, that upon Galileo is perhaps the most interesting, or at least timely. The process of Galileo has received so much light of late years from the new evidence that has been discovered in the Archives of the Vatican that we hoped to find here—what the English public would be very glad to have—a fair and complete summing up of the case as it now stands, after the labors of Martin, Berti, Gebler, etc. Unfortunately Mr. Wilson's object was a different one—to couple Galileo with Bruno, and compare their scientific attitude and the treatment they respectively received; there is not room, therefore, for a complete presentation of Galileo's case. It takes for granted more previous knowledge on the subject than most readers possess. Enough of detail is given, however, to support the conclusion at which, we believe, most well-informed persons have arrived. Galileo was not put to the torture, as has been sometimes asserted, nor was he subjected to any severe physical punishment; he was nevertheless threatened with the torture. Neither, if we understand aright, was he, in 1633, when summoned before the Inquisition, put upon trial for his opinions, but *for contumacy,* for publishing in 1632 opinions which in 1616 he had been forbidden to teach, and had promised not to teach. Mr. Wilson says (p. 65):

"What Rome did to Galileo is now before the world in its minutest circumstances. Let her have full credit for what, by special grace and favor, she left undone. An infirm old man of seventy, stricken with grievous maladies, whose labors and discoveries had done honor to Italy in every realm of Europe, was neither burned at the stake, nor thrown into the dungeons of the Holy Office, nor stretched upon the rack."

So, too, Rome did not, perhaps, formally condemn his scientific opinions; she did, nevertheless, what she could to crush them.

More than half the volume is made up of the eight articles upon the French revolutions, empires, and wars, including one upon the land question in France, in which an opinion is expressed unfavorable to the existing system. These articles present a tolerably complete sketch of the history of France during the last hundred years, and, being based upon fresh and authentic information, can be read with great profit. With regard to the causes of the "Terror"—really, perhaps, the most vital question in dealing with the French Revolution—he presents the view elaborated so fully by M. Taine in his last volumes, that the government of the Jacobins was a usurpation by a small minority: "that there was in Paris, as well as in the departments, an enormous preponderance of force, as well as of opinion, ready to array itself against the Jacobin populace-tyranny. But that force was without organization and without leaders" (p. 245). At an earlier stage he shows that the Revolution could have been easily held in hand by a competent executive: "As Dumont says, the one thing needful in 1789 was a King of firm and decided character" (p. 227). Back of it all, however, were causes at work, not merely in France itself, but in Europe, in the "joint policy of perfidy and violence in Eastern Europe" pursued by Frederic the Great and Catherine of Russia. "Anarchy in Europe—international anarchy produced by the lawless will of her rulers—preceded anarchy in France, and rendered Europe defenceless against French invasion" (p. 275). There is no more conspicuous example in history of the punishment that crimes bring upon themselves than the connection pointed out by Von Sybel between the second partition of Poland in 1792 and the successes of the French Revolution in the same year. While the allies were jealously

watching each other and their destined prey, they presented but a half-hearted resistance to the enthusiastic legions of France. The whole of this article, "Through Anarchy to Cæsarism," is forcible and just.

Extracts from the Writings of W. M. Thackeray, chiefly Philosophical and Reflective. Philadelphia: J. B. Lippincott & Co. 1882.

THIS volume differs from most collections of extracts in the fact that it can be read through without weariness—a strong proof of the indestructible virtue of Thackeray's style. The extracts are really minute essays on the topics about which Thackeray was fond of moralizing by the way—men, women, marriage, hypocrisy, humbug, love, friendship, old age and youth, the way of the world, *vanitas vanitatum*—subjects which preachers, poets, and moralists have from the beginning of the world discussed, and which in modern times have in great measure fallen into the hands of novelists.

When Thackeray first came before the world, as the author of 'Vanity Fair,' the impression he made upon the English public was more that of a cynical moralist than of a master of fiction. Subsequently, it became gradually apparent to the dull, honest Anglo-Saxon mind that his philosophy, cynical though it might be, was not Mephistophelian; that he seriously admired and respected the cardinal virtues, though he did not believe that they were very common in the world, nor so invariably united with a high degree of intelligence as some students of human nature like to believe. When it was once admitted that he was not simply sneering at all good and manly things, it was but a step to exalt him into the position of a great preacher, who told the world the truth about itself, but chiefly because he so loved whatever was pure and lovely and of good report that he was forced to lift up his voice against the humbug and hypocrisy and shams with which he found it obscured and disfigured. As time went on, he got to take this view of himself, and to preach more and more and play the cynic less and less; and it must be confessed that in this process his style lost most of its freshness and pungency.

In looking over these extracts, one is most struck by the fact that there was really no novelty in his philosophy of life at all, and that the real reason why it attracted so much attention at the outset, and caused so much dispute, was the perfection of Thackeray's style, the delicacy of his humor, his power as a story-teller, and his lifelike development of character—in other words, his purely literary merits. It was these that made a view of life that was in fact very old seem to have the force of startling novelty. His cynicism, too, was a sort of surprise to the novel-reading public, because it came in the midst of an age of sentimental admiration of human nature, and sharply recalled the world to one of the great central facts of existence—that hypocrisy and deceit play an important part in it. The generation to which Thackeray belonged was determined at all hazards to make out that human life was a blessing and human history a tale of progress. To him, on the contrary, whatever might be the truth about human progress, human life was essentially unhappy, its hopes and ambitions delusive, its joys ephemeral, its sorrows lasting, and its meaning—except in the light of a supernatural revelation—like a tale told to an idiot, full of sound and fury, signifying nothing. This view of life may be all wrong, and it was believed to be all wrong by most of the readers of 'Vanity Fair' when it came out. At that time a taste for Thackeray was a sort of test of the disposition of a reader. To enjoy 'Vanity Fair'—or, at any rate, to enjoy it to the point of sympathy and admiration—was supposed to be an indication of a worldly, cynical spirit. Most people who wept over Nancy Sikes or the sufferings of Smike, looked upon the unhappiness of life as something which had its root in inequality of condition, or misfortune, or poverty, and looked forward to a time, not so far off either, when it would disappear like a disease the cure for which has at length been discovered, and leave nothing but kindness, love, and undiluted bliss in the world. Thackeray, as we have said, was no believer in this optimism. All lovers of him will find this volume worth looking over, as it presents his "philosophy" in a concise form.

Autobiography of the Rev. Luther Lee, D.D. Phillips & Hunt.

THIS is the story of a Methodist preacher, now an octogenarian, who won distinction by his efforts to redeem the Church he loved from the defilement of slavery. His account of the early fall of that Church into the embrace of the slave power, and of its long and desperate subserviency thereto; of the efforts of the bishops and others in authority to overawe and silence every manifestation of anti-slavery sentiment; and of the proscription and persecution visited upon those who sought to redeem their beloved Zion from blood-guiltiness, is fitted to astonish the present generation. Dr. Lee was among those who were driven by these persecutions to secede from the Church of their first love, and to organize another under the name of the "Wesleyan Connection." This secession failed to disintegrate the old Church in the Northern States only because it speedily brought the leaders, in part at least, to their senses. The iron rule of the bishops was relaxed, the preachers were no longer forbidden to discuss the subject, and in 1844 the General Conference actually called a bishop to account for being a slaveholder. The Southern secession followed, but a large portion of slave territory was still left within the jurisdiction of the Northern Church, where slavery was tolerated exactly as before, until the system was destroyed by the Civil War. After the Church had been thus purified of slavery, less by any action of its own than by the wage of battle, Dr. Lee and others of the Wesleyan body once more united with it.

That Dr. Lee's account of the struggle is substantially accurate there is no room for doubt. If he sometimes oversteps the bounds of modesty in what he says of his own part in the controversy, his narrative is yet of considerable historic value, showing as it does how much was done for the support of slavery by one of the largest of American churches. But while his familiarity with Methodist history saves him from falling into any serious errors on that subject, he is less fortunate in his attempt to give an account of the division of 1839 among the Abolitionists of Massachusetts. He was in the State but a short time, and his associations there were not favorable to a just apprehension of the matters in controversy. When he says that Garrison, Phillips, and others of their school "vehemently opposed all political action against slavery," he falls into an error at once so grave and so absurd that we can only attribute it to the forgetfulness of age. As to the importance and necessity of political action for the abolition of slavery, there was never any division of sentiment among Abolitionists in Massachusetts or elsewhere. The mooted question concerned only the form of such action. Mr. Garrison and his friends believed it unwise, in the then state of the cause, for Abolitionists to organize a political party. They thought the inevitable tendency of such a measure would be to cripple the work of moral agitation, to relieve the churches of their distress by drawing the movement almost exclusively into a political channel, and thus to postpone the crisis in which genuine political action might be expected to give effect to the moral sentiment of the country against slavery. Again, Dr. Lee falls into a palpable anachronism when he says that Garrison, Phillips, and others, in 1839, "declared it a sin to vote under the pro-slavery Constitution of the United States." It was not until five years after this that the anti-slavery societies led by Garrison arrived at this conclusion. We do not so much wonder at these mistakes of Dr. Lee when we observe that he makes "Josiah" Quincy chairman of a meeting of reformers in the Chardon Street Chapel in Boston. We notice also an error of the types, which makes Dr. Lee deliver a speech before the American Anti-Slavery Society, in 1832, a year and a half before that Society was organized.

P. Ovidii Nasonis Ibis: ex novis codicibus edidit, scholia vetera, commentarium cum prolegomenis, appendice, indice, addidit R. Ellis, Coll. Trin. ap. Oxon. Socius. Oxford: Clarendon Press. 1881.

IT may be in bad taste to admire Ovid too much. Men have been found to call him a poor poet. It was so in Bentley's time, it is so to-day. He has not the pulsing life of Catullus, the tenderness, the idyllic sweetness of Tibullus, the intimate touch of Propertius. He has a fatal facility in poetry that reminds one of Cicero in prose. One resents so much aptness. Ovid's art is so thorough that some critics would call it a knack, and by these he is accounted an artist as a *chef* is counted an artist. To them his skill is not so much that of the painter's deft finger as that of the juggler's nimble wrist. He is too much in love with his own cleverness—an old charge. He rings the changes on the same theme; he takes with both hands, and not only from the Greeks. They were fair game then as the French are fair game now for dramatists, and Germans fair game for scholars. But he borrows from his Roman brethren, and those who delight in the silent criticism of parallel columns can get some satisfaction out of Ovid, especially as his enemies say that he does not improve on what he borrows. He is too fond of conceits, of points; and he mars his best passages by quibbling comparisons. He has little depth of feeling; he is as frivolous as his verse is light. His tripping hexameters, his well-cadenced pentameters symbolize the airy man of the world. And yet, in the face of every possible objection and criticism, it may be confidently maintained that Ovid had genius enough for half a dozen poets; that he borrowed not because he was poor, but because he was rich; and that he had a great deal of Roman sap in him. There was no fight in Propertius: Ovid would and did fight on occasion, and one has not far to seek in his poems in order to find manly, ringing verses. If he seems to pule in his later poems, we should remember the misery of his lot, the contrast to him between Tomi and Rome. Ovid must have been a thoroughly companionable man, whereas Catullus, though charming, was dangerous, and Propertius was moody and sullen. We find fault with Cicero, with Ovid, with Voltaire, and we end by coming back to them.

Apart from the rest of Ovid's poems stands the "Ibis"—apart, as he himself says, both in its bitterness and in its obscurity; so far apart that the Ovidian authorship has been questioned. Ovid had passed fifty before he wrote a harsh line against any one. Fifty is an age at which the wine of life, as the Greek

said, is apt to turn to vinegar; and yet how few men can lay claim to so long a course of good-nature! When the poet was exiled, his own familiar friend lifted up his heel against him, gave tongue against him in public places, and tortured the loving wife to whom Ovid's thoughts turned constantly from his dreary exile. Up to that time, the poet says, his muse had harmed no one but himself. Now even his good-nature was turned to gall, and he learned to curse. That he had to get a master to teach him how to curse might be considered a proof of the native sweetness of his temper; but, unfortunately, the Romans always had to look for Greek models, even if they looked for them to surpass them. Ovid's model was the "Ibis" of Callimachus. Callimachus, a clever and pragmatic pedant-poet, was incensed with Apollonius, afterward called the Rhodian, for daring to contravene his canons of criticism, and especially that famous canon, "A big book is a big bore"; and, in order to punish his adversary, poured out on his head a vial of wrath into which he had distilled a whole herbary of curses gathered from the most secret recesses of Greek mythology. The title itself is a puzzle, as the ibis was highly reverenced among the Egyptians, although the popular ornithology of the period told unsavory tales about "Father John," as he is now affectionately called by the dwellers in those parts. The object of this poem—which belonged to the class of *Diræ*—was twofold: it was to blast by its malignity, and to abash by its learning, so that Apollonius would be hurt as much by what he did not understand as by what he did.

The "Ibis" of Callimachus was a short poem, Mr. Ellis thinks, and Ovid enlarged it by numerous additions borrowed from other writings of the same Callimachus and from the stock which he used in the "Metamorphoses." After the introduction, which is very vigorous and has more directness than is Ovid's wont, the mythological cursing begins, and we are introduced to a chamber of horrors and a Newgate calendar carefully made up from the dismal endings and wicked deeds of heroes and heroines. The page bristles with proper names. Even when the stories to which the poet alludes are sufficiently well known, the characters are often given in their genealogical relations, and the most familiar myths are thrown into the form of riddles. It is a catechism without any answer. Everybody knows Orestes, the Danaides, Ino, Æsculapius, and Ulysses. Is everybody so ready with the father of Tisamenus, the daughters-in-law of Ægyptus, the maternal aunt of Bacchus, the great-grandson of Saturn, and the son-in-law of Icarius? But most of the allusions do not lie on the surface, and some are so recondite that they have baffled the keen scent of all the scholars who have tried to track them out, from the days of Salvaing, that marvellous student who, in his twentieth year, mastered some of the worst problems of the "Ibis," down to Mr. Ellis, who has brought to his task better scholia, better MSS., besides vast erudition and rare acumen, proved in far higher and wider regions of classical literature.

Mr. Ellis has solved some of the hitherto insoluble puzzles, and his commentary is a treasure-house of learning. Few can read the original without some degree of mortification, and it is for this reason that Niebuhr recommends the study of it "to any scholar who wishes to ascertain whether he is thoroughly conversant with poetical mythology and ancient history." All will find in Mr. Ellis's notes a store of rare and curious learning worthy of the massive erudition of an earlier day. Of course detailed criticism of an edition of so peculiar a poem would be out of place here, but praise and all praise is sometimes dispraise: and it must be said that Mr. Ellis is occasionally too completely at the mercy of his own erudition and acumen, and that he bewilders his readers by the variety of his suggestions. Strange to say, Mr. Ellis, with all his learning, seems to have fallen into the popular error of confounding the Homeric and the Vergilian tradition of Hector's end. This only shows how overmastering the influence of Vergil is. Preller, in his 'Greek Mythology,' with his Homer presumably open before him, makes precisely the same mistake. Ovid says (v. 333, 334): "Vel qui, quæ fuerat tutatus mœnia sæpe, corpore lustravit non diuturna suo"; and yet Mr. Ellis refers to Homer (Il. 24, 16. 755), in which Hector's body is dragged, not round Troy, but round the tomb of Patroclus. Vergil followed a different tradition, which seems to have been present to Sophocles (Ajax, 1029), and is referred to in Curtius, 4, 6. Salvaing makes no allusion to the Homeric passage.

In the "Prolegomena" Mr. Ellis has discussed with ample learning the occasion of the "Ibis" of Ovid, although he has not reached a definite conclusion as to the person at whom all this malediction is aimed. He has discussed the "Ibis" of Callimachus, the meaning of the title, and the character of the bird; the sources of Ovid's poem, the arrangement of the fables, the special allusions to Egypt—which, by the way, he has hardly made out satisfactorily; the extent to which the "Ibis" was read in after times, the MSS., and the scholia. There are several excursus, and there is an index of words, due to the loving care of Mr. Ellis's sister. There is no compromise about the book. It is intended for scholars, and will be prized by scholars as a classical edition of one of the most curious monuments of antique literature.

Le Château de Versailles: Histoire et description. By L. Dussieux. 2 vols. 8vo, xi.–512, 472 pp. Versailles: Bernard; New York: J. W. Bouton. 1881.

THE Tower of London, the story of which the late Hepworth Dixon told rhetorically in a series of volumes, is the only building erected in the last thousand years which in historic importance and personal interest can vie with the Château of Versailles, the story of which M. Dussieux is now the first to tell fully and satisfactorily. The Tower of London is the older building of the two, and has had more of a drum-and-trumpet history. But high treason is now a thing of the past; for nearly two centuries the Tower has been slowly passing into the domain of romance; and we are inclined to doubt whether that veracious traveller, Mr. Martin Chuzzlewit, would now meet any one in these United States who believes that the Queen of England habitually resides in the Tower of London in preference to Buckingham Palace, Balmoral, or Osborne. The Château of Versailles, on the contrary, has kept its place in the very centre of power in France, with only occasional intermissions, for nearly two hundred and fifty years. It is only yesterday that the Government of the French Republic moved from Versailles to Paris; only ninety-odd years since the Third Estate met in the Jeu de Paume at Versailles. It is a little over a century ago since the simply-clad Benjamin Franklin moved amid the gaudy throng of courtiers, and won over to the support of the American cause the ally by whose aid was made possible the success we have been celebrating at Yorktown. And during the century which preceded Franklin's appearance in France, the Château was the most important building in existence, for in it centred the life of French royalty for three reigns, ending with Louis XVI.'s departure for Paris.

It may even be asserted that the Château of Versailles had a greater influence on the Revolution than the Bastille itself. The prison was little more than the symbol of arbitrary power, and comparatively few ever felt the weight of its chains, while the palace, with its prodigal profusion, was the cause of a great part of the public misery. One starts at reading of the vast sums squandered on the women who ruled the rulers of France. From the figures given by M. Dussieux it seems that Louis XIV. alone spent about $100,000,000 on Versailles, not counting the fortunes expended on Clagny (for Madame de Montespan) and on Marly (to which no one came without the permission of Madame de Maintenon). Nor does this sum include the unpaid labor of the thousands of peasants who were forced to work in *corvées*, and who died by hundreds from disease caused by the unhealthy nature of the soil.

It was on May 6, 1682, that Louis XIV. definitively took up his residence at Versailles, and it was in 1689 that La Bruyère wrote his famous description of the poor peasants, and it was in 1698 that Vauban declared it certain that the enormous taxes were unbearable, and that the roads in the country and the streets of the towns were full of beggars driven from their homes by hunger and nakedness. On the same page (i., 178) that M. Dussieux cites these facts he gives us a glimpse of the richness and extravagance of the King and court at the wedding of the Duke of Burgundy in 1697, which recalls a dream of the Arabian Nights in the profusion of its gold and velvet and precious stones. Louis XIV. died, and Madame de *Maintenant*, as the witlings nicknamed her, soon followed, and Louis XV. sat on the throne of his fathers. In time came Madame de Pompadour, and after a little the house in the Parc-aux-Cerfs. Just what Madame de Pompadour cost it is impossible to say exactly, although we know she received in nineteen years not less than $24,000,000 directly. In less than five years Madame Dubarry received more than $8,000,000. The recurrence of these names of favorites calls forth the remark that the history of Versailles is really a history of woman's influence on royalty in France. It was to Versailles that Louis XIII. invited Mlle. de Lafayette, an invitation declined because the young lady saw the pitfalls before her and escaped her royal lover by taking the veil. It was at Versailles that Louis XIV. gave to Mlle. de la Vallière the splendid fêtes at which Molière produced his "Princesse d'Élide," the first three acts of "Tartufe," and the "Impromptu de Versailles." It was there that Madame de Maintenon succeeded to her friend Madame de Montespan. It was there that the Duchess of Châteauroux and her sisters ruled the fickle heart of Louis XV.; and it was there that Madame de Pompadour and Madame Dubarry brought the monarchy to still greater shame and degradation. It was at Versailles that Louis XVI. led a decent life, amusing himself with locksmithing, while the Comte d'Artois was learning to dance on the tight-rope (ii., 354), and while Marie Antoinette, with her wonted imprudence, was referring to herself as Venus and to her husband and King as Vulcan. It was at Versailles that Marie Antoinette revolted against the elaborate ceremonial of monotonous etiquette and earned the deadly hatred of the nobility—a hatred which found vent in innuendo, scandal, and slander, and which the lower orders only imitated from their betters when they rose against the "Austrian woman" and her husband.

This hurried glance along the history which M. Dussieux has told in detail must suffice at least to suggest the interest of the narrative and

the exceeding richness of the materials he has had at his command. In reality, M. Dussieux's book is closely akin to what we Americans know as a local history; and his method is a model. In his first part, devoted to the Château itself, we have an account of its foundation and of its gradual elaboration, the description of every important room, including a sketch of the chief events which may have happened in it, with ample quotations from the original authorities, memoirs, letters, etc. This first part is, indeed, the main body of the book, filling the whole of the first volume and a third of the second. In a second and a third part are considered the dependencies and the parks and gardens; and in a fourth are described the royal houses, Marly, Clagny, and the Trianons. Then, in a short concluding part, is given a brief account of the town which had grown up by the side of the Château. There are ten engravings of the Château at different times, and of the chief objects of interest; noticeable is a double-page etching of the *Théâtre des petits-appartements*, with Madame de Pompadour on its stage. There are twenty-two plans. M. Dussieux, who is an honorary professor at the military school of St. Cyr, understands the necessity of accuracy, and at his hands the history of Versailles appears for the first time freed from legend and error, and founded securely on actual investigation. In conjunction with the late M. Soulié, kindly remembered by all students of Molière, M. Dussieux had edited the 'Journal' of Dangeau (1684–1720) and the 'Memoirs' of the Duke de Luynes (1735–1758), from which he has derived much of the information in the present work. A history of the royal Château was a task which M. Soulié had hoped to accomplish, and for which his minute historical knowledge, his keen critical sense, and his wide acquaintance with the Château (of the museum of which he was keeper) admirably qualified him; but if anything could reconcile us to the loss of M. Soulié's work, it would be the execution of his project as satisfactorily and as fully as by M. Dussieux.

Treatise on the Game of Twenty Questions. Henry Holt & Co. 1882.

LOVERS of this interesting game will gladly read the aptly-bound little book which so brightly discusses and so clearly explains it. They will enjoy this reminder of the keen questionings, subtle evasions, and wonderful clairvoyance which Twenty Questions can evoke from any quick-witted circle. The rules given are clear and explicit, and well adapted to preserve harmony among players of a game which often severely tries the temper even of good-natured people. The suggestions as to improvements in methods of playing and in regard to different varieties of the game are good, though we see the author makes no mention of the kind in which one person (not being captain of the party) for a time does all the questioning and guessing. One objection to the game, played so formally as the rules here given demand, is, that such exactitude diminishes fun and frolic. Still, without it, the cry of unfairness is often raised. The specimen games are pretty fair illustrations, though they do not make apparent the brilliancy of the game. The book will be widely acceptable.

BOOKS OF THE WEEK.

Across the Atlantic. A. D. F. Randolph & Co. $1.
American College Song-Book. Chicago: Orville Brewer & Co.
Avenarius, F. Deutsche Lyrik der Gegenwart, seit 1850. B. Westermann & Co.

"HAMMOCK STORIES."

TWO DAYS.

A BOY'S ROMANCE.
BY ONE OF THE BOYS.

"Just at the age twixt boy and youth,
When thought is speech, and speech is truth."

Cloth, Decorated, 60 cents.

SURF:

A SUMMER PILGRIMAGE.

Author, SAUL WRIGHT.

"Four congenial knights of the quill decide to take a summer pilgrimage, and they embark on board the 'Lady of the Lake.' . . . There are little sketches here and there, somewhat of the Mark Twain style, which would do no discredit to that humorist. After most heartily enjoying—yes, luxuriating in his narrative, as we close the book with a sigh of regret that there is no more of it, and a sigh of sympathetic pleasure at the happiness of dear old 'Sid' and the lovely 'divinity in pink,' we mentally exclaim, 'It's Saul Wright!'"—*Boston Home Journal.*

Cloth, $1; paper, 50 cents.

For sale by all Booksellers, or mailed by

The Nation.

NEW YORK, THURSDAY, JUNE 15, 1882.

The Week.

THE Tariff Commission has been made up of five representatives of special interests (the woollen-manufacturers, the iron-masters, the wool-growers, the rice-growers, and the sugar-planters), two persons classed as "strong protectionists," one person classed as a "moderate protectionist," and one (Mr. John S. Phelps, of Missouri) whose tariff predilections are not known, but who is supposed to have been placed on the Commission because he was a Democrat, and who is at all events superannuated and has, since his appointment, resigned. The *Tribune's* Washington correspondent says very frankly that "the work of the Commission is not to decide whether or not there shall be a protective tariff, but to make a protective tariff." This statement of the intent of the Commission is undoubtedly true, as far as it goes, but it is incomplete. We have a protective tariff now. The purpose of the Commission, therefore, must be to make another and different protective tariff. This can be done only by making a redistribution of the duties so as to take away from some interests a portion of the favors given to them, and to bestow the same upon others. They can hardly expect to increase the aggregate burden of the tariff: the country is in no mood for that; but they may divide the spoils differently. We cannot say that we are disappointed by the make-up of the Commission. Having looked upon the movement from the beginning as an effort to stave off needed amendments of the tariff, the separate and successive steps taken to carry out this intention are not, in our view, matters of any great moment.

The Senate on Monday and Tuesday made an attempt to grapple with the Japanese indemnity question, and, in the effort to be "just honest enough," made a sad exhibition of itself. The money originally received from Japan, $785,000, belongs either to the United States or to Japan, and of course the interest belongs to the owner of the principal. The Senate voted, however, that the principal only ought to be returned. The only reason advanced for treating the matter in this way was the statement of Messrs. Plumb and Ingalls that a "lobby" has been at work for years in the interest of the Japanese Government. This lobby has been got up, it seems, by the Japanese Minister, who has "descended from the diplomatic office he occupies," and is hard at work "influencing legislation." They evidently think that he is spending a good deal of money, for he is described as not only lobbying the Senate and getting up elaborate legal briefs, but as furnishing the entire press of the country with editorials. On the whole, they make him out the most accomplished corruptionist that has ever appeared at Washington. He has got the newspapers of both parties not merely to favor his scheme for taking money out of the Treasury, but to insist that it would be a breach of national faith not to do it. The strangest part of the matter is that a considerable number of votes should be influenced by such stuff as this.

Mr. Wilson, in the course of his opening for the defence in the Star-route trials, resorted to an argument in defence of his clients of a somewhat novel character. He urged that in the far West the returns from the overland mail service had always been small in proportion to the outlay. This service was first established at the time of the California gold fever in 1849, "over the alkali deserts," over "sage-brush plains, where no living thing larger than a jack-rabbit could be met with in hundreds of miles," over "enormous mountains," too; and its maintenance cost $600,000, while the returns from postage were only $27,000. Not satisfied with this, the Government pushed out another route through the Southwest, passing through "many miles of morass," over "scorching prairies," where the thermometer went "far above a hundred," down through "the desolate Staked Plains of Texas"; and this route cost $600,000 a year, and only brought in $2,000. "Now," said Mr. Wilson, "has any complaint ever been made against the operation of these routes because of their cost? Not a voice was ever raised against them." The difference between the two cases, however, is that in the Star-routes the cost was not occasioned by the alkali deserts, the sage-brush plains, the enormous mountains, the miles of morass, or the scorching prairies, but by the Second Assistant Postmaster-General and his friends taking the money and putting it into their own pockets. This constitutes an important distinction between the two cases, as the jury will no doubt, on reflection, perceive.

The Republican State Convention in Ohio, which met, deliberated, and adjourned on Wednesday, had the difficult task to perform of harnessing two horses together that wanted to go in two opposite directions. The principal point was how to keep the temperance vote and the German vote at the same time. The platform presents a model of plausibility intended not to offend anybody, and for that very reason calculated not to satisfy anybody. It provides that, "by specific taxation, the traffic in intoxicating liquors should be made to bear its share of the public burdens," and that the Constitution, which, according to the recent decision of the Supreme Court on the Pond law, stands in the way, should be amended accordingly. This has a fair sound to the uninitiated, but it is very questionable whether it will satisfy the opponents of strict sumptuary laws in Ohio, who have learned to suspect the contents of the wooden horse of Troy, while on the other hand it will be scarcely satisfactory to the strict sort of temperance people. Thus this platform may fail in winning back the disaffected German vote, and succeed in driving away the advocates of prohibition. The whole muddle is the upshot of one of those ill-advised attempts to save people from perdition by extreme legislation—attempts which, as experience teaches, will always fail the more surely the more extreme that legislation is, while moderate measures might be quite effective.

It has been determined upon by Mr. Cameron, according to recent advices, that his State Convention, recalled to nominate a candidate for "Congressman-at-large," is to select Mr. Wanamaker, the great clothing merchant of Philadelphia. There is said to be a good deal of reluctance on the part of "the boys" to nominate that gentleman, but as Mr. Cameron has selected him, they will, of course, have to obey orders. The reasons why Mr. Cameron made that selection are very curious. Mr. Wanamaker is not known as much of a statesman: he has not even taken any part in politics. But, in Mr. Cameron's opinion, he is the man for the hour (1) because he is a prominent Presbyterian and great Sunday-school patron, and may therefore be expected to draw a large religious vote, and (2) because he is, as a clothing merchant, a very large advertiser in the newspapers, and it is thought no paper in Philadelphia will dare to oppose him for fear of losing his patronage. With his peculiar views of human nature, Mr. Cameron evidently thinks that he is putting the fidelity of the Independents to their cause to a very severe test by a nomination of such many-sided strength.

The announcement that the collection of "assessments" is this year to be carried into the Navy-yards, and that even the laborers are to be levied on, shows that the spoilsmen are steadily growing more audacious in their ventures. The Navy-yards have long been—in fact, have always been—great sources of corruption; but hitherto, we believe, as far as the laborers were concerned, a vote has been considered a fair equivalent for employment. They have not hitherto been compelled to pay cash for their places besides voting. Any collection of assessments is the sale of Government offices for money, but the manual laborers have not until now been expected to purchase theirs. This sort of traffic has been common enough in past ages in every country. In France, under the old régime, a large number of Government places were vendible, and in England commissions in the Army remained negotiable commodities down to our own day. But we believe no Government but our own, and no party but the Republican party, has until now forced the laborer and mechanic to pay out of his scanty earnings for the privilege of doing public work. Even the Turkish Pashas have not reached this point, so far as we know, though some of them are ready for anything with a profit in it. Of course, assessed laborers cannot be good workmen. They would be more than human if they rendered faithful service in employment which they have purchased. The connection of the assessment system in general with the cost and inefficiency of Navy-yard work must be close, and will hereafter be closer, though we may not be able to say exactly how much of

the waste, and extravagance, and failure of our navy-building and navy-maintaining is due to it.

The bill making retirement at the age of sixty-four compulsory in the Army passed the Senate on Tuesday. All efforts to except Generals Sherman and Sheridan from its operation were unsuccessful, owing to the fear felt by many that if exceptions were once begun they would be greatly multiplied. It cannot be said that there is any great hardship in the rule. No man of sixty-four can be greatly wronged by being relieved from active work, with a pension, six years before the period which is for all practical purposes the term of human life. There is hardly any man who by the age of sixty-four has not begun to feel the weight of years, and the cases are rare indeed in which an officer who has begun to feel the weight of years is fit for active service in the field, and as a rule every officer in the Army ought to be fit for active service in the field. As a rule, too, the elderly soldiers have got the worst of it, other things being equal, in campaigns against young opponents. The success of the Germans under old generals in the wars of 1866 and 1870 is an exception, but it must be remembered that the real work of these two campaigns was done by General Moltke years before. The greatest achievement of his career was the organization and perfection of the Prussian General Staff, probably the most complete and effective weapon of war ever devised. The campaigns against Austria and France were by it planned long before the war broke out, and the Army put into a state of perfect readiness. The blows which followed, too, were delivered in close accordance with the programme, and they fell with such force and regularity that they had almost the air of being struck by the hammer of Fate. The result was that the enemy was destroyed with literally unprecedented speed. The Austrian capital was at the mercy of the Prussians, and peace concluded, in six weeks. The French Emperor and his Army had been bagged and his capital reduced to extremities in nine months. So that there was in neither contest the prolonged wear and tear of the sudden and unforeseen, which are most trying to elderly nerves. That Moltke and Steinmetz and Vogel von Falkenstein could have stood the vicissitudes of a protracted struggle like our Civil War, is not likely.

Our military policy is a very simple one. We do not need a large army, but we do need a considerable body of trained officers, ready to take the command of a large army whenever we see fit to raise one, knowing well that the emergency which calls for one is, if it ever occur, pretty sure to be sudden. It should, therefore, be our object to encourage officers to enter the service and remain long enough to learn its business thoroughly, and then to leave it, so as to have a steady stream passing through the process of training. Whatever in our system of promotion or retirement affords this encouragement is desirable; whatever diminishes it, pernicious. And it must not be forgotten that in creating a military organization it is the probable effect on the imaginations of the young we have mainly to bear in mind. The period of retirement, for instance, should be fixed so as not to make the young men think promotion likely to be slow, and not to make middle-aged men think themselves likely to be hardly dealt with. It is these two classes whose views should settle the matter. As a general rule a man of sixty-five, who prances about, and fancies he can sit a horse as well as ever, and is as good in a campaign as any one, is a foolish old fellow whose powers of mind as well as of body are failing. Some of the most shocking disasters in the history of war have been caused by this class of officers. The memorable panic of the British cavalry at Chillianwallah was largely caused by the presence in command of an aged brigadier who had to be lifted into his saddle, and the earlier and still more frightful disaster of Cabul, in 1841, was directly due to the age and infirmity of Elphinstone, the general in command.

The gold-export movement during the week was not important, and late in the week the foreign demand for American railroad securities was renewed, having undoubtedly been stimulated by the favorable condition and prospects of the crops, and by the fact that Mr. Vanderbilt spoke to his friends more encouragingly about his railroads than he has done of late, and because of the belief that he has been buying back the shares in them which he sold. The New York banks, mainly in consequence of the excessive disbursements of the Treasury for the redemption of called bonds, gained in reserve, and now hold upward of $5,000,000 more lawful money than the reserve law requires. In the foreign trade of the country the imports are decreasing, but there is no increase in merchandise exports. Domestic trade continues very dull. There has been no extension of the labor troubles; on the contrary, in some places the strikers have returned to work. At the Stock Exchange prices declined early in the week, but later advanced to the highest figures. Railroad earnings show surprising gains; the tonnage is larger than a year ago, and the rates are higher than since the outbreak of the late railroad war.

The circulation on Friday on the Stock Exchange of rumors affecting the solvency of some half dozen prominent houses—rumors which could not be traced to any responsible source, and which were falsified by the fact that the houses in question continued to transact business as usual—was evidently a part of a "bear campaign," and is by no means unprecedented in the history of Wall Street. If a party is "short" of a particular stock, and has exhausted all other means of depressing its price, the last resort is to spread a story that some firm known to be "long" of the same stock is about to fail, and to have this story telegraphed privately to all parts of the country. To those who believe the story (and many will believe it if somebody else has actually failed within a day or two), the inference will be that a large amount of this stock will come on the market suddenly, with the effect of depressing the price. Bona-fide holders will thus be alarmed and impelled to sell before the expected break comes, and their selling will produce the break desired and intended by the malignants who invented the slander. This is an old story. The practice of crying down the credit and standing of respectable and solvent firms has been in vogue so long, and has yielded such handsome returns to fresh relays of rascals, that we must not indulge in the hope of seeing a stop put to it at an early day. But the Stock Exchange ought to expel from its membership any person who can be shown, upon good evidence, to have set on foot false rumors respecting the credit and solvency of a fellow-member; this as an additional penalty to that imposed by the law of the State for the same offence.

The English friends of marriage with a deceased wife's sister have just been defeated, by a very small majority of four, however, in a vote of 360, in an attempt to carry their bill through the House of Lords. As the royal family seems to have come over to them, the Prince of Wales and the Dukes of Edinburgh and Albany voting in the minority, their triumph cannot be far distant. There never has been a more curious or characteristic agitation in England than that on this question. The number of men who wish to marry their deceased wives' sisters never seems to have been great: in fact, they were only a handful all told; but their attempts to get their wishes legalized have been met by an opposition of almost passionate bitterness. The contradictions produced in the utilitarian argument against them have been very remarkable. It has been maintained, often by the same writer, that the cases were so few that it would be absurd to change the law on account of them; and also, that they were so numerous and desperate that if legislation were provided for their benefit it would lead to an awful amount of crime, including wife-murder and incest. The *Saturday Review* has for many years had an annual article on men who wish to marry their deceased wives' sisters, in which they are painted in the blackest colors, as an extraordinary mixture of imbecility and lawlessness, and as capable of overthrowing both throne and altar, if necessary, to gratify their desires. The supporters of the change are, however, after all more powerful and persistent than the opponents of it, because their interest in the question is keener. They have, in short, the advantage over the latter which the high-tariff men have over the freetraders. A man who wishes to marry his wife's sister is, as an agitator on this subject, worth two dozen men who think he ought not to marry her.

Mr. Henry George has made a convert of Michael Davitt, the Irish suspect, to his plan of having the state own all the land of the country and let it out to the occupiers, and he proposes to have it adopted in Ireland under the auspices of an Irish Parliament, the landlords to be bought out for about $750,000,000. The worst effect of this will be its unsettling effect on the Irish tenants, who are now in a transition state and need all pos-

sible assistance in settling down. That the scheme will receive much real acceptance from the farmers is very unlikely, because they see peasant proprietorship already within their reach; and that any body of Celtic peasant proprietors will ever consent to surrender their land to the state or anybody else, is something which the experience of France justifies us in disbelieving. If the Irish tenants ever get the fee simple of their farms, the danger is that even the purchase money advanced by the state will not be repaid, although a fixed amount. That a scheme for saddling them with a variable state rent would be accepted is most unlikely. But that the Davitt plan might furnish something to clamor for, as a stepping-stone to proprietorship free of all charges whatever, is not very unlikely, and if he perseveres with it, he may greatly embarrass Parnell. The more such theories are produced by the Irish leaders, however, the more remote the period at which capital will seek the country for any species of investment.

As Mr. Gladstone rather pooh-poohed the disinclination of the Irish judges to serve without juries under the Repression Bill, and, in fact, intimated that he had not heard of it, they have held another meeting, at which they have drawn up a protest, which, to make assurance sure, they have sent to Mr. Gladstone's house, reiterating their objections. One of them, Baron Fitzgerald, will, it is said, resign, in case this feature of the bill is not modified. The truth is, that as the bill is an English measure, and as no Irishman of note, whether lay or professional, has been consulted about it—not even the judges on whom it is proposed to lay this most serious and unprecedented burden—it ought to provide a special tribunal made up of Englishmen or Irishmen who approve of it. Inasmuch as it constitutes a startling departure from the existing usages of English jurisprudence, it is essentially a law which nobody who disbelieves in it ought to be called on to execute, and, least of all, the judges, because the only thing they have to rely on for the preservation of their moral authority is the popular belief in their political impartiality. If their resistance should lead to greater consideration for Irish opinion in the concoction of Irish legislation, it will do great good. One of the singular but very instructive incidents of Mr. Forster's official career as Chief Secretary was that, although he was exercising enormous powers and had but little knowledge of the country, he never consulted an Irish member, not even one of the moderate Liberals.

The *Tribune* cites, as an illustration of the prophetic powers of its London correspondent, his prediction that Mr. Dillon's late "heart-breaking speech," as Mr. Gladstone called it in the House of Commons, would find its "echo in the report of an Irish rifle behind a hedge." Accordingly, says the editor, "the same issue of the *Tribune* which contained the prediction chronicled its fulfilment" in the murder of Mr. Bourke. Unfortunately, it is not so easy as this would make it appear, to become a first-class Irish prophet. The practice of murdering landlords as a remedy for agrarian wrongs began in Ireland between 1750 and 1760. It was the first sign of life the conquered population gave after the triumph of William of Orange and the enactment of the Penal Laws. It has continued steadily ever since, and has been promoted by various organizations, beginning with the "White Boys," and coming down to the "Moonshiners." During all that period there has been no year in which some agrarian murders were not committed; there were some years in which more were committed than in any one of the last three. In order to repress them fifty coercion acts of various degrees of severity have been passed. In all debates on Irish matters in the House of Commons since 1800, these outrages have been used to taunt and silence all, whether English or Irish, members who urged the redress of Irish grievances. In many cases they have been used, as in Dillon's case, to make orators who denounced force as "no remedy" responsible for the murders which followed the delivery of their speeches. In fact, one of the favorite modes of evading the radical treatment of the Irish problem has been to accuse them of instigating by their language an excitable and lawless population to deeds of violence. That the *Tribune* correspondent should know nothing of the history of the Irish question is not surprising, because it is not an inviting branch of literature; but the rule that "you mustn't prophesy unless you know" is peculiarly applicable to his case.

The notion which the Tory papers in England are industriously preaching, too, that the Land League teachings have caused the violence of the past three years, is equally absurd. The violence began in its present form 130 years ago. The causes of it were described by Dean Swift in his fiercest rhetoric. They were described forty years later by Arthur Young, and since the beginning of the century have been described by hundreds of travellers, publicists, and economists, English and foreign, and by three English Commissions. These all tell the same story. Roughly speaking, peasants shoot landlords to keep down rents. In some cases, as in Tipperary, for instance, which was forty years ago literally a "dark and bloody ground," they shot so successfully that the rents have been moderate and the county very peaceable ever since. To state these things in this way has, of course, the air, from one point of view, of palliating or instigating crime. And yet stated they must be, before the remedy can be applied. But the question on whom the greater bloodguiltiness rests—those who have for a century permitted this fountain of woe to flow, or those who have from time to time passionately and indiscreetly called attention to it—is one which few moralists will have much difficulty in answering.

The retirement of General Ignatieff as Minister of the Interior might be taken as a symptom of reformatory intentions on the part of the Russian Czar. In diplomacy Ignatieff was currently called "the father of lies." In politics he was one of the chief pillars of old Russian absolutism, and in administration he was looked upon as the very embodiment of arbitrary and corrupt methods. His withdrawal from an important post in the Ministry would, therefore, under any circumstances, be a *sine qua non* of a liberal and enlightened policy. But the appointment of Count Tolstoi as his successor is not calculated to encourage great hopes in that respect. He was Minister of Public Instruction once, and as such he showed himself more of the kind of Ignatieff than of General Melikoff, the reform Minister, who, when in power, deemed it necessary to use his whole influence to bring about the removal of Tolstoi from the place he then held.

The Turkish Commissioner has arrived in Egypt, the Sultan's efforts to have the conference given up before he went having failed. The Powers refuse to give up the conference, and the Commissioner is to do the best he can in the meantime. He is said to have instructions to restore the authority of the Khedive, and has received Arabi Bey coldly, but the populace in Cairo have evidently been led to believe that his mission is to oust foreigners from control in Egypt, and revive the Mussulman supremacy. The Commissioner probably has instructions to do everything to satisfy the Powers, but it will be done in such a way as to make the people regard it as an assertion of the Sultan's authority for which the Powers are grateful.

The situation in Egypt has been so long "strained," as the diplomatists say, that the wonder is that the outbreak at Alexandria, reported on Monday, did not come sooner. The population of course know nothing about the negotiations between the Powers, and the reasons of state which make France and England reluctant to take active steps to restore order. They only know what they see, and what they see is that Arabi Bey and his men are masters of Egypt and do not care a straw what the infidels think or say, and that the Khedive has no authority. If France and England had made up their mind to leave Egypt to the Egyptians, the prolongation of this state of things would make but little difference. But nothing can be further from their thoughts. They are determined, each for different reasons, that the Egyptians shall not have Egypt, and it was, therefore, incumbent on them to let the Egyptians know in some unmistakable way at the outset that Arabi Bey's performances were simple tomfoolery, and that if he did not soon desist, he would be summarily dealt with. He has been allowed to go on, however, so long that the populace in Alexandria and Cairo have begun to feel that the foreigners are there on sufferance; and this being the case, a row in a café was all that was necessary to bring on an *émeute* such as has occurred. The worst of it is that order and security will be now much harder to restore than before. Moreover, the attack on the Italian Consul brings Italy into the field, with a claim to meddle which she did not before possess. The Italians will now hardly be content if their Ministry does not make a show of Italian troops to the Egyptians, and there is nothing which France would like less.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, June 7, to TUESDAY, June 13, 1882, inclusive.]

DOMESTIC.

ON Wednesday afternoon the President sent to the Senate his nominations for the Commission authorized by Congress to inquire into the tariff and suggest legislation. The names are as follows: William A. Wheeler, of New York, chairman; John L. Hayes, of Massachusetts; Henry W. Oliver, jr., of Pennsylvania; Austin M. Garland, of Illinois; Jacob Ambler, of Ohio; John S. Phelps, of Missouri; Robert P. Porter, of the District of Columbia; John W. H. Underwood, of Georgia; and Duncan F. Kenner, of Louisiana. The Commission is largely made up of representatives of the leading interests which profit by a high protective tariff. Mr. Phelps and Mr. Wheeler have declined to serve.

The Japanese Indemnity Bill was passed by the Senate on Tuesday by a vote of 35 to 13. The bill, as it came from the House, provided for the repayment to Japan of $785,000 unjustly taken from her, with interest, but the Senate struck out the interest, and voted to return only the principal.

On Monday the House of Representatives agreed to the Senate amendment to the Army Bill, fixing the age for compulsory retirement of Army officers at sixty-four.

The House Committee on Civil-Service Reform has directed a favorable report to be made to the House of Representatives on Mr. Kasson's bill, which charges the Court of Claims with the preliminary consideration of cases of contested elections.

The Foreign Affairs Committee has reported to the House a joint resolution authorizing the President to call an international conference to fix a common prime meridian for the regulation of time throughout the world.

The Ohio Republican State Convention met on Wednesday and nominated Charles Townsend for Secretary of State; John H. Doyle for Judge of the Supreme Court; and Charles Flickinger for Member of the Board of Public Works. The platform adopted laments the death of President Garfield; approves President Arthur's course; condemns the outrages upon the Jews in Russia, and calls for a continuance of the efforts of the Government to ameliorate their condition; endorses and affirms the principle of protection to American industry; demands that, "by specific taxation, the traffic in intoxicating liquors shall be made to bear its share of the public burden," and that the Constitution of the State shall be changed so as to give the people practical control of the liquor traffic, "to the end that the evils resulting therefrom may be effectually provided against." This last clause is the most important in the platform, for upon the way in which the liquor question was treated depended the German vote in the State. The action of the Convention in coming out decidedly in favor of specific taxation of the liquor traffic will, it is conceded, lose a large portion of the Germans to the Republicans.

The Independent-Liberal State Convention of North Carolina met on Wednesday. Sixty of the ninety-five counties are said to have been represented by men who have heretofore acted and voted with the Democratic party. The platform invites "all persons, without regard to past political affiliations," to join the party; denounces the present system of county government in the State; demands a free ballot and a fair count; denounces all sumptuary laws or class legislation in general, and the Prohibition Act in particular, and calls for its repeal; calls for a liberal system of public instruction, both by the State and National Governments, and to that end urges the "application of all the funds arising from the tax on distilled spirits by the general Government to the common schools of the State."

Two Democratic election officers of Halifax County, North Carolina, were convicted of fraud at Raleigh, on Thursday. They will both be sent to the Penitentiary. This is looked upon as a great victory for a "free vote and a fair count" in that State, and it is thought that the precedent will do much toward securing a fair vote and an honest count in the November elections.

The Alabama Democratic State Convention met on Thursday at Montgomery and nominated E. A. O'Neal for Governor by acclamation. He is a native of the State, a lawyer by profession, and was a Brigadier-General in the Confederate Army. The platform demands a strict construction of the Federal Constitution; denounces centralization; invites immigration and capital to the State, and pledges them "full and perfect protection"; says that "public education should be fostered and encouraged by the State as far as the means of the State will allow"; calls for the protection and preservation of the purity of the ballot-box, and condemns any attempt to interfere with the free and full exercise of the elective franchise.

The Iowa Greenback State Convention met on Thursday and elected General Weaver chairman. The Committee on Resolutions reported in opposition to the national banks and in favor of the general Government issuing legal-tender notes; in opposition to refunding the interest-bearing debt of the country; in favor of the unlimited coinage of gold and silver; in opposition to railway and telegraph monopolies; and in favor of a revision of the tariff in the interests of American labor.

The Maine Republican State Convention was held at Portland on Tuesday. Frederick Robie was nominated for Governor. Senator Hale presided at the Convention, and Senator Frye made an address which created great enthusiasm. The platform calls for an honest count of votes, maintenance of free schools, protective tariff, hard money, and opposes the reduction of the internal-revenue tax on liquors.

The Utah Constitutional Convention assembled on Wednesday and adopted a memorial to Congress, urging the admission of the State, and appointed a committee of seven to go to Washington immediately and personally urge the admission of Utah into the sisterhood of States.

The election in Oregon resulted in a victory for the Republicans. George, the Republican candidate for Congress, was elected by a majority of over 3,500, which is the largest majority ever given to any candidate. The Republicans control the Legislature by a certain majority of ten.

The Legislature of Rhode Island reëlected Senator Henry B. Anthony on Tuesday.

News has been received from Patrick and Franklin Counties, Virginia, that the people of those counties have been threatened with a famine, owing to the failure of the corn crop. The counties are remote from railway communication, in a mountainous country, and it is difficult to ship provisions to them. There were said, on Tuesday, to be hundreds, if not thousands, especially in Patrick County, who were without food, and had no idea where their next meal was to come from. Many persons, both white and colored, had not tasted food, except such vegetables as they could gather in the fields, for two days.

Major E. A. Burke, State Treasurer of Louisiana, and Mr. C. H. Parker, editor of the New Orleans *Picayune*, fought a duel in New Orleans on Wednesday, in which Mr. Burke was severely wounded in the thigh. The cause of the duel was an article which appeared in the *Picayune* reflecting on Mr. Burke.

A committee of workmen from the Cincinnati iron mills met the proprietors of the mills on Saturday, and made an agreement to go to work on Monday on the terms of the contract of last October, the contract, however, to be amended by striking out the word "forever." The prices at present will be the same as those when they stopped work, and will remain so until the scale is fixed at Pittsburgh, when that will be the Cincinnati scale. All the iron mills in the Cincinnati region began work on Monday. The situation in Pittsburgh remains unchanged. The members of the Amalgamated Association are preparing for a great labor demonstration on the 17th of June. There will be a procession which will be one of the largest that ever marched in Pittsburgh. Delegations from various States will participate, and it is expected that there will be from 20,000 to 25,000 men in line.

While 150 Poles and Bohemians were returning from work in the mills at Cleveland, Ohio, under protection of a guard of policemen, they were attacked by a mob of strikers who were finally driven off by the police, but not until they had inflicted serious injuries upon some of the Bohemians.

Commissioner McFarland says that a larger amount of public lands will have been disposed of during the year ending June 30, 1882, than during any preceding year since the establishment of the General Land Office.

The opening arguments of counsel in the Star-route cases ended on Thursday, and the prosecution began to put in its testimony.

Mr. Reed has applied to Associate Justice Bradley, of the Supreme Court, for a writ of habeas corpus in the Guiteau case, upon the ground that the Criminal Court of the District of Columbia had no jurisdiction. Justice Bradley has the papers under consideration, and his decision is looked for in a day or two. This is Guiteau's last chance.

A reunion of officers of the Union and Confederate Armies upon the battle-field of Gettysburg for the purpose of locating the positions of the various commands began on Wednesday.

The American Medical Association, which has been in session at St. Paul, Minnesota, refused on Wednesday to admit the delegates from the New York State Medical Society, on the ground that there were in the code of ethics of the New York Society "provisions essentially differing from and in conflict with" the code of ethics of the American Asociation.

Chief-Justice Bradford L. Prince, of New Mexico, and Judge Porter, of Arizona, have tendered their resignations to the President.

The Spanish-American Claims Commission has adjourned until July 8. All business before the Commission will remain at a standstill until the Governments of Spain and the United States come to a final understanding on the general question of citizenship and the right of the Spanish Government to go behind the naturalization certificates in a number of cases pending before the Commission.

The Italian residents of Cincinnati, Richmond, Chicago, Washington, San Francisco, and other cities held meetings on Sunday in memory of Garibaldi.

The Ladies' Land League, of Cleveland, held a large meeting on Sunday, notwithstanding Bishop Gilmour's threat that he would excommunicate those ladies who would not renounce all relations with the League. President Rowland delivered an address in which he congratulated the members on their gallant stand, and said: "To-day we have the sympathy of the whole world, and expressions of admiration and esteem, telling us to persevere in the good work, come pouring in from the press and from every Land League in the Union."

Lieutenant Danenhower has received information by mail from Irkutsk to the effect that letters from Engineer Melville, giving particulars of the finding of the bodies of Lieutenant De Long and his men, have reached there from the Lena Delta. In a memorandum found on De Long's body, and bearing the date October 18, it was stated that four of the party were dead, and that Mr. Collins was dying.

FOREIGN.

Dervish Pasha and the rest of the Turkish Commission arrived in Alexandria on Wednesday, the 7th. They were enthusiastically received by the native troops. Arabi Bey has been continuing the work of recruiting and quickening the mobilization of the reserves. On Thursday, Dervish Pasha arrived at Cairo and held a reception, at which Arabi Bey and other leaders of the military party are said to have been coldly received. He declared he was resolved to restore order, and that, if necessary to that end, he would himself assume the Ministry of War. On Saturday he received the Ulemas and addressed them in firm language. Four of the Ulemas rose from their seats and declared that if Europe had not annexed Egypt it was due to Arabi Bey and the military party, adding that before the pending questions were settled the English and French fleets must leave Alexandria. Dervish Pasha, on hearing this, "bounded to his feet," and exclaimed that he came as the representative of the Sultan, and not to listen to their advice, and ordered them to quit the room. It is believed in diplomatic circles in Egypt that Dervish Pasha, while offering general amnesty, will go even further than the Franco-British ultimatum against the leaders of the movement. On Saturday the Austrian, German, Italian, and Russian Ambassadors made collectively a communication to the Porte supporting the proposed conference on Egyptian affairs. The Porte in replying to this communication reiterated its arguments against the conference.

The troubles in Egypt came to a crisis on Sunday. Serious riots broke out in Alexandria between the natives and the Europeans, in the course of which sixty-seven Europeans were killed, and the English and Greek Consuls and the Italian Vice-Consul were severely wounded. The immediate cause of the disturbance, which continued about five hours, was said to have been the stabbing of an Arab by a Maltese. A mob of natives then collected and sacked the shops of Europeans, and killed and wounded the Europeans whom they met in the streets. Egyptian soldiers were called out, but they looked on for some time without interfering in the work of demolition and bloodshed. The Rue des Sœurs, inhabited chiefly by Europeans, was completely wrecked. The Europeans fired from the windows, killing many Arabs. The British Consul was dragged from his carriage and severely beaten. The fighting, except the deliberate attacks upon the Consuls, seems to have been chiefly confined to the Arabs and Levantines. On Monday, a meeting of the foreign Consuls was held with the Khedive, Dervish Pasha, and Arabi Bey, and a solemn agreement was entered into that the Khedive should undertake to maintain order, and that Arabi Bey should strictly obey the Khedive's commands. A proclamation was to be issued informing the populace of this agreement. The correspondent of the London *Times* at Cairo telegraphs that in view of the critical condition of affairs, Dervish Pasha, the Turkish Commissioner, has agreed to accept joint responsibility with Arabi Pasha for the preservation of order.

The correspondent of the London *Daily News* at Alexandria telegraphed on Tuesday that the position of the Europeans there was a terrible one, and that any small force which the fleet could land would only excite the Arabs to a general massacre. Papers have been distributed among the populace exciting them, and summoning them to be ready at any moment. The Italian Consul has issued notice to all Italians to quit the country; and notwithstanding a proclamation by the other Consuls exhorting them to remain tranquil, and expressing confidence that the Army will be able to maintain order, Europeans are leaving Alexandria as fast as possible.

A despatch from London to the New York *Tribune* on Thursday said that Irish correspondents describe the temper of the population as sour and sullen, and as showing settled disaffection, and the anticipation of a good harvest as being the only favorable element in the situation. On Thursday Walter M. Bourke, a Galway landlord, was shot dead while riding with an escort, a soldier, who was also killed. Mr. Bourke had had several disputes with his tenants, and recently left London to carry out evictions. The news of this murder created a profound sensation in the House of Commons. Mr. Parnell and other Irish members expressed regret at the assassination. When the news reached London Mr. Bourke's brother went into the lobby of the House of Commons and accused Mr. Parnell and Mr. Biggar of being the cause of it. The Dublin *Gazette* on Friday contained a proclamation offering a reward of £2,000 for information leading to the arrest and conviction of the murderers, and £1,000 for private information leading to the same result. This murder was followed by other outrages in different parts of Ireland.

The Irish Bishops have issued an address, promising the support of the clergy to the people in peacefully agitating for their rights, but condemning as the worst enemies to the country men who recommend illegal courses, particularly those who belong to secret societies. The address condemns refusing to pay just debts, preventing payment by others, injuring neighbors in person or property, forcibly resisting the law and forming secret societies and obeying the orders thereof, as unlawful and utterly subversive of social order, and impresses upon the people that what is morally wrong cannot be politically right. The address is signed by Cardinal McCabe, Archbishop McGettigan, Primate of All Ireland, Archbishop Croke, and twenty-two others.

In the House of Commons on Wednesday the discussion of the Repression Bill was resumed. Mr. Russell, Liberal member for Dundalk, offered an amendment defining intimidation as "threats or acts of violence to persons or property, or incitement thereto." Mr. Dillon defended boycotting, and Sir William Harcourt said the Government was willing to accept any amendment consistent with the putting down of boycotting. On Thursday Mr. Russell's amendment was rejected by a vote of 247 to 36. An amendment offered by Mr. Parnell defining intimidation, and limiting it to certain definite acts, was also rejected. On Friday more amendments to the paragraph of the bill defining intimidation were rejected. On Monday, clause four of the bill, defining and dealing with intimidation, was adopted. Clause five, concerning riots and other offences, was then taken up. Sub-section A of this clause was adopted. In the debate on this clause on Tuesday, various amendments proposed by Irish members were rejected, but Mr. Gladstone agreed that reëntry into an evicted holding should not be punishable unless it was effected by force, and that of two magistrates exercising summary jurisdiction one must be a lawyer. Sir William Harcourt promised that the new summary jurisdiction, so far as it applied to assaults on bailiffs, etc., should be exercised only in proclaimed districts. The fifth clause was then adopted by a vote of 176 to 34.

The Home Rule members of Parliament, at a meeting on Monday night, decided not to offer any systematic obstruction to the Repression Bill.

The Irish judges have held a meeting, and passed resolutions protesting against the provision of the Repression Bill for the holding of trials by a commission of three judges without juries. In the event of the bill passing, with its obnoxious provisions, Baron Fitzgerald will resign. It is generally understood that when the bill passes, Mr. William Johnson, the present Attorney-General for Ireland, will be raised to the bench.

The London *Daily News*, commenting on Secretary Frelinghuysen's despatch of May 8 on the Clayton-Bulwer treaty, says that commercial as well as political considerations are decisive against the position which Mr. Frelinghuysen has chosen to assume. The *Standard* says that "the answer to all this rhetoric [*i. e.*, of the despatch] is that the treaty has been made and ought to be kept."

The bill permitting marriage with a deceased wife's sister was defeated in the House of Lords, on Monday, on a motion ordering it to a second reading. The Prince of Wales, the Duke of Edinburgh, the Duke of Albany, and nearly all the members of the Government voted with the minority, but the bulk of the Conservatives and all the Bishops voted with the majority.

On Tuesday, the 13th, the French Chamber of Deputies passed to its second reading the bill establishing the divorce law. The Budget Committee rejected the grant for the maintenance of an embassy at the Vatican.

The family of Garibaldi decided to abandon the cremation of his body, "owing to practical difficulties in the way of its accomplishment," and on Thursday he was buried in the cemetery at Caprera. A storm of wind and rain raged the whole time. The coffin was borne by some of the survivors of the thousand of Marsala, and was followed by the Duke of Genoa, Signor Zanardelli, General Ferrero, representatives of both Chambers, and delegates of three hundred various associations. Speeches were delivered at the grave by the Vice-President of the Senate, the President of the Chamber of Deputies, the two Cabinet Ministers present, and Signor Crispi.

A great demonstration in memory of Garibaldi took place in Rome on Sunday. There was an immense procession, in which the bust of Garibaldi was borne on a car drawn by six white horses. An enormous crowd filled the streets and houses along the line of the procession. The buildings along the entire route were draped in mourning.

The Empress of Russia was safely delivered of a daughter on Tuesday. She will be named Olga.

An imperial decree has been published at St. Petersburg announcing that General Ignatieff, at his own request, has been relieved of the post of Minister of the Interior, on the ground of ill health, and has been appointed President of the Academy and Member of the Senate. He retains his membership of the Council of the Empire and his adjutancy. Count Tolstoi, who was formerly President of the Academy, has been appointed Minister of the Interior. The retirement of General Ignatieff caused much satisfaction in Berlin and Vienna, and Russian funds rose on the London Stock Exchange on the receipt of the news. His successor represents the orthodox Russians, but has not General Ignatieff's extreme antipathy to Germany.

A despatch from St. Petersburg says that the appointment of Jews as chief surgeons in the Russian Army has been forbidden except on receipt of express instructions from the Commander-in-Chief.

The lower House of the Hungarian Diet has debated a petition of the authorities of Szathmar requesting that steps be taken to stop the immigration to that place of the Jews from Russia, and has approved a motion of the committee on the subject, that the Government adopt such police and sanitary measures with regard to the Jews as the circumstances may require.

Prince Bismarck made a speech in the Reichstag on Monday in support of the Tobacco Bill. He said the tobacco monopoly was an evil, but reform in taxation could not be effected without it. The bill for the remission of taxation, as proposed by the Government, would be reintroduced in the Reichstag and in the Prussian Diet, and if it was rejected he should, he said, appeal to the constituencies. He added that if he remained in office he did so only to keep his oath to the Emperor, and concluded by expressing the hope that party policy would give way before the feeling of nationality.

REFORMERS WHO DO NOT WISH TO REFORM.

ALTHOUGH the usual answer made to the civil-service reformers is that the civil service is well enough as it is, and could hardly be improved except through improvements in human nature, the attempts to tinker it by those who "have no faith in the theories of the reformers" are incessant. Bills intended to take the place of the bills of "the doctrinaires" are introduced nearly every session, but they usually give very little space to reform of any kind, and a good deal to a more equitable distribution of the patronage. In truth, to most Congressmen the one crying evil of the present system, and the only one which needs to be seriously dealt with, is the difficulty they have in getting what they consider their legitimate share of the offices. In trying to remedy this they are always willing to put in just enough mention of examinations, and qualifications, and morality, and efficiency, to give the mixture a reform color, just as old topers in the cars like the contents of their flasks to have a deep brown hue so as to pass for cold tea.

One of these interesting bills is now before the House of Representatives, the father being Mr. Curtin, and it has been referred to the Committee on Reform in the Civil Service. In the opening of it there is a very stirring roll of the reform drum, well calculated to collect a large and excited audience. The candidates for admission to the clerical force are to be not less than eighteen or more than fifty years old, are to be of good moral character and habits, and are not to be admitted without "the preliminary examination now required by Section 169 of the Revised Statutes." This examination, however, was provided for in 1853, and is conducted by the heads of departments through some of their subordinates, and unfortunately has never been anything but a farce. We believe there is no case on record of its preventing "the right man" from getting the place. In fact, it is the examinations conducted under this statute which furnish Dr. Newman and the Stalwarts with the materials for that standing joke of theirs against the examinations of the civil-service reformers, about the candidates being asked the distance of the moon, and the names of the Shepherd Kings of Upper Egypt, and the best manner of cooking a shad. There is probably no piece of modern legislation which has furnished materials for more quiet mirth.

Throughout Mr. Curtin's bill, in fact, both admission to the service and promotion are carefully kept within the control of the heads of the departments, who are never directed to do anything which has a reform look, but are always told that they "may" do it. Moreover, the principle of "rotation" is carefully looked after by limiting the terms of "permanent appointments" to three years. Two years would, for the purposes of most Congressmen, be one-third better, because it would enable them to give one-third more workers a turn at the public crib; and to many men the supreme test of goodness in a civil service is the frequency with which access to the crib comes round. The most imposing feature in the bill is, however, the provision made for the examination of "professionals" and "experts" for the various departments. This is to be conducted in writing by a "board," and it looks as if it would be worth something, and so it may be; but then the head of the department is not to be bound by it. He may set its conclusions aside, or give the place to any one of the candidates he pleases, or he may order another examination.

The gist, or backbone, or kernel of the bill is to be found in the section on "apportionment and nomination," in which, in Congressional eyes, the whole civil-service question lies, as in a nutshell. Most Congressmen, no matter how much they may seem to be listening to a civil-service reformer about qualifications, and tests, and competitive examinations, and efficiency, and merit, are in reality thinking about "apportionment and nomination." To them these are the milk in the cocoanut, the dewdrop on the lotus, as the Buddhists say, the Alpha and Omega, the beginning and the ending of all civil-service reform. Accordingly, Mr. Curtin proposes that all appointments in the Executive Departments "shall be made *pro rata* among Congressional districts, based on the apportionment under the tenth census, and on the appropriations for the fiscal year 1882–3, beginning with the States in alphabetical order," etc., etc. The nominations are then to be given to the Senators and Representatives of each State, each Senator keeping one-eighth of them. We have here given only the merest outline of the scheme. It is highly complex, and indeed we do not think it will be possible to give each Congressman his fair share without a liberal use of the calculus and the services of the Naval Observatory. To the outsider it is diverting as another of the attempts to postpone the evil day when no Congressman will be able to rely on patronage to give him weight or importance in the eyes of his constituents. The reason why so many cling to it is the fact that it furnishes a pedestal which raises some members a little above the plane along which their personal merits carry them.

MR. BLAINE'S METHOD AND MR. FRELINGHUYSEN'S.

MR. BLAINE is evidently still very sensitive about the unfortunate result of his various diplomatic enterprises, which is not surprising. His friends in the press accordingly every now and then try to give him a little rehabilitating filip. One of these appeared in the *Tribune* of Friday, in the shape of arguments of Mr. Blaine's against the continuance of the Clayton-Bulwer treaty, placed in parallel columns beside Mr. Frelinghuysen's arguments on the same subject, by way of showing that Mr. Frelinghuysen has not improved on Mr. Blaine. But this unfortunately does not help the latter. Nobody ever said that he was wrong in attacking the Clayton-Bulwer treaty, or that his arguments against its continuance in the despatch of November had no force. Nor is it to Mr. Frelinghuysen's discredit that, as the *Tribune* shows, he has used some of them. The reasons for abrogating a treaty are always few in number, and easily discovered by all intelligent men who have considered the subject. In order to give a true comparative view of the Blaine and Frelinghuysen modes of conducting a diplomatic controversy, we must not simply compare two despatches written on the same subject, but compare *all* the despatches written by each on the same subject.

Under this rule Mr. Blaine cuts a somewhat grotesque figure in the Panama controversy, for he began his attack on the Clayton-Bulwer treaty not by the despatch of November last, but by the despatch of June last, in which he resorted to the very singular device of making no mention of the Clayton-Bulwer treaty at all. He wished to warn England and all other European powers from meddling with the projected canal across the isthmus. As far as England was concerned, the unabrogated Clayton-Bulwer treaty stood directly in his way, and he accordingly attacked it by ignoring it—a childlike expedient, to which neither Mr. Frelinghuysen nor any other diplomatist is likely to resort. This despatch of June 24 discusses with much solemnity the treaty of 1846, made between the United States and the republic of New Granada, and directs Mr. Lowell to call Lord Granville's attention to it as constituting an insurmountable obstacle to British interference with Central American concerns, and as alone governing American action with regard to the neutrality of the canal. The originality of this consists in the fact that the Clayton-Bulwer treaty, which admitted Great Britain to participation in the neutrality guarantee, was made four years later than the treaty with New Granada, and the only hope of the success of Mr. Blaine's mode of abrogating it lay, therefore, in the chance that the British Foreign Office had forgotten its existence. Unfortunately some record of it seems to have been kept in London, so that Lord Granville was able to overthrow Mr. Blaine's maiden effort as a diplomatist by producing it. We cannot recall in diplomatic history any discomfiture of a middle-aged man so complete as this was, and it was made all the more complete by the fact that Mr. Blaine's despatch was couched in very menacing terms, and, in fact, intimated pretty distinctly that any want of respect on the part of Great Britain for the treaty with New Granada would put her peaceful relations with this country in serious peril.

It was only five months later, after Lord Granville, in a dry and slightly ironical manner, had called attention to the Clayton-Bulwer treaty, that Mr. Blaine took it up, and began the controversy which Mr. Frelinghuysen is now carrying on, with many improvements in tone, and temper, and English. It no doubt strikes Mr. Blaine's admirers as rather remarkable that he should use some of Mr. Blaine's arguments, but they must observe he does not use them all. He overlooks, for instance, the New Granada treaty, which was Mr. Blaine's *cheval de bataille*, and which nobody but an unusually unscrupulous person would meddle with. It would not enrich Mr. Frelinghuysen if he stole it, and would make Mr. Blaine poor indeed if he lost it, for it was his only original contribution to the controversy.

DOCTOR AND PATIENT.

THE action of the American Medical Convention at St. Paul, in excluding the New York delegates, seems to have been, from a professional point of view, unavoidable. The New York State Medical Society had, at its meeting in February last, passed a vote permitting practitioners of the "regular" school to hold consultations with homœopathists. This vote was in conflict with the rules of the American Society, which had nothing to do but to punish the New York branch for its violation of them

The action of the Association will probably lead to a new discussion of the matter in the New York society, its action in February being regarded by its members as by no means conclusive. The view taken of the matter by the physicians who support the "code of ethics," as stated by one of them in an interview last Friday, is that "no possible good could result from consultations in which there could by no possibility be an agreement"; and that "so long as they (the homœopaths) insist on the dogma that like cures like, we cannot but regard them as irregular, and no member of the regular profession can with dignity recognize them."

Now, if it could be proved in any way that it was true that "no good" could come of any such consultations, the position of the regular practitioners would not be worth disputing about. But it can only be true if homœopathic practice can be shown to be pure quackery. If homœopaths are mere quacks, who practise upon the credulity of the public, like astrologers or "weather prophets," then the regular physicians are performing a public service by discrediting them in every way that they can, and it is not merely undignified, but dishonest to consult with them. But the homœopaths are not in this position at all. They constitute an important and growing branch of the medical profession. They have obtained legal recognition for their chartered institutions, and they have plenty of them. There are some 8,000 homœopathic physicians in the United States, and a dozen homœopathic colleges, turning out a couple of hundred new physicians every year. There are, of course, no statistics to show how many families or individuals are dependent upon this body for medical advice and care, but the number embraces a very considerable proportion of the population, whom it would be appalling and absurd, too, to think of as given over entirely to the care of quacks and cheats.

The fact is, that medical science is not in a condition which entitles any one to say that the profession of a particular dogma like that of the homœopaths makes him an impostor. What little is known about the effect of drugs upon the human body is the result of experiment, and the homœopath deduces his "dogma" from experience, just as the regular practitioner does his belief that there is nothing in it. As to which is right and which is wrong, the layman is usually profoundly ignorant, and it must be remembered that the layman's experience of medicine usually inclines him to be very sceptical on the subject. Every one sees so many mistakes continually made both in diagnosis and treatment that he cannot but recognize the fact that mere "regularity" of dogmatic opinion with regard to disease or the *materia medica* is very far from insuring success, and that in nine cases out of ten what makes a man a good doctor is not only science but natural aptitude and individual experience.

We have the medical profession thus divided into two bodies, both of which believe equally in the importance of professional training, and the possibility of treating disease according to rules derived from experience; both of which possess a high degree of skill, training, and education. They differ as to a dogma of the truth of which laymen have hardly any means of judging. Few laymen who go for advice to a doctor who maintains the truth of this dogma, do so because they care anything about the dogma; they do so simply because they think him a good doctor, and find that he brings them and their wives and children through their various ailments with success. Frequently, however, they find that even a good doctor's skill is baffled, and then very likely they would like to call in another good doctor, of what is to them simply a rival "school." But now they find themselves confronted with a strict rule that the two cannot consult, because one of them believes that diseases should be treated by drugs whose effects, tested on the body in health, are similar to the symptoms present in disease. The layman wants to call them in because they belong to different schools, and he wants to have the benefit of the difference; but for this very reason he cannot get them.

The physicians ought, in any future discussion of the question, to take into account, more than they are usually willing to do, the layman's view of the subject. To him the rule forbidding the regular practitioner to consult with a homœopath, simply means that he is cut off by a dispute which he cares little about from getting all the available experience and advice within reach on what may be a matter of life and death. He does not regard, and can never be brought to regard, a highly-educated and trained physician as a "quack" merely because of a difference between him and his rival round the corner on a recondite matter like that which divides homœopaths from allopaths, and, therefore, he looks upon the rule as a mere piece of superstition. The enormous growth of the homœopathic body in the last fifty years shows that the rule does not prevent what the regulars regard as medical error from spreading, and if the rule does not prevent this, would its abrogation be attended by any very dreadful consequences? If a regular physician sees that "no good" can result from a consultation because no agreement is possible, he will no doubt always withdraw of himself; and so will a homœopath. If either thinks his "dignity" compromised by the meeting, he will not come to it. Will it do any harm to humor the layman a little in the matter?

THE FRENCH JUDICIARY.

THE French Assembly has taken the somewhat startling step of voting, by a considerable majority, and in the teeth of the opposition of the Ministry, to make the judiciary elective. The vote has naturally caused a good deal of surprise, and doubtless, also, a good deal of alarm, though it is not quite as serious as it looks, for it does not appear to contemplate anything more than the election of the judges by some sort of electoral body created *ad hoc*. If we may judge by the recommendations of the Committee on Judicial Reform, which recently made its report, we may, in the absence of fuller news than that of the telegraph, conclude that the majority does not propose to select judges by universal suffrage, but simply to have "them elected for a fixed term by a special electoral body (*corps électoral spécial*), chosen under conditions to be hereafter determined." The question of "judicial reform" has, almost ever since the Republic fairly came into power, been one of the burning questions of French politics, owing to the highly partisan character of the bench, which differs considerably in its organization and composition both from that of England and the United States. Its greatest peculiarity in Anglo-Saxon eyes is that it is composed not of successful advocates, as in England, and to some extent here, but of professional judges —that is, of men who never practise at the bar at all, but begin by appointment as judges of a low grade, and look for success through promotion to the upper courts. In England the judges are chosen by two processes, not unlike that by which bishops are chosen in the Catholic Church by the priests, who vote for three candidates as "dignus, dignior, dignissimus," respectively, one of whom the Pope appoints. The British Minister, in like manner, appoints the judge, but he is compelled by usage, which has the force of law, to make his choice from among a small body of men, who have previously been sifted out from the mass of the bar by receiving from the public a large professional practice. In other words, the judge is always a successful barrister before he becomes judge, so that the question whether he shall ever be a candidate for the bench is determined by the litigants of the various courts.

In this country we started with a rule of the same kind. In the earlier days of the Republic it was generally the successful lawyers who were made judges, and the judicial salaries were made sufficiently high to tempt them. In the Federal service, and in those States in which judges are still appointed, this rule is yet as closely adhered to as the modern lowness of judicial salaries will permit. The places are offered to as good lawyers as can be got to accept them at the rate of payment. In the States in which election has been substituted for appointment, politics has had in a greater or less degree the effect of making the judicial office a part of the spoils, and treating it as the reward of party service, discarding large practice or long experience as a qualification for it. Nevertheless, the Anglo-Saxon tradition that a judge ought to have previously been a successful advocate is still strong all over the country, and disregard of it is still reprobated by public opinion.

In France, however, there is no such feeling or tradition. A judge may begin judg-

ing when he is twenty-five, without ever having found anybody willing to take him as a legal adviser, and he makes his way up in the scale by the favor of the Government pure and simple. There is no other mode of testing his merits. In 1789 the National Assembly, in the first moments of reforming enthusiasm, made the judges elective by the people, and that they should be elected by the people is still one of the Republican traditions. But it has, ever since the overthrow of the first Republic, been treated by Conservatives as one of the dangerous schemes of the Reds. All true French Conservatives hold to an irremovable, appointed, and promoted judiciary as one of the anchors of the state. It is not wonderful that, after eighty years, such a system should have produced a bench which regards itself not as a branch of the Government, separate and apart from the Executive, but as a part of the Administration, and charged with the defence of the existing régime in one field, as the Army is in another. Nor is it surprising that the French bench should be even now, or until very lately, intensely monarchical. The Republic in France has never lasted very long. It has always been the product of insurrection, too, and its existence has been marked by great disorders, and in fact it may be said that ever since the Dixhuit Brumaire, Republican and criminal have been to French judges synonymous terms.

When the present Republicans came into power, therefore, they found the judiciary bitterly hostile. Few judges, if any, believed in the permanence of the Republican régime, and there was something shocking to them in the presence in high office of a parcel of political adventurers, many of whom they had had to try under the Empire, and all of whom they had longed to try. Accordingly, the last ten years have been full of judicial scandals, caused either by the alleged partiality of Bonapartist or Legitimist judges, in Government prosecutions as well as private suits, or by the indiscreet language of judges with regard to the Government or the Ministers of the day. Besides this there have been large numbers of judges who were not indiscreet on the bench, but who off the bench made no secret of their contempt for the Republic, and their belief in its evanescence. This has been very provoking to the Republicans, and all the more so because the remedy was not easy. Anti-Republican military men were readily disciplined, and so were disaffected civil servants. But the judges could not be got at, because they were irremovable. The only way of punishing them was by refusing promotion, and, in the lower grades, sending them to disagreeable districts.

After prolonged agitation, the majority in the Chamber of Deputies has taken the bull by the horns by adopting the report and bill of the Committee on Judicial Reform, which reduces considerably the number of courts and judges—thereby rectifying an undoubted abuse of the monarchical régime, abolishes the permanence of tenure, and recommends election by some other body than the Government. In fact, if the permanence was abolished, it seemed impossible to leave the appointment to the Government, with unlimited liberty of choice. The substitute proposed seems to be, as we have said, election by some sort of electoral college created for the purpose, or, in other words, election by two degrees. But that this would long stave off popular election pure and simple, or would in the meantime protect the independence of the judges against popular passion, is very unlikely. The French are fully as intolerant as Americans of two degrees of election, and will manage just as readily to get rid of one of them in fact if not in form. Of the gravity of the change there can be no doubt, especially as it has been resolved on by the majority in defiance of the Ministry. It will dishearten greatly the large body of moderate Republicans who have feared all along that the Republic would perish through its inability to satisfy both the Democratic leanings and the national pride of the French people. Granting all that is said of the desire of the French to see their institutions thoroughly democratized, it remains true that they will never be content with a Government which does not supply an efficient army and perfect security for property. But, say the Conservatives, the army cannot be efficient, French character remaining what it is, if its organization be as democratic as the Radicals insist on making it, and property cannot be secure with removable and elected judges; and with a bad army and bad judiciary France will cut such a contemptible figure in foreign affairs that the people will be mortified beyond endurance, and get rid of the Republic by way of relief.

THE OPENING OF THE ST. GOTHARD TUNNEL.

MILAN, May 22, 1882.

ITALY, Germany, Switzerland, and we may say all Europe, have participated with thorough satisfaction in the ceremonies attendant on the opening of the St. Gothard Tunnel; but, as is usually the case, the promoter, the initiator, of that great international work has been almost entirely forgotten in his birthplace, Milan, as in his beloved Lugano, where he spent the last twenty years of his life in study and poverty, dying there in 1869. Carlo Cattaneo, the greatest philosopher and political economist of modern Italy, the guide and inspirer of the Five Days of Milan in 1848, when the unarmed citizens defeated and drove out from their city the entire Austrian Army under Radetsky, as early as 1859 insisted on the tunnel through the St. Gothard, in the interests of Italy and Switzerland alike. We have even now before us his letter to the Genoese, showing to them "that, the new current of commerce coming from Suez, it behooved them to prepare to take advantage thereof." After passing in review the various projects for the Splügen and other passes, he continued:

"St. Gothard is not only a predestined railroad, it is a map of railroads which unite and open out for themselves a common centre; it is the military centre of Switzerland, the fortress of liberty. The safety of those Alps is our safety; the pre-Alpine line from Brescia, from Bergamo, from Lecco acquires fresh and practical value from the union of the plains of Erba with Como. The two cities of Como and of Lecco gain other advantages; the railroad from Varese must be extended to the Lake of Como, the railroad from the Lake of Garda be led up to Orta. All the industries of the higher valleys connected, commerce will be doubled by the completion of the Simplon and Mont Cenis railroads. Fortunate Genoa, which in this heritage of nature has the lion's share, such is the free interval from Constance to Basle, with almost the entire valley of the Po and of the Rhine, together with the long list of industrial cities, Zürich, Strassburg, Mannheim, Frankfort, Coblentz, Cologne, Elberfeld, Amsterdam, Rotterdam, Liége, Brussels, Antwerp, Ostend. The natural port of the Valley of the Rhine on the Mediterranean is Genoa. Genoa and Hamburg will be the two ports on which the Swiss will think when they think of their own homes."

Cattaneo then went on to show how the line of the St. Gothard offered to Genoa the shortest line of communication, surpassing in this respect, for the special commerce of Italy, the Lukmanier, the Simplon, the Cenis, or the Brenner, and, as regards foreign commerce, uniting Genoa with the above-mentioned cities by a much shorter line than they could be with Marseilles: how, in a word, as soon as the St. Gothard railroad should be completed, Genoa could take into her own hands the commerce of the German Rhine with the East in the place of Marseilles. His counsels, eagerly listened to by the Genoese, were enthusiastically accepted by the Swiss, but it was not until April, 1869, that a regular project was presented to the Swiss Federal Council, to the Italian Government, and to the Confederation of Northern Germany for the perforation of the St. Gothard.

The St. Gothard, until the present century, had been one of the least frequented passes, although the hospital of the monks of St. Gothard was founded in 1331. In 1816, however, a regular post between five Swiss cantons and Milan was established, yet up to 1820 the path was only practicable for horses and pedestrians, and until lately the journey from Lucerne to Turin occupied twenty-five hours and a-half, whereas the same journey henceforward will occupy but eight hours. The convention for the construction of this railroad was signed by Italy and Switzerland in 1869, and in 1870 the North German Confederation adhered to the Convention. Engineer Gelpke and the geometrician Koppe were the chief designers. At first seven companies sent in their estimates—one Swiss, one Franco-Swiss, one Italian, one German, two English, one American. Finally L. Favre, of Geneva, and the Italian Society of Public Works in Turin, headed by Grattoni, the constructor of the tunnel through Mont Cenis, were the only competitors, and to Favre the contract was assigned, his offer being considered the most advantageous. Meanwhile, the administration of the St. Gothard railway had arranged for the commencement of the excavations of the grand tunnel, begun in June, 1872. For the perforation the waters of the Reuss were utilized on the northern slope, those of Val Tremola on the southern. In 1879, Favre, who directed all the works in person, died suddenly of apoplexy in the tunnel as he was explaining the operations to some foreign visitors; nor was he the only victim, 179 workmen having lost their lives by accidents or suffocation, while hundreds of others have contracted maladies which sooner or later will bring them to the grave. One special form of anæmia, caused, it is said, by the insect *Anchylostomum duodenale*, has proved and is proving most fatal; indeed, a special hospital and convalescent home is being constructed for the survivors. The work, which was never interrupted, day or night, occupied nine years and three months—3,330 days in all. The first estimates of the sum total to be expended amounted to 227 millions of francs, of which Italy agreed to pay 55 millions, while various municipalities and provinces made up another 15 millions; Germany and Switzerland contributed 63 millions, the remainder of the sum being made up by shares, of which a vast number are held by Italians, so that in fact Italy has contributed far more than half of the

sum total, the province and city of Milan alone furnishing two millions and a half.

The gallery of the St. Gothard runs in a straight line from the village of Göschenen to Albinengo, a village to the west of Airolo. The tunnel to be excavated along this line was 14,912 metres long, 2,700 metres longer than the gallery of Mont Cenis. In order to join it with the railroad which comes toward Airolo in an east-to-west direction, another gallery of 150 metres was excavated. The altitude at the entrance of the tunnel at Göschenen is 1,109 metres above the sea level; in the centre 50 metres higher, at Airolo 40 metres higher. The geological formation differs essentially from that of the Cottian Alps. The bore of the gallery, after some 2,000 metres of granite or granite-gneiss, entered into crystalline schist, intersected with veins of serpentine, a mass, in short, of the hardest rock, which at first threatened to baffle the perforating machines. The hydraulic works were also extremely tedious, owing to the difficulty of obtaining a sufficiently strong body of water from the Reuss, while, on the Airolo side, during the winter, avalanches often obstructed the bed of the Tremola, rendering it necessary to excavate a bed under the snow. Signor Favre, in order to overcome the difficulty with the Reuss, constructed an enormous reservoir and a canal, while to baffle the avalanches he caused the water to be conducted by means of a wooden canal into the bed of a minor torrent, the Chiesso, less subject to avalanches. Other difficulties were encountered and overcome by his indomitable will, so that at his death it may be said that only the mechanical portion of the work remained. This was completed really in December, 1881, but the inauguration was delayed until yesterday, owing to various circumstances.

It was hoped that the King of Italy would have been present, but neither he nor the Prime Minister was able to attend; instead of them, the Foreign Minister, Mancini, the Minister of Public Works, Baccarini, and the very unpopular Minister of the Navy, Acton, were the sole representatives of the Italian Government. The inaugural train conveying them, the Presidents of the Chamber and the Senate, and the German Ambassador, together with the syndics of Genoa, Turin, and Milan, and about four hundred invited guests, left Milan yesterday morning. I cannot say that any particular interest was manifested at the Italian stations, and it is presumable that the indifference is owing to the all-absorbing *cavalieri* (silkworms), which do literally absorb the thoughts, hands, time, and sentiment of every man, woman, and child in the country throughout Northern Italy at this season of the year. At Chiasso, however, that once so dreaded frontier town in the bad old days, when ten to one the incomer from free Switzerland was repulsed by the suspicious Austrian sentinel, a number of maidens, all dressed in white, presented the chief guests with beautiful bouquets of flowers, and at Lugano, that asylum of Italian exiles, where Mazzini spent great part of his time in planning expeditions, printing clandestine papers, receiving and despatching conspirators, and where, as we have said, Cattaneo lived and died, a modest but substantial breakfast was prepared, while the enthusiasm at the successive stations, Claro, Osogna, Biasca, Giornico, Faido, up to Airolo, the unfeigned delight and the cordial welcome afforded by the inhabitants, and the joyous cries of "Viva l'Italia!" from the children of the communal schools, formed a pleasing contrast with the cold reception which all remarked on the Italian side. From Lugano to Bellinzona there are eight galleries, the longest of which, that of the Ceneri, is two kilometres in length, and we shot through in three minutes and a half. From Bellinzona to Airolo there were thirteen other galleries; finally, a few yards beyond the station of Airolo, you enter the tunnel, and whatever may have been one's former experience, I doubt if any of the persons whirled through those 15,000 metres—darkness above, below, around, the air hot and damp—arrived at the other end after twenty minutes' flight without a feeling of intense satisfaction that they were through, and well through, without the slightest accident. Perhaps the predominant feeling of suffocation was owing to the weather; certainly, as far as comfort goes, the old days of coaching and diligences have left enviable memories. Between Göschenen and Brunnen there are twenty-seven other galleries. Often the railroad runs level with the post-road, and you see the old vehicles rumbling along as though the tunnel were nothing to them. The view of the roaring, seething Reuss and of the Lake of the Four Cantons was, despite the gloom of the day, magnificent. The courtesy of the officials along the *Gotthardbahn* was especially remarked by the Italians, as forming a noteworthy contrast with their own rude, domineering railway officials, and it was hoped by more than one that their superior, Baccarini, himself by no means noted for courtesy, would take and teach a lesson to his subalterns.

I pass over the speeches, which have probably done service on every similar occasion. The speakers, like the press, omitted any mention of Cattaneo, which incensed not a few of his disciples present. At Lucerne the reception equalled, if it did not surpass, that of Lugano. All the guests—the Italians on one steamer, the Germans on another—crossed the lake up to Brunnen, where, after a short journey on the ordinary railway, special trains, consisting of two carriages each, took us up 1,800 metres to the summit of the Rigi, whose mountain sides are literally furrowed with rails and sown with villas. The octogenarian Tecchio, one of the oldest Italian Liberals, now President of the Senate, was the first to arrive, and was loudly applauded by his countrymen. A breakfast was prepared for 500 persons at the grand hotel Rigikulm, whence the view is beautiful beyond words—here snow-mantled winter, there spring merging into summer. At Lucerne, on our return, there was considerable confusion. The German Ministers Bittern, Von Boetticher, and Hatzfeldt were lost in the common herd, but took it most good-temperedly, and the dinner at the Schweizerhof, a fine hotel on the lake, passed off pleasantly enough until Baccarini tired out the guests with a long and pompous speech. That of the Syndic of Milan was, on the contrary, short and sweet: he made a pleasant reference to the numbers of Swiss resident in Milan, to their industry and law-abidingness, which are, in fact, noteworthy, and trusted that the colossal work brought to such a successful termination would augment and cement the friendship between the two countries. Of this there can be little doubt, provided no political annexation schemes be again set on foot by Italian statesmen. Well do we remember, when it was proposed to annex the Italian Tessin to Piedmont, how Cattaneo, with incisive phrase, made answer: "Why kill a nightingale to add an ounce of fat to a goose?" The absence of Frenchmen from among the guests was remarkable, but Americans and Englishmen were largely represented, all expressing their satisfaction at the successful termination of the enterprise and the cordial harmony that prevailed throughout the inaugural festival.

It remains now to be seen whether Genoa will have sufficient skill and enterprise to profit by this enormous boon. It will not suffice that she is the nearest port to the great commercial cities of Germany and Switzerland. She must render her port and harbor safe and commodious as is Marseilles, her ship dues as low, her porters less insolent and exorbitant in their charges, or else the great French seaport will continue to outrival her as heretofore.

THE CORRESPONDENCE OF GEORGE SAND.—II.

PARIS, May 24, 1882.

I MUST return to the correspondence of Madame Sand, and I take it up where I left it, in the year 1833. The more I read this correspondence, the more I think that nature made a mistake when she gave to Madame Sand the feminine sex. She was in reality a man: all the attributes of her character are virile, and none are feminine. She was brave, hard-working, domineering; she was a good father rather than a good mother to her children; she was with everybody what the French call a good *camarade;* she cared really for nothing except independence—she hated any kind of restraint. To M. Rollinat, at Châteauroux: "Socially, I am free and more happy. My position is externally calm, independent, advantageous. But in order to reach it, you don't know what terrible storms I have gone through. To tell you, I should have to spend many evenings in the walks of Nohant, under the stars, in this great silence we both like so much." This was the time when she had just written 'Lélia,' the most eloquent and also the most morbid of her books—a work which in parts seems almost insane, full of what might be called sentimental depravity, the apotheosis of passion unbridled, unchained, sovereign of man and things. She spoke the truth when she wrote to Madame ——: "I have studied nothing; I know nothing—not even my own language. My brain has so little exactitude in it that I have never been able to learn the smallest rule of arithmetic. . . . I have only sensations, and no will. For what, for whom should I have a will? Besides two or three persons, the universe does not exist for me. You see that I am good for nothing."

At the end of 1833, she started for Italy. She admired the valley of the Rhone, but found the cities of Lyons, Avignon, and Marseilles "stupid." She was in Venice in March, 1834.

"Venice," she says, "is the finest thing in the world. All this Moorish architecture, in white marble in the midst of limpid water and under a magnificent sky; this people, so gay, so thoughtless, so full of song, so spirited; these gondolas; these churches and galleries of pictures; all the women pretty or elegant; the sea; a moonlight such as you see nowhere else; serenades under the windows; cafes full of Turks and Armenians; great and fine theatres, where Pasta and Donzelli sing; magnificent palaces; . . . what more can you want?"

She wrote and worked in this beautiful Venice. "I bless my grandmother, who gave me this habit of work. The habit has become a faculty, and the faculty a need. I have come to this: I can work, without being ill, thirteen hours in succession; but, on the average, seven or eight hours a day. My work gives me a good deal of money and takes much of my time, which otherwise I should employ in having the spleen, as my bilious temperament would produce it. . . . I regret that my money difficulties always force me to draw something out of my brain without giving me time to place something new in it. I wish I had a whole year of solitude and of complete liberty, so as to fill my head with all the foreign masterpieces which I know imperfectly." But she had no time for reading; after having blackened paper for hours, she ran to the Piazza San Marco, took coffee and smoked cigarettes, and tried her Italian with some Italian friends.

Life is still cheap in Venice; it was then even

cheaper, and she was able to economize. She sent her manuscripts to Buloz, the editor of the *Revue des Deux Mondes*, and lived like a student. She was not alone; Alfred de Musset was with her. He left her, to return to Paris, at the beginning of April. He had been very ill.

"He is still very delicate for undertaking this long journey. I am not without uneasiness on this point; but it was worse for him to remain than to leave, and every day spent in waiting for a return of his health retarded instead of accelerating it. He is gone at last, under the care of a very good and devoted servant. The doctor [Dr. Pagello] answers for his lungs, if he will take care of them; but I am not very tranquil. We have left each other for a few months, perhaps for ever."

It was for ever. The sad story has been told in 'Elle et Lui,' in 'Lui et Elle.' Musset and Madame Sand were not in reality made for each other. They were both irrational, unconscious slaves of their sensations, and fond of new sensations. If they had any sentiment of duty, it was to hate duty. One was the most sensitive of poets, the other the most insatiable searcher after new sensations, new ideas, new figures. They met for a moment, and fled away from each other almost with a sentiment of repulsion; to them love was almost less than a caprice. Madame Sand could only be faithful as a friend; she really despised those who fell in love with her—she looked upon them as inferior beings. We find in a letter from Venice some explanations on the subject of the relations of Madame Sand with Gustave Planche, who was for a long time the great critic of the *Revue des Deux Mondes*. She says that Planche never took the trouble to play with her the part of a lover. "Our affection was quiet and fraternal. . . . The friendship of Planche, the memory of his devotion, of his inexhaustible kindness to me, will always remain in my life and in my heart."

After leaving Alfred de Musset at Vicenza, Madame Sand made a little excursion on foot in the Alps, along the valley of the Brenta. She returned to Venice with seven centimes in her pocket. If she had not been so poor, she would have gone into the Tyrol. In her journeys in Italy she did not spend more than five francs a day, but she always travelled on foot or on a donkey. She was still in Venice in the midsummer of 1834, working "like a horse," to pay the expenses of her Italian journey. She sent articles to the *Revue* which are full of beautiful descriptions of Italian life and scenery. Buloz only sent her money by driblets; it was a sort of principle with him to give as little as possible at a time to his great writers—he looked upon necessity as the great inspirer of the muses. In August, 1834, she returned to Paris; she had taken with her her Italian doctor Pagello, whom she thus describes: "Pagello is a brave and worthy man, of your sort, good and devoted as you are [this she writes to the faithful Boucoiran]. I owe to him my life and Alfred's. Pagello intends to stay a few months in Paris." She herself made a visit to Nohant, in order to see her daughter Solange. She invited Pagello to make a visit to Nohant, with the permission of M. Dudevant. I cannot discover from the correspondence whether this visit was made or not. Madame Sand must have been very fond of writing letters, since, with all her enormous work, she found time to write pages in this style:

"I have never had for you [M. François Rollinat, of Châteauroux] either any moral love [what does she mean by that?] or physical love; but, from the day when I first knew you, I felt one of those rare, profound, and invincible sympathies which nothing can alter. I have not found you superior to me by nature; otherwise, I should have conceived for you the sort of enthusiasm which leads to love; but I have found you my equal—*mio compare*, as they say in Venice. You were better than myself, as you were younger, as you had lived less in the storm, as God had placed you at once in a finer and straighter way. But you had come out of his hand with the same sum of virtues and of defects, of greatness and misery, as myself."

Really, when Madame Sand wrote such letters, she must have been preparing herself for a novel.

All the letters of this period show a sort of exaltation, and at the same time of discouragement. Madame Sand was out of equilibrium, struggling hard, exciting herself, so to speak, one hour, and the next hour falling back on a natural *fonds* of *bonhomie* and of simplicity. She was simple by nature and complex by effort; good by nature, misanthropic and bitter by the result of her life. "Society," she writes to Madame d'Agoult, who wrote under the name of Daniel Stern, "is bad and cruel. Our passions are neither good nor bad." She had no system of philosophy, no religion, no politics; she was constantly feeling her way in every direction. When she writes to her son, whom she really loved, she is careful what she says. Here is a letter to him:

"Work; be strong, be proud, be independent. . . . We resemble each other in our souls as well as in our faces. I can see now what your intellectual life is to be. I fear profound pain for you, and hope also for very pure joys. Keep in yourself the treasure of goodness. Learn how to give without hesitation, to lose without regret; learn how to harbor in your heart the happiness of those whom you love in place of the happiness which you will not have yourself! Keep the hope of an after life, of a place where the mothers will find again their sons. Love all the creatures of God; forgive all those who are disgraced; resist the unjust; devote yourself to those who are great by their virtues. Love me! I will teach you many things if we live together. If we have not that happiness (the greatest that I can imagine, and the only one which makes me desire a long life), you will pray God for me; and from the darkness of death, if something remains of me, your mother will watch over you."

This volume would be worth reading and keeping were it only for a letter like this!

Monsieur Dudevant was certainly not worthy of his wife. He drank habitually, and when drunk he sometimes became violent. After a scene which had nearly become tragical, Madame Sand resolved to make a formal suit of separation. There was no divorce then, as there is none now, in France; but under some circumstances a *séparation de corps* can be pronounced by the judge. On both sides there was an abundance of reasons. Madame Sand had from time to time returned to Nohant, but practically she had assumed a complete liberty. She was the richer of the two—Nohant belonged to her; she offered to give her husband a pension, and she undertook to pay for the maintenance and education of her children herself.

We find her at the end of this first volume in correspondence with the famous Franz Liszt. She was always attracted by all the extraordinary men; and it did not take long to make her intimate with them. It was one of the most curious traits of her character that, as soon as she saw somebody, she treated him as if she had known him from childhood. The last letter of the volume is dated June 28, 1836. She informs us that her lawsuit was not yet concluded. Meanwhile, she was writing letters and novels in a most extraordinary mood. She was becoming a Socialist, and entered into communication with the Saint-Simonians and the Republicans.

Correspondence.

MR. RICE ONCE MORE.

To the Editor of The Nation:

Sir: If you will permit me again to encroach to a small extent upon your space, I should like to remind Mr. Rice that in my note I distinctly disclaimed the intention of refuting his argument, and merely cited one passage as an *illustration* of his unfitness to deal with the subject. In that passage Mr. Rice undertook to expose a confusion of ideas on the part of Ricardo concerning the latter's "own fundamental proposition"; and in this connection the object or general drift of Mr. Rice's article was an entirely irrelevant matter. Perhaps you will allow me to add that I very fully agree with Mr. Adams in his remarks in yesterday's issue, and that what I had in mind in my first note, as preferable to the *Nation's* review, was not "silent contempt," but that judicious, though distinctly spoken, contempt in which the *Nation* is usually anything but deficient.

Yours, very respectfully, X.

Baltimore, June 9, 1882.

Notes.

D. Appleton & Co. are about issuing, in twelve monthly volumes, small 18mo, an elegant edition of Shakspere's works, printed from new type, on linen paper, and bound in vellum.

B. Westermann & Co. send us the first instalment of a new illustrated edition of Goethe's Works, now publishing at Stuttgart, under the competent editorial supervision of Heinrich Düntzer. It will match the illustrated Schiller already put forth by the Deutsche Verlags-Anstalt, of which more than 50,000 copies have been sold, and the same firm's illustrated Shakspere. There will be eighty-five instalments in all. No one can complain of the paucity of the illustrations and other pictorial adornments of this edition, which are naturally of a popular character. The form is large 8vo.

L'Art offers gratuitously to each subscriber for the present year a premium plate etched by M. Ulysse Butin, after his own picture in the Salon of 1875, entitled "L'Attente." Mr. J. W. Bouton will deliver it with the next quarterly volume, about July 15.

Waterton's 'Wanderings in South America,' after J. G. Wood's edition, the illustrations included, is the latest sixpenny venture of Macmillan & Co. in the form and after the fashion of the Franklin Square Library. Such a work as this, despite the defects and idiosyncrasies of the author and the shortcomings of the editor, deserves a wide circulation, and is well chosen for popular reading.

Dodd, Mead & Co. have also come into this new (and to the genuine book-lover still strange) field of competition with a twenty-cent edition of E. P. Roe's 'Barriers Burned Away.' The story has been revised by the author.

Edmund Burke's 'Thoughts on the Cause of the Present Discontents,' in Ireland, in 1770, namely, have just been made accessible in a cheap pamphlet published by M. H. Gill & Son, Dublin. Mr. Vincent Scully furnishes an introduction.

The Boston Civil-Service Reform Association has printed two prize essays on the general subject prepared by college students (in this case both graduates of not more than five years' standing). The award of the first prize was unaffected by the fact that the essay did not conform entirely to the views of the Association.

Nature (May 18, 25) is publishing a summary review of Darwin's career by several hands, directed by Dr. G. J. Romanes. The first paper is chiefly biographical; the second shows the great naturalist's contributions to geologic science and insight. It appears that Mr. Darwin's father, a physician, "had a wonderful power of diagnosing diseases, both bodily and mental, by the aid of the fewest number of questions"; and even of

divining what was passing through his patients' minds. Darwin himself was first intended for the same profession, but, as it was repugnant to him, he was on the eve of entering the Church when the post of naturalist on the *Beagle* expedition was secured for him by Professor Henslow, to whose instruction Darwin owed his impulse in the direction of physical research. The voyage which determined his life-work and imperishable fame, also proved ruinous to his health, by inducing a chronic indigestion. *Nature* states that the memorial fund about to be raised in his honor is designed to include an effigy of Darwin, as well as an endowment for the furtherance of biology.

Part 6 of Reiss and Stübel's 'Necropolis of Ancon, in Peru' (Dodd, Mead & Co.), contains one plate showing a gorgeous mummy pack, the rest being wholly devoted to cotton and woollen fabrics (often conjoined)—borders, fringes, trimmings, etc. In these fresh examples of a highly advanced art, one is struck by the brilliancy and harmony of the coloring, as well as by the beauty of the designs, of which the decoration abounds in animal figures in all stages of conventionalism. They form, as we may already have remarked, a "grammar of ornament." The fidelity of the lithographic facsimiles is most illusive.

We have received from the Ann Arbor Printing and Publishing Company a 4to volume of 240 pages, consisting of tables for the calculation of interest, discount, the value of investments, annuities, and related subjects, prepared by the late Professor Watson while Director of the Observatory at Ann Arbor, and Professor of Astronomy in the University of Michigan and Actuary of the Michigan Mutual Life Insurance Company. The explanations accompanying the tables are very full and precise, and there seems to be hardly any question relating to the subjects above mentioned to which these tables do not afford an answer. We have examined with some care that part of the book which treats of partial payments, a subject in regard to which the statutes of different States, the rules adopted by different courts, and the practice of different merchants and bankers present great and often important variations. The different rules for adjusting such payments are given by Professor Watson, and he then explains what he considers the correct and just rule. On comparing his results with those arrived at by an entirely independent process, believed to be just and correct, we find an exact agreement. Every possible precaution appears to have been taken to secure mathematical and typographical accuracy.

Another volume of the series of mathematical text-books by Prof. Newcomb has been published by Henry Holt & Co. It comprises a treatise of plane and spherical trigonometry, and the logarithmic tables usually accompanying such works. The treatise and tables are also published in separate volumes, and are for sale independently of each other. The treatise is formed upon the same plan and possesses the same general characteristics as the previous volumes of the course. In the present volume, however, the author appears to have kept the practical applications of the science more especially in view. The tables are "five-place tables," and are printed with great clearness and even beauty.

So far as such a subject can be taught by questions and answers, the 'School Manual of Household Economy,' published under the direction of the Kitchen-Garden Association of this city (Ivison, Blakeman, Taylor & Co.), ought to accomplish its purpose. Housework, or housekeeping, like every other art, can be effectually learned only by actual practice; but the future servant or mistress will surely profit by the study of the clear, concise statements of this treatise. It is all the better for its simplicity, being without hobbies, or even theories, except the beautiful one, of the character of the virtuous woman, which makes the device of the title-page—"She looketh well to the ways of her household."

From Christian Tönsberg, Norway's enterprising art publisher, we have received a small volume containing 160 wood-engravings of Norwegian cities, landscapes, waterfalls, etc., with 127 pages of text in Norse and in English. The illustrations are from photographs and drawings taken on the spot. The English title of the book is 'Norway, exhibited in engravings, with a brief description by various authors.' It will be found a convenient pocket-guide for people who contemplate spending a vacation in Scandinavia.

—In these days, when all of our academies, colleges, and libraries, supported wholly or in part by the income of invested funds, are suffering from the diminished rate of interest, it may be well for them to lay to heart the optimistic view taken by the Peabody Institute, of Peabody, Mass. Its income has fallen off nearly $1,500, but it declares that "this misfortune is not without its compensations. . . . The youth or adult who masters one good book has reaped more benefit, and made more real progress, than the one who has acquired but a superficial knowledge of a score of volumes"; ergo, the smaller a library's income, and the fewer new books it is able to buy, the better for its readers. The "Thirtieth Annual Report" does not draw this conclusion in so many words, but it is difficult to see what other compensation there can be. The next alderman who is trying to cut down the City Library appropriation, will find this a convenient argument.

—Pending the delay in the publication of the annual report of the Director of the United States Geological Survey, Mr. S. F. Emmons, geologist in charge of the Rocky Mountain Division, has issued, in a separate pamphlet, his contribution to Director Powell's volume, consisting of an abstract or outline of a more detailed report, to be presented later, upon the geology and mining industry of the Leadville region. The abstract makes a pamphlet of about ninety large octavo pages, and is accompanied by two colored plates, representing the geology of the vicinity of Leadville in a map and sections. Among the many interesting results of Mr. Emmons's investigations, some of the most noteworthy, from an economical point of view, are those that relate to the geological position of the ore bodies of the district, the more important of which occur as a replacement of the blue limestone at or near its contact with an overlying white porphyry. The limestone is shown to be of Carboniferous age, with an average thickness of only 150 to 200 feet and the composition of a normal dolomite. In places the dolomite has been so largely replaced that it is now mainly represented by a mass of ore, ferruginous clay, quartz, and chert. The overlying porphyry is regarded as the immediate source from which the vein materials were probably derived, chemical examinations having shown that while the sedimentary and crystalline rocks of the region, taken at some distance from the ore deposits, contain no precious metals, appreciable amounts of gold, silver, lead, and baryta may generally be found in the eruptive rocks. The details of these examinations must be reserved for the final publication; but an idea of the amount of material available in these rocks may be obtained from an estimate of the possible contents of a single variety of porphyry (the pyritiferous) of the Leadville district, from which it appears—taking into the calculation the area of its outcrop, as shown on the map, its probable thickness, and the average percentage of metals contained in it, as deduced from chemical examinations of eleven specimens from different parts—that the mass under consideration would contain, in round figures, 250,000,000 ounces of silver, 9,000,000 tons of galena, and 100,000,000 tons of limonite, which represents fairly the average proportions of each in Leadville ores as a whole.

—The main report, now in course of preparation, as outlined in the present pamphlet, will comprise, in part 1, a detailed description and discussion of the geological phenomena of the Mosquito Range in general, and of the Leadville region in particular; and in part 2, a study of the ore deposits of Leadville, their mineralogical and chemical composition and their probable origin, and a description of the methods of working the mines, metallurgical treatment of the ores, and the economical results. It is to be very liberally furnished with engraved book-plates and woodcuts for general illustration, and accompanied by an atlas of fourteen sheets, comprising geological maps and sections. The preliminary report now submitted gives such abundant evidence of careful and intelligent study of the subject by Mr. Emmons and his assistants that their final conclusions cannot fail to make a very important contribution of lasting value to the science of economical geology. The work as projected and so far developed embraces much that is deeply interesting not only to the student, but to the practical miner or mine-owner; and its successful execution will be a credit to its authors, and a practical demonstration of the usefulness of the Geological Bureau in its relations to one of the great industries of the country.

—M. Jules Claretie gathered into a volume the best of the *chroniques* which he had contributed during 1880 to the *Temps*, and the book sold into the seventh or eighth edition. So he has repeated the experiment this year, and 'La Vie à Paris—1881' (Paris: Havard; New York: F. W. Christern) is already in its fifth edition. It is a little difficult to define in English the exact function and nature of a *chronique* such as M. Claretie writes fortnightly or oftener in the *Temps*. In his hands it is a running commentary on the passing show of Parisian life, and its manner varies from that of the "Easy Chair" in *Harper's Magazine* to that of the better class of "Our Own Correspondent." He eschews politics, and considers society, art, literature, and the drama. Music, sport, and fashion are not neglected, but perhaps it is manners that M. Claretie dwells upon most skilfully and lovingly. An antiquary as well as a critic, an historian as well as a novelist, M. Claretie is plainly enough ever observant of the shifting customs of society. He has a quick eye and a pointed style; his acquaintance in the artistic and literary circles of France is most extensive. Thus the book abounds in bright pictures of Parisian life and in fresh and pertinent anecdotes. For example, the Electric Exhibition of last summer gave M. Claretie a chance to tell an apologue he had once heard Victor Hugo extemporize—an apologue which shows Voltaire frightened by the simple marvels of modern science and which is not at all unlike Poe's 'Thousand and Second Night.' The annual picture-show brings up the subject of artists' models; and M. Claretie gives us a curious sketch of this singular class, of the odd lives they lead, and of the pride they take in the pictures for which they have posed. It is amusing to learn that the model who is in the habit of posing for historical painters, scorns to sit for a *genre* picture, and that the woman who has often been painted as a fine lady refuses to pose as a peasant. Another interesting chapter is on the many dining clubs of Paris—clubs

which have no club-house and indeed no existence except during the monthly or fortnightly dinner. Not to be passed over hastily are the chapters on Parisian journalism and on actresses' mothers. It only remains to be added that there is a classified table of contents, besides an index of the many proper names scattered through the book. It is M. Claretie's intention to continue this series of annual volumes; and its future value, like its present interest, is indisputable.

—The late Édouard Fournier must have been one of the most indefatigable note-takers ever known. The 'Bibliothèque de l'Arsenal' has twenty quarto volumes, which have been carefully arranged by M. Paul Lacroix; the 'Bibliothèque de la Ville' has fifteen more volumes, relating to the history of Paris, which have been arranged by M. Jules Cousin; and a large mass on the history of the *chanson populaire* in all countries and ages, which was to have been used by the late Baron James de Rothschild, will now probably be deposited in some other library. Besides all these, there is another collection relating to the history of signs, which is to go into the 'Bibliothèque de l'Arsenal' as soon as M. Fournier's posthumous work on signs is published. With all this apparatus it is remarkable that he should have published so much as he did. His 'Esprit dans l'Histoire,' 'Vieux Neuf,' 'Histoire des Hôtelleries et des Cabarets' (in conjunction with Francisque Michel), and more than a dozen other antiquarian works; his ten plays, in which, however, he was usually only joint author; his collections, such as the nine volumes of 'Variétés Historiques et Littéraires,' and the 'Théâtre Français avant la Renaissance,' and 'Théâtre Français au 16e et 17e Siècles'; his editions of the works of Regnard and of Beaumarchais, and an endless number of *notices*, *préfaces*, and articles in journals—all these constitute a literary performance of which, considering its general excellence, an antiquary of any nation might be proud. We doubt if even his friend Paul Lacroix ("le Bibliophile Jacob") has surpassed him in diligence.

—The University of Berlin is going a-begging for a professor of philosophy. A few years ago Professor Harms died, and after considerable negotiating Professor Lotze accepted the place. He, too, died before he had occupied his chair more than a year, and all the efforts made since to obtain Professor Kuno Fischer, of Heidelberg, Professor von Goltz, Professor Sigwart, and others have failed. The position is one of the most honorable and remunerative in the country, and the phenomenon is therefore somewhat peculiar. There are plenty of younger psychologists in Germany, but they are all modern in spirit and convictions, while Berlin is conservative, and still observes the custom, noted by Heine in his day, of keeping all new ideas in quarantine for some years or decades.

—A collection of twenty-five new cartoons by Albert Hendschel has just been issued by F. A. C. Prestel of Frankfort. They are in his old, well-known manner, representing incidents of every-day life with a few simple but suggestive lines, in which the humor is always tempered by a certain grace and naïveté. In a late number of the *Frankfurter Zeitung* Johannes Proelsz gives some facts concerning Hendschel that will be of interest to his admirers in this country. His father had originally intended him for the career of a naturalist, but on seeing a very clever caricature of one of his teachers made by his twelve-year-old son, he allowed him to follow the bent of his own mind. In 1872 he had already reached the age of thirty-eight years without having taken any steps toward notoriety, outside of a limited circle of friends. About this time the art-dealer Prestel secured twenty-five of his sketches and printed them in an edition of a hundred copies. Most of these were sold in Frankfort, but one copy was exhibited at the Leipzig Kunstverein, where it made a great sensation. Another copy got into the hands of Bismarck, who immediately wrote to the editor of the weekly *Gartenlaube* and called his attention to the new talent. As the *Gartenlaube* at that time had a circulation of almost half a million copies, an article on Hendschel which soon appeared in it at once helped him to a popularity which has been constantly on the increase, more than a million copies of his sketches having already been disposed of by his publisher. "Mischief and gracefulness" are the leading traits of Hendschel's *genre* pictures. He occupies an intermediate position between those painters who, like Richter, Pletsch, and Klimsch, idealize the scenes from life which they choose for subjects, and the caricaturists of the *Fliegende Blätter* and *Schalk*—Busch, Oberländer, and others—whose principal aim is to excite laughter by exaggerating the awkward and comic, whereas Hendschel aims at fun which does not clash with the lines of beauty. "The form which he adopts in his most characteristic sketches as most suitable is peculiar to himself. He places the clumsy directly beside the graceful, the awkward beside the clever; and the artistic contrast resulting from this method gives a purer form of humor than the exaggeration of the awkward into ugliness."

—Mr. Grant Allen, in the June number of Cassell's *Magazine of Art*, has an article entitled "The Great Classical Fallacy," mainly devoted to the lamentable ignorance of the English architects of the eighteenth century regarding the antique architecture which they endeavored to imitate, especially in respect to its color. It is indeed true that Sir Christopher and his followers, Hawksmoor, Vanbrugh, the brothers Adam, Kent, Campbell, Chambers, and the rest, did create a distinctive English Renaissance, which was crude and formal, and, unlike their Italian and (to a certain extent) their French contemporaries, did not consider the painters their natural allies. Classical forms in their hands thus not only refused to stoop to the requirements of domestic comfort, but suffered an eclipse of color. In this latter respect, we venture to question whether the very affluence of archæological discovery in these latter days has not so embarrassed the present generation of English architects that they are not much better off than their ancestors. Certain it is, no English writer has yet presented anything approaching a satisfactory theory of the relations of color to form; and, as for practice, the modern drawing-room, richly bedight with carpets, hangings, and wall-papers, decorated ceilings, and the spoils of the gorgeous East, is by no means a completed architectural interior in the sense that the royal chambers recently disinterred upon the Palatine or in the gardens of the Tiburine villas are complete; our public halls do not yet recall the splendors of the secular basilicas or curias of the Empire; nor do our churches borrow either from the paintings and marble inlays of the pagan temples, or from the Christian mosaics of Byzantium, Ravenna, or Venice, any hint of beautiful completion. Our conscience is aroused, but our civilization is at fault, and we have not yet married color to form in perfect union, or defined the true relations of color to architectural effects. Mr. Grant Allen utters a commonplace fact when he states that the classical scholarship and art of the last century went hand in hand, and suffered from certain obvious limitations of knowledge; he might have added that our own shortcomings differ only from those of our ancestors in degree. It is quite true that not only his imaginary villa of Charlecomb, but all the great monuments of the time—Blenheim, Wanstead House, Castle Howard, Holkam House, and the rest—are for the most part cold and colorless; that they but dimly apprehended the classical idea which they were intended to revive; that they sacrificed comfort to an architectural formula, and ease to monumental effect; but, with all their defects, they are at least deserving of respect as genuine historical expressions. Apparently, the day is not far distant when the incomprehensible revolution of taste and fashion through which, by way of the "Queen Anne" aberrations, we are at present passing, will culminate in a revival of respect for classical symmetry—better instructed and more conscientious, perhaps, than that of the last century, but none the less diametrically opposed to the license and mediæval picturesqueness which have lately controlled most of our architectural expressions. Then we shall have another conflict of essays on the true principles of architectural æsthetics; and what prophet shall say when and where we shall finally rest from these unscientific and empirical processes, and enjoy an era of rational peace with art?

—One of the most curious and interesting incidents of the religious history of the Middle Ages is the conversion of a "master of Holy Scripture"—a distinguished preacher—by a "friend of God from the Oberland," apparently at Strassburg, about the middle of the fourteenth century. The "master" has generally been identified with the famous Dominican preacher and mystic, Tauler; the "friend of God," with one Nicholas of Basel. In 1879 an eminent Dominican scholar, Denifle, published a treatise entitled 'Tauler's Bekehrung,' in which he undertook to show that Tauler could not be the hero of the story, and that it was probably a fictitious narrative, drawn up with a view to edification—a *Tendenzschrift*. The same year, Dr. Auguste Jundt published in Paris a volume of 445 octavo pages entitled 'Les Amis de Dieu au quatorzième Siècle,' containing a detailed account of the career of "the friend of God of the Oberland" and his associate, Rulman Merswin of Strassburg, with a critical examination of the evidence as to the identity of both "master" and "friend of God." His book was in print before the appearance of Denifle's; nevertheless, he was able to add an appendix of twenty-five pages, in which he considers and answers his arguments. A part of Denifle's case is disposed of by the fact that M. Jundt does not identify the "friend of God" with Nicholas of Basel, but, by an ingenious combination of bits of evidence, comes to the conclusion that he resided in Coire (Chur) in the Grisons, and that his name was John—probably John of Rutberg. That the "master of Holy Scripture" was Tauler, he appears to have proved conclusively in the body of the book, and in the appendix he successfully answers, or at least weakens, all of Denifle's arguments. The strongest of these is that Tauler was not a "magister," but only a "lector"—and we know how strict the scholars of the Middle Ages were in their use of the titles of the several grades of scholarship. But the "friend of God," Jundt answers, was not a scholar, but an uninstructed layman, who might easily give the title "master" to a preacher of Tauler's eminence—just as every distinguished preacher at the present day is "Doctor" in common parlance. Another argument of great strength is that the "master" was not positively identified with Tauler until the year 1486, although the treatise which de-

scribes the occurrence was published fifty years earlier; the occurrence itself is usually placed in 1348, but by Jundt in 1350—Tauler died in 1361. In reply to this argument, Jundt shows that even the first edition of the treatise (1436) was associated with Tauler by being placed in a collection of his sermons, and being ascribed to a master of the order of St. Dominic. The first use of the term "master of Holy Scripture" for Tauler was in 1468; the first direct assertion that he was the person referred to by the "friend of God," in 1486; and these three dates show a concurrence of tradition which is certainly very strong. On the whole, Denifle's arguments that the "master" *could* not have been Tauler seem to us successfully answered; that it certainly was he, cannot be claimed, but is at any rate made probable. Jundt's book will be found very instructive for the religious life of the Middle Ages.

—On very few occasions during the past season —even during the "Africaine" excitement—has the Academy of Music been so crowded as it was on Friday evening. Many who had heard Frau Materna at the May Festival concerts came to bid her good-by, or rather *au revoir*, and others came to hear for the first time the "heroine of the three May Festivals." The concert opened with the overture to Weber's "Euryanthe," which was rather poorly played; the most beautiful passage in it—the weird *pianissimo* tomb motive—being, moreover, spoiled by the noise made by the late-comers. In this piece, as well as in the "Rienzi" and "Tannhäuser" overtures, which the orchestra played alone, it became only too apparent that Wagnerian music cannot be effectively rendered with so small a band in so large a hall, in which, too, no one could help contrasting the effect with that produced at the Philharmonic concerts. Some piano solos contributed by Mme. Constance Howard must have convinced every one that the Academy is no place for that instrument, and that the performer would have made a more favorable impression under more auspicious circumstances. The burden of the concert accordingly lay chiefly on the shoulders of Frau Materna and Herr Candidus, the magnitude of whose merits may be estimated from the fact that they succeeded in making of the concert one of the most interesting of the season. Herr Candidus sang an aria from the "Huguenots," and *Siegmund's* love-song from "Die Walküre," besides assisting Frau Materna in the duo from the second act of "Tannhäuser," which closed the concert. His beautiful, manly voice and excellent method won him new admirers, and we are sure we express a general hope that some manager may restore this fine tenor to his native country. He always sings his part as it was written, and that alone would distinguish him favorably from some other tenors known to local fame. Frau Materna's contributions were three in number—the aria "Adrian," from "Rienzi," a song, "Meine Boten," by W. Goericke, of Vienna, and the part of *Elizabeth* in the Tannhäuser selection, already referred to. Like Herr Candidus, she was compelled to repeat each of her solo pieces, although there was in them not a trace of such ornamental or florid vocalism as alone would have evoked demonstrations of enthusiasm from a less intelligent audience. The truth of what we said of her voice on a previous occasion—that it is "of great compass, sonorous quality, absolute purity, great flexibility, unequalled power, amazing endurance, and great emotional range and intensity"—was fully demonstrated on this occasion to the satisfaction even of those who had heretofore been sceptical as to one or other of these points. No living singer that we have ever heard has a voice that so completely contains in itself the whole gamut of human passions, and that conveys to the hearer in such a thrilling manner every variation of emotion contained in the situation she is interpreting. We even maintain that in loud, sustained high notes her voice has a purely sensuous beauty that transcends anything that even the purely sensuous Italian school of vocalism can boast of. In the athletics of vocalism—in feats of agility, trills, etc.—she has many superiors, but in the æsthetics she has no equal. And this is the result of the Wagnerian, declamatory style, which we are always told prematurely ruins every voice.

—Frau Materna has every reason to be satisfied with her reception in this country. She has received high praise from every quarter except a few *Italianissimi* and one remarkable "critic," who has made the epoch-making discovery that she is defective in that for which Wagner and all German critics have always especially admired her—her distinct and clear pronunciation of the German language. And this success is much more remarkable when we bear in mind that she is by instinct as great an actress as she is a singer, and that the audience lost just as much in seeing her on the concert stage as they do in hearing Wagner's music out of its proper connections. In Vienna this is so clearly understood that we have known her to appear in connection with other opera singers at a concert which did not fill half the house, while the house is always full when she sings at the Opera. One more point must here be insisted on. It was noticeable, and we mentioned it at the time, that Frau Materna in some passages sang slightly out of tune at the May Festival concerts. We ascribed this to the high American pitch, to which she was not then accustomed; and the result has shown the correctness of our view. A few weeks have sufficed to adapt her voice to our pitch, and on Friday it deserved the epithet of absolute purity as much as the others enumerated above. But to prevent other singers from being similarly misjudged it is surely time that this old nuisance of the American pitch were abated. It arose from the desire of piano manufacturers to give their instruments especial brilliancy by an abnormally high pitch. This is unjust to the singers, and we believe that music is now sufficiently advanced in America to be at last emancipated from the patronage of piano manufacturers. In saying this we do not mean to deny the good service done to the cause of music heretofore by some of our leading manufacturers.

STATE TRIALS OF THE NINETEENTH CENTURY.

Narratives of State Trials in the Nineteenth Century. By G. Lathom Browne, Barrister-at-Law. 2 vols. London: Sampson Low & Co.; Boston: Houghton, Mifflin & Co.

Mr. Lathom Browne has published a worthless book which is yet well worth reading. He is himself, to judge from his work, a professional bookmaker, and his bookmaking is not of a high quality. His historical summaries, which fill up a large part of his two volumes, are the most pretentious narratives of facts known to all the world which it has ever been our fate to read. His accounts of the trials with which he is specially concerned are neither clear nor interesting. His opinions upon men and things are commonplace, superficial, and utterly deficient in insight. Whoever wishes to understand how a strange and exciting tale of mystery may be spoilt by bad telling, should read Mr. Browne's account of the frauds which wrecked the reputation of Lord Cochrane. It is difficult, from Mr. Browne's version of the affair, to follow out the leading incidents of a complicated transaction. It is even more difficult to form from his narrative any clear judgment as to the parts played by the different actors in one of the most painful judicial investigations of modern times. Mr. Browne has never understood the whole of the difficulties involved in the supposition of Lord Cochrane's innocence. He sees that Lord Ellenborough was a violent partisan, and was not an impartial judge in a case where political feeling prejudiced him against the prisoner. But he never perceives that Lord Ellenborough's unfairness or severity does not prove Lord Cochrane's innocence. Every one must wish to believe that a seaman who displayed all the boldness and much of the genius of Nelson was not mixed up in frauds which would have disgraced the blacklegs of the Stock Exchange; and any candid critic will gladly admit that Lord Cochrane's general career affords a considerable presumption against his having participated in a disgraceful imposture, likely, had it succeeded, to bring ruin on many innocent persons. But when every consideration in favor of Lord Cochrane is duly weighed, the fact still remains that the circumstances of suspicion against him were very strong, and have never been satisfactorily cleared up. It would probably have been well had the jury given him the benefit of every doubt, and found him not guilty. But ordinary justice to the judge who tried, and to the jurymen who convicted, Lord Cochrane requires the admission that in his case a verdict of not guilty could not morally have differed from a verdict of not proven. That Mr. Browne does not see this, gives us the full measure of his capacity for sifting evidence.

The persons, again, about whom he writes are for the most part men and women whose fame or infamy has by this time become almost forgotten, and, what is more, hardly deserves to be remembered. Who is there at this time of day who knows anything about Alexander Davison and Valentine Jones, about Dr. Troy or Mr. Drakard; Brandreth, Turner, Ludlam, and the other Nottingham rioters; Thistlewood, of the Cato conspiracy? Sir Charles Wolseley, Harrison, and Bamford are names which can raise few recollections in England, and are utterly unknown beyond the limits of that country. Who is there, we wonder, who could tell us what were the views or what (if any) the policy advocated by the "patriarch" Cartwright or "orator" Hunt? Is there any among our readers so well informed as to be able to say what was the history or fate of the Spence who founded "certain societies or clubs calling themselves Spenceans, or Spencean philanthropists," which did in 1817, if we are to believe the language of 57 Geo. III. cap. 19, "hold and profess for their object the confiscation and division of the land and the extinction of the funded property of the kingdom"? Who, in short, learns, knows, or recollects anything about the Reformers, Radicals, or Revolutionists who, during the earlier part of this century, excited the terror—well or ill-founded—of all the respectable classes throughout Great Britain? Whatever were the merits or the demerits of the men who agitated or conspired against the Government of George III. or of George IV., they were utterly deficient in that kind of individuality or genius which makes a permanent impression on the memory of mankind.

Some, indeed, of Mr. Browne's state trials have no reference to treason or conspiracy. But the fashionable blackguardism of fifty or sixty years ago was at least as dreary and characterless as its sedition. A man must have a strange taste for the details of low intrigue who can feel much interest in the miserable contest between George IV. and his Queen. The "delicate in-

vestigation," the Milan inquiry, the Bill of Pains and Penalties, and the like, are matters which it is impossible for any one concerned in the history of the century wholly to overlook: they throw a curious light on the state, not of England, but of the English court, when George IV. was King. But in themselves they are matters neither more important nor better worth recollection than the daily records of the police court. Great qualities are needed for the making even of a great villain, and the scoundrels who during the first quarter or so of this century found in the English law courts a stage on which to exhibit their vices had not capacity or originality enough to give them a high rank among notorious rogues. The Duke of York and Mary Ann Clarke, the Earl of Berkeley and Miss Tudor, George IV. and Queen Caroline, have one and all of them the unmistakable note of commonplace vulgarity. For invention, for resource, for humor, they cannot compare for a moment with the Claimant. As the world goes on, even crime and blackguardism, there is reason to hope, improve in quality. In the field of roguery, no less than in that of politics, Mr. Browne is forced to deal with the adventures of persons who, if we except Lord Cochrane, all lacked any touch of greatness or genius.

An ill-written book, the work of an incompetent narrator, which tells for the most part dull stories about dull persons, may, in the strictest sense of the word, be called worthless. Yet, for all this, we have no hesitation in asserting that Mr. Browne's book is worth reading, and, what is more, is worth reading with some thought and attention. The narratives of state trials are worth reading, because they bring into a clear light several aspects of recent English history which are constantly overlooked, and yet are in their way of supreme importance. No one, for example, who reads Mr. Browne's pages with any intelligence, can doubt that the standard of public morality in England has risen immensely since the beginning of the century. The statesmen, the politicians, and officials of to-day have faults of their own enough and to spare. The men of the Gladstonian era may lack the nerve, the force, and the character to maintain the empire which was defended and preserved by the generation that idolized Pitt, remembered the greatness of Chatham, and produced Peel and Wellington; but no one can doubt that the Ministers, the Secretaries, the Under-Secretaries, and the administrators generally who have held office for the last fifty years have been, as a body, incomparably more honest than the officials who flourished eighty years ago. Pitt's public honesty was, it is true, proverbial; but when a particular Minister is praised because he does not plunder the country, we may be pretty sure that the mass of officials are accustomed to dip their hands freely enough into the national Treasury. The records of the law courts are in such a matter worth a hundred general statements. Lord Melville may have been in reality, as well as technically, innocent of every offence laid to his charge. The Duke of York may possibly have been so complete a fool that he ought not to be considered a thorough-paced knave. But we may be sure that when Melville was Treasurer of the Navy, and the Duke Commander-in-Chief, favoritism and corruption must have been rampant throughout the public departments over which the Viscount and the Duke presided. It is hard, further, to believe that men like Alexander Davison and Valentine Jones were not to be found in other departments than the commissariat. The trials which laid open to the nation some, at least, of the secrets of official corruption and official incompetence took place between 1806 and 1809, just at the moment, that is, when England was engaged in her life-and-death struggle with Napoleon. It is difficult at first sight to reconcile the external with the internal view of English political life. As we read of sieges, of battles, of victories, of patriotic exertions for the defence of the country, we picture to ourselves an age of heroes. As we read of frauds on the commissariat, of corrupt sales of commissions, we fancy that the age was one in which rogues in high places were rapidly bringing the whole country to the brink of ruin. The apparent contradiction can be reconciled only by admitting that an age of national glory need not be an age of high public morality. The regiments which fought and conquered in the Peninsula were, it is said, recruited from the jails and the hulks. The royal Commander-in-Chief who distributed promotion in accordance with the suggestions of Mary Ann Clarke, might well, under slightly different circumstances, have been sent to stand his trial at the Old Bailey. It is surely one of the strangest strokes of the irony of history that scoundrelism and incompetence should have flourished at the very period which future historians will paint, and paint with truth, as the age at which the glory of England reached its highest point.

The history of nations is never in reality a mere exhibition of the sarcasms of Providence. There is, if any one considers the matter fairly, a true connection between the public corruption at home and the national glories abroad which mark the first twenty years of the century. England was not corrupt. The tone of political life had risen for at least a century, and was every day rising. But a time of war is almost of necessity a time of corruption: the absence of reform means the growth of abuses. Moreover, the administrative machinery of English government needed complete supervision and rearrangement; and at the very moment when it required repair, it had to bear a greater stress of work than has ever been laid upon it before or since. The wonder is not that many officials should have been corrupt and incompetent, but that there should have been found among the governing classes enough men of honesty and vigor to carry the country with success through the crisis of her fortunes. The ship needed repair, but the energy of the crew and officers brought her safe into port.

But let no optimist suppose that England did not suffer from the patent vices of her institutions. The plain and undoubted fact is, that for the first thirty or forty years of the nineteenth century the people of England were in a more or less constant state of suffering and discontent. The trials of the Luddites in 1813, the trials for high treason of 1817, the Peterloo massacre of 1819, the Cato conspiracy of 1820, the passionate excitement caused by the proceedings against Queen Caroline, the whole history of men like Despard, Watson, Hunt, Brandreth, and a score of others—tell a tale of popular misery and of popular discontent the meaning of which is unmistakable. The men whose names we have mentioned were, it will be said, conspirators or agitators of a mean and despicable type. Despard was, indeed, a soldier of some ability, and Hunt a speaker of some power; but no doubt the democratic leaders or conspirators whose plots from the beginning of the century alarmed the Cabinets of George III. and of the Regent, were for the most part persons of little ability or character. Not one of them rose intellectually to the level of Wilkes, Horne Tooke, or Thomas Paine. It would be ridiculous to compare any of them with agitators of the mould of O'Connell, of Cobden, of John Bright, or even of Feargus O'Connor or Ernest Jones. Their schemes were wild and incoherent, their means of accomplishing their plans laughably inadequate for their object. The Cato Street conspiracy had about it an element of horror; but that any man should have thought he could work a revolution by assassinating the whole of the Cabinet, would, but for one circumstance, argue at least as much insanity as wickedness. The one circumstance which makes it possible to believe that conspirators such as Thistlewood, Watson, or Brandreth were not madmen, is their knowledge of widespread discontent and suffering among the masses of the people. In this point of view, the popular leaders with whom we are concerned gain a certain historical importance from their individual insignificance. When the acts of Hunt, of Watson, or of Brandreth could seriously alarm the English Government, there was, we may feel sure, something very critical in the state of the nation.

A good deal of allowance must be made for the panic caused among the well-to-do classes by the recollections of the French Revolution. Still, the Ministers of the Regent were not fools or cowards. They undoubtedly committed the mistake of supposing that spies, informers, special commissions, suspensions of the habeas-corpus act, and the like, could cure a disease of which such measures can only suppress the outward signs. But it is folly to suppose that Perceval, Lord Sidmouth, Lord Eldon, and the Tory statesmen generally were mistaken in thinking that a spirit of disloyalty and sedition was threatening the institutions of the country. Respectable Radicals like Bamford, ruined adventurers like Despard, and fanatics like Brandreth, were on this point quite at one with prime ministers and privy councillors. Every man who really knew the state of the country between 1800 and 1830 was well aware that a revolutionary spirit was abroad. The growth of pauperism, the severity of taxation, the disturbance in social arrangements caused by the rapid growth of manufactures, the absence of all attempt to reform institutions which had long been unsuited to the changed conditions of the country, were, it is perfectly plain, during the first quarter of this century creating that condition of popular sentiment which every one now knows to be the certain sign of approaching revolution. Whoever wishes to realize how near England came to being swept into the general revolutionary movement of the age, will find an infinite amount of instruction in the careful study of the book before us.

RECENT NOVELS.

The Revolt of Man. [Leisure-Hour Series.] Henry Holt & Co. 1882.

Heaps of Money. A Novel. By W. E. Norris. New York. 1882.

The Eleventh Commandment. A Romance. By Anton Giulio Barrili. From the Italian, by Clara Bell. New York: William S. Gottsberger.

Dorothea. [Round-Robin Series.] Boston: Jas. R. Osgood & Co.

Why Frau Frohmann Raised Her Prices. By Anthony Trollope. Harper & Bros. [Franklin Square Library.]

A Reverend Idol. Boston: James R. Osgood & Co.

An Echo of Passion. By George P. Lathrop. Boston: Houghton, Mifflin & Co.

Rocky Fork. By Mary Hartwell Catherwood. Boston: D. Lothrop & Co.

The Rival Heirs. By the Rev. A. D. Crake, B.A. New York: E. & J. B. Young & Co.

L'Abbé Constantin. Par Ludovic Halévy. Paris: Calmann Lévy; New York: F. W. Christern.

From Hand to Hand. From the German of Golo Raimund, by Mrs. A. L. Wister. Philadelphia: J. B. Lippincott & Co.

Lottie of the Mill. From the German of W. Heimburg, by Katharine S. Dickey. Philadelphia: J. B. Lippincott & Co.

Castle and Town. By Frances Mary Peard. Philadelphia: J. B. Lippincott & Co.

If satire to be successful needed only to be elaborate, 'The Revolt of Man' would be one of the greatest successes in the way of satirical writing since the days of Swift. It is directed against the woman's-rights agitation, and, like most satires of the kind, endeavors to turn the cause into ridicule by a picture of some of its probable remote consequences. In this case we are introduced to the England of the future—a country in which women are not merely entirely emancipated from man's yoke, but make laws for and govern him. The Great Transition and the Transfer of Power have been brought about. Women have been gradually substituted for men in the affairs of state; the monarchy has been abolished—a pure theocracy, with the Perfect Woman for its ideal head, has taken its place; man's rough and rude strength has been disciplined into obedience. Parliamentary government still exists, but it is in feminine hands. A ministry known as All the Talents is succeeded by one known as All the Beauties. But in the House of Peeresses a wide latitude of debate is permitted: one peeress taunts another with her youth, or with an alleged lover, or with trying to be thought prettier than she actually is, etc., etc. At the opening of the book, the ministry gets into trouble by asking for a commission of inquiry into the general condition of the men of the country. The Home Secretary, Constance, Countess of Carlyon, gives the following account of her position in the matter:

"I showed that the whole of the educational endowments of this country have been seized upon for the advantage of women; I suggested that a small proportion might be diverted for the assistance of men. Married men with property, I showed, have no protection from the prodigality of their wives. I pointed out that the law of evidence, as regards violence toward wives, presses heavily on the man. I showed that single men's wages are barely sufficient to purchase necessary clothing. I complained of the long hours during which men have to toil in solitude or in silence; of the many cases in which they have to do house-work and attend to the babies, as well as do their long day's work. And I ventured to hint at the onerous nature of the Married Mothers' Tax—that five per cent. on all men's earnings."

This shows the general drift of the satire, which is certainly harmless, if commonplace. In the course of time, the seeds of revolt are sown; man rises and throws off his yoke, and re-establishes his old supremacy. This being done, the subjection of woman is once more an accomplished fact, and the old order is restored. The plot of the novel, in which there is a sufficient amount of love and adventure to carry the reader through the satire, alone makes the latter readable.

Mr. Norris became very well known to the novel-reading public last summer by his 'Matrimony,' and to a less extent by 'Mademoiselle de Mersac.' 'Heaps of Money' must have been one of his earliest, if not his very first attempt at fiction; and in a slight way a very charming attempt it is. We will not spoil the reader's pleasure by giving him any analysis of the plot, which concerns the adventures of a very interesting young woman who not only desires, but obtains, "heaps of money." The scene is laid in part on the Continent, and among the incidents is a very cleverly-managed affair of honor, in the narration of which Mr. Norris displays the same familiarity and sympathy with the weakness and pettiness of human nature which are the source of so much of the attraction of 'Matrimony.' Perhaps we ought to say, knowledge of human nature as a whole; but while he undoubtedly understands its good as well as its bad sides, it is over the latter that in his later book he lingers most lovingly. On the other hand, to most readers of 'Matrimony' the author is merely an accomplished cynic; but any one of them who will take the pains to look into 'Heaps of Money' will see that the cynicism of the later story is founded upon a matured observation and reflection—that deep and growing insight into the selfishness of man which time and experience so often produce in the candid writer of fiction. When he wrote 'Heaps of Money' he had observed and reflected less; hence, as a love-story, the earlier is the better of the two. As novels, their positions have to be reversed.

A translation from the Italian is so unusual that the mere announcement attracts attention. The publishers have been specially fortunate in their choice of 'The Eleventh Commandment.' It is a gay, sparkling little comedy. The first act passes amid the petty strivings and plottings of a little old Italian town, with its sub-prefect and its registrar-general. Enter a grand personage, a duke, who is seeking a richly-dowered bride. Act ii.: Up in the mountains, above the town, in an old monastery, is gathered a party of nine gentlemen who have voluntarily bound themselves together as the "Reformed Order of Saint Brund." They devote themselves to archæology and the publication of a scientific journal—"monks who are not monks, a craze worthy of an Ariosto," but the country people call it "the convent of madmen." To them enter a young novice with "round, fresh face like an archangel out for a holiday," with his uncle, likewise a novice, a portly, comfortable man of fifty. The young novice brings to the community an eleventh commandment: "Thou shalt stay among thy fellow-men, live their life, love and suffer as they do; for thou mayest not escape the common lot." Act iii. we leave to the reader to make out for himself. The book is so wholly without pretension, and so lightly told, that one pardons minor faults, and no more questions probabilities than one would in 'The Princess,' which, *mutatis mutandis*, it is not unlike.

The author of 'Dorothea' adopts the Philadelphia Exposition of 1876 for the setting of the story; and very pretty it is. The scenes are happily chosen and lightly, gracefully sketched, with an appreciative sense of the humor in many of them; but for plot and character the book amounts to nothing.

'Why Frau Frohmann Raised Her Prices' is the first and most entertaining of three short stories in Mr. Trollope's best manner. It is a pleasant form of altruism to imagine upon how many piazzas it will be read aloud with delight this summer.

'A Reverend Idol' is but a lay figure, spite of the very strenuous attempt to make it like life. All clerical and manly virtues are heaped upon it, but all fail to produce reality. The heroine, however, is at moments a creature of true flesh and blood, and in those moments the author has actually succeeded in *making* her charming, not merely saying that she is so. Even in scenes which can be nothing but ridiculous, she is, let it be frankly admitted, adorable. But the want of sustained power, either in description or in portrayal of character, makes the book only a medley of incongruous elements. The heroine is by turns a young *ingenue*, a Daisy Miller, a Dorothea Brooks, or an Angelica Kauffmann. Any discrepancies or inconsistencies are of little concern to the author, who makes nothing of the difficulties of putting high art, woman's sphere, the Cooking-School, and "Studies at Home" all into one story, besides the soul-perplexities of the clergyman and a proper amount of satire upon his feminine admirers. Left to themselves in a lonely farm-house on Cape Cod, what could these two do but fall in love? And a very pretty idyl it might have made but for the necessity for a plot. A most dreadful one it turns out to be, and the prudent reader will close the book when Mrs. Van Cortlandt, the superlatively handsome widow, enters "to play a Satanic game"; for the last that is seen of the heroine she is drowning herself, and the last that is heard of her the wedding-cards are just out, and there is not even the poor satisfaction of knowing how the reverend idol justified his foolish and cruel mistrust. Such a tale had best be left to the dime novelists, who at least understand their trade. The boldest would not venture such an impossibility as a young girl's going without detection from New York to New Orleans in man's attire, with wig, false moustache, and seven-shooter, besides the trifling addition of a young wife.

In profound and beautiful contrast is Mr. Lathrop's 'An Echo of Passion,' in which a woman who might have played this same wicked part resists temptation, though sorely tempted in herself, and becomes the higher and better conscience to the man who loves her, and who is loved by her, though both in spite of herself. The book would be more telling if it were written more simply and heartily. It is weakened by a kind of refining which produces not so much refinement as thinness.

'Rocky Fork,' a book with very attractive illustrations, tells the story of a few summer days in a little neighborhood of farmhouses of central Ohio long ago. The children are the central figures, but there is a due background of older people. Though the book has not the exquisite artistic finish which made the little 'Hector' the unique book of last winter, it has the same simplicity and sweet homeliness. Very rarely has plain, rough country life been so faithfully described. It seems usually impossible to do it without a tinge of vulgarity, which is just what true American country-life escapes. Some fine fibre in American nature, when close to fields and woods and sky, keeps it always noble, however rude the exterior. If there is a hint toward the end of the book, that refined manners are of their nature insincere, it is evidently a tribute to some supposed prejudice of the sort, not out of the writer's own conviction. Her people are all graciously attractive—the schoolmaster, with "sweet severe face under iron-gray hair"; Lisa, the guardian of the doctor's motherless children ("comely and important, she was a woman with a wholesome soul, and they all got on comfortably"); and the great-aunt from the far-off Sharon, to the children "a rose-leaf lady." "She inclined her cheek toward the bashful eager little face, and Bluebell felt as if she had kissed a white hollyhock's yielding petal." It is useless to try to transplant the children. They must be known in their own woods and meadows. Theirs was a blessed world of happy "make-believes" when simple pleasures yet had charms. One bit will give the delicate tone in which all this picture of primitive life is shaded. A child of nine is waiting at the bars for the cows:

"She had called them from the other side of the run, with long intonations: 'Su-kee! Pi-dey! Ro-see! Suu-kee!' Pidey's bell had tinkled accompaniment, recording their progress on the way. Now it dingled down the opposite hill with such a clamor that Bluebell could fancy the knock-kneed trot of both cows; and now it thumped as they plunged into the run; then it wandered along, pausing over some very sweet

bunch of grass, jerking at a mouthful of sweetbriar, and finally coming to the bars in perfect marching time: 'te-ding, te-ding, te-ding, a-ding, ding.' Bluebell had never heard an organ or an orchestra. She thought that cow-bell in the dim landscape, with echoes coming back from the hills, the most softening music in the world. The sound brought with it a smell of roses, of grass after rain, and clover."

'The Rival Heirs' were Saxon and Norman in the years between the battle of Hastings and the return from the first crusade. It is a tale for the elders in the school-room, and for the purity and smoothness of its style it may be commended to such of them as can stand the horror of the deeds of a brutal time. The bare outlines which the chronicles furnish have been filled in with details almost too real, some of them, in their cruelty. The author follows scrupulously the lead of such writers as Freeman, and perhaps it is his very painstaking which deprives his work of the fascination of books confessedly far less accurate. The great historical novel, like the law, *de minimis non curat*, while it shares with the legend that strange quality of being truer than the truth.

The firm of Henri Meilhac & Ludovic Halévy, makers of plays, has finally dissolved, and the junior partner has given up the stage. He intends to devote himself to prose fiction, believing that the time is at hand when the French novelist will be as well remunerated and as highly honored as the French dramatist. M. Halévy has long been known as a writer of sketches and short stories of astonishing point and humor. Gathered into three volumes—'Madame et Monsieur Cardinal,' 'Les Petites Cardinal,' and 'Un Mariage d'Amour'—they have already been sold to the extent of more than fifty thousand copies in all. M. Halévy's first novel had above twenty editions—a success remarkable enough anywhere, and doubly so in France, where a sale of five thousand has been known only at long intervals until very recently. All American readers of 'L'Abbé Constantin' will incline to believe that this success is well deserved, for it is due to the charming portraits of two American girls. M. Halévy has joined the group of the international novelists, and, although perhaps he never heard of Mr. Howells or of Mr. James, he is walking in their footsteps and working with their tools. One of the authors of that personification of feminine Parisianism, Froufrou, has now attempted to draw a cousin of Lydia Blood and Daisy Miller. Strange to say, the attempt is a complete success. Mrs. Scott and her sister, Miss Bettina Percival, are true Americans—and they are true ladies. It is perhaps a tribute to the purity of the American character that the story in which these ladies play the principal part is not only altogether delightful, but as innocent as it is interesting. The creator of Madame Cardinal has in 'L'Abbé Constantin' written the healthiest and most wholesome French novel since M. About's 'Roman d'un Brave Homme.'

The three books last on our list are all stories of Germany, though but two are translations. 'From Hand to Hand' begins, as a certain class of German novelists like to do, with the marriage of the hero and heroine. She is a child, and the scene is beside the death-bed of her father. The joys and griefs of three generations are inwoven in the plot, and all sorts of complications follow the marriage, under the malign influence of the widowed sister-in-law of the hero. The book tires, like music when some notes, though not exactly discordant or false, are too loud. 'Lottie of the Mill' is a fair example of another specific type of German novel. The impoverished nobleman seeks to restore the fallen fortune of his house by the marriage of his son to the daughter of the rich paper-maker. Both these translations are well enough done to encourage the hope that we are at last coming to really good work in this difficult line. "Gems of culture," however, is a mixed metaphor that is neither good English nor good German. 'Castle and Town' elaborates the same theme, but in a finer strain. The two books are like the same melody arranged by different hands. The latter, within its modest limits, is singularly well sustained and harmonious. There is a Nuremberg episode, which, without delaying the action of the story, sets before the reader all the charm of that "quaint old town of art and song."

FISHER'S PHYSICS OF THE EARTH'S CRUST.

Physics of the Earth's Crust. By Rev. Osmond Fisher, M.A., F.G.S., etc. Macmillan & Co. 1881.

THE earth is certainly a hot body, which is slowly cooling and shrinking. This process has been going on since a time at which the surface was in a state of fusion, and there is no reason to suppose that it will not continue indefinitely. Most of the physical influences which have determined the character of past geological ages were dependent upon this general fact, and so too will be the future of the globe and of its inhabitants. It is conceivable that the earth may be solid throughout, or that it may be a melted globe surrounded by a solid shell, the "crust of the earth"; or that it may be solid at the surface and at the centre, with a fluid stratum between. For the correct reading of the past and the future, it is exceedingly important to know which of these suppositions is the true one; to which of these conditions we must ascribe the distribution of land and sea, the upheaval of mountain ranges, earthquakes, volcanoes, the score of complete changes in animal and vegetable life which have left their traces in the sedimentary rocks, and many other striking features in the history of the globe.

The problem of the condition of the earth's interior can be approached in two ways: we may inquire what subterranean conditions are compatible with the surface phenomena, or study the behavior of the globe to other bodies, especially to the moon and sun. As long as the latter method was neglected it was believed that only the supposition of a solid crust floating upon a melted globe could account for volcanoes and allied evidences of high temperatures, and of the presence of melted matter at considerable depths. Hopkins was the first to argue, some forty years ago, from astronomical grounds, that the earth showed a rigidity incompatible with an essentially fluid condition. Of late years Sir William Thomson has resumed the subject from a similar, but somewhat different, standpoint; and still more recently, Mr. G. H. Darwin has discussed it by ingenious methods of his own. The latter gentlemen have indeed shown that a portion of Hopkins's arguments were illusory, but they confirm one another fully in pronouncing the globe a rigid body still more emphatically than Hopkins. Were the interior of the earth fluid, but its crust three hundred miles thick, and made of continuous steel, the surface would still, according to Sir William Thomson, yield so freely to the deforming influence of sun and moon that it would carry the waters of the ocean up and down with it, and there would be no sensible tidal rise and fall of water relatively to land. The external layer or crust of the earth is therefore sensibly rigid. The phenomena of nutation, however, prove that the earth is not a rigid shell filled with liquid, nor is such a shell physically possible. The earth can, therefore, possess such a rigidity as it exhibits only because it is solid from the surface downward to a depth so great that it cannot be regarded as a shell filled with liquid; or, in other words, the fluid interior, if there is one, must be an insignificant portion of the whole globe, and lie at a vast distance from the surface.

This seems a strange conclusion when it is considered that there are now hundreds of active volcanoes, and that the areas of land are few and small which do not show that great masses of eruptive rocks have poured over them in past ages. Then, too, as the thermometer rises one degree Fahrenheit for every fifty or sixty feet of depth below the surface of the earth, a temperature must be reached within a hundred miles at least equal to that of melted lava. But the pressure also increases with the distance from the surface, and the temperature necessary to fusion increases with the pressure; so that, as Hopkins pointed out, the interior of the earth may be solid in spite of being heated much above the point at which the same material would melt were the pressure no higher than at the surface. In spite of the imposing character of volcanic eruptions, they may be fed from accumulations of melted matter insignificant compared with the size of the earth; and it may be that lava, though intensely heated, only becomes liquid through some local and temporary relief of pressure. It is in virtue of an analogous relation that superheated water flashes into steam when a boiler bursts and the pressure is relieved. There are still other phenomena, such as the crumpling of strata attended by horizontal movement, which might be explained on the supposition of a fluid interior; but there are few phenomena in nature which, taken singly, are susceptible of but one explanation, and these are not of that character.

Geologists have been very reluctant to abandon the theory of a fluid interior, and the Rev. O. Fisher maintains that it is necessary to suppose the surface of the earth a crust floating on a liquid substratum. Hopkins, Scrope, Hunt, and others, have held similar views, with some modification. The thickness of the solid crust Mr. Fisher places at twenty to thirty miles; the depth of the substratum he does not state, but indicates on page 132 that it must be at least something like twenty miles. Mr. Fisher quotes Sir William Thomson's arguments as to the rigidity of the earth at some length; but he thinks that the tides in the fluid substratum "would not be of the nature of the tides contemplated by Sir William Thomson, as affecting the entire spheroid, but more nearly analogous to the ocean tides." Mr. Fisher thus allows that there must be tides of some sort in the substratum, and such tides must evidently be waves, following the moon like the oceanic tidal-wave. It would seem that the crust floating upon it must yield flexibly to such a subterranean tide, or else be fractured. Nothing that is known of the nature of the earth's crust indicates that it could yield flexibly to a stress of such short duration in any given direction as that due to the moon, and, if it did so, it is more than probable that evidences of the fluctuations of the crust would already have been perceived. None such, however, have ever been detected. If, on the other hand, the crust behaved as a brittle shell, the passage of the subterranean tide would be marked by phenomena similar to those observed in the great oceanic ice-sheets of the arctic regions. Fissures would form at short distances, and these fractures, and the minute dislocations which would accompany them and would recur at every tide, would keep every portion of the earth's surface in a nearly continuous tremor.

The retention of the supposed solid nucleus in its central position, too, as well as the behavior of the crust, requires explanation. None of

these points are discussed, or even mentioned, by Mr. Fisher, who, having presented Sir William Thomson's views, contents himself with showing that it is possible for solid lavas to float upon liquid ones, and that Hopkins regarded a fluid substratum as a physical possibility. He therefore draws the conclusion that a fluid substratum may now exist. In a later chapter he shows that certain phenomena of the upheaval of mountain ranges might be conveniently explained by the supposition of a fluid substratum, and this leads him to pronounce his hypothesis necessary as well as possible. This reasoning is in the highest degree unsatisfactory. Mr. Fisher appears to suppose that, by assuming the solid nucleus to reach within, say, forty miles of the surface, he satisfies the astronomical conditions. But this is far from being the case. The earth manifests its rigidity by the behavior of its surface, and, regarded from that surface, it is a rigid body. If any one were to maintain that the earth is fluid for a few miles from its centre, astronomers might have little to say against the hypothesis, though physicists would object. Just so the surface of a solid ball, say of steel, might behave toward external forces sensibly like that of a second similar ball with a small fluid cavity at its centre, but assuredly not like a body consisting of a thin envelope enclosing a fluid in which a large solid nucleus was held in suspension. This, however, appears to be Mr. Fisher's supposition; but to establish satisfactorily the existence of a fluid substratum, it would be necessary to show that Hopkins, Thomson, and Darwin are fundamentally in error in their arguments as to the action of tides and the conditions of nutation.

In order to obtain a "datum level" from which to measure the upheaval and subsidence of tracts of the earth's surface, Mr. Fisher resorts to a very ingenious expedient. He believes the surface of the earth to have been without elevations or depressions when the crust first solidified; and he argues further that, had the crust been perfectly compressible horizontally, it would have remained smooth during contraction. The position which the surface of such a crust would have occupied forms a very excellent and natural level from which to measure elevations and depressions. If the earth had been a solid body through geological time, this datum level must nearly correspond with the lowest depths of the ocean, and all variations from it must be elevations; while, if the crust rests on a fluid substratum, a portion of the present inequalities are to be regarded as depressions below the datum level. Taking probable values for the contraction of cooling rocks, Mr. Fisher shows that the amount of shrinking which could be supposed to have occurred if the earth were solid is greatly insufficient to account for the elevations which actually exist.

This ingenious argument, however, will scarcely bear examination; for, in spite of Mr. Fisher's assertion that no evidence can be adduced which is opposed to the supposition that the crust was without inequalities when it first solidified, such a supposition will appear to many in the highest degree unlikely. The earth is unquestionably a mass of heterogeneous materials of greatly differing densities. While the globe was still in a highly fluid state, an approximate separation into concentric layers, arranged according to their specific gravity, no doubt occurred; but as the temperature of solidification was approached, other physical properties of the constituents must have come into play. Some substances become viscid at much higher temperatures than others, and there is a great difference in the melting-points of various rocks. Layers of equal density must therefore have been far from uniform in their mobility. As long ago as 1879, Mr. G. H. Darwin showed ('Philosophical Transactions,' p. 589) that while the earth was still somewhat viscous and not perfectly homogeneous, the attraction of the moon must have induced wrinkles on its surface, of a form suggesting the present continental areas; and he strongly inclines to the opinion that the distribution of land and water, both on the earth and Mars, is attributable to this cause. Though the tops of the highest mountains are some ten miles above the lowest sea-bottoms, the elevations and depressions of the earth's surface bear, after all, a very small relation to the size of the globe—a relation which has been aptly illustrated by comparison with the slightly uneven surface of an orange. That variations of form of this order should have occurred on the surface of the globe at solidification, does not seem *à priori* improbable, even without regard to Mr. Darwin's argument, and observations have been made which tend to confirm such a view historically. The regions underlying continents are certainly less dense than those beneath the ocean, and there must have been a similar difference as long as oceans and continents have coexisted. There are also strong geological grounds for believing that continental areas have always been confined to the same regions of the globe as at present, and though this does not necessarily imply that the inequalities were pristine, it at least lends such a supposition considerable probability. In short, the hypothesis of an originally smooth globe requires stringent proof, while Mr. Fisher assumes it as self-evident.

Many topics of dynamical geology are discussed in 'Physics of the Earth's Crust,' for the most part by mathematical methods. Some of the discussions show great ingenuity, but the conclusions are all more or less affected by the exceedingly questionable assumptions of a fluid substratum and an originally smooth surface. Mathematical reasoning is, indeed, the most precise form of logic; but, in dealing with physical questions, the premises cannot be mathematically established, and unless the data of a physical argument can be so proved and tested, by observation or otherwise, that they may fairly be considered as demonstrated, mathematical reasoning from them is not only tediously elaborate, but altogether illusory.

The Naval War of 1812; or, The History of the United States Navy during the last war with Great Britain. By Theodore Roosevelt. G. P. Putnam's Sons.

The War of 1812 was the golden age of naval fighting. In it "the art of handling and fighting the old broadside sailing-frigate in single conflict was brought" by our little Navy "to the highest point of perfection ever reached." The English nation had achieved a supremacy of the sea which has never been equalled before or since. The European wars had thrown a large part of the carrying trade of the world into American vessels, and built up a great mercantile marine. Such a marine is the best foundation for a naval one. In this case our Navy was fostered by the principal *casus belli*—the impressment of Americans into the English Navy. The result was a contest between men of the same race—the most web-footed in the world—trained in the same school, in similar ships, with similar weapons, and under officers of similar experience and skill. The scenes presented were most dramatic, and singularly fitted to affect the imagination. They furnished some of its best material to the vigorous and vivid genius of Cooper, and will live longer in his novels than in his more serious narrative.

The difficulty of reconciling reports and fixing figures relating to our last war takes away from our surprise at the same perplexities in events of seventy years ago. The passions smouldering since the Revolution then burst out afresh, and our brilliant and unexpected success made them more outspoken on both sides. One result seems to have been exaggerations and misstatements, sometimes honest and sometimes not, by both parties. In this mendacity the Americans must yield the palm. Their case is principally known from Cooper's history. His genius for romance was too famous for his statements to be received literally. The English account is mainly given by Brenton and James. To the latter Mr. Roosevelt addresses himself with a thoroughness of preparation and knowledge like that he praises in his naval heroes. While giving full credit to his ability and research, he proves him, in more than one instance, not only to have made false statements, but to have done so intentionally.

One prominent object of this book is the investigation and correction of such errors. A complete account of the naval events of the war is given, and their merits considered. The impartiality of the author's judgments and the thoroughness with which the evidence is sifted are remarkable and worthy of high praise. Log-books are consulted to show attention to drill; muster-rolls for numbers of combatants; contracts for descriptions of vessels; reports, and in their absence official letters of commanders, for evidence on disputed points; and the fullest use is made of original records to check collated published accounts. The descriptions of engagements are clear, sober, and in good taste, and from their matter often thrilling. The effect is never injured by fine writing, and there is no attempt at the personal element appropriate to participants or to the writers of fiction.

Great attention is paid to determining the relative force of combatants, and the methods generally must command assent. Some of the assumptions, however, would certainly seem violent if carried to extremes. The subject involves the consideration of numbers of crews and guns as well as the calibre and range of the latter. Some advantages, like speed and *ableness* in manœuvring of ships, discipline and courage of crews, skill and ability of officers, etc., hardly admit of being expressed in numbers. Some peculiarities may be of great value under some circumstances, and of none under others. The *Adams*, for instance, is said by tradition to have been fastest on one tack, and to have once owed her escape from pursuit to getting on this in the night. Some ships are relatively faster going free, and others on the wind. It is manifestly impossible to make a just allowance for every advantage. If it were possible, the rectified, computed result of every action would be a drawn game, with no superiority to either side. When so many considerations must be excluded it may be questioned whether it is desirable to attempt any comparison between the relative value of long and short-range guns of the same calibre. Such a relation may perhaps be satisfactory for a particular case, but no more admits of a general statement than the relative force of a blow and a pressure. If the vessel with the longer range can choose and keep her position, her antagonist can inflict no injury on her, and one gun is better than a thousand of shorter range. This was the case in the defence of the *Essex* against the *Phœbe*—the most desperate in the war. At short range the two classes of guns would be nearly equal. It is hardly satisfactory, therefore, to assume in any case, as Mr. Roosevelt does (though, it must be allowed, with cautious qualification), that one long-range gun is equivalent to two carronades. The assumption may help to illustrate a conclusion already reached, but it cannot add much to its

conviction. In the same way, and for much the same reason, the tacit assumption that the damage inflicted should bear some proportion to the force is fallacious. If the *Phœbe* had carried fewer guns, but their range had enabled her to keep entirely out of reach of the *Essex*, the damage she inflicted might conceivably have been no less. It might have been longer in inflicting.

These battles belong to a past era as truly as the sea-fights at Sphacteria and Salamis. But whatever new modes of destruction science may introduce, so long as the race of man survives, no higher exhibition of manhood can be made than the decks of these little frigates witnessed. The true and just descripton of them, freed from distortion and falsehood, must always be gratifying and stimulating to patriotic pride. But more than this, it teaches clearly and emphatically, and with an ominous warning, the essential conditions, slow of growth but indispensable, on which naval supremacy in all ages depends, and without which it is hopeless. The best ships of their class and time, with the best machinery and all material preparation; the best drilled and disciplined crews, taken from an apprenticeship in a flourishing mercantile marine; and the most experienced, accomplished, and able commanders, are the requisites. With these in perfection a navy inconsiderable in size made itself dreaded and famous. Without these the more numerous a navy the more it invites disaster.

Victor Hugo and His Time. By Alfred Barbou. Translated from the French by Ellen E. Frewer. Harper & Bros. 1882. 8vo, pp. 275.

M. BARBOU is a high-priest of the Hugo cult. He tells the tale of his hero's career with unflagging eulogy. In his youth Hugo was a "sublime infant," in his manhood he was a marvel, in his old age he is a wonder. The bare facts of Hugo's life are given here with sufficient accuracy, but M. Barbou is plainly lacking in the critical faculty. In his eyes, any one who praises, or has praised, Hugo is a distinguished writer of sound views; while any one who has detected any of Hugo's colossal defects is either foolish or knavish. We pass by Gustave Planche, but the author's treatment of Sainte-Beuve (see pp. 111 and 134) is inexcusable, and only atoned for by his unlucky quotation of a remark of Sainte-Beuve's made in 1835, to the effect that Hugo's "egotism was unbounded," and that he "recognized no existence outside of his own."

In its present form, this is an enlarged and copiously illustrated edition of an earlier and simpler biography of Hugo published three or four years ago. An American translation of the original book was issued in Chicago a year ago. The present translation is by an English lady, and is very bad indeed. It is dull and heavy, to begin with, and then it is inaccurate. "Éditeur" is rendered "editor" (p. 68) instead of "publisher"; and "couplets" is transliterated as "couplets" (p. 214) instead of "songs," etc. "Féerie" is turned into "pantomime" (p. 119), and we are told that among Hugo's unpublished dramatic MSS. is "a pantomime, 'La Forêt Mouillée,' in which trees and flowers are made to talk"—surely an odd thing for a pantomime. The illustrations are of very varying value. Some, like the drawing of Cromwell on horseback at the head of his troopers (p. 83), not only depict no scene in M. Barbou's book, but have a very remote connection with any work of Hugo's. Others, like the views of the different houses Hugo has lived in, are more appropriate and useful, although the printing is so cold and harsh that even when the woodcuts are good in themselves they fail to please. Quite the most interesting feature of the book is the number of engravings of Victor Hugo's own drawings, from the chicken in the eggshell, which typifies the "nonsense I wrote before I was born," to the dark and striking profile of a "Castle on the Rhine," signed in bold letters almost as tall as the towers of the castle, and dated 1866. To Americans, perhaps, the most curious sketch is the shadowy scaffold and the hanging figure of John Brown, athwart which fall a few rays of the coming dawn.

Chambers's Etymological Dictionary of the English Language. A new and thoroughly revised edition. Edited by Andrew Findlater, M.A., LL.D. London and Edinburgh: W. & R. Chambers. 1882.

HAVING delivered himself on English science, as being amply sufficient in itself, Dr. Johnson proceeded to pronounce that "the more airy and elegant studies of philology and criticism have little need of any foreign help." And he also satisfied himself that "we know nothing of the scanty jargon of our barbarous ancestors." If, then, between his easily avoidable ignorance of Anglo-Saxon—ignorance going so far as to describe its unknown subject-matter as a "scanty jargon"—and his limited conception and frivolous estimate of philology, his Dictionary, in its etymological department, is seen to be a miserable failure, such a result is only what was to be expected. But his were days when philology was as yet in its stammering infancy. Of Anglo-Saxon, and equally of the numerous other languages from which our own is derived, we are now able to speak with a confidence which was impossible in any past age. Indeed, English etymology has already matured into a science to which, considering its essential character, there adheres, on the whole, but very little uncertainty. To present, in a book that can comfortably be held in the hand, an English dictionary aiming at once to define and to etymologize, is an enterprise which has the merit of novelty. The convenient manual published by the Messrs. Chambers, while not pretending to original research, has laid under contribution many, and indeed most, of the latest and most accredited sources of relevant materials, and has utilized them with sound judgment. Here and there, to be sure, it leaves a blank which is readily supplied, as in the case of *cockroach*, metamorphosed, pretty certainly, from the Portuguese *caroucha*, "chafer." And it might have done better than repeat the absurdity, "*topsi' to'er way*, corr. of 'topside the other way,'" quoted by Mr. Wedgwood, and previously quoted by Dr. Richardson, in elucidation of *topsy-turvy*—an expression whose earliest discovered form, *toppe over terve*, or "top overthrown," helps us toward *top set turve*, as presumably the immediate predecessor of the corruption now in vogue. Among the miscellaneous contents of the serviceable appendix to the volume are a list of prefixes and suffixes, explanations of the names of places, words and phrases from Latin, Greek, etc., and many other particulars, in search of which one must ordinarily have recourse to such a quarto as Worcester's or Webster's.

Schiller und Goethe im Urtheile ihrer Zeitgenossen. Zeitungskritiken, Berichte und Notizen Schiller und Goethe und deren Werke betreffend, aus den Jahren 1773–1812, gesammelt und herausgegeben von Julius W. Braun. Erste Abtheilung. *Schiller.* Erster Band, 1781–1793. Zweiter Band, 1794–1800. Leipzig: Bernhard Schlicke; New York: L. W. Schmidt.

THIS laborious compilation, already briefly described by us on its arrival in this country, is the first of a series designed to include all contemporary German criticism of the writings of Schiller, Goethe, and Lessing. The first two volumes contain nearly three hundred notices of Schiller, and a third volume will be necessary to complete the references to his works. This is a valuable contribution to the literary history of the time. Of greater worth than the criticisms themselves, is the insight which is given into the condition of German thought and judgment at the close of the last century. The comparisons made with French and English authors serve to illustrate the popular estimate of the different writers of the time. The criticisms, which are faithfully reproduced in the original language and orthography, have been drawn from the multitude of journals and transient publications of the day. The files of long-forgotten newspapers in the great libraries of Germany have been carefully searched. As to the thoroughness with which this has been done, there can be no question. If we compare the list of notices of any single work with the most comprehensive bibliographies, like those of Gödeke and Wenzel, we find much that has not been previously mentioned.

The personal references to the life and character of Schiller are fewer than we should have wished: such as do occur are incidental in notices of his works. The criticisms which Schiller's earliest writings encountered, reveal the general condition of the public mind more clearly than any biographer has yet portrayed it. The present judgment of the "Robbers" would differ little from the estimate of the acutest contemporary criticism. Schiller's great merit was recognized from the first; at the same time, his unbridled license, his inflated style, his rudeness of expression and provincialisms in language, were clearly seen. The moral tendency of such writings, their effect upon public taste and reverence for law, were sharply questioned. In all these reviews the backwardness of German literature is frankly admitted and deplored. Germany is said to be two hundred years behind England in literary culture. The foreign, artificial character of the writings of the best German authors was frankly confessed. We observe, however, that Lessing's criticisms had begun to prevail in literary judgment, and that his dramatic works were seen to possess a natural and truly national character. It was many months after the publication of the "Robbers" before Schiller was generally known as the author. The influence of the play is shown by its immediate and universal popularity. In Swabia and Bavaria it was performed in booths, in the smallest country villages. Its effect upon the young was such that numerous bands of schoolboys organized for a career of robbery, murder, and incendiarism. The *Literatur- und Theater-Zeitung* of Berlin says, curiously, that during the performance of the "Robbers" in Leipzig, robbery in the theatre and in the city was so great that the magistrates privately forbade the repetition of the play.

The parts of this collection which have the greatest present interest are those which relate to Schiller's earliest and latest works. Those which contain the current criticisms of the successive numbers of the *Thalia*, and of Schiller's numerous translations, are of less importance. The general verdict of praise began with Schiller's historical works. His brilliant style and attractive generalizations, so different from the prevailing manner, won hearty admiration, and foreign recognition increased his popularity at home. Of the many reviews, those written by Schlegel and Wieland, as well as some whose authorship can no longer be traced, have a permanent value. On the publication of the "Xenien" in the *Musenalmanach* for 1797

Schiller's name was joined in public notice with that of Goethe. The memorable controversy which resulted from this attack upon the whole army of German scribblers and pedants is vividly recalled in these pages. The work contains not only criticisms of the "Xenien," but reviews of the "Anti-Xenien" as well. Many new facts regarding this contest are revealed. While the presentation of all existing criticisms has been made with the greatest care, occasionally a more extended knowledge on the part of the editor would have increased the value of his work.

The source of each article is given when its contents clearly reveal the authorship, or when investigation has succeeded in determining it. The chronological arrangement is followed throughout the book, all reviews being grouped under the date of their appearance. Hence notices of the same work are often separated by several years. "Fiesco" was reviewed upon its publication in 1783, and was noticed at intervals until 1788. A considerable part of the first volume is taken up with notices of the representations of Schiller's plays upon the stage. Many of these have little value, but are perhaps necessary to afford a complete view of the reception of his works. The insertion of the article upon the execution of the Abbé Frick at Strassburg is scarcely justifiable, as it has nothing to do with Schiller, while that upon the condition of the German stage in 1789, from the Weimar *Journal des Luxus und der Moden*, is an interesting contribution to our knowledge of the dramatic art and actors of the time. The signature to the articles from the *Kosmopolit* should be "H. K—t, in H." An alphabetical index, with the sources of each review, would be a useful addition to the work.

Sache, Leben, und Feinde. Von Dr. E. Dühring. Leipzig. 1882. Pp. 434.

THIS is announced as the author's chief work, and key to all his writings. It is accompanied by a portrait and autograph, is essentially autobiographical, and contains indications that the blind author of the 'Philosophy of Reality' is taking final leave of his public at the early age of forty-eight. After a long course at the University, where he devoted himself to jurisprudence, national economy, philosophy, physics, and mathematics, Dühring began to lecture as *Docent* in Berlin in 1863. His literary productivity was great, and his 'Critical History of the General Principles of Mechanics,' his best work, published anonymously, obtained the first prize, with extremely flattering characterizations, from the University of Göttingen. Meanwhile, lack of funds, failing eyesight, want of recognition, and especially of promotion, and the democratic drift of his morbidly accented personality, gradually embittered his temper, until at last the authorities of the University deemed it advisable to depose him, after he had served for the very long period of fourteen years as *Privat-Docent*. Disparagement of Helmholtz was made the special occasion of this action. Hundreds of students petitioned, not only in Berlin, but in other universities, that he might be allowed to remain; mass meetings were held, and circulars distributed, and petitions signed; but all in vain. Since then, and especially in this volume, Dühring has dipped his pen in gall. In the autobiography his teachers in the University are denounced by name as "grossly ignorant," "intriguing," jealous, plagiarizing, etc.; his physicians are coarse and undiscriminating, his colleagues in the faculty are plotting against him, friends are false, and enemies bitter and unwearied.

In the autumn of 1879, Dühring found in his morning papers a notice of his own death, which, he says, he held it undignified to refute; so that during the next few weeks, while quite well and seeing his friends as usual, he read a score or two of necrological notices, most of which were of no very flattering nature. His enemies assert that he gave occasion to the report himself, in order to aid the sale of his books by notoriety, and perhaps to find out his true friends. Congressman Kelley, prevented by false reports of illness and absence from Berlin from visiting him, printed these reports in the Philadelphia *Times* during the summer of the same year, where they were later denied by Dühring with great vigor. The latter, not long after, received $1,000, bequeathed him by Carey, whose disciple he had long professed himself. Through one of his agents, Bismarck requested Dühring to prepare a treatise in answer to the question, what the Government should do for workingmen. Two years afterward this treatise, which the Government did not formally notice, was published as the production of the agent. Dühring's polemic against the Jews and Social-Democrats has been quite as bitter as against the professors, and, finally, his religious opinions are not unlike those of Feuerbach; so that his enemies are as those of Ishmael, while his tongue is the tongue of Thersites.

He has certainly pointed out, though with vast exaggerations, real defects in the present organization of university life and society. If he should really come to America, as he once told the writer he intended when he had silenced the guns of all his enemies, we can hardly think, handicapped as he is with morbid egotism and the most radical positivism, that he would improve upon his present condition, which he here details with such painful fulness.

Our Ride Through Asia Minor. By Mrs. Scott-Stevenson. With map. London: Chapman & Hall. 8vo. Pp. xix.-400.

ONCE more we have the picture of the desolation wrought by Turkish misrule which all recent travellers in the unhappy lands still subject to the Porte have drawn. The few remaining forests are fast disappearing under the torch of the incendiary. Fruit trees are cut down in mere wantonness by Circassians, the scourge of the land. Roads, even between important cities, are so neglected as to be almost impassable for beasts of burden. The people, stricken with frequently recurring famines, are fast disappearing, deserted villages and towns in ruins being the incidents of every day's journey. Eastern Asia Minor, at least, is becoming an uninhabitable wilderness, chiefly because of the hopeless "weakness and corruption" of the Government. Mrs. Scott-Stevenson's testimony on this point is the more trustworthy since she and her husband are Jingoes of the extremest type, and lose no opportunity of lauding the "poor, down-trodden Turk, abused and robbed by every one," and denouncing "that incarnation of organized hypocrisy and injustice, of brute force and cruelty—the Russian Government and the Russian people." Her husband, an English Army officer holding an official position in Cyprus, puts these two questions to "every man who applies to him for enlistment—first, if he was willing to serve the Queen? . . . then if he was ready to fight the Russians?" It is hardly necessary to add that our author has a most cordial dislike for the Christian population of the country through which she travelled, attributing to them every mean and evil quality, while the missionaries seem to be doing more harm than good. The devotion of lives spent in the endeavor to lift a little of their burden of misery from this wretched people, and latterly in strenuous efforts to rescue them from starvation, goes for nothing in her eyes since they have fearlessly exposed the barbarities of Turkish rulers. Perhaps it is to emphasize her distrust of them and her contempt for "our fellow-Christians" that she always spells Bible with a little b.

The first part of her ride, taken in the spring of 1880, was over familiar ground, and it is only when the mountain range separating Northern Syria from Asia Minor is crossed, and Tarsus is reached, that we feel any interest in it. From this place her route lay directly through the famous Cilician gates. In the narrowest part "the pass can hardly be more than twenty-four feet wide. The rock had evidently been cut through, for in many places one can easily trace the marks of the mason's chisel and hammer." Kaisariyeh, "the filthiest and most ruined city we had yet entered," and yet rich and prosperous as compared with most of the towns of Armenia, was the northernmost limit of her journey. Much more interesting was Urgub, with its numerous cave houses, formerly the abode of early Christian anchorites. They are very numerous, and in many cases have no visible means of approach, "being cut in galleries along the face of the rock, from two to three hundred feet above the ground." The most attractive part of the journey, however, proved to be the visit to Koniah, the ancient Iconium. Here is the church and college of the Mevlevi dervishes, "the richest and most powerful sect in Turkey." The floor of the dancing chamber

"was of polished oak, and overhead hung a network of silver wires, on which were fastened thousands of glass lamps of every conceivable shape, form, and color. The effect was most beautiful. There were gems of Venetian work among them that collectors would willingly give thousands of pounds for. I have never seen such a variety. Delicate glasses from Venice so thin that one was almost afraid to breathe near them: some with coats-of-arms and designs engraved on them so minutely that it required a magnifying-glass to make them out; some with stems, others with handles, a few with lips or flowers—every color was represented, and the value of the collection must be enormous. I saw Bohemian glass in ruby color and deep blue; opaque Persian glasses and iridescent vases that had been exhumed from some ancient tombs."

Mrs. Scott-Stevenson gives a very animated account of a performance of the whirling dervishes, which was extemporized for her benefit in the kitchen of the monastery. Very graphic, too, are her pictures of the scenes in her night ride over the Taurus, and of the lovely valleys lying between the mountains and the sea. At a little fishing-port her ride ended. Her book gives a fairly trustworthy and readable description of a country but little visited. It is marred, however, at times by a lack of womanly reserve, and by a certain childish petulance which she evidently mistakes for vivacity.

The Young Nimrods Around the World. By Thomas W. Knox. Illustrated. Harper & Bros.

COLONEL KNOX carries his military training into the composition of his books. Though dashing, bold, and brilliant, he rigidly adheres to the well-known maxims of the art of war. He secures a base of supplies, collects ample *matériel*, and, when he has his troops well drilled, showily clothed, and armed with the most improved weapons, enters upon a campaign whose only limits are those of the globe itself. In his latest enterprise, 'The Young Nimrods,' he plainly shows that time has in no way quenched within him the ardor of the warrior. In command of his gallant little army, he captures the mines of the West, whence he advances upon San Francisco. This city falls an

easy prey to his dashing assault. Here he transforms his troops into horse marines, and takes possession of a ship of war, the *Albatross*. This vessel is one of the extraordinary craft of which our Navy is composed; for to-day, on board of her, he is at the North Pole, to-morrow in Africa, and with equal celerity in South America and Asia, stopping between times to explore the bottom of the sea, or touching *en passant* at New York to describe the life on board the nautical school-ship *St. Mary's*. Sated with victory and success, the Colonel ultimately disbands his army of veterans and seeks retirement wherein to develop plans—possibly for an expedition to the moon.

The confidence of Colonel Knox has been somewhat abused by the topographical engineer attached to the expedition. For example, at page 92, what purports to be a view of the "principal street of Realejo" is in fact the "Calle Real Leon," at least thirty miles from Realejo; at page 230, "shore of the Bay of Fonseca" is a view down the coast near Realejo. There are several cases of this kind. Summary punishment should be inflicted upon this officer. The Colonel might with advantage exercise a closer supervision over his adjutant-general. Evidently this functionary writes up the reports while his chief is snatching a few minutes of much-needed rest. He avails himself of this opportunity to pad the Colonel's [illegible] experiences related by other writers. [illegible] and astute military man is sometimes be[illegible] by unworthy members of his staff, and Colonel Knox should look to it that no question should arise impugning his veracity—a point upon which a soldier is peculiarly sensitive. 'The Young Nimrods Around the World,' notwithstanding the shortcomings of these two subordinates, contains a great store of valuable information, given in an agreeable way, and graphically aided by a large number of illustrations, many of which possess uncommon merit.

The Nation.

NEW YORK, THURSDAY, JUNE 22, 1882.

The Week.

THE very remarkable audacity and coolness with which the Republican managers are going to work to collect assessments from the Government officers, in the teeth of the repeated declarations of the party platforms as to the officeholder's true position, and of unmistakable public reprobation of the practice, show that they count on impunity for the present at all events. They are evidently very confident that they have for the moment nothing to fear from Congress in the way of further prohibitory legislation, and they are willing, for the sake of the money, to risk being rebuked at the polls. This suggests the idea of some sort of compromise, at least for the present until the public has more fully made up its mind, between the promoters of this abuse, as we consider it, and the civil-service reformers. The theory of the spoilsmen, as we understand it, is, that the places in the public service belong in absolute possession to the party in power, to be used primarily for the benefit of the party, but with an obligation, in the nature of a lien, to use them also for the discharge of the public business, as efficiently as is consistent with proper attention to the party interests. It is this theory which justifies the demand that the officeholder shall pay back a portion of his salary toward helping to keep the party in power. He pays it as the rent, so to speak, of his office. It is at once an acknowledgment that the party owns the office, and that the officer's tenure of it depends on his serving the party. The amount proposed to be levied this year is two per cent., which, supposing it to reach all salaries, would bring about $400,000 into the party treasury. But, if the officeholders can afford to pay this, and are willing to pay it sooner than surrender their places, it shows that they are overpaid, and that the civil-service appropriation might be, and therefore ought to be, reduced by that amount. Every dollar paid by the Government more than it need pay to have its work properly done is a fraud on the taxpayer. Therefore, if it appears that an officer, whose salary is $1,000, can afford to give $20 to the Republican Committee for the privilege of keeping his place, his proper salary is $980, and so on all through the service.

This is the reformer's view of the matter. If, on the other hand, the party in power is entitled, as a matter of right, on "the American plan," to take two per cent. of the officeholder's salary, and the officeholder is bound to pay it as part of the legitimate cost of carrying on party government, why not do away with the whole machinery of assessment, and indeed with the very name of assessment? Why should the party Committee have to go every year through the cumbrous and expensive process of issuing circulars to the clerks, and sending agents through the public offices to collect the money? Nothing can be more destructive to discipline than the existing mode of collecting the assessments has become. It teaches the employee to feel that he has other and more powerful superiors than his official superior, and that he can make himself secure in his place, not by diligence and fidelity, but by the payment of a round sum annually to a political committee. What we propose is, therefore, that the right of the party in power to procure its campaign expenses from the United States Treasury should be recognized in legislation as "the American plan," openly and frankly, and that assessments on officeholders, by means of solicitation of any kind, should be absolutely prohibited, and that the Appropriation Bill should every year contain a sum equal to two or three per cent. on the total amount paid in salaries, which should be payable on proper Treasury warrants to the Campaign Committee, in each State, of the party in power at Washington. This would reconcile theory and practice, and put the whole matter on an open and manly basis. It would deliver the public officers from a potent cause of dishonesty and inefficiency, and distribute the tax now levied on one small class of the community over the whole community. The cost of "the American plan" ought to be paid equally by all Americans. Congress should, therefore, now vote $400,000 for the Republican campaign expenses this fall, and reduce the salaries of all officeholders by two per cent., and treat the levying of any money on officeholders hereafter for political purposes, by any person whatsoever, as extortion by threats and intimidation.

Secretary Chandler, at a complimentary dinner in Boston, expressed himself freely about the necessity of building some new vessels for the Navy; only a few, if there was no hope for many. There is no doubt that such an addition to our Navy is desirable, and yet the voices urging that money be appropriated for that purpose just now are very few. If Mr. Chandler wants to know the reason, let him look into the newspapers. As one of our morning contemporaries expresses it, "Congress is wise not to want to build a navy at present in view of the existing organization of those committees of the House which in a great measure would control the expenditures." This is a very edifying state of things. The people want an effective addition to the Navy, but they do not want Congress to make any appropriations for it as long as any committee in which Mr. Robeson has a potential voice will have a hand in controlling the spending of the money. This fact—for an undeniable fact it is—everybody appreciates except perhaps Mr. Robeson himself.

At last the Tariff Commission is completed. It consists of John L. Hayes, of Massachusetts; Henry W. Oliver, jr., of Pennsylvania; Austin M. Garland, of Illinois; Jacob Ambler, of Ohio; Robert P. Porter, of the District of Columbia; John W. H. Underwood, of Georgia; Duncan F. Kenner, of Louisiana; Alexander R. Boteler, of West Virginia; and William H. McMahon, of New York. There are among these gentlemen several who represent different protected industries, such as woollens, iron, sugar, etc. But there is not one among them who is known to have made the subject of tariff legislation in the larger sense a special study, and whose opinion will be accepted by the country as worth more than that of an advocate of some special interest—unless it be Mr. McMahon, who has been for some years a clerk in the New York Custom-house, and is thought to be familiar with the working of the tariff in a commercial point of view. The *Evening Post* prints a communication from a prominent merchant, expressing the liveliest gratitude for Mr. McMahon's appointment. The compliments paid to Mr. McMahon are undoubtedly deserved. But it is a significant circumstance that the appointment of a Custom-house clerk on a Commission of such importance should be looked upon as the one redeeming feature. It must be said for President Arthur that he offered places on the Commission to several business men of the highest respectability, who declined. Whatever reasons they may have given for doing so, the true one in most cases was undoubtedly that they disliked to be identified with so conspicuous an enterprise, evidently doomed to failure.

One of the most grotesque appointments made by this Administration is that of Mr. George E. Spencer, of Alabama, as one of the Government Directors of the Union Pacific Railroad. Mr. Spencer was elected a Senator from Alabama in the good old carpet-bag times, and it may be said that he represented the most obnoxious type of that sort of statesmanship which then flourished in the South, and that there was no redeeming feature about him. Since he left the Senate he has been long struggling to get "recognition" again, but vainly until now. The place to which he has been appointed is indeed not a very important one. The Government Directors of the Union Pacific Railroad have never succeeded in exercising any influence upon the management of that enterprise, nor in learning more about its affairs than the real managers thought it harmless to let them know. And then every summer they make a pleasant "inspection" trip over the road in a nice palace car, well equipped with the good things of this world, and finally they draw up a report the principal feature of which is that the Union Pacific Railroad is one of the grandest enterprises in history, an inestimable benefit to mankind, and, "we are happy to say," in excellent condition. These duties, it is true, Mr. Spencer may perform as well as anybody else, although we should think his presence on the Commission would not be pleasant to his colleagues. But if the "recognition" of such a politician as Mr. Spencer by the National Administration is intended to give him a new lift in the Republican party of Alabama, it will prove a disastrous investment. If Mr. Spencer ever becomes a Republican leader in Alabama again, that fact, by reviving the worst

memories of the past, will sink the Republican party of that State below the lowest level of respectability, and render the task of recruiting it from the decent and progressive elements of the population absolutely hopeless.

The clouds lowering upon the house of Cameron in the staid old State of Pennsylvania are getting blacker and blacker all the time. The first great meeting which the Independents held at Pittsburgh, a few days ago, was presided over by one of the old Republican war-horses, and among the Vice-Presidents there were a great many prominent business men and old steadfast Republicans "of whom nobody would have thought any such thing." It was a lively surprise to the Stalwarts. And now Mr. Thomas Marshall, whom the Cameron Convention had nominated for "Congressman-at-large"—an honor which he declined—comes out with a letter denouncing the reassembling of the defunct State Convention called by Mr. Cameron's chief of staff to fill the vacancy caused by Mr. Marshall's refusal, as an entirely unauthorized act, binding nobody. He declares that he will not obey the call himself, and calls upon others to do the same. And, finally, there appears to have been a curious miscalculation of forces in Mr. Cameron's selection of a candidate for Congressman-at-large. Mr. Wanamaker, the largest clothing merchant in Pennsylvania, had been pitched upon for that nomination, mainly, it was said, on account of the influence he would exercise over the newspapers as their most important advertising patron. But now we are told that this advantage would be more than offset by the hostility of all the small clothing dealers, who would work tooth and nail against him, and it would require the whole ingenuity of the Machine to figure out the chances of profit and loss. Mr. Wanamaker has, however, settled the matter by refusing to run

---

The fate of the Commissioner of Agriculture as a Cabinet officer seems to have been settled by the Chief of the Bureau of Statistics. Mr. Nimmo, upon the request of the Secretary of the Treasury, has given an opinion against the scheme. Mr. Folger has adopted this opinion as his own and forwarded it to Senator Mahone, who has charge in committee of a bill relating to the subject. It is believed that the Administration is thus shown conclusively to be opposed to giving the Commissioner a portfolio, and that Mr. Mahone, as a representative of the views of the Administration in the Senate, will act accordingly. Mr. Nimmo objects to the bill because the department "is not charged with any executive function," but "merely with the duty of furnishing information," and it would be an "incongruity" to declare, as the bill does, that this non-executive office "shall be an executive department." The possibility that the Commissioner's duties might not be of sufficient scope and importance to warrant his admission to the Cabinet, seems to have occurred to the framers of the bill. They therefore proposed to enlarge his powers and responsibilities by entrusting to him certain business relating to surveys and education; but Mr. Nimmo was quite ready for this change of front. He objects to the further "incongruity" of requiring a department composed of "specialists with respect to the interests of agriculture" to look after "subjects entirely foreign to agriculture." The circuit is thus complete: the Commissioner should not go into the Cabinet, because his duties are not sufficiently executive; he should not be charged with other duties which might fit him for the Cabinet, because these are inconsistent with those he now performs. Whatever may be thought of Mr. Nimmo's "incongruities," is anything which he suggests more incongruous than the decision of a broad question of public policy, such as the enlargement of the Cabinet, by the Chief of the Bureau of Statistics?

The New York banks added $3,500,000 to their surplus reserve during the week. There was a gold shipment of about $1,000,000; but as this was an arbitrary transaction (said to have been for the account of the Italian Government), without reference to the current rates of foreign exchange, it had little or no influence on the markets. The weather during the week was for the most part very favorable for the growing crops, and these now promise to be exceptionally fine. In the southern and middle belt of country the winter wheat has already been harvested; the corn crop, about which there has been so much anxiety, has made great progress; and spring wheat in the Northwestern States was never in better condition. These facts have had great influence. In business circles the tone has changed from despondency to hopefulness, and at the Stock Exchange depression gave way to buoyancy, Mr. Vanderbilt and his friends having been conspicuous buyers of his stocks, and one of these—Lake Shore and Michigan Southern—having been bought up to 113. Less than two weeks ago this stock was sold at 98. On the last day of the week there was a downward reaction, partly caused by orders to sell from the foreign markets, which were depressed on account of the Egyptian troubles.

Michael Davitt, who has arrived here, declares, we are glad to see, that he does not attach much importance to his scheme for the nationalization of the land in Ireland, and is quite prepared to give it up for Parnell's. The object of both schemes is to get rid of the landlords, but when they are gone Parnell proposes to lodge the ownership in the farmers, while Davitt proposes to lodge it, on Henry George's plan, in the state, and have the occupiers pay their taxes in the form of rent. Whatever be the value of the Henry George scheme for the world in general, it is open to the fatal objection in the case of Ireland, that the Irish are not ready for it. The cause of the land trouble in Ireland for three hundred years has been that the tenure was not Irish but English, introduced and maintained by force of arms; a process closely resembling that which took place in India, when the English converted the old Mogul zemindars, or revenue collectors, into the landlords of their districts, and the cultivating taxpayers into their tenants. The English mind was not, until the Mill school of philosophy made its appearance, able thoroughly to conceive of a society in which there were no large landed proprietors, living on rent, and whenever they came into control of the soil of a country, and found none, they set them up. They did so in Ireland, by taking away the lands of the tribes, which were held in a sort of commonalty with the chiefs, and giving them to English grantees in fee-simple, and converting the aborigines into tenants-at-will. Out of this state of things has arisen the agitation in favor of having Ireland governed, in the matter of land tenures, as in other matters, according to "Irish ideas," and not according to English ideas—a plan of solving the Irish trouble, as far as England was concerned, which it is but just to say was suggested nearly one hundred years ago by that great Englishman, Charles James Fox.

Now, the Irish idea about land is very simple. It is that the occupier should be, if not the legal owner of the soil, as nearly the legal owner as possible; that if he has to pay rent, it should be a low and certain rent, which nobody could raise, and that his title should be indefeasible as long as this rent was paid. This is the French idea also. It is the Celtic idea everywhere. It is probably at this moment the strongest idea in the world about land. The Germanic or English view of land, that it should be treated as a commercial commodity, and cut up and sold as easily as corn or railroad shares, is not nearly as strong. The new Henry George or Communistic idea, that the land is a great national domain, to which all have an equally good claim, is still weaker. It probably has not to-day the smallest acceptance with any agricultural population. If it have secured any foothold at all, it is among the landless. It could not be preached to the farmers of any country in the world with any chance of success. Moreover, there are no farmers to whom it could be preached with less profit than to the Irish. To them it would be simply bewildering. They have not as yet even enough political education for it. They have yet to conceive of the state as the representative of the common interest. It will be a good while before they look on the Government as anything but the head of a hated foreign police, which it is always fair, and often desirable, to vex, harass, and even cheat. So that necessity as well as safety seems at present to confine the programme of the agitators to the conveyance of the land, not to an abstraction with a big name, but to the men who live and toil on it, and love it, and who cannot now be got to conceive of anything more desirable for them than the ownership of the fee.

Mr. Keely has come out with a card in which he declares that he has reached a point in his discoveries at which he can safely communicate his secret, and is now getting ready to take out a patent for it. We fear, however, that he will find himself confronted with new difficulties in the attempt. He declares that he has discovered a great natural Force, which he sometimes refers to as an "etheric force," exercising a pressure of 25,000 pounds to the square inch. His accounts of it are not very definite; but, as far as can be made out, it is generated by simply pouring a pint of water

into a hole. The Force itself cannot be patented, any more than the attraction of gravitation or electricity, and therefore what Mr. Keely must intend to patent is the way he uses it. He could not get a patent for pouring water into a hole, because the art of doing this has been possessed by mankind from the earliest times. Probably he will undertake to patent the mechanical appliance for using the Force. This is said to be of a "vibratory" character, and for all that is known may be patentable; but that this will involve a disclosure of the nature of the Force itself seems very doubtful. The Force may after all be one of those mysterious agencies of nature which cannot be disclosed to the senses.

M. Roustan, the new French Minister, seems to be very indiscreet for a French diplomatist, if we may judge from the report of an interview with him published in the *Herald* of Friday, in which, if correctly rendered, he gives an explanation of the French quarrel with Tunis that does not put the Jules Ferry Ministry, which began it, in a very creditable light. The reason given to the world for beginning it was a desire to punish the Kroumirs for marauding on the French border, but the flimsiness of this excuse was speedily laid bare, and the real cause—a desire to oust the Italians from influence in Tunis—was openly and very cynically revealed. M. Roustan now repeats this, with some accompanying abuse of the Italians, which is about as unbecoming, under all the circumstances, as anything we have seen in print for some time. Nor is his explanation of the verdict in his libel suit against Rochefort any more appropriate. Rochefort printed very serious charges against him in connection with the origin of the Tunisian war, and when he prosecuted him criminally the jury acquitted Rochefort. We gave at the time the best possible elucidation for this very untoward result, as furnished by French journals friendly to M. Roustan. This was that under the French law of libel, although the conviction of Rochefort would have affirmed the falsehood of all the charges made against M. Roustan, the acquittal did not affirm their truth, because the jury may have based it on the belief that Rochefort in publishing them acted in good faith, believing them to be true, as thousands of better Frenchmen than he undoubtedly did. It is far better to leave the matter in this shape than say, as M. Roustan has been saying, that Rochefort was "paid by the Italians" for attacking him, and that the jury acquitted him because they were afraid of Rochefort. The verdict of a Paris jury, we assure M. Roustan, cannot be disposed of here in *that* way. He seems, in fact, to have caught the light, sportive style of dealing with "charges," which some of our politicians in their distress have cultivated with so much success; but he will discover before he has been long in the country, that it is not a style which the best portion of the American people fancies or approves of.

The signs of trouble in the Gladstone Cabinet increase, and are now very threatening. Its composition in the beginning was heterogeneous enough, and it was only agreed to in opposition to the Jingo policy of the Tories. When the Irish question came up, it was rudely shaken by dissension on the matter of coercion—to which Dilke, Chamberlain, and Fawcett only gave a silent and reluctant assent. Their hostility finally drove Forster out, and there is much reason for thinking that Harcourt and Hartington only get very slender support from them in the concoction of the new Repression Bill. This trouble might possibly have been tided over without an explosion if the Egyptian crisis had not come about, and had not at last taken such a shape as to make some action imperatively necessary. Gladstone, with the Irish question absorbing his faculties, and with his old timidity in foreign affairs deepened by age, is naturally reluctant to do anything but let things drift. Sir Charles Dilke knows so much about foreign politics that he probably sees better than any one the abyss of uncertainty which any military action in Egypt will open up, and hangs back too. The rumor now is that Chamberlain here sees his chance, and offers himself for the leadership of the rising democracy by advocating prompt and energetic measures; or, in other words, waving "the meteor flag of England," with the prospect of a dissolution and some new combination opening up to him.

The way in which the Ministry is managing the two Irish bills now before the House of Commons furnishes the Irish Home Rulers with a striking illustration in support of their claims. In order to get the Repression Bill through the House and prevent too much obstruction at the hands of the Irish members, it has put the Arrears Bill behind it, so that the early passage of the latter shall depend on the early passage of the former. Gladstone does this because the Repression Bill is demanded by English opinion, which cares little about the Arrears Bill. But if he were an Irish Minister simply, he would undoubtedly, however much determined to repress crime, put the Arrears Bill first, because there is no good reason for believing that it will make any difference whether the Repression Bill is passed now or a few weeks hence. Its effect, if it ever has any effect, must come slowly. On the other hand, every day's delay in the Arrears Bill is producing consequences of the most terrible kind. It is intended to prevent the eviction of farmers who are unable to pay their rent, owing to the three bad harvests, and to bring them within the operation of the Land Act, the benefits of which they lose by eviction. But the evictions are now going on on a great scale. They have reached, Mr. Trevelyan says, 1,000 a week, and the landlords have the strongest motive for pushing them, because the future letting of every farm they now get into their hands will be free from most of the restrictions imposed on them by the Land Act. Consequently, in order to secure the passage of a measure of doubtful value, demanded by English pride, for the punishment of crime, the Government is inflicting, or allowing to be inflicted, a penalty of the most frightful kind, on persons who are not accused of any crime, and whom the Ministry has acknowledged, in the most solemn and formal way, to be the victims of a great wrong. No Ministry which was dependent on the public opinion of the country for which it was legislating, as every Ministry ought to be, would attempt such a proceeding.

Mr. Gladstone has once more put his strength to the test, by a vote on Tuesday in the House of Commons, on a motion giving the Arrears Bill precedence over all other business except the Repression Bill, and putting it into the Committee of the Whole, which was carried by 253 to 97. What makes this important is that it is on the Arrears Bill that the opposition to the Ministry is now concentrated, inasmuch as it is considered the crown and consummation of Mr. Gladstone's errors in the treatment of the Irish question. If the majority in the House can stand this, they can stand anything, and they certainly appear to stick to him with wonderful fidelity. The meeting of the Conference is also likely to help him. He must have struck terror into the Tory ranks, however, by his announcement of an autumn session to take up the proposed changes in procedure. Most of the sporting politicians are in their ranks, and this proposal to take them away from the grouse-shooting and deer-stalking must deepen the hatred with which already they regard him.

The absolute indifference to the French and English fleets of Arabi Bey and his men is one of the very comic incidents of the Egyptian crisis which has attracted less attention than it deserved. The fleets were in the earlier period of the troubles kept hanging over his head as a bogey. "Arabi," the French and English Control would say to him every now and then, "if you don't behave, the fleets will come—iron-clads, you know, throwing shells as big as a saint's tomb." The Khedive warned him also that if he didn't keep quiet, he would bring the iron-clads on him. The Turks, on their part, when they heard the iron-clads were going, protested warmly. The Sultan was much agitated when the thing was first talked of, and hoped the Powers would do nothing so dreadful. At last they did it, however. They sent the iron-clads to Alexandria, and waited to see the effect on Arabi. He, however, remained calm and self-possessed. The British Consul seems to have been the first to discover the real effect of the move, for he telegraphed to the British Admiral, for God's sake to keep as quiet as possible, and not try to protect anybody or anything, and above all not to land marines or sailors. In fact, it was recognized in two or three days that the arrival of the fleets had put every Christian's life in danger. Every Englishman and Frenchman began to tremble when he heard that his country's navy was at anchor in the Alexandrian Roads. Arabi, now, apparently likes to have plenty of iron-clads in the Roads. It makes his troops bellicose and patriotic, and he is said to be ready to meet the combined navies at any point in the interior at which they choose to attack him. In fact, it is plain that the fleets, unless reinforced by the Bedouin cavalry, cannot hurt him in the least.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, June 14, to TUESDAY, June 20, 1882, inclusive.]

DOMESTIC.

ON Friday the President nominated Alexander R. Boteler, of West Virginia, and William H. McMahon, of New York, to fill the vacancies in the list of nominations for the Tariff Commission. Mr. Boteler is a farmer and in favor of a moderate protective tariff. Mr. McMahon is in charge of the division of duties in the New York Custom-house, and it is "hoped by the President's friends that the selection will give satisfaction to the New York merchants." The Senate confirmed on Tuesday, by 31 to 21, the President's nominations.

On Friday the President also sent to the Senate the full list of nominations for the Utah Commission. They are: Alexander Ramsay, of Minnesota; A. S. Paddock, of Nebraska; J. T. Godfrey, of Iowa; Ambrose B. Carleton, of Indiana; and James R. Pettigrew, of Arkansas.

The President has approved the sentence in the case of Lieutenant Flipper, who was tried by court-martial for conduct unbecoming an officer, and sentenced to dismissal from the service.

Mr. Trescot appeared before the House Committee on Foreign Affairs on Wednesday. He testified that he knew nothing of the missing letters, and scarcely anything of Shipherd; denied that the possible intervention of the Crédit Industriel between Peru and Chili had ever become a practical question, and spoke in high terms of the estimation in which Mr. Hurlbut had been held in Chili as well as in Peru, and said he had learned absolutely nothing prejudicial to his character in Chili or Peru. In regard to the relations of the State Department with the Crédit Industriel, Mr. Trescot knew little. The Crédit Industriel, as he understood it, made an offer to Peru to this effect: "If you can reach a negotiation with Chili by which Chili will consent to receive and you to pay a war indemnity instead of ceding territory to Chili, we will furnish you with means to make that payment." After some further questioning in regard to the Crédit Industriel, an adjournment was taken till Tuesday, when Mr. Trescot, after declining to state whether he had drafted the letter of instruction of June 15 to Mr. Hurlbut, said it clearly had reference to the Crédit Industriel and its plan of paying the indemnity.

On June 14 the President sent to the Senate copies of all the correspondence not heretofore published between the State Department and Messrs. Trescot and Blaine. This correspondence adds little, except in matters of detail, to the information which the public already has in regard to Mr. Trescot's mission, but shows what an embarrassing position he was placed in on account of the premature publication of his instructions from Mr. Frelinghuysen. Mr. Trescot had an interview with Mr. Balmaceda, the Chilian Secretary for Foreign Affairs, on January 13, the purpose of which was to extend to Chili Mr. Blaine's invitation to the "Peace Congress." Mr. Trescot stated the purpose of his visit, and then asked Mr. Blaine to read the invitation. Before Mr. Blaine could begin, however, Mr. Balmaceda said: "It is useless. Your Government has withdrawn the invitation. Your instructions have been changed. Your instructions from Mr. Blaine have been published, and others are on their way to you modifying your original instructions in very important particulars." Mr. Trescot at this was taken aback and at a loss what to say, but finally remarked that he must decline to say a word more until he learned from his Government what it had done and what it meant to do. In other portions of the correspondence Mr. Trescot shows with what tenacity the people of Peru clung and still cling to the belief that the good offices of the United States would be exercised in their behalf. In a report made since his return to Washington Mr. Trescot says that the time has come for definite action one way or the other in the matter of intervention, and that he believes that whenever the United States formally withdraws from further intervention, Peru will apply to the European Powers, and that a joint intervention of two or more is probable.

The Bonded Whiskey Bill was defeated in the Senate on Thursday by a vote of 32 to 20 to postpone it and all amendments to it indefinitely. The Senators who voted against the postponement were all, with the exception of Mr. Miller, of California, Democrats.

On Wednesday the House of Representatives passed the Legislative, Executive, and Judicial Appropriation Bill. The Pension Appropriation Bill, which was reported to the House on the same day, appropriates $100,000,000, distributed as follows: for Army pensions, $97,000,000; Navy pensions, $1,800,000; surgeons' fees, $275,000; allowances to Pension Agents, $275,000, and contingent expenses of Pension Agents, $10,000.

On Saturday the House of Representatives passed, by a vote of 119 to 47, the River and Harbor Bill, which appropriates over $17,000,000. No material amendments were made to the bill. The Mississippi River Commission is to have authority to spend $5,000,000.

On Monday the House of Representatives passed "a bill to regulate immigration," which provides that the master, owner, consignee, or agent of any vessel bringing immigrants to the United States and landing them, shall pay a tax of fifty cents for each immigrant landed. The Secretary of the Treasury is authorized to enter into contract with State authorities for the support and relief of such immigrants as may be in need. The authorities are also authorized to prevent the landing of convicts, lunatics, idiots, or any persons unable to take care of themselves, and such persons are to be returned to the countries from which they came.

The passage of the above-mentioned bill was opportune, since the Board of Emigration of New York, being without funds and deeply in debt, decided on Friday to close Castle Garden, the steamship companies having refused to contract with the Emigration Board to pay fifty cents a head for the landing, care, and protection of their immigrants. The steamship companies, however, finally yielded, and consented to contract on these terms.

The House on Tuesday rejected a bill for the electoral count reported by Mr. Updegraff from a select committee.

The New York Civil-Service Reform Association has sent a circular to the principal employees of the Federal Government, calling their attention to the United States statute prohibiting subscriptions toward defraying the expenses of the Congressional Republican Committee, and warning them that they are liable under the statute to fine or removal from office in case they subscribe.

The Republican State Convention of North Carolina met at Raleigh on Wednesday. The platform favors the apportionment of the internal-revenue tax on distilled spirits pro rata among the States and Territories for educational purposes; calls for a continuance of the tariff; demands the repeal of the county government system of North Carolina, and affirms the inherent right of the people to elect all the officers of the State; demands an honest count and a free ballot; and denounces the Prohibition Bill and requests members of the Legislature to vote against all similar measures. The Convention adopted the ticket of the Liberal Independent Convention of the 7th inst. This union of the Republicans with the Independents will, it is thought, make the struggle very hard for the Democrats.

The Arkansas Democratic State Convention met on Saturday and nominated C. R. Breckenridge for Congressman-at-large, and unanimously adopted a resolution endorsing Senator Garland and urging his reëlection by the Legislature. A resolution was also unanimously adopted declaring that while the Democracy of Kansas favor the resubmission to the people of the Constitutional Amendment forbidding the payment of alleged fraudulent bonds, they do not recognize the question as furnishing a test of any man's Democracy. The Greenback Convention, which was thinly attended, met and made its nominations on Tuesday.

A meeting of between forty and fifty prominent Germans of the State of Connecticut was held in New Haven on Monday to organize a "Progressive Union in opposition to both of the existing political parties." A constitution was adopted, expressing opposition to both political parties, and calling on Germans to vote for men, who are honest and true, without regard to their politics, who will conform to the platform of organization. The real trouble they seem to find with both parties, however, is that neither of them opposed the passage of the existing stringent license law in the Connecticut Legislature.

Laborers have continued to strike throughout the country. On Monday the freight handlers in New York and Jersey City struck, adding over 3,000 to the list of idle workmen.

The great labor parade at Pittsburgh took place on Saturday. Fully 100,000 strangers were in the city, and the streets and houses along the line of the procession were crowded. Quite 20,000 men were in line, representing numerous industries. The marked feature of the demonstration is said to have been the gentlemanly and soldier-like bearing of the men. Not a single intoxicated man was to be seen in the whole column, and at no point along the line of march was there any disturbance.

The Amalgamated Association of Iron and Steel Workers has decided that no trouble hereafter at Cleveland, Ohio, shall be laid at its door, and accordingly all of its members will remain at home hereafter during the hours in which trouble is likely to occur.

The total value of the exports of domestic breadstuffs from the United States for the eleven months ending May 31, 1882, was $167,653,532, as against $244,955,413 for the corresponding period of 1881.

The Grand Jury at Washington has found two new indictments against ex-Assistant-Postmaster-General Brady for conspiracy to defraud the Government in the Star-route service.

Lieutenant Danenhower says that he does not expect to complete the report of his Arctic experiences called for by the Secretary of the Navy before the 1st of September.

A despatch was received by the New York *Herald* on Monday, from their correspondent who is with the *Rodgers*, giving an account of the finding of the bodies of De Long and his men. The despatch is dated Lena Delta, April 12, and says that Engineer Melville found the bodies on March 23, eleven in number, buried in the snow, not far from where Noros and Ninderman left the party in search of help. They had all evidently suffered greatly from exposure and hunger, the hands of several being burned as if, while dying, they had crawled into the fire. In their pockets were pieces of burnt skin and of their clothing which they had been eating. None of them had boots. Their feet were covered with rags tied on. Two boxes of records, with a medicine chest and a flag on a staff, were beside the tent. They were buried in a mausoleum of wood on the top of a hill near by, and a huge cross was set up to mark the spot. The search for Lieutenant Chipp was then continued, but, up to the date of the despatch, without result.

A tornado swept through central Iowa late Saturday night from northwest to southeast. The town of Grinnell was struck by it, and half the northern part of the town, including the college buildings, left in ruins. Over forty persons were killed and over 150 wounded. About 150 houses were destroyed, and the damage to property is estimated at $600,000. The neighboring town of Malcolm was also

heavily visited. The path of the tornado was twenty-five miles long and about half a mile wide, extending five miles northwest of Grinnell and twenty miles southeast. Storms raged almost simultaneously in other parts of Iowa, and in Illinois, Kansas, and Missouri, inflicting great damage on property.

Mr. Michael Davitt, founder of the Irish Land League, arrived in New York on Sunday. He has come for a twelve days' lecturing tour in the States, the object of which he says is to contradict the rumors which have been bruited about that there is a split in the Land League movement, and that there is likely to be a difference between Mr. Parnell and himself, and to explain the work that is being carried on in Ireland by the Ladies' Land League.

M. Maxime Outrey, the French Minister, presented his letters of recall to the President on Friday. M. Roustan, the new Minister from France, arrived in Washington on the same day.

The seventieth anniversary of the birthday of Mrs. Harriet Beecher Stowe was celebrated at the residence of ex-Governor William Claflin, at Newtonville, Mass., on Wednesday, the 14th, by a reception in Mrs. Stowe's honor. An address was made by the Rev. Henry Ward Beecher, and poems read by Dr. Oliver Wendell Holmes, Mr. Whittier, and others.

Mr. Paul Tulane, of Princeton, N. J., who made a fortune in business in New Orleans, has given $2,000,000 for the erection and endowment of a college in that city for the education of white young men in languages, literature, science, and art.

Rear-Admiral Nicholson, commanding the European station, has telegraphed to the Navy Department at Washington that all the vessels of the European squadron now in the Mediterranean have been ordered to proceed to Alexandria, to look after American interests in Egypt.

FOREIGN.

Hundreds of Europeans have been leaving Egypt during the week by the advice of the Consuls. A street quarrel in Alexandria on Wednesday, which would have resulted in another riot, was stopped by the arrival of Egyptian troops in time to suppress the disturbance. A correspondent of the London *Daily News* stated on Wednesday that not only women and children, but men with large material interests in Egypt, were begging passage and leaving their property behind. The panic increased on Thursday, and Cairo was deserted by all Europeans who could possibly leave the city. The shops were all closed, and some Europeans unable to leave were fortifying themselves in their houses. The Khedive expressed the hope that 18,000 Turks would soon be on their way to Egypt, but it is stated that some of the Powers opposed the despatch of Turkish troops, on the ground that it would provoke fresh outbreaks. After a reception which the Khedive held on Wednesday he informed the Europeans that he had divided Alexandria into districts and made an officer responsible for each, and added that 430 of the ringleaders of Sunday's riot had been arrested. The number of Europeans killed in the riot on Sunday is now estimated at over 250. Many were thrown into the sea, and their bodies have been daily washed ashore. On Saturday the despatches represented the situation as becoming more quiet, and stated that all rumors of military preparations by Turkey were premature. The Khedive, at the suggestion of the representatives of the European Powers, has asked Ragheb Pasha to form a new Ministry, and the latter consented. Arabi Pasha of course has the portfolio of War. Ragheb Pasha is not very favorably disposed toward Europeans. There is said to be little doubt, however, that Arabi Pasha is straining every nerve to keep order, as he is beginning to realize how injurious the exodus of Europeans will be to the country. A Berlin despatch says that England and France have promised that the Conference on Egyptian Affairs will meet at Constantinople on the 22d inst. The Porte received a despatch from Dervish Pasha on Monday, reporting the state of affairs as very satisfactory, and that Arabi Pasha strictly obeys the Khedive's orders.

In the House of Commons on Wednesday Sir Charles Dilke, Under Foreign Secretary, replying to questions, denied that the Egyptian troops were disaffected, and said that Dervish Pasha was confident that he would be able to maintain order. He declined to answer further questions, as it was impossible to explain the situation until the papers on the subject were published, whereupon Sir Henry Wolff, Conservative, moved an adjournment of the House as a protest against the reticence and imbecility of the Government. In the debate that followed, Sir Henry Wolff condemned the association of England with France. Mr. Gladstone replied that he greatly lamented what had been said concerning France, that all the Powers were coöperating heartily with England, and that the Sultan was in complete harmony with the Powers. He dwelt on the necessity of using the instrumentality of Turkey, and said the British policy was the maintenance of all established rights. On Thursday Sir Charles Dilke said, in reply to questions, that it was true that Mr. Cookson, the British Consul in Alexandria, had, in September last, informed Arabi Pasha that if the Egyptian Army persisted in assuming the government of the country, it must be prepared to meet the united forces of the Sultan and Europe, as the country could not be suffered to relapse into a state of anarchy, and that the British Government had approved of this language. There is said to be great irritation in England at the apparent inaction of the Government on the Egyptian question. In the House of Commons on Monday Sir Charles Dilke stated that Germany, Austria, and Russia had accepted the proposal for a Conference, and that Italy had previously declared she would follow the course of the other Powers. Very full instructions, he said, had been sent to Admiral Seymour on Friday, which were sufficient to protect British interests in Alexandria in case of renewed disturbances.

In the House of Commons on Thursday, Mr. Trevelyan stated that of 216 suspects still in custody, 125 are suspected of personal association with crime. Mr. Childers, Secretary of State for War, replying to questions, said that hereafter the arms of soldiers employed for escort duty and protection in Ireland would be loaded.

On Friday clause 7 of the Repression Bill was adopted by a vote of 208 to 67. The Government previously accepted an amendment that magistrates should appear at meetings and summon the people to disperse, but an amendment confining the operation of the clause to the proclaimed districts was rejected. Clause 8, directing the arrest of persons found at night under suspicious circumstances, was also passed by a vote of 98 to 27. On Monday clauses 9 and 10 of the bill were adopted, the former, providing for the arrest of strangers found under suspicious circumstances, by a vote of 194 to 31, and the latter, directing the seizure of newspapers containing matter inciting to the commission of treason or any act of violence or intimidation, by a vote of 99 to 26. Mr. Gladstone moved on Tuesday that precedence be given to the Arrears of Rent Bill, whenever set down, over other business, with the exception of the Repression Bill, and that there be morning sessions on Friday. The motion prevailed by a large majority.

The news from Ireland has not been very important. Miss Anna Parnell has written to the Dublin *Freeman's Journal* that the fund for the maintenance of suspects, for which purpose £24,000 has been collected and £16,000 spent, should now be closed. Several more persons have been arrested on suspicion of being connected with the murder of Lord Cavendish and Mr. Burke. The Corporation of Dublin has adopted, by a vote of 34 to 12, a petition to Parliament against the Repression Bill, and on Tuesday the Lord Mayor in his official robes presented it in the House of Commons.

Cambridge University, England, has conferred the degree of Doctor of Laws upon Prof. Josiah P. Cooke, of Harvard University.

In the Reichstag on Wednesday, after a lively debate, in which Prince Bismarck made a speech of two hours' duration, the Tobacco Monopoly Bill was rejected by a vote of 276 to 43. Among other remarks, Bismarck declared that party government in Germany was impossible. He also held up the United States as an example of the benefits of a protective tariff. In conclusion, he declared that the Federal Government would not be diverted from its adherence to protective duties by any resolution that might be adopted. In another debate, in replying to the criticisms on the largeness of the military budget, he said that Germany was only prevented from having coalitions made against her by other Powers by the fact that her military power was known. He also said that in view of the slightly developed national feeling of the Germans, the French had not abandoned the hope of getting back Alsace and Lorraine.

It is announced that Herr Bitter, Prussian Minister of Finance, has tendered his resignation on the ground of difference of opinion in regard to taxation reform.

A despatch from St. Petersburg says that a ukase has been issued dissolving the committee for an inquiry into the condition of the rural population, and its duties have been transferred to the Council of the Empire and the Senate. The revenue of Russia for the first quarter of the year shows an increase of seven million rubles over the first quarter of 1881. The correspondent of the London *Times* at St. Petersburg says that General Ignatieff's resignation was caused by his proposing to summon the States-General.

The Holy Synod has passed a resolution, which has received the sanction of the Czar, prohibiting persons not Christians from publicly trading in pictures, crosses, or vessels used in Christian worship.

A despatch from Belgrade says that it has been arranged that the entire Ministry shall retain office and carry on the programme initiated by the last electoral decree of the King, and consequently all reëlections of Radicals will be declared illegal. The Progressist candidates who were second on the list, though some of them did not obtain a dozen votes, will be summoned to take the seats. It is apprehended that these events may lead to a suspension of the Constitution and internal strife, resulting in European intervention.

The Italian newspapers publish an agreement of the members of the Garibaldi family to give the island of Caprera to the Italian nation.

The news from South America is that a bill will be soon introduced into the Chilian Legislature declaring the incorporation of the Peruvian departments of Tarapaca and Tacna, including the port of Arica, within the territory of Chili, and that, as soon as this bill shall have been approved, the whole of the Chilian troops will abandon the north coast of Peru, and concentrate in Lima. The Bolivians are said to be almost unanimously in favor of an immediate truce, and are working energetically to bring about this result. The London *Daily News*, commenting on Mr. Trescot's despatches to Secretary Frelinghuysen, says that none of the European Powers would refuse to try to effect a peace between Chili and Peru, if so requested by the belligerents, but that the Powers do not intend to coerce Chili at the request of Peru.

The Canadian elections, on June 20, went heavily in favor of the late Government, all the members of which were returned—the Premier, Sir John Macdonald, by two constituencies. The national protection policy has thus obtained a formal popular endorsement.

THE FOUR-YEARS-TERM SCHEME.

A BOLD attempt to extend the operation of the spoils system, and increase its efficiency as an agent of corruption, was defeated in the House on Monday, largely owing to the vigorous exposure of it made by Mr. Bayne, of Pennsylvania. It took the form of a bill introduced by Mr. Burroughs, of Michigan, in the House, to fix the terms of the Internal Revenue Collectors at four years. At present these officers hold during good behavior, or until some henchman wants an office. For the most part, however, they hold during good behavior. Many of those now in office were appointed during General Grant's first term, and are excellent officers. Indeed, the Internal-Revenue service is exceptionally well administered, and there is more or less reluctance to remove the Collectors for political reasons, owing to the outcry which it makes among the reformers, and the public generally outside of politics. This, however, does not by any means diminish the desire of "the workers" to get at the offices. In fact, in this case, as in many other cases, difficulty of gratification only inflames the desire. The spectacle of an honest man performing the duties of the same office, faithfully and efficiently, for ten or fifteen years, is to them indescribably odious. It seems so mawkish and sentimental that it makes them sick, as they say themselves. Finding, therefore, that it caused too much fuss to dismiss an officer simply to make a vacancy, they determined to try to subject Internal Revenue Collectors to the same rule as the Customs Collectors and Postmasters, limiting their appointments to four years, so that they might dismiss an officer at the end of four years without laying themselves open to the charge of dismissing him without cause. When they got rid of a good officer, they would thus be enabled to say that his term had expired, and that the law would not have fixed a term if it had not contemplated a change at the expiration of it. In fact, one of the concessions the spoilsmen have of late been making to the reformers takes the shape of an offer to remove no officer before the expiration of his term. They do remove officers frequently in the middle of their terms, but then, if you insist upon it, they are always willing to promise that they will do nothing of the kind, just to keep you in good humor.

The creation of the four-years term for the Federal accounting officers, or officers charged with the custody or disbursement of the public funds, was resorted to in 1820 simply as a clumsy and semi-barbarous mode of checking fraud and defalcation. Owing to the want of a proper system of inspection and auditing, there was a great deal of malfeasance. The proper remedy was to improve the checking and oversight and the organization generally. The plan actually resorted to was to dismiss every such officer at the end of four years, so as to compel him to balance his accounts at that date. Instead of being abandoned as an expedient to be ashamed of, and which in a mercantile counting-house would have seemed ludicrous, it rapidly took the shape, in the eyes of politicians, of a valuable feature in their system of "rotation," and the four-years term came to have a sacrosanct character, somewhat like the number seven in necromancy and astrology, as the true and only period for the commission of an American revenue officer to run.

In these days of increased facilities in travel and communication, and of improved discipline and organization and bookkeeping, it is as absurd to keep it up, as a guarantee of fidelity and efficiency, as it would have been to maintain in the English Exchequer the old tally system of keeping accounts by notches on a stick. We pay the President and the heads of departments considerable salaries for the work of inspection—that is, for seeing that their subordinates are fit men and do their duty, and for keeping a close watch on their accounts. To enable them by law to find out whether a subordinate is doing his duty, by dismissing him at the end of four years, is to encourage supineness or negligence on their part in the interval, and sometimes to encourage even connivance at, and participation in, fraud, as in the case of Assistant Postmaster-General Brady in the Star-route service. In other words, the time which the President and heads of departments give to distributing patronage—that is, to creating vacancies and filling them—is so much time taken away from their proper work of vigilant inspection, and the four-years term is a direct encouragement to neglect of this work, and is nothing else. There is no excuse or defence to be found for it, either in principles of human nature or human experience of affairs, in any field of administration.

The sole defence for this Burroughs attempt to introduce it into the Internal-Revenue service is to be found in the report of the Commissioner of Internal Revenue in 1877, which contains the curious suggestion that the Collector's term of office should be fixed at four years, because:

> "It often happens that when a Collector has served for a longer period than four years constant efforts are being made for his removal, and many officers, however well they may have discharged their duties, feel, after a four years' service, uncertain as to the length of time they will be retained in office. Where an officer is appointed for a term of four years, he has a right to expect that if he performs his duties diligently and faithfully he will not be disturbed until his term expires, and this feeling of security I regard as an important element in maintaining a good public service."

This is very like saying that in order to deliver a public servant from constant unjustifiable vexation and annoyance he should be guaranteed against them for four years certain and then dismissed altogether, which is one of those grotesque remedies for abuses which are generated only in the spoilsman's brain. Why, also, an officer who performs his duties diligently and faithfully is entitled to security from disturbance for four years, and not for eight or twenty years, is one of those questions which probably not even a spoilsman could answer, or could only answer by saying that four was the mystic number of "politics."

The true reason for the revived interest in the four-years-term system among professional politicians is undoubtedly a desire to escape from the growing strength of the public condemnation of the prostitution of the public service to partisan ends. The four-years term would furnish a period at which any competent officer could be got rid of, and room made for a "worker," without attracting public attention and without the necessity of giving reasons. In practice, it greatly stimulates the disease of office-seeking among the unsteady, shiftless, and incapable portion of the community. It gives notice to the whole tribe of the exact day and hour when a vacancy will occur, and thus enables them to prepare their intrigues, and deprives the appointing power of that best defence against their rapacious importunity, which consists in saying that the office is already filled by a competent man—an answer which no lazy "worker" ever receives without being in some degree, however small, improved by it. He cannot hear it without being reminded of something which in "politics" he is very apt to lose sight of—that civilized government rests, after all, on private morality, and that no government can long with impunity disregard the elementary virtues which hold society together. No government can in our time long continue to declare in its practice that honesty and capacity shall not open the door to its offices, that faithful service shall not give security in them, that the tried man shall count for less in them than the untried man, and that the very fact that a man has done a thing well for four years is a reason why he should not be allowed to do it for six. Civilized society could not exist under such rules, and, *à fortiori*, no civilized society can long permit its government to enforce them in the administration of its affairs.

TERRIBLE REMARKS FROM GAIL HAMILTON.

GAIL HAMILTON'S political articles are always read with a certain interest, because, whether rightly or wrongly, she is supposed to utter or reflect "the Blaine view" of things. Many people fancy that by reading them they get hold of the talk of the Blaine circle, thrown into a sort of literary form. She almost always writes to defend the spoils system; but then she is not fortunate as a defender. She defended Mrs. Howe, the Boston banker, and maintained that ninety-six per cent. per annum could be very properly offered as interest on deposits by a female banker, without giving reason to any but the most degraded minds to suspect this person's honesty. Mrs. Howe is now lamenting in the penitentiary the failure of the jury to share Gail Hamilton's admiration of her mode of doing business, and we fear that if some similar test of the value of her apologies could be applied to the spoils system, it would be found that she had done just as little for it as for Mrs. Howe. But no feebleness or inconsequence as an advocate can deprive her of her attractiveness as a mouthpiece. As she says, or is supposed to say, what Mr. Blaine says to "the boys," she will always be sure of a hearing.

What stirs her into utterance now in the latest *North American Review* is the public "cussedness" in supposing that Guiteau is a product of the spoils system, or that his crime

illustrated the workings of the spoils system. How, she asks, could he be the product of the spoils system when he never got into it; and how dare any one say that he murdered the President because he was disappointed in getting an office, when he never had held an office? Far from being a part of the spoils system, or a product of it, or an illustration of it, he was a "vagabond and villain from the beginning," "organically and primordially worthless, instinctively and imperiously vicious, grotesquely consistent to the horrible inconsistency of his depraved and deformed being—mere human vermin," and a great deal more of the same sort. Guiteau gets no mercy at her hands. In fact, she handles him without gloves. He catches it, whichever way he turns, in the most terrible English that was ever showered on a bad man, and she winds up one burst of vituperation by proposing that in some future "higher life," in which we suppose the nominations will go to the right men, we should take the Guiteaus, and "instantly on discovery, not with ignominy, but with tenderness," kill them, or, as she calls it in her pretty, alliterative way, "release them from the doom of birth by the boon of death, and so relegate these marred and monstrous abortions to the Creator's hand to be restored to the decency of non-existence." Now, what has brought all this down on poor Guiteau—this horrible proposal, not simply to hang him but annihilate him—is simply his having been used by the reformers as an argument against the spoils system. His career had been a bad one, but he had not, like some of Mr. Blaine's appointees to high office, been convicted of any infamous offence. He had managed, in short, like many of the Mikes and Barneys, while not passing as a saint exactly, to keep out of the hands of the law, and we must protest against the fate which Gail Hamilton has prepared for him. He must not be "reduced to the decency of non-existence," and shall not be as long as there are judges and police in America.

We must also protest against the conclusion which Gail Hamilton reaches, after disposing of Guiteau, "that the great obstacle to civil-service reform to-day is civil-service reformers." Matters, we think, can hardly be quite as bad as this, and Miss Hamilton would not have said this had she been talking in her usual moderate, accurate, restrained, Blaine way, and had not been excited by her analysis of Guiteau's character. There must, we feel sure, be some obstacle to civil-service reform a little greater than the civil-service reformers themselves. And we cannot quite agree with her in thinking that the lesson Garfield's assassination should teach is "not to assassins, officeholders, office-seekers, or others of the disreputable and dangerous classes," but "to the respectable and religious, and that the lesson is to speak the truth." Is there not some mistake about this, just as there was about Mrs. Howe's banking? Can it be possible that the lesson of Mrs. Howe's banking was not to the swindlers, and confidence men, and Peter Funks, and banco men, and check-raisers, but to the merchants and bankers of unimpeached integrity? Surely Gail Hamilton would not now maintain that it was. And if she was mistaken in that case, may it not be that the lesson of Garfield's death was really addressed to the liars, intriguers, dodgers, jobbers, bribers, and bribe-takers of our politics, and not to the harmless bodies who simply ask that the tenure of office be permanent, and that appointments be made for competence only, and dismissals for misconduct only, and that perjurers, forgers, and embezzlers, and ignoramuses shall not be employed in it on any terms whatever?

BISMARCK'S DEFEAT.

Prince Bismarck's pet scheme, the Tobacco Monopoly Bill, which was to put the manufacturing and warehousing of tobacco and the sale of manufactured tobacco of all kinds into the hands of the Imperial Government, has been buried in the German Reichstag under an adverse majority of 276 to 42 votes. Any other Minister would probably permit it to stay buried. Bismarck had exhausted all the resources of his political skill to build up a majority for this one measure. He had tried all his power of persuasion; he had, at the expense of his pride and consistency, yielded the position he had taken against the arrogations of the Church to propitiate the Clericals and to render a Parliamentary combination with them possible; he had used all the influence of the Government with the voters at the last elections to win a favorable majority; and after all this comes a defeat so crushing that it would dishearten any statesman of ordinary courage. But Germany is not one of those constitutional states in which a defeated Minister is compelled to retire. Bismarck is sure to have the Emperor behind him as long as he lives, and so he may stick to his plans with the hope of wearing out the Opposition.

It would be doing injustice to a statesman who has rendered his country such eminent service, to think that he clings to this scheme from mere pride of opinion and despotic obstinacy. He acts upon the belief, as expressed by his organs, that, while the German Empire is fairly safe externally, it cannot be considered safe internally until "it stands financially on its own legs"—that is to say, until the Government of the Empire has financial resources of its own and under its immediate control to draw upon, which will make it independent of contributions from the several states. And Bismarck thinks that the tobacco monopoly would furnish such an independent and reliable source of revenue. He further believes that something must be done to "improve the lot of the common people," to blunt the edge of the Socialistic movements, and to attach the masses by such means to the central authority. With this view he conceived some rather extraordinary schemes to insure disabled workingmen against want and distress, and the new revenue was to serve to some extent in this direction. Finally, the tobacco monopoly no doubt appeared to him a very expedient measure in a political sense, as it would have immensely increased the number of officials, licensed traders, and laboring men directly dependent upon the favor of the Imperial Government, to be used as a huge electioneering machine.

It cannot be denied that the first-mentioned object to be served by the tobacco monopoly is a perfectly legitimate and very important one, which no statesman in Bismarck's position would lose sight of. The trouble is that he has set his heart upon a particular fiscal measure which the people, with rare unanimity, have told him again and again that they do not want. This unanimity seems to be almost absolute, for it is very certain that even the pitiable minority of forty-two votes which the bill obtained in the Reichstag is composed of men not who believe in the tobacco monopoly as a desirable fiscal scheme, but who would stand by Bismarck under any circumstances. The only excuse he seems to be able to give for his persistence against an overwhelming public opinion is, that he does not know of any other plan that would answer the object, and, according to the cable report, he went even so far as to say in the debate: "Let the Reichstag substitute other proposals for those of the Government, unless the Reichstag regards the present state of things as absolutely excellent." This is a curious appeal appearing side by side with another declaration, made almost in the same breath, "that party government in Germany is impossible." It lays bare the fundamental difficulty of the political situation in Germany in a nutshell.

Here is a great Minister who, by extraordinary achievements, has won immense renown and authority. His self-reliance has grown with his success. Having done many great things so well, he thinks he must himself do all that is to be done. His authority is to be shared by nobody. All initiative—legislative as well as executive—is to remain in his hands. The Parliament is not to originate anything, but only to assent to what the one supreme mind originates. The executive power is to remain independent in its own right, and party government is to be scouted as an impossibility. At last this Minister runs against a public opinion which he cannot overcome. The Parliament stubbornly refuses to assent to a measure upon which he has set his heart, and which, to do him justice, he thinks necessary for the safety of the country. And then the same man, to whom Parliamentary initiative has always been an object of contempt, in his last perplexity exclaims: "Why does not the Parliament invent and propose something better?" Bismarck has never wanted the Parliament to propose anything—he was to do all the proposing himself. Moreover, according to his theory, the Executive is to continue to hold in its hand the initiative in all things after he himself shall have left the scene. And now while he, the only man who with his extraordinary genius and authority could in our days sustain such a system, is still on the stage, he calls upon the Parliamentary power to propose something better than he had to propose. The truth is that only Bismarck's prestige and energy have stood in the way of Parliamentary, that is, party, government in Germany ever since the Austrian war. It will inevitably come when he is gone, and the great mistake and failure in his splendid career will turn out to be that, while he was in power, he did not train and accustom those who, after him, will have to conduct the Government, to the habits and responsibilities of it.

THE CASE AGAINST MR. GLADSTONE.

LONDON, June 5.

WHEN the Government released Messrs. Parnell and Dillon, and announced what the world considered (though Mr. Gladstone refused to accept the term) a new departure in their Irish policy, they stated that it was to have two sides, as it had had in the preceding year—repression of crime and relief for the peasantry. As in 1881 we had the Coercion Act and the Land Act, so now we were to have some provision for those tenants who were hopelessly in arrear with their rent, together with more stringent measures for the discovery and punishment of crime. Their first idea was to carry out the indulgent part of the programme first, and relieve the tenants before strengthening the law against offenders. When Mr. Forster quitted the Cabinet he announced that he would have remained if they had provided a stringent punitive act in place of the Coercion Act, which they intended to let drop. Mr. Gladstone observed that there must be some legislation against secret societies, but he spoke of it as matter rather for the future, implying that he would proceed first to deal with the case of tenants in arrear. All this was changed by the Phœnix Park murders. English feeling demanded, Irish feeling did not at first seem likely to refuse, something to deal with men capable of so atrocious a crime. Accordingly, the new Prevention of Crime Bill was brought in five days after the murders, and has ever since been pressed on, all other business being set aside for it. The only exception is in the case of the Arrears of Rent Bill, which was also carried to a second reading, and then postponed till the Crime Bill should get through committee. It has now been three days in that stage, and seems likely to remain there for as many weeks, for although the Irish members have not yet entered on any systematic obstruction like that of last year, they seem disposed, and are indeed almost compelled by the exigencies of their own position, to discuss every clause with great fulness, and to propose many amendments tending to modify the rigor of the bill. The Tory party of course welcomes this rigor, and reserves its criticisms for the Arrears Bill, a measure which proposes to pay, first out of the surplus funds of the disestablished Irish Episcopal Church, and next out of the public exchequer of the United Kingdom, a large part of the debts which the smaller tenants owe their landlords from the years 1878 and 1879, when the harvests were exceptionally bad. It is admitted that some measure of the kind is needed, but the particular plan the bill takes is severely criticised, not by the Tories only, but also by many among the Liberals, who apply the strict tests of political economy. To make a gift to tenants in arrear is, it is alleged, unfair to those tenants who, often with great efforts, have already paid their rents. It teaches a bad lesson and sets a dangerous precedent; for whenever again a series of bad seasons arrives, the suffering peasant will rely not on his own exertions, but on the prospect of help from the national treasury. The Conservative leaders—though their sympathy with the Irish landlords, and wish to see the latter get what the bill provides for them, prevent them from offering any strenuous opposition to it—have laid hold of it as the latest development of the mistaken and mischievous plan which Mr. Gladstone has in their view followed throughout his dealings with Ireland. And Lord Grey, one of the most eminent and sharp-tongued of our elder statesmen, once himself a Minister, but long since retired into critical isolation, passes a similar condemnation on the Irish policy of the Liberals, though, to be sure, he thinks the Tories little better. It may be worth while to present to your readers an outline of the case made against Mr. Gladstone and his "policy of conciliation."

Conciliation (say these critics) is another name for concession, and concession has been the great cause of Irish agitation. Up till 1867 the attitude of England had been firm, and though disaffection existed, it was not increasing. But then, under the alarm caused by the great Fenian conspiracy, the Disestablishment movement began, and in 1869 the Protestant Church was disestablished, and the appetite of the Irish populace for revolution thereby whetted. Next, in 1870, came the Land Act of that year, which disturbed and confused the hitherto clear and plain relations of landlord and tenant, giving the latter an interest in the land which no contract had given him, and which was really incompatible with the power the landlord ought to have of dealing as he thinks fit with his own for the purpose of making the most of it. These two measures had the further evil of being avowedly passed in obedience to "Irish ideas"—*i. e.*, to ideas which not only were not those of the whole United Kingdom, but were even opposed to previous principles of policy, and were adopted, not because they were sound, but because the Irish people were possessed by them. In other words, the pernicious doctrine was recognized that Ireland is a quite distinct part of the United Kingdom, to be dealt with in a peculiar way, and that when she asks for anything she is to have it. During the following years these mischiefs had time to bear fruit in the popular mind, but while the Tories were in power (from 1874 to 1880) there were no further concessions. As soon, however, as Mr. Gladstone came into office in 1880, the hopes of the Irish agitators revived. The new Government allowed an act which forbade the possession of arms to expire, and when outrages increased, during the latter part of 1880, used its executive powers timidly, and forbore, till January, 1881, to apply for any further powers. In compliance with the demands of the Land League, which had by this time become a power, it brought in a bill to prevent tenants who had been in arrear with their rent from being evicted, and through Mr. Forster's mouth denounced the House of Lords for refusing to join in depriving landlords of their clear legal rights. In 1881 it passed the famous Land Act, a measure unsound in conception, because opposed to the teachings of political economy, and unjust in operation—a measure which handed over to the tenants a large slice of their landlords' property, which destroyed the action of free contract, and which, by providing for a general reduction of rents, encouraged the hope that rent might be altogether extinguished. Even then, however, the Government refused to pay for defaulting tenants out of the pockets of English taxpayers the debts they had incurred. This last humiliation was reserved for the present session, and has been made at the instance of those very Land League leaders whom the Government had thrown into prison, and whom it has now released in the vain hope of being aided by them to pacify Ireland.

What will be the next concession? Since 1868 every compliance has only led to further demands; and as these demands have been admitted the hopes of the agitators have risen, the appetite of the people has been whetted, and the English Government has slipped further and further down the perilous slope. What is still worse, the means by which these concessions have been wrung have not been argument and reason, they have not been even appeals to pity and benevolence; they have been threats and denunciations in the English Parliament, backed up by murder, treason, and the whole swarm of agrarian outrages in Ireland. This is why concession has aggravated instead of mitigating the situation. The Irish people have felt that it was due not to conviction, but to fear; they have, therefore, been stimulated to increase English fear by more and more flagrant breaches of the law. Their whole character has changed in the process. The old friendliness between them and their landlords, where the landlords were genial men, has been replaced by suspicion and hatred. Disloyalty is more rife than ever, and more ready, as the Phœnix Park assassinations prove, to resort to the most horrible means. The Protestants in Ireland, hitherto attached to England, have lost all confidence in the power of England to protect them. Capital, so much needed in a poor country like Ireland, has been frightened away. No one knows what may come next. When Mr. Gladstone, after vehemently refusing the demand for the three F's (fixity of tenure, free sale, and fair rent), practically conceded them in the beginning of 1881, while denying that they were in his bill, then, at the end of the same year, defended them, and now actually consults Mr. Parnell and brings in such an Arrears Bill as that gentleman writes from Kilmainham Jail to demand, what certainty can there be that he will not next year concede Home Rule, which he has admitted to be a question fit for discussion? And when Home Rule has been granted, will it not be a mere preliminary to the separation of Ireland and the recognition of her national independence?

Even this (the critics of the Government add) is not the whole of the mischief. The Liberal Ministry talks of governing Ireland by Irish ideas. But what are Irish ideas? Are they not something more than Irish? Are they not simply the communistic ideas of the Social-Democrats of the Continent of Europe, the same ideas at bottom as have more than once imperilled society in France, as have stimulated assassination in Germany and Russia? The demand of the peasantry to have the land, which the law declares to belong to their landlord, given to them without paying for it its fair price, is flat Communism. This is the ugliest face that democracy shows; and it is one which the democracy can show in England as well as in Ireland. We have got in England, too, a vast laboring population, at present fairly comfortable, and therefore contented, but liable in a time of commercial depression to be brought to the verge of want. Will not they be ready to profit by the example which Irish agitators have set, and open an assault on property in England like that which has overwhelmed the landowners in Ireland? They will not be checked by appeals to economic doctrine, because they have seen the teachings of political economy derided. They will not quail before the executive authority of Government, for they have discovered that behind the walls and towers which confront them there is a timid garrison, ready to surrender at the first attack, afraid to face the anger of the populace.

Not conciliation, but coercion, is what is wanted in Ireland. Force is wanted—prompt, decisive, unsparing. Soldiers and policemen are wanted, judges, and jailers, and executioners. If the ordinary machinery of the law will not do, let us substitute special commissions of judges for juries. If that will not do, let us have martial law, and take the risk of punishing some innocent people for the sake of putting down disorder. But force is just what a Liberal Government, whose maxim, enunciated by Mr. Bright, is that "Force is no remedy," cannot use. "Radicalism," says Mr. Goldwin Smith, himself a republican—"Radicalism cannot govern." That is to say, the principles of the Liberal party, its deference to the

popular will, its disposition to believe that the mob must be in the right, its aversion to all punishment and all bloodshed, its fondness for new ideas, its want of national pride, make it unfit to deal with a crisis like the present. It is too much distracted by philosophy, too much enfeebled by sentimentalism, to grapple with the hard facts of the case, and apply boldly, unrelentingly the only appropriate remedy. The Government have, no doubt, brought in a stringent measure in their Prevention of Crime Bill But apart from the risk that in deference to the advanced section of their party they may consent to let it be whittled down in committee, they are destroying half the effect of it by carrying through along with it their Arrears Bill, avowedly as a sop to the recalcitrant tenantry, avowedly in obedience to the commands of the Land League. Before anything whatever is done for the peasantry the authority of law and the sovereignty of the Queen ought to be sternly and completely vindicated. Not till then can conciliation cease to be taken, and justly taken, for weakness and cowardice.

These are the doctrines which one hears in London, and to a less extent elsewhere through the country, from those who constitute Society; and not from Tories only, but largely also from persons claiming to be Liberals of that "older and better" school which was untainted by modern Radicalism. Of course, they are often presented in far more violent terms. The hatred of Mr. Gladstone, in particular, has risen to something even beyond its usual height. It is not to be denied that there are some plausible grounds for them. The English Parliament, largely composed of landowners, has dealt with the Irish landlords in a way which no one, three years ago, could have ventured to foretell. We have found ourselves, before we knew it, in the throes of a social revolution. The language held by the Nationalist Irish members in the House of Commons has been usually irritating and sometimes insolent. They have made it very hard for any Government to take their advice; hard even for those Liberal members who have most sympathy with their programme to coöperate with them. Hence it is easy to represent the conduct of the Government, when it does listen to them, as humiliating, and that of members who support them as unpatriotic. Not only do the interests of the English landholding class seem threatened, but the pride of Englishmen of all classes has been affronted by the apparent powerlessness of the law to check outrage. It wanted but little more to produce a panic, and a panic would have driven the present Government from power and evoked a burst of ferocity against Ireland. Still, there is another side to the question, another aspect of these last fourteen years of Irish difficulty. I shall try to lay it before you in another letter. Y.

EGYPT AND ENGLISH OPINION.

LONDON, June 6.

THE opinion of Englishmen in England on the present crisis in Egypt is so far an important factor in the problem, that it is worth analyzing with some care. Having had occasion to return to England on private business just before the overt revolution broke out in Cairo, I have been able to watch all the stages of public opinion in this country, as well as to contrast the opinion of Englishmen here with that of Englishmen in Egypt.

I have been surprised to find how successful Sir W. Gregory and Mr. Wilfrid Blunt have been in diffusing erroneous impressions concerning Arabi Pasha, and in darkening the views of Liberal politicians. In the lobbies of the House of Commons, among newspaper writers, and in the most intelligent political circles, I have found but one opinion—namely, that, somehow or other, there is an important National party in Egypt, that Arabi Pasha personates it as its adequate representative, and that the European intervention, usually known as "the Control," is opposed to, and inconsistent with, the proper development of the ideas and projects of this party. These opinions, however, though universal in Liberal circles, are very loosely held, and every one has professed himself to be imperfectly informed and sincerely desirous of knowing the truth. In one very radical quarter I found the belief to prevail that though there was undoubtedly a National party deserving the vehement sympathy of the lovers of liberty everywhere, yet that Arabi Pasha had, from his military and self-seeking proclivities, ceased to be its representative, and ought to be dissociated from it, in the same way that the two Napoleons had, in their later careers, been unfaithful to the promise of their early days. In one high diplomatic quarter I was positively assured at the beginning of the crisis that it was expected that the next day Arabi would depose the Khedive, that he would act for a time as Governor-General under a firman from Turkey, that this firman would recognize the rights of foreigners resident in the country, and that a European Congress would immediately assemble. Though at first facts seemed to belie this programme to a ridiculous extent, it is remarkable that time has imparted increasing veracity to it. The notion of a Congress, preceded by Turkish intervention for the immediate preservation of order and the upholding of the authority of the military usurpers, has as yet prevailed over every other view, though the maintenance of the present Khedive on the throne is still recognized openly as a diplomatic *sine qua non*.

The ready belief in the veritable existence of a "National party," and the eager support of its claims, find their explanation in a protest, of an honorable kind, against vicious views in relation to Egyptian matters which have done much to distract and pervert the public mind. One of these is that the first duty of the English and French in Egypt is to secure the regular payment of interest to the bondholders. Another view is that England, in the interests of her Indian empire, ought to grasp any opportunity which may offer to annex Egypt, or to secure an influence there not less preponderating than that which it exercises over a variety of native states in India. Yet a third view is that England and France must coöperate at all hazards, even if this implies any amount of truckling to the sinister African policy of France. To these objectionable views may be added that of reinforcing Ottoman influence by allowing Turkey practically to vindicate her abstract right to secure order in one of her provinces.

There is no doubt that these several obnoxious views have persistently been held in many quarters in reference to Egyptian affairs, and that they are not without their vehement advocates in the Conservative press in England and in some of the leading Continental journals. Lord Beaconsfield's Government was credited with an ambitious annexation policy in respect of Egypt, and an Anti-Aggression Society has been organized in London for the express purpose of preventing and defeating all such schemes. Mr. Wilfrid Blunt has just been addressing this Society at a special meeting convened for the purpose, and, though I understand his arguments did not seem very convincing, yet the fact demonstrates the sensitiveness that prevails on the subject. M. Gambetta and his organ, the *République Française*, incessantly deprecate the recognition or use of Turkish influence in Egypt, and a like antipathy to all that is Turkish, though based on very different grounds, is a central point in the foreign policy of the Liberal and Radical party in England.

It is not surprising, therefore, that the wish for some "National party" in Egypt should be, if not the father of the thought, yet a most favorable medium for a rapid and unquestioning belief in the existence of such a party when once casually mooted. The voluble translations of Arabi's vague phrases into the terms of English constitutional politics, and the simultaneous assembling of the Chamber of Notables (an aristocratic body well known to the worst days of Ismail's reign), favored the progress of the gigantic fraud. The early victories of military intimidation were, for a time, successfully disguised as democratic and constitutional triumphs. The mysteries of Egyptian administration—which were only mysteries because no one troubled themselves to read the clear language of Blue-Books and Controllers' and Liquidators' Reports—were supposed to conceal horrid orgies of European fiscal oppression. In fact, they exhibit, when duly studied, miracles of hand-to-hand conflicts on the part of honest administrators with every form of Eastern corruption, injustice, and cruelty. The true story of European intervention in Egypt is that of restricting despotism, of introducing a reign of justice, of abolishing, reducing, regulating, and ameliorating taxes, and of preparing the way—and the only way—by which a horde of crushed slaves can be educated into a civilized and independent nation.

There is no doubt that English opinion is gradually being righted on the whole subject, though the recent history of Egypt is so complicated and tortuous that even the best-informed writers of leading articles know, or seem to know, only a part of the facts. But the statement of Mr. Gladstone in the House of Commons, that Arabi Pasha had now "thrown off the mask," and the utter surrender of all concern for him personally on the part of most of his original English adherents, are proofs that light is breaking in upon what was, certainly, a very dark place. The fact is that the complication of Irish politics, and the reform of the procedure of the House of Commons, have so far absorbed public attention since Parliament met that there has been little spare time or energy for foreign politics, least of all for those requiring much historical study and the correct appreciation of far-reaching, intricate facts.

The contrast between the state of mind in England and that of Englishmen in Alexandria is very noticeable. Though I have discoursed on political affairs with all classes of resident Englishmen in Cairo and Alexandria, I have not found a single one who at any time regarded Arabi Pasha as other than a pure military adventurer, or who had any belief in the existence of any party which, by the most superficial observer, could justly be denominated "national," or who considered that Egyptian administration, as conducted since the accession of the present Khedive, in 1879, was other than the most beneficial of which the country at present admits. No doubt the Administration is capable of receiving all sorts of improvements, readjustment, and retrenchment—as what administration is not?—but the cardinal vices of corruption and injustice, which beset all Oriental governments, have been successfully grappled with, and the danger is that the good be undone instead of being made better. A.

BISMARCK AT FRANKFORT.

BERLIN, June 1, 1882.

SINCE, for a foreign observer, there is not much of real importance in our politics at the present moment, I devote this letter to literary matters, and first report upon a newly-published book which is causing unusual excitement in all political circles. It bears the simple title of 'Prussia in the Bundestag' (the former German Federal Council, created in 1815 and thrust out of existence in 1866), and, by authority and with the assistance of the Prussian State Paper Office, is edited by Dr. von Poschinger. It is intended to give in three volumes a synopsis of the development of German public affairs, and especially of the relations of Prussia to Austria, from 1851 to 1859. This first volume covers the years 1851 to 1854, and begins with the appointment of Herr von Bismarck as Secretary of Legation in Frankfort on May 10, 1851, or more especially his promotion to the Ambassadorship in the same city on July 15, 1851; while it closes with the Crimean War in 1854. As was to be expected from its source, it abounds in a large number of important official documents written by Bismarck. Up to that time the insignificant dikemaster had not been of any consequence. While, in 1848, member of the Prussian Landtag, he was not taken for a serious man. Being a reactionary Hotspur, he provoked the Opposition, threatened them with the guillotine if his party should come out victorious, visited public houses in Berlin and picked quarrels in the interest of the royal family. If the *Kreuz-Zeitung* (reactionary), of which he was one of the collaborators during the revolutionary period, can be trusted, the present powerful Chancellor was so poor in 1849 that his party, for the services rendered to it, presented him with a new suit of black clothes. But with his appointment to a public office the scene instantly changed. He was hardly thirty-six years old when he assumed the responsibility of the important office of Ambassador. He immediately proved that he was a man of superior timber, who, like an old, experienced diplomatist, acted with perfect self-assurance among all the practised old fogies of the Diet.

The very first documents of the young diplomatist show all the advantages which the great statesman commanded at a later period. The affairs upon which Bismarck entered in Frankfort were very complicated. After her moral and political defeat, Prussia was not considered of such importance as she should have been, and only acted a secondary part with all the other smaller states. Austria presided and used her influence chiefly to put down Prussia. Until 1848 the two Powers had lived on comparatively friendly terms; the former often left to Prussia the details of the business, and only kept an eye on her own interests and prerogatives, which she rather sought to enlarge than to have them touched by other influences. But when in 1848 it appeared that the German nation principally looked to Prussia and depended on her for its unity and greatness, Austria and the small states under her leadership were filled with suspicion and distrust against Prussia, notwithstanding Frederic William IV. had rejected the imperial crown. Henceforth Austria considered it her chief object not to let the dangerous Prussia gain ground. Austria's privileged position in the Bundestag offered a thousand occasions for humbling and pushing back Prussia, whose representatives at Frankfort had hitherto submitted with good grace to Austrian arrogance. Bismarck was not the man to follow in their footsteps, and by his pluck soon made himself obnoxious and inconvenient to such experienced diplomatists as Münch-Bellinghausen and Prokesch-Osten. Bismarck's attacks were principally directed against the latter, who slandered his older colleague in every possible way. It is very fortunate that Bismarck began his diplomatic career in Frankfort and became acquainted with the miserable constitution of the German Confederation at its source. Had he been employed as a diplomatist only at foreign courts, his later tendencies would perhaps have taken quite another direction than they actually did. But in Frankfort he personally suffered so much from the Bundestag's *misère* that afterward it became his first object to put an end to it. In the published documents of that time the German standpoint in no way clearly appears; only the Prussian one is emphasized. But you must consider that these papers were directed to Secretary Manteuffel, to whom, as to all Conservatives, the German idea was a horror.

Baron Prokesch's policy against Prussia has since been put down, but unhappily the principles by which he was guided, and the tactics employed by him, which Bismarck indignantly describes and rightly condemns, seem to have found followers, for at the present day we see them often applied, not only in foreign, but also in home politics. It is highly interesting to observe the then unknown gentleman in his official reports and private notes, to follow his way of thinking, reasoning, and acting. He writes an excellent style—terse, comprehensive, and vigorous; never misses the right word, and always hits the mark. His descriptions and characterizations are full of reality, good-humored softness, and bitter severity. Again and again he reverts to his subject in other and not less clever words, and leaves the impression that everything that could have been said about it has been said. I here give as an example of Bismarck's power of characterization his portrait of Herr von Prokesch in a confidential letter written on May 30, 1853, to Baron Manteuffel, the then weak and pusillanimous Secretary of Foreign Affairs:

"Herr von Prokesch," Bismarck says, "is too well known in Berlin to require any allusions to his person; but I cannot help remarking that the sereneness and ease with which he affirms false facts, or disputes correct ones, greatly surpasses even my highest expectations. This state of mind finds its completion in a quite surprising degree of cold-bloodedness in dropping a topic, or in changing front as soon as the falsehood with which he starts is proved. In case of need he covers his retreat by flying into a violent passion, by a parade of moral indignation, or by a rather personal attack, with which he transfers the discussion to a new and heterogeneous field. His principal weapons in the petty war which, where our interests diverge, I have to carry on with him, are (1) passive resistance—*i. e.*, protracting a case—by which policy he forces me into the rôle of a disturbing and (according to the nature of the case) a narrow-minded dunner; (2) attacks by his encroachments, accomplished as President, which usually are so calculated as to make their rejection on my part appear that of a quarrelsome character, contentious about trifles. In my relations to him I can therefore hardly avoid the appearance of a petulant disposition if I would not prejudice the interests of Prussia to such an extent that my yielding would still increase Austria's claims.

"Thus, the other day I was compelled to call him to account for having arbitrarily contracted a loan of 37,000 florins for fortification purposes, on which occasion he referred to 'hundreds' of precedents, of which, however, he could not specify a single one. Thereupon he asserted that a certain discretionary power of the President was necessary for carrying on business matters; that in the time of Count Münch (Prokesch's predecessor) no member of the Diet would have dared to call its attention to such trifles, and that a good understanding between Prussia and Austria could not be maintained if every act of the President was exposed to malevolent criticism on the part of the Prussian Ambassador. My refutation of these views caused him to answer, that my (temporary) Presidency had not been examined in all its details, and that he calmly awaited the resolution of the Diet, which he was sure would not disavow the acts of the President. If, however, contrary to his expectations, it should do so, he would pay out of his own pocket the trifling interest which had accrued in the meantime. I answered that the latter way appeared to be the only agreeable and best solution of the present difficulty, and that I would most cheerfully contribute my share rather than act officially in a case which my Government would not and could not sanction. The smallness of the object would thus help us to do away with a precedent which, if now passed over without objection, might in future easily be repeated and extended. I have thus checked the Ambassador, and put him back into his proper limits with that energy which, in the nature of the case, I am entitled to exhibit, and I have at the same time done everything in my power to lead back the discussion into the track of friendly understanding."

On another occasion Bismarck writes:

"Even a common difference of opinion he treats as incomprehensible and ill-natured, but a denial of the lawfulness of his enterprises he considers a personal offence; so that a quiet discussion upon such divergences is quite impossible, as he immediately takes to general protestations, wholly extraneous counter-charges and suspicions, and becomes excited to unpoliteness—whether from calculation or from fault of temperament I cannot decide."

It is impossible to give many extracts from this valuable collection. I should be at a loss to make a proper selection, and besides, the letters enter too much into the details of a period which has no other interest for a foreign reader than to show the method in which Bismarck shuffled the cards twelve years before the war of Prussia against Austria broke out. Without him, the old relations between the two Powers would still exist—namely, Prussia would still follow in the rear of Austria. Let me, however, quote one other instance of Bismarck's diplomatic coolness and foresight. In January, 1854, Herr Prokesch-Osten sold an old bureau without having first emptied it. The purchaser found its drawers full of important state papers, such as correspondence of the Austrian Ambassador with press and political agents hostile to Prussia, with drafts of reports to his Government, newspaper articles written by him which offensively attacked the person of Frederic William IV., and that at a time when Prokesch was the accredited Austrian Minister at the Court of Berlin. The great majority of these papers were so venomous that when published they were taken for the outflow of radical rage. Nothing could have come more apropos to Bismarck than to have these rich treasures offered and sold to him. He was thus enabled to characterize Prokesch's diplomacy in his own words. Manteuffel, to whom Bismarck had reported his good luck, asked him how he proposed to avail himself of it; whereupon the young diplomatist answered on February 2 as follows:

"The moment that we succeed in disposing the Imperial Cabinet to a policy with which we can sincerely go hand in hand, and which contains in itself the guarantee of its permanence, it will be very desirable to have Baron Prokesch recalled from here; but as long as on the field of federal policy we are more rivals than allies, I consider Baron Prokesch a less dangerous representative than any *persona grata*. The appointment of such a *persona grata* would be highly charged on our debit side by Austria. His successor would, perhaps, conceal the anti-Prussian tendencies of his instructions with more dexterity and taste, and at the same time be more clever in their execution, than the present President of the Diet; the more so, as the successor would secure for himself in a higher degree the esteem and the confidence of his colleagues. My humble vote, therefore, is not to make use of our discovery to attack the person of Baron Prokesch and to drive him out of his present office, but, on the contrary, to derive as much advantage as possible from our good luck by making him feel uneasy in his position, and by so far acquainting our allies in a confidential way with the facts at our command that our patience and forbearance will appear in the most favorable light. I would likewise recommend you to inform the Vienna Cabinet, indirectly and unofficially, that we have the most convincing proofs of the Austrian intrigues against us which have hitherto constantly been denied, and of the real sentiments

which these intriguers entertain even against the august person of His Majesty the King.

"Another great advantage, which, in my opinion, is not the least we can derive from the materials in our hands, will consist in our making public the source from which public opinion is worked on in the Austrian sense, and thus giving open proof of the value of those political convictions which manifest their German patriotism by extolling Austria and vilifying Prussia. I have not an official publication in view, nor a verbal reprint of the calumniating articles. My plan of operation would be to throw out the first hints in a very unsuspicious newspaper, and as if our documents were in private possession, and to print in one or more articles the essential contents of the *species facti*. Perhaps the *Preussisches Wochenblatt* would do best if your Excellency should also think fit to take one of the editors into our confidence. When the transactions between Herr von Prokesch and his agents become known, they will effect a strong reaction on public opinion in relation to those articles which have been written in favor of Austria. The irritation with which a few months ago, some hints were received about the Austrian inspiration of the German press already now proves that I am correct. . . . I would, therefore, most humbly propose to feign that by the article or articles to be published the attention of our Government had been directed to its or their source, and that in this way we had obtained official knowledge of the materials, which, in the manner alluded to, could likewise be used for further ends."

Here the above correspondence has been received with a mixed feeling of admiration and pity. While Bismarck's letters, on one side, exhibit the greatness of the statesman, on the other they show the limits which such greatness imposes. We find in them the traces of that utter contempt of men whom, when using them as his tools, he always supposes to be directed by selfish motives and low ambition. In relation to diplomatic transactions, agrarian tendencies, and manufacturing interests, he may be right; but that our people, and especially our Parliaments, are so destitute of honest and unselfish characters, Bismarck himself will not and cannot pretend. Like Napoleon, he only knows how to reckon with the mean instincts of human nature; he laughs at the elevation of noble minds, of ideal aims. Independent men turn away from him more and more, and even among the Government officers he can only command the assistance of subordinate characters, clerks and "Streber," while men of self-respect hold back. His calculations have proved wrong several times and produced political failures, if not in our foreign, in our home policy. The defeat of his pet measures on the politico-economical field should have given him a warning. † † †

Correspondence.

THE LABORER'S QUESTION.

To the Editor of The Nation:

Sir: Mr. Justin McCarthy, in the *Tribune*, gives the following as the objects of the Irish Land League:

"It aimed at the extinction of landlordism in Ireland: not the extinction or extirpation of the landlords, but the abolition of the landlord system and the introduction of a peasant proprietary system which should leave the land of Ireland in the hands of one set of owners, each occupant being the proprietor of the ground he tilled and improved."

He also says:

"There are about 600,000 occupying tenant-farmers, and rather more than 500,000 laborers."

Passing by the neat distinction between extinguished landlordism and extinguished landlords (which some landlords may appreciate), I would ask why the laborers also are not to become proprietors of the ground they till, sharing with the new "set of owners" in the ratio of five to six, taking so much of each farm? How else is there to be an "extinction of landlordism"?

Anti-Landlord.

Notes.

It has not been made clear, it seems, that the national dollar-subscription in honor of the poet Longfellow is not restricted to contributions of that amount. Any larger sum than one dollar will be gladly received by the Committee on Collections, and may be sent to the Treasurer, Mr. John Bartlett, Box 1590, Boston, Mass., or, as already announced, to the Publisher of the *Nation*.

Cassell & Co. publish immediately a new and cheap edition, in cloth, of Richard Jeffries's 'Wood Magic.'

With the fifth volume, 'Condensed Novels and Stories,' and by no means with an anti-climax, ends the uniform edition of Bret Harte's works published by Houghton, Mifflin & Co. Any author should rejoice in such a handsome memorial of his genius. The same firm announce for the autumn a 'Life of Ole Bull,' by his widow, and for speedy publication a new volume of poems by Longfellow, embracing all those written after "Ultima Thule," and several not heretofore printed. The title, 'In the Harbor: Ultima Thule, Part II.,' was chosen by the poet himself.

A. D. F. Randolph & Co. send us artotype likenesses of Longfellow and Emerson, after drawings by T. de Codezo. As these apparently follow either photographic or other original portraits, there is little motive for putting up with second and third-hand performances which are, moreover, not remarkable in themselves.

Better than the foregoing Longfellow is the lithographic drawing by Peter Calvi, issued by R. H. Curran & Co., 12 Pemberton Square, Boston. It is a correct if not an inspired work, but in framing it it would be well to shut out the bust, which is very inartistically rendered.

Still another likeness, an etching by W. M. Chase, appears in part 7 of the serial *American Etchings*, edited by Ernest Knaufft and published by the *Art Interchange* Publishing Co. It is a ghostly profile seen against an almost black background, so that the effect is nearly that of a medallion. The drawing is forcible.

The second volume of Mr. Pierre Irving's 'Life and Letters of Washington Irving' ("Geoffrey Crayon" edition) has just been published by G. P. Putnam's Sons. On p. 336 will be found a letter of Irving's, written in 1840, throwing his weight in favor of an international copyright law. After half a century its appeal is still as necessary as it was originally.

Dr. J. G. Holland's 'Nicholas Minturn' and 'Miss Gilbert's Career' are the latest additions to the Messrs. Scribners' uniform reprint of that author's works. The same firm have issued a collection of 'Westminster Sermons,' by the late Dean Stanley, five of which relate to the Abbey itself, six to royal and national events (such as the Prince of Wales's critical illness in 1871, and his setting out for and return from India in 1875-76), fifteen to eminent Englishmen who had passed away—from Palmerston to Beaconsfield—and seven to miscellaneous subjects, like Paris under the Commune and American Independence. The range of topics is great enough to illuminate every one of the Dean's mental characteristics. On reading his sermon on Lyell, "The Religious Aspect of Geology," one can but wish he might have survived to preach a funeral discourse over Darwin.

Harper & Brothers have done well to combine in one volume, for their Franklin Square Library, three volumes of the "English Men of Letters" series—viz., Pattison's Milton, Leslie Stephen's Pope, and Goldwin Smith's Cowper. Still other such combinations are in progress. They have also prepared a special 'Tourist's Edition' of Drake's 'Heart of the White Mountains,' with Mr. Gibson's exceptionally fine illustrations, in which the chief sacrifice is one of margins, due consideration being had for the tourist's trunk or bag. The book remains a very beautiful one, and is provided with a map of the White Mountain region.

Estes & Lauriat, Boston, have now brought out the 'Coues Check List of North American Birds' in the revised second edition which we announced last April. It is an eminently handsome book, with an old-fashioned garrulous title, and most carefully considered in choice of type, size of page, and the more precious details of literal accuracy. It opens with a dissertation on the use of names, and when the numbered check-list is reached, every name is repeated in a foot-note scrupulously marking its pronunciation (on the compromise system proposed by the author), and interpreting its significance. These notes are highly interesting, and imply a vast amount of labor, which has been shared by Mrs. Weston-Aiken. There is a list of the words defined, and a catalogue of Dr. Coues's ornithological publications. The scheme of this 'Check-list' seems admirably calculated to reconcile youthful naturalists to the scientific nomenclature, as well as to protect the untrained adult from egregious errors in orthography and orthoepy.

Our historical magazines being too prone to neglect everything later than the Revolution, it is refreshing to find a long defence of President Tyler by his son in the June number of the *Magazine of American History*. The paper is not the work of an historical mind, but it is worth reading. President Tyler's title to be the great original Texas annexationist, on grounds absolutely independent of slavery, and by means equally devoid of public morality, is asserted with a heartiness which only extracts can illustrate. "He [Tyler] was a man, indeed, . . . on practical questions always right" (p. 394). "If . . . success is to be attributed to the importance of the results achieved, what administration, from Washington's down, can compare with it?" (p. 398).

Robert Clarke & Co., Cincinnati, have just issued an interesting catalogue of Shaksperiana and of books about the stage, most of which are still in print, but scattered about in the catalogues of various American and English publishers. A catalogue of 536 numbers of books relating to the theatre, music, and art has been put forth by the old book-store of Stoll & Bader, in Freiburg, Baden, and another of 603 numbers, relating to music and the drama, by Nijhoff, of the Hague. Both of these foreign catalogues are cosmopolitan and polyglot; the latter is especially rich in the Dutch drama.

The latest issue of the English Dialect Society, being the conclusion of Nodal and Milner's 'Glossary of the Lancashire Dialect' (London: Trübner & Co.) calls for no special comment. In the ninth annual report, prefixed to the volume, mention is made of the tracing of the lines between the southern and midland, and midland and northern dialects in England, based on the treatment, in each division, of the Anglo-Saxon short and long U in *some house*. This shibboleth, beginning in the South and ending in the Scottish Lowlands, is successively pronounced *sum house, sŏŏm house, sŏŏm hōōss*, and *sum hōōss*. "Of course," says Mr. A. J. Ellis, "the four districts above described are essentially of to-day; six hundred years ago all said *sŏŏm hōōss* [*i. e.*, Northern English]."

Part 16-23 of the new 'Brockhaus's Conversa-

tions-Lexikon' (New York: L. W. Schmidt) carry the work to and a little beyond the name of the great African explorer, Barth. The more significant articles are on Asia, Australia, Atlantic Ocean (all accompanied with maps), Ashantee, Ethiopia, Athens (with a plan, and with views of the Acropolis), Assyria (with a plate of antiquities), Architecture (with many plates), Banks, Baden, and Eye. Ethnographical plates also illustrate the articles on Asia and Australia. In biography this part of the alphabet is notoriously meagre.

Not content with annexing Alsace-Lorraine territorially, the Germans are proceeding to annex the Alsatian literature, beginning with Erckmann-Chatrian. The prospectus of a German translation of their romances declares that as these literary Siamese twins have a name half French, half German, their writings may be properly considered as German stories in a French clothing. The German publisher merely proposes to restore to them their proper habit. What will M. Arvède Barine say to this? Erckmann-Chatrian of all writers! Recall the 'Histoire d'un Paysan,' the 'Conscrit de 1813,' and the 'Invasion.' France some time ago lost Charlemagne from her list of great kings; if this new appropriation succeeds, Napoleon also must be surrendered to the enemy.

From the *Journal de la Jeunesse* M. Charles Joliet has reprinted in a neat little volume of 216 pp. 'Mille Jeux d'Esprit' (Paris: Hachette; New York: F. W. Christern), a collection of questions and puzzles—acrostics, rebuses, charades, square words, etc., cryptographic, alphabetic, and arithmetic curiosities, etc., *bouts-rimés*, and the like. Solutions are given in the second part. The book may be recommended to all children who are sufficiently advanced in French to be able to make use of it, and sufficiently fond of solving difficulties to enjoy it.

A discussion in *Nature* of the mildness of last winter in England justly ascribes it to the unusual violence of the southwesterly storms there prevailing. When this has been said often enough, geographers will begin to reflect that it is not the Gulf Stream that imparts to Western Europe its temperate winters, but rather its situation eastward (and therefore leeward) of an ocean which moderates, as do all oceans, the climate of any region fortunate enough to derive its prevalent winds from off the water.

—In the *Atlantic* for July Mr. Thomas Hardy carries the adventures of his astronomer and lady in "Two on a Tower" several steps forward, and introduces a page or two of conversation between Sammy Blore, Hezzy Biles, Nat Chapman, and Haymoss which has a queer echo of the talk of Shakspere's clowns and bumpkins. This has been a peculiarity of Mr. Hardy since he first made a success with it in 'Under the Greenwood Tree.' Notwithstanding what Mr. Matthew Arnold would call a note of falsity, there is underneath it a certain probability in the peasant types into whose mouths it is put, that makes it sometimes very entertaining. Mr. Hardy's characters in all classes of society, indeed, have much that is human in them, although their humanity has a strong literary cast. Mr. Henry Cabot Lodge, in a valuable article on "Naval Courts-Martial and the Pardoning Power," proves by indisputable statistics what has been merely surmised before, that the abuse of the pardoning power is beginning to have a shocking effect on the discipline of the Navy. For seventeen years since the close of the war sixty per cent. of the sentences of naval courts-martial have been reversed, set aside, or commuted, or in some way unexecuted; in the last few years the condition of things has become fairly deplorable. Down to 1877 the percentage of unexecuted sentences was reasonably constant—not far from fifty-four per cent. But in the last four years the percentage of sentences unexecuted rises to 79.4, while in 1880, of twelve cases of commissioned officers sentenced, every sentence was either set aside or remitted, or commuted to an extent equivalent to setting aside. Most of these cases were for drunkenness and scandalous conduct. Mr. Lodge evolves from the statistics a regular "law" with regard to the matter, that "high rank joined with a severe sentence is almost sure to bring some form of pardon." As the rank declines, the severity of the sentence has less and less apparent effect. "But low rank and a heavy sentence fare far better than low rank and a moderate or light sentence." The inference is inevitable that "in the majority of cases pardon or remission depends on the position of the culprit, the amount of pity excited by the weight of the sentence, and the quantity of influence which can be brought to bear." With these facts before us, it looks as if the petition presented to the Senate by some three hundred officers of all ranks in the Navy, praying that the practice of interfering with the sentences of courts-martial may be stopped, ought to receive some attention. Mr. Lodge thinks that the pardoning power itself should be restricted by law, but he does not explain how this can be done under the Constitution.

—Mr. William Henry Bishop's "House of a Merchant Prince" is continued through two chapters, in one of which is a more than usually clever conversation of the "platonic" variety—one of those conversations between a man and woman based on a professed friendship, but made interesting only by the tacit recognition of a sentiment of a different nature. Jay Gould, if he will take the trouble to read Mr. Henry D. Lloyd's article on the "Political Economy of Seventy-three Million Dollars," will find himself accounted for in a very different way from the simple explanation that used to be given by his partner, Jim Fisk. Gould's career, according to Mr. Lloyd, "illustrates what may be accomplished by a scientific devotion to the principles of competition, *laissez-faire*, desire of wealth, and self-interest, if not the harmony of interests." In other words, Gould's acquisition of his immense wealth is due to political economy, and political economy is all bosh. Such is Mr. Lloyd's contribution to the warfare carried on in England against the *laissez-faire* school. We fear, however, that even Ruskin will repudiate this volunteer. Gould is the product of corrupt courts and legislatures, and no economist of any school ever taught that the principle of *laissez-faire* covered the right to bribe judges or "gobble" railroads, any more than it does the right to rob and murder on the highway. Mr. Harrison continues his studies in the South, and discusses in an interesting manner the interference with the freedom of the ballot in the black districts of Mississippi, Southern Alabama, and Louisiana. About the facts there is no dispute. The whites prevent the negroes from voting, or else falsify the count, and thus keep the government in white hands. This was universally admitted, Mr. Harrison says, in conversation, and defended as necessary for the preservation of society. Black government would mean anarchy and chaos, the whites say, and advance many reasons for thinking so; none of these, however, are so strong as the character given the negro population by Mr. Harrison, himself a strong anti-slavery man:

"As to any knowledge, intelligence, or judgment, such as should equip a man, even in the lowest degree, for the exercise of the right or power of suffrage, I cannot see that they know anything about it, or possess it any more than sheep do. If by a vote we mean, according to the definition long ago enunciated by Horace Greeley, 'that by which the will, preference, or opinion of a person is expressed'; if we mean anything which is the voluntary and purposed act of a man, with the object of announcing a decision, choice, or judgment which he has formed or arrived at, then these negroes are not able to vote, and do not vote. They have the 'right' to vote under the law, but they have no real power or ability to vote. They do not and cannot choose; they have no knowledge of what is involved on one side or the other. They have no materials for an opinion or judgment, nor any ability to form a preference or decision regarding political matters. They know nothing of the position, doctrines, history, traditions, or aims of either party, and they have no idea or notion whatever of their respective merits or principles."

Mr. Longfellow's poem, "The Bells of San Blas," has an interest as being the last verse written by him.

—There are two musical articles in *Harper's* for July. The first is ostensibly on "Franz Liszt," but those who expect a sketch of interesting events in the pianist's life based on his recently published biography and collected writings will be disappointed. It is one of those flimsy articles whose chief aim seems to be to impress the reader with the fact that the writer met Liszt on a certain occasion, and talked to him, and was kissed on the forehead, and got a parting gift of violets. A specimen of the style needs no comment: "Was the master thinking of Chopin as he raised his superb hands, and let them fall, with a touch as delicately soft as rose-leaves, and weave, as if in dreaming, the memories of mountain lakes and pine forests into an improvisation full of starry minors from echoing Alpen-horns?"—whatever this may mean. The second article is on "Sailor Songs," and is much better. Although there are still sailors in abundance, the typical "Jack" of the pre-propeller age—the "packetarian" and the seaman of the clipper-ship fleet—has utterly vanished, according to the author, whose aim has been to secure for the benefit of posterity some of the wild melodies characteristic of the old sailors from the few specimens still lingering in marine museums or hospitals. The sailor songs are not like those of civilized men. "They breathe the wild freedom of the jungle, and are as elusive as the furrow left by a ship on the trackless ocean." Many of them are doubtless of negro origin, having been caught by the sailors from slaves working in Southern ships. "Dixie" is cited to give an idea of their proximate character, and more than a dozen of them are printed in musical notation, although "no true idea can be given on paper of the wonderful shading which shanty men of real genius sometimes gave" their songs, by their subtle variations of time and rhythm and expression. The songs are divided into two classes — pulling-songs and windlass-songs, the former being used as mechanical aids to work, the latter more elaborate and varied both in the solo part and the chorus. The illustrated articles are excellent in various ways. Mr. Henry W. Lucy touches off the characteristics of the leaders of the two parties in England from a Liberal point of view, but in a fair spirit, and with the aid of an extensive portrait-gallery. Another type of faces is reproduced in connection with Mr. G. W. Sheldon's article on "The Old Shipbuilders of New York"—an article not more entertaining than mortifying when one reflects that there are no successors to the Berghs, Steerses, Webbs, Browns, and Westervelts, and on the causes of the "fault" in the succession. The recent astonishing discoveries of royal tombs in Egypt are related by Miss Amelia B. Edwards; and the mummy-cases, the kingly mummy faces even, the funeral canopy, and much else, are shown in capital

engravings. Mr. Julian Hawthorne contributes some brief thoughts on the late Mr. Emerson, dwelling rightly on his essentially American character, on the rare quality of his oratory, and on the still rarer quality of his verse. A full-page woodcut by Closson, after Rowse's well-known crayon likeness of the poet, will go far to satisfy those admirers who have not been fortunate enough, and are not able, to procure Schoff's masterly steel engraving from the same original.

—Some remarks on "Our Geographical Nomenclature," by the retiring President of the Boston Appalachian Mountain Club, are printed in the first number of the third volume of *Appalachia*. With many of Mr. Fay's strictures all must agree; but his general dislike to descriptive, and preference for personal, names, especially in the case of mountains, does not seem wholly reasonable. He gives a black list of names of streams west of the 100th meridian, as combining "every shade of unsuggestiveness and poor taste"; yet, except for the possibility of repetition in so vast a country, we could not find it in our heart to object to one-sixth part of them. Grey Bull, Mussel-Shell, Bad Land, Red Willow, and Long Pine, for example, do not seem to call for any apology, and do, on the contrary, wear a prima-facie justification as being associated with natural features, or with incidents which are not ignoble simply because they are solitary and forgotten. A poet may build on Grey Bull River as surely as on Hartleap Well; and it is, in fact, a poetical feeling which applies such an epithet as "Jack-straw" to the region of confused dead timber on Pike's Peak noticed by Mr. Stearns on page 40 of *Appalachia*: the metaphor is perfect. Doubtless somewhere the name "Leadhole" occurs in our mining districts; and this is every whit as defensible, if not quite as euphonious, as the Buco del Piombo near Erba in Lombardy, visited by Mr. Henck, and described on page 14 of the present number. In short, the best as well as the worst names arise spontaneously, and the whimsies of the learned and fastidious are as much to be dreaded—witness the town nomenclature of Central New York, or the original hybrid name "Losantiville" proposed for Cincinnati—as the vulgarity of the miner and the frontier backwoodsman. The only safe censorship, on the other hand, is that of the Post-office Department, which can do something to reduce or to prevent the perplexing multiplicity of identical names. In saying this, we do not mean to deny the Appalachian Club the right to propose names for peaks hitherto undistinguished.

—There is hardly an article in the present number of *Appalachia* in which the general reader cannot take an interest. Besides the President's address, we may mention Mr. Henck's account of his visit to Milan as delegate to the fourteenth annual congress of the Italian Alpine Club; Mr. Stearns's "Ascent of Pike's Peak"; Mr. Ritchie's "Winter Excursion to the White Mountains"; Mr. Davis's "Little Mountains East of the Catskills," which, with its illustrations, will prove a very instructive guide to those who summer among these mountains; Mr. Edmands's "Mountains between Saco and Swift Rivers"; and Mr. Wm. H. Pickering's description of his new contour map of the Presidential Range. This important map also accompanies a handy little 'Walking Guide to the Mt. Washington Range' just published by Mr. Pickering (Boston: A. Williams & Co.), which opens with some capital advice to pedestrians, then enumerates the distant points visible from Mt. Washington, with compass bearings (the most distant is Ebene Mountain in Maine, 135 miles; the next, Mt. Whiteface, in the Adirondacks, 130 miles), gives a list of elevations, and describes eighteen different excursions, with approximate time of achieving them. It would be superfluous to predict that this guide-book will prove a great stimulus, as well as a great safeguard, to White Mountain pedestrianism, and indeed it should be a *sine qua non* to all tourists who wish to determine the innumerable peaks, valleys, and ravines seen from the more famous trails and summits of the Presidential Range.

—The celebration of Mrs. Stowe's seventieth birthday on June 14, in Massachusetts, by the publishers of the *Atlantic Monthly* and a number of her literary, philanthropic, and theological friends, was a graceful reminder not only of the rapidity with which the number of those who bore the brunt of the anti-slavery conflict is diminishing, but of the enormous changes, both social and political and moral, which they themselves have seen and been a part of. Since 'Uncle Tom's Cabin' appeared, the political and scientific world has undergone great revolutions, but hardly so great as the moral world. Anybody who takes up the book now, and has any difficulty in finding in it, as a piece of literary work, the reason of the enormous success which it achieved, may take it for granted that he knows nothing of the state of mind in which its earliest public received it, or of the mental and moral conditions of a society in which negro slavery had powerful defenders in every walk of life, and in which its ultimate abolition seemed too far off to be within the sphere of practical politics. The greatest peculiarity in the lot of the anti-slavery champions who are now so rapidly passing to their final rest, lies in the fact that while other reformers as well as they have seen their reform triumph, no others have seen the very beginning and the very ending of so stupendous a reform in their own lifetime. No others ever saw, within a single generation, the idea of a few "fanatics" take hold of the resources of a great nation, cover the waters with its fleets, and darken the land with its armies, and get itself proclaimed by the throats of a thousand guns. All this, however, Mrs. Stowe has witnessed. Her book was very fortunate in its opportuneness. It came into a world that was apparently waiting for it with such eagerness that it would probably have had a great success even if its literary charm had been less than it was. It is now probably about to achieve a second and no less remarkable success as an historical reminiscence. It is not simply, like most historical romances, a mere picture. It was really in itself one of the weapons in a great fight. Consequently, as long as the story of the fight is told, it will be read, not simply as a description of what caused it all, but as itself one of the causes. It must always remain one of the monuments of literature, and, perhaps, the only striking and enduring literary monument of the anti-slavery struggle. In other products of the anti-slavery pen, everything was sacrificed to the immediate effect on the contest. But Mrs. Stowe's book successfully recognized also the claims of art, and has thus secured for her a wider and more enduring fame than has fallen to the lot of the other writers in the same field.

—The Archæological Institute of America, if if had merely set an example of book-making like that of the first volume of its Papers (Classical Series), would have conferred a substantial benefit. We have not, indeed, in a long time seen a more tasteful and inviting book than Mr. Joseph Thacher Clarke's 'Report on the Investigations at Assos, 1881,' conducted under the auspices of the Society. The only fault we can find with it is the too glossy surface of the paper, but the error in this direction is very slight. Mr. Clarke's modest narrative of what has been achieved in the Troad is remarkable for its learning and for its literary quality, the one not overweighting the other. It is eminently readable, and nothing has been omitted in the way of maps and illustrations to make clear the site, the conditions, and the progress of the excavations. The historical preparation of the expedition has been most ample and intelligent, and topographically, artistically, and archæologically the little group of explorers seems to have been strong and capable. Mr. Clarke describes the inevitable Turkish obstacles to the work—the bad faith, the false assumption of authority, the attempts at blackmail by the authorities. He notes the growing ascendancy of the Greek population in the Troad, notwithstanding all adverse influences, and the steady retreat of the non agricultural Moslem. Both races were employed as workmen, and became emulous of each other; the Turks, though inferior on the whole, receive honorable mention, with pity for their exhausting fasts in the observance of the Ramazàn. The best previous description of the remains at Assos was found to be that of Baron Prokesch-Osten, whom Bismarck took such satisfaction in badgering at Frankfort. The French Texier, on the other hand, drew inordinately on his inner consciousness, and is the object of much censure and exposure on the part of Mr. Clarke. The delimitation and ideal restoration of the Doric Temple on the acropolis at Assos was the principal achievement of the expedition last year. Fragments of sculpture were discovered matching and supplementing those already in the Louvre, and sufficient remains, after Turkish spoliation, of the bases, capitals, and drums of the columns to determine that there was no entasis in these, as there was no perceptible curvature in the stylobate. In these particulars, and in some others, the divergence from the Parthenon was considerable. The carvings of the frieze and of the metopes were decidedly archaic, yet their age is variously estimated by scholars. Some primitive polygonal masonry occurs in a neighboring fortification known as the "Seaward Acropolis." Mr. Clarke ventures the suggestion that the Pedasos sacked by Achilles ('Iliad,' xx. 92) should be identified with Assos, not simply on the theory of phonetic decay, but in consideration of the geographical context of the passage alluded to. We have not room to carry further our synopsis of this highly interesting volume, so creditable to all concerned in its production. Mr. Francis Henry Bacon's delicate and picturesque delineations deserve all praise. An appendix contains the inscriptions found at Assos, the most important being that on a bronze plate celebrating the accession of Caligula; some lively notes of travel to the disputed sites of Troy, etc., Homer in hand, by Wm. C. Lawton; and, finally, a report on the geology of Assos (the acropolis is a crater) by J. S. Diller.

—Mr. Berens's 'Myths and Legends of Ancient Greece and Rome' (Clark & Maynard) possesses a good deal of merit. The stories are told with unusual spirit, so that this little book will be found attractive to young students; it is well illustrated from ancient sculptures (many of the illustrations being, however, rather too small); and it contains a very good account of Roman mythology—we know none so good in English. It would have been better to put the Roman mythology as a whole by itself. This would have enabled the student to obtain, what it is now so hard to get, a connected idea of this little-known subject. The arrangement followed in this book, on the other hand, has the advantage of affording an easy comparison of Greek and Roman mythology, where Minerva, for example, follows directly upon Athene. The text is generally very

correct. It is strange that the worship of Cybele (p. 18) is associated with Crete rather than Phrygia, as Rhea the Great Mother was worshipped in Crete, but Cybele (her name Berecynthia is not given), with the troupe of Corybantes and the myth of Attis, belongs to Asia Minor. Comus is given, p. 184, as a Roman god: if he was a divinity at all, he was Greek, not Roman, and but for Milton we should never think of him as belonging to the classical pantheon. There is a very good chapter upon the public worship of the Greeks and Romans, in which, however, hardly anything distinctively Roman is mentioned; and this deficiency is still more apparent in the chapter upon Festivals which follows, the only Roman festivals mentioned being the Saturnalia, Cerealia, and Vestalia.

—The Society for Photographing Relics of Old London has issued this year (its eighth) to its subscribers a series for the most part consisting of the architectural works of Inigo Jones. It has been moved to such a choice by the destruction during the past twelvemonth of Shaftesbury House, in Aldersgate Street, one of Jones's designs, which the Society had already photographed (No. 32), and by changes in and threatened demolition of other monuments by the same hand. It appears to have staved off the latter fate from Ashburnham House, until recently owned by the Dean and Chapter of Westminster, and meantime it has obtained views within and without of this interesting building, and now sends them forth, with the effect, it is to be hoped, of confirming the temporary arrest of the destroying spirit. Six of the twelve plates (62–67) relate to Ashburnham House, which, as is known from engravings and drawings of the last century and the first decade of the present, has had a second story added to it, and been otherwise altered in recent years. The south transept of the Abbey, the roof of the Chapter House, and the eastern wing of Ashburnham House, all enter into the view (No. 61) of Little Dean's Yard, Westminster, whose picturesque grouping recalls the view of St. Paul's from the court of the Oxford Arms. No. 62 gives the full exterior of Ashburnham House from the same yard. Nos. 63, 64 (the order should be reversed) show the staircase, the most notable feature of the house, for ingenuity and beauty alike; No. 65, the graceful doorway leading from the Anteroom into the Drawing-Room; No. 66, the Dining-Room, or rather the alcove end of it, the design of which is not Jones's, but probably Ware's (*ante* 1735); No. 67, the Garden, with its ancient boundary-wall, being that of the Refectory of the Abbey, which from Edward I.'s time was an occasional place of session for the Commons. Here a little summer-house, often figured, is the only memorial of Inigo Jones. His grand performance, the Banqueting House, Whitehall, is the subject of plate No. 68—a noble study in itself, and historically famous for the beheadal of Charles I. in front of it (it was built in 1619). The Water Gate of York House (No. 69), left high and dry by the Thames Embankment, has an archæological, but hardly an artistic, interest. Nos. 70, 71, 72 are views of the west side of Lincoln's Inn Fields, including Lindsey House and Newcastle House. The last was not Jones's work, but Winde's (about 1686). It is, despite the loss of some of its decorative motives, a singularly dignified and imposing residence. The series thus hastily enumerated proves anew the able direction of the Society. More than ever, now that a descriptive text regularly accompanies the photographs, the annual issues commend themselves to persons of antiquarian tastes, and especially, for professional reasons, to architects. Back sets can still, to a considerable extent, be obtained of the Honorary Secretary, Mr. Alfred Marks, Long Ditton, Surrey, to whom we owe the historic research bestowed upon every building in the letterpress. The permanence of the autotypes should not be overlooked.

—Perhaps no places stand more in need of electric light than libraries and reading-rooms. Hitherto many libraries have refused to submit their costly books to the risk of fire and the certainty of a slower but not less real destruction by heated air which the use of gas always involves. The discomfort to readers is equally great, and to brain-workers there is more than discomfort—there is danger, from a kind of brain-stewing which increases fatigue, impairs the working powers, and in the long run undoubtedly shortens life. From these evils, which we have not in the least overstated, the new light is free. No wonder then that its use is rapidly spreading. The Royal Library at Brussels is the last, so far as we have heard, to adopt it. Their "installation" is a "lampe-soleil" of MM. Clerc and Bureau, Belgian inventors. It is described as being much more steady than other arc-lights, of very agreeable color, not at all trying to the eye, but on the contrary soothing, and costing only one-fourth as much as its competitors. The hall is lighted by three of these lamps as well as it would have been by 125 gas jets of sixteen candle power. The difference in the heat evolved is enormous. The light is all thrown up on to the ceiling and thence reflected through the room. In this way the strong lights and shadows, which are usually the worst feature of arc-lights, are avoided; the light at the reading table is agreeable, and every alcove is sufficiently lighted to make it easy to find the books. The vestibule and cloak-room are lighted by a dozen incandescent lamps invented by M. L. Nothomb, a Belgian officer; the Belgians naturally think them superior to Edison's.

—Richard Fleischer, known through his connection with the *Deutsche Revue*, makes his appearance in the new capacity of editor of the 'Vierteljahresberichte über die gesammten Wissenschaften und Künste,' published by Gustav Hempel, of Berlin (New York: L. W. Schmidt). The object of this new enterprise is to issue before the close of every three months six brochures of the size of an ordinary magazine, containing, in concise and generally intelligible form, summaries of all the important recent discoveries, improvements, and novelties in pure and applied science, the industrial and fine arts, and literature. These summaries are intended less for specialists than for educated people in general, who wish to keep abreast of the times without being able to devote their leisure to a perusal of the numerous periodicals dealing with special subjects. In botany alone, according to Dr. Wiesner, some two thousand writings are published annually, thus making it difficult for even a specialist to take note of all significant facts. If the qualification of Herr Fleischer for the supervision of such an extensive scheme may give rise to some doubts, they are likely to be dispelled by the list of forty-five names of eminent professors who have promised their permanent or occasional coöperation. The first part of the first volume contains contributions on Physics, by Prof. P. Zech; Botany, by Dr. Wiesner; Anthropology, by Dr. Hellwald; Ægyptology, by Prof. Brugsch; Philology, by Prof. Mähly; and Geography, by Prof. Th. Fischer. Of these the first is almost entirely devoted to discoveries in the practical application of electricity, while the second is doubtless the most interesting of all, as it contains a lucid statement of the reasons which have induced Dr. Wiesner to reject Darwin's circumnutation theory as developed in his work on the 'Power of Movement in Plants.' Dr. Wiesner's treatise, of which he here gives a synopsis, has been critically examined in recent numbers of *Nature* by Mr. Francis Darwin, the whole controversy being an admirable illustration of the objective and impartial manner in which the Darwins conduct their investigations and scientific discussions. Descriptive ethnology has long been recognized as offering more entertainment than the average novel, and Dr. Hellwald's article does not belie this view. Among the strictly technical facts noted in his article, none is perhaps of more importance than the reference to the investigations of Dr. Emil Schmidt, of Essen, which confirm the opinion already held by Broca that the current classification of skulls into dolichocephalic, brachycephalic, etc., is imperfect, being based on only two of the three dimensions of the skull.

BANCROFT'S HISTORY OF THE CONSTITUTION.

History of the Formation of the Constitution of the United States of America. By George Bancroft. In 2 vols. New York: D. Appleton & Co. 1882.

Mr. Bancroft has in these volumes attempted to "trace the formation of the Federal Constitution from its origin to its establishment by the inauguration of its President." The first volume treats of the Confederation and the causes which led to the Federal Convention, the second of the Constitution itself and its adoption by the States. Appendices contain a quantity of documents and letters bearing on the events narrated, which Mr. Bancroft has collected from various sources.

The story of the formation of the Constitution is so well known, and has been so often told, that Mr. Bancroft could, in the nature of things, add very little to it. Facts and documents may be accumulated—and he has shown great industry in this part of his work—but they do not substantially affect the conclusions which must be reached on the main points. The book is chiefly valuable as a full and connected narrative of the adoption of the Constitution, not only by the Convention, but by the different States. It contains absolutely no original discussion; in fact, Mr. Bancroft's historical system almost precludes anything of the kind. History is with him a chronicle of events associated with and caused by distinguished men. His natural taste is for the picturesque and dramatic, as the excesses of his style amply show; and this disposition of his mind diverts him from the discussion of the growth and development of principles of constitutional law. Moreover, he is never satisfied with a calm, dispassionate analysis, but is always longing for an opportunity to express his approval or disapproval. To his mind the adoption of the Constitution is a classically dramatic episode in the history of the race; it "has perfect unity," and "falls of itself into five epochs or acts." His history of the Constitution is, accordingly, divided into five "acts," something like the "fyttes" of an ancient ballad, to each of which he gives an appropriate name—*e. g.*, I. The Confederation; II. On the Way to a Federal Convention; III. The Federal Convention; etc. The most credulous reader will hardly persuade himself that the work fell "of itself" into them. Mr. Bancroft, in the retrospect with which the book opens, himself gives an account of his view of "history." He thinks that

"History carries forward the study of ethics by following the footsteps of states from the earliest times of which there is a record. The individual who undertakes to capture truth by solitary thought loses his way in the mazes of

speculation, or involves himself in mystic visions, so that the arms which he extends to embrace what are but formless shadows return empty to his own breast. To find moral truth, he must study man in action. The laws of which reason is conscious can be tested but by experience; and inductions will be the more sure the larger the experience from which they are drawn. However great may be the number of those who persuade themselves that there is in man nothing superior to himself, history interposes with evidence that tyranny and wrong lead inevitably to decay; that freedom and right, however hard may be the struggle, always prove resistless. Through this assurance ancient nations learn to renew their youth, the rising generation is incited to take a generous part in the grand drama of time; and old age, staying itself upon sweet Hope as its companion and cherisher, not bating a jot of courage, nor seeing cause to argue against the hand or the will of a higher power, stands waiting in the tranquil conviction that the path of humanity is still fresh with the dews of morning, that the Redeemer of nations liveth."

Now, admitting this to be all true, it obviously furnishes us with no fundamental principles of any value in the study of the history of institutions or the development of constitutional law. The American Constitution offers to the student some very interesting problems. It was the first written charter in the history of mankind in which the attempt was made to enact in the form of permanent statutes, unalterable by the legislature itself, those cardinal principles of government which the experience of centuries had shown to be essential to national prosperity, individual freedom, and the administration of justice. It was the first attempt to erect a judicial barrier between those principles and the encroachments both of the legislature and the executive. The Constitution is a document which can only properly be studied by a critic thoroughly versed in the history of the English institutions out of which it grew: the monarchy, which was destined to be Americanized as the Presidency; the two Houses of Parliament, which were to be transformed into our Congress; the great landmarks in the struggle between arbitrary power and individual right contained in Magna Charta, the Petition of Right and the Bill of Rights, which were on this side of the Atlantic to be given a more sacred character than had been accorded to them in the land of their origin. That Mr. Bancroft is not such a critic, any one may see by a very cursory examination of these volumes. With regard to the *Federalist*, the essays of which still constitute the most valuable discussion extant of the political problems supposed to be solved by the Constitution, all that Mr. Bancroft has to say is that "they form a work of enduring interest, because they are the earliest commentary on the new experiment of mankind in establishing a republican government for a country of boundless dimensions." That this failure to examine anew the questions discussed in the *Federalist*, or even to give any account of the nature of the problems discussed in it, proceeds from distaste for the work, any one may satisfy himself by turning to chap. i. of book v., in which Mr. Bancroft undertakes on his own account to go over the ground covered by Hamilton, Madison, and Jay, and show what the Constitution really is. Mr. Bancroft's established position as an American historian gives anything that comes from his pen an authority which, on such subjects as these, may be very misleading.

A few extracts will give a fair idea of his analysis of the Constitution. First, it "had its forerunners," for there were the colonial charters and "other precursors," but as to what these others were we get no more definite statement than that they were the "gifts of the ages." This is followed by two pages to show that the distinctive character of the American people is their "individuality," and that "the Constitution establishes nothing that interferes with equality and individuality." Especially is this so in religion, for the Constitution withholds from the Federal Government "the power to invade the home of reason, the citadel of conscience, the sanctuary of the soul." With all this individuality in matters of conscience, it looks as if labor ought to have been free, and Mr. Bancroft points out that the Convention "was careful to impose no new incapacitation on free persons of color; it maintained them in all the rights of equal citizenship; it granted those rights to the emancipated slave; and it kept to itself the authority to abolish the slave-trade instantly in any territory that might be annexed; in all other States and lands at the earliest moment for which it had been able to obtain power." This singular analysis of the manner in which the Convention disposed of the slavery question is followed by a bare allusion to the tripartite division of the Government into legislative, executive, and judicial, and the paramount authority of the Constitution over laws enacted by Congress; but how this latter is enforced is rather obscured than explained by Mr. Bancroft's treatment of it. The question of the relation of the Federal Government to those of the States he hopelessly confuses by a continual use of metaphor which, however beautiful in itself, is far worse than useless in a historical work of this kind. Thus we learn that the States are "the parents, the protectors, and the stay of the Union"; that the Union without "self-existent States" is "a harp without strings," while "the States without Union are as chords that are unstrung." State rights are necessary, for without them "the Union would perish from the paralysis of its limbs." Figures of speech may be, as is so acutely demonstrated in 'Father Tom and the Pope,' the "pillars of the Church," but that they are a very poor foundation for analysis such as that undertaken by Mr. Bancroft, no one will doubt after an examination.

The chapter from which we have been quoting has a great deal to say about the relations of the States to the Union. Mr. Bancroft leaves the matter exactly where he found it. His researches have evidently suggested to his mind the question how far the old difference of view as to the relations of the States to the General Government can be considered a permanent political force in the development of our institutions. No one writes upon the Constitution without approaching this at many points. We are frequently assured that the Federal origin of the Government necessitates the perpetual existence of two opposite political parties—one struggling for centralization, or Federalism, the other for local self-government, or State Rights. If the former carried the day, the country would be governed from Washington; if the latter, the central power would become less and less, and that of the States greater and greater. Neither, however, can obtain permanent control, because both forces act upon the Government under the Constitution, and beyond the confines of this instrument neither party can permanently carry us. This view of party dynamics has a fascination for many minds on account of its symmetry; and it is flattering to national pride, because it makes out a striking likeness between the Government of the United States and that of the solar system, the ingenuity and simplicity of which we are taught to revere from our cradles. The two party tendencies correspond to the centrifugal and centripetal forces, either one of which alone would be fatally destructive, while both together maintain the earth on its appointed—or, as we may say, constitutional—orbit. A little reflection upon the history of parties in the United States will serve to show at least that this analogy is misleading, and to suggest that the idea on which it is based is mistaken.

Undoubtedly, as the evidence collected by Mr. Bancroft shows, at the time of the formation of the Government, the States were still regarded as sovereign powers, and as calling into existence the Federal Government for certain definite objects, described and limited first in the Confederation, and afterward in the Constitution. In other words, the new Government was historically a creature of the States. So firm a hold had the original thirteen States upon the affection and allegiance of their subjects, that the Federalists had great trouble in getting the Constitution into working order, and, in the next generation, a politician appeared who attempted to establish the idea of State sovereignty as a fundamental political dogma which was to be a permanent guide in the interpretation of the Constitution. Calhoun's system was not logically consistent; for he juggled with it so that State sovereignty always yielded the General Government ample powers whenever they were needed for the defence of slavery, but none at all when they were required for the opposite purpose. Congress could secure the extension of slavery into the Territories and the erection of new slave States, because the States were sovereign, and the General Government is called upon to aid and foster their "domestic institutions"; so it could establish espionage of private correspondence to prevent the circulation of anti-slavery documents, though it was powerless to enforce its own laws against the veto of a State. There is no better proof of the heated and passionate condition of the public mind on all constitutional questions, during the slavery conflict, than the fact that Calhoun should have been able to persuade people that he was a great constitutional lawyer, or that his system had a consistent logical basis to rest upon. Calhoun's attempt, for a time successful, finally failed, and the centripetal force began to assert itself. But is it credible that the Calhoun theory of the Government should be regarded as anything more than an extinct force? Is there something in the nature of the Government which will compel history to repeat itself, and give us in the future other Calhouns, without slavery and with nothing but an abstract constitutional principle as their *raison d'être*? If there is, it is the business of constitutional historians to find it out, and explain it, and show how it works.

ROSENTHAL'S AMERICA AND FRANCE.

America and France: The Influence of the United States on France in the Eighteenth Century. By Lewis Rosenthal. Henry Holt & Co. 12mo.

It is not often that we have the pleasure of reading and reviewing so satisfactory a monograph as this. The subject is practically a new one. That American ideas had some influence on the course of the French Revolution is, indeed, generally admitted by the historians of that great upheaval; but no one of them has given to the subject more than a passing glance. Schlosser, Dahlmann, and Von Sybel have merely alluded to it, while Thiers, Mignet, Michelet, and Louis Blanc have been content to dismiss it with a paragraph. Laboulaye and Taine have disregarded it altogether; Lanfrey has given it but a cursory notice; and even Rocquain, the historian of the revolutionary spirit before the Revolution, has not thought it necessary to give to the subject more than a single page. But it was well worthy of careful study. Many of the political leaders of the movement had fought in

America, and had caught the American spirit. Some of them were of the old nobility. After the famous oath of the Tennis Court, it was for some days a question whether the division between the clergy and nobility, on the one hand, and the Third Estate, on the other, would be irreparable. On the 25th of June, a strong faction of the nobility solved the question by joining the commons. Among those going over were Broglie, Beauharnais, Lameth, Noailles, and Custine, all of whom had been soldiers in the American war. La Rochefoucauld, Duport, D'Aiguillon, Charles de Lameth, "Tonneau" de Mirabeau, and Lafayette remained behind, in order that they might the more readily persuade the nobles to yield to the popular wishes. It was very largely in consequence of this element that, two days later, the nobility and clergy decided to unite with the commons in the formation of a National Constituent Assembly.

Surely an influence so powerful as this was worthy of the historian's careful attention. The study was a difficult one, for it demanded new researches in the chaotic mass of the political literature of the time; but it has found a historian worthy of its importance. Mr. Rosenthal has carefully groped his way through the materials surrounding him, has noted his authorities at every step, has held the balance of probabilities with a level hand, has expressed himself at all points with critical moderation, has clothed his ideas with clear and elegant English—in short, has produced an exceptionally good specimen of critical historical work.

The volume begins by showing not only that the evils which overwhelmed France were evils from which America, under its new form of government, was absolutely free, but also that those evils were, in the opinion of many Frenchmen, the very ones which the American method was best calculated to correct. This belief was in every way fostered by Franklin in Paris, and by the French in America. Madame du Deffand wrote to Horace Walpole: "We talk of nothing but America"; and Soulavie declared, "I saw Franklin become an object of worship." When Adams arrived at Bordeaux he was received with a salute of thirteen guns, the city was illuminated in honor of America, and the inscription was put up, "God Save the Congress. Liberty and Adams." Lafayette wrote, from this side of the Atlantic: "Simplicity of manners, the desire to oblige, the love of country and of liberty, and a delightful equality reign supreme here among all classes of the people." In a word, the French were brought to see that the new government across the Atlantic combined order with liberty; and Mr. Rosenthal shows us, by a great number of quotations, that the desire for similar blessings for themselves and their country had taken possession of very many of the most prominent writers of the day. These good impressions were more than confirmed when, in 1783, a volume on 'The American State Constitutions' was published in Paris. It was of these that Sir Samuel Romilly wrote in his 'Memoir': "They certainly produced a very great sensation at Paris." They were generally noticed by the journals of the country. The *Mercure de France* but echoed the general sentiment when it declared: "The acts of the American Congress and those of the General Assemblies of the several States seem to be the handiwork of wisdom itself." In response to the interest felt, an enormous number of books and pamphlets on America sprang into existence. We are assured that they were to be found everywhere. The *Journal Général* said of them: "Ces ouvrages ont été accueillis avec une espèce de fureur." And yet the supply only answered to the demand.

When Jefferson went to France, he made his way at once to the hearts of the people. "You replace M. Franklin, I hear," remarked Vergennes. "I *succeed* him, your Excellency; no one can *replace* him," was Jefferson's happy reply. This *bon mot* gave him an immediate introduction to statesmen and philosophers, as well as to the fashionable world. We soon find him writing to Madison, of France: "Its inhabitants love us more, I think, than they do any other nation on earth." The Virginian's house at once became the meeting-place of many of the Revolutionary leaders. Duport, Lafayette, Saint-Étienne, Lameth, and others gathered around Jefferson's table to talk over the prospects of the movement, and to lay plans for the future. In this way Jefferson's influence made itself felt; and, a little later, it was carried into the National Assembly.

There is abundant evidence that the effect of American ideas on the proceedings of the Constituent Assembly during the early months of its session was very considerable. Soulavie expressed opinions generally held when he wrote: "The greatest part of the gentlemen Democrats who abandoned their order in 1789; who joined the commons; who proposed the Declaration of Rights; who directed the revolution against the *ancien régime*, had made their revolutionary studies in the United States." Jefferson himself relates how the Liberals of the movement, in one of the gravest crises of the Revolution, sought his advice, and how the interview, after continuing from four o'clock until ten, resulted in harmonious agreement. It is worthy of note, moreover, that the American Minister's counsels were uniformly in the interests of moderation. To such an extent was this felt to be the case that one of the Ministers of the French Government thought it worth while to write him and express the hope that he "would habitually assist at such conferences, inasmuch as he would be useful in moderating the warmer spirits and promoting a wholesome and practical reformation only."

But it was evident from the first that there was a very strong faction that would not follow the guidance of moderation. Of the three plans for a Constitution, the English and the American met with only partial favor, while the one that had received its principal features from the theories of Rousseau took strong hold of the Assembly. There is perhaps nothing in the history of the Revolution more interesting than the process by which the delegates were led at this point to reject the dictates of wisdom, and to adopt the policy of a political sentimentalist. At two points the Constitution adopted was fatally weak. The provisions for but one legislative chamber, and for giving to that chamber the power to change even the Constitution, were doubtless the most stupendous blunders of the Revolution. But what is here of especial interest to us is the fact that at the very moment when the decision of the momentous question was in doubt, the great name and authority of Franklin were invoked in behalf of the unicameral system. It is not a matter of satisfaction to reflect that at the most trying moment of the whole period the well-known views of the American philosopher were thrown into the wrong side of the scale. From the moment all authority was constitutionally vested in a single chamber, the more radical leaders of the movement began to acquire a steadily-increasing power, and the American influence began steadily to decline. During the ascendancy of the Girondists and the Jacobins there is no evidence whatever that a single movement or a single act was appreciably affected by the opinions of a single American. Thomas Paine lifted up his voice in behalf of moderation; but we all remember how he was condemned to the guillotine, and by what a curious incident he was saved on the very day of the fall of Robespierre.

FREEMAN'S WILLIAM RUFUS.

The Reign of William Rufus and the Accession of Henry the First. By Edward A. Freeman. Two vols. octavo, pp. 624 and 732. Oxford: Clarendon Press; New York: Macmillan. 1882.

Six years ago, in the preface to the last volume of his 'History of the Norman Conquest,' Mr. Freeman expressed the hope that he might some time be able to deal more fully with the important reign of William Rufus, the son and immediate successor of William the Conqueror, than it was possible to do in concluding a general sketch of the Norman kings. The fulfilment of the historian's purpose may at last be seen in two stout octavo volumes, now published in a form similar in every technical respect to the five volumes composing the 'History of the Norman Conquest.' Mr. Freeman says he is now done with this subject, although he still hopes to put forth the same story in somewhat briefer space, perhaps in a form intermediate between the seven large volumes and a very small one already published. From the vantage-ground of his completed work on the Norman Conquest of England, he will probably soon pass over to that broader, Continental ground of Norman conquests in Italy, Sicily, and Southeastern Europe. "The Norman in the great island of the ocean, and the Norman in the great island of the Mediterranean, naturally form companion-pieces." Mr. Freeman says he has already made some acquaintance with the Rogers and Williams of Sicily in their own home, which he well calls the meeting-place of the nations; and it is safe to predict that his story of these Norman vassals of the Church will assume even greater international significance than his account of the Williams and Rogers of Norman England.

William Rufus, thus familiarly known to his contemporaries by reason of his ruddy countenance, is graphically described by Mr. Freeman as "a man of no great stature, of a thick, square frame, with a projecting stomach." He appears to have been a caricature of his father, the Conqueror, both in body and mind. Freeman says William the Red may pass for William the Great with all his nobler qualities left out. Father and son were both ambitious to conquer and rule, but the one pursued determined ends with unyielding energy and unerring sagacity; while the other, though bent upon following his father's track of conquest and dominion, yet followed with unequal, uncertain steps. William the Conqueror conquered boldly and steadily, and he maintained his ground by blood and iron. William, the Red-faced King, conquered by fits and starts, often by bribery and intrigue instead of by force of arms, and frequently lost advantages which he had already gained. The Conqueror left England practically subdued by Norman power. The heir of the Conquest, forced by the rebellion of his Norman barons, fell back upon the support of his English subjects, and, while defeating Norman rebels, capturing their fortresses, and repelling another Norman invasion on the very spot where the Great William had landed, unconsciously reversed Norman ascendancy and ruled England as an English King. Of all the bad sovereigns whose reigns have proved for the good of the English people, William Rufus was perhaps the worst in point of personal character. He was oppressive, extortionate, and vicious to the last degree. His reign was called the reign of *unlaw* and *ungeld*, because, in his time, injustice and exactions were beyond all parallel in an unrighteous feudal age. Money was squandered

upon mercenary troops, who harried the land they were hired to protect. Twenty thousand Englishmen who came together at the King's bidding to invade Normandy, each man with ten shillings contributed by men of his shire, were fleeced of their money by the King's agent, Randolf Flambard, and then ignominiously sent home, while the base King used his ill-gotten gains to bribe the baser King of France. William the Conqueror had some consideration for religion and morality, but the Red King defied God and man. Such blasphemy and shameless indecency the Court of England never saw, even in the reign of the Stuarts. Mr. Freeman says William Rufus represented the habits of the ancient Greek and of the modern Turk. The chroniclers of the time said that he every morning got up a worse man than he lay down, and every evening lay down a worse man than he got up.

And yet the Red King had some qualities which, if not exactly virtues, leaned toward virtue's side. Among his redeeming traits was a kind of pious veneration for the memory and great deeds of his father. Whatever territory the Conqueror had won in England or on the Continent, that his faithful son endeavored to keep at any cost. Rufus showed the quality of mercy to rebellious Norman barons, "for the love of his father, to whom they had been faithful followers." Battle Abbey, which the Great William had founded, was treated with generosity by his degenerate son, even though the latter cared nothing for religion, and unscrupulously plundered other monasteries to enrich those patronized by his father. Besides these qualities, Rufus had a certain species of knightly honor. Although he thought it no crime to break his chartered promises to the English people and to violate his pledges to the Holy Church (for, as he bluntly said, "No man can keep all his promises"), yet he never dreamed of breaking his word as a knight, and, what is no less remarkable, he had implicit confidence in the knightly word of others. Perhaps the most striking example of this honorable side of the Red King's nature is his treatment of Helias, a noble count of Eastern Maine, who fell into the hands of Robert the Devil, and was handed over to William Rufus, by whom he was treated with knightly courtesy and at last set free, Rufus having promised it in case Le Mans should be surrendered. Helias, departing, swore he would win back his lost city, and defied Rufus to his face. The latter, though blazing with anger, told Helias to do all he could. Such an example of generosity and good faith in a man who sometimes mutilated prisoners, and who trod his own people under foot, is worthy to be compared with the chivalry of the Black Prince, who spared French knights, but murdered the defenceless citizens of Limoges, or with the honor of that knightly king, Francis I., who boasted that he never broke his word of honor except to women. As Mr. Freeman remarks, "He who cannot rise to the higher rank of an honest man had better be a knight and gentleman than a mere knave and ruffian."

Decidedly the most interesting and important portions of the present work are those describing the relations of Church and State during the reign of William Rufus. It is an historical point, never before made clear, that the first appeal from an English court to papal authority was made not by Anselm, that "holy man," Archbishop of Canterbury, but by Anselm's enemy, William of Saint-Calais, Bishop of Durham, who had joined in the Norman revolt against William Rufus upon his accession to the throne, and who appealed to Rome against the jurisdiction and sentence of the King's Court. "It was from the mouth of William of Saint-Calais that, for the first time, as far as we can see, men who were English by birth and settlement heard the doctrine that the King of the English had a superior on earth; that the decrees of the Witan of England could be rightly appealed from to a foreign power." Lanfranc, who was then Archbishop of Canterbury, stoutly maintained the old doctrine of royal supremacy in temporal matters, as he had done in the days of William the Conqueror. The Red King asserted the Conqueror's ancient right in forcible terms: "By the face of Lucca, you shall never go out of my power till I have your castle." And the Bishop of Durham left England despoiled of his stronghold and all his domains. Arriving in Normandy, he was honorably received by Duke Robert, elder brother of the King, and invested with the charge of that entire duchy, where he appears to have forgotten his grievances, and whence he returned at a later period to England and to the King's favor, only to persecute Anselm in the Witan of the nation for maintaining the same right of appeal to Rome which he himself had once asserted.

The death of Lanfranc in 1089, one year after the suppression of the Norman rebellion, marks the outbreak of the Red King's gross iniquity toward the Church and his people. Up to that time, Rufus had been under some moral restraint, but, now that the chief adviser of his father was removed, the King followed the counsels of his own heart and evil counsellors of his own choosing. Robert of Bellême, commonly known as Robert the Devil, became his chief guide in war, and the crafty Randolf Flambard his chief adviser in affairs of state. This satanic clerk and *Justiciar*, this later Bishop of Durham, who delighted in leading his own monks as well as his King into temptation, had the doubtful honor of systematizing the evil customs of feudalism in England, and of suggesting to the King the economic policy of keeping abbeys and bishoprics vacant in order to appropriate their revenues for the royal coffers. The Archbishopric of Canterbury was thus kept vacant, after the death of Lanfranc, for four years, although in this instance the King was actuated by the additional motive of securing freedom from all ecclesiastical restraint. The Red King would have no yoke-fellow in the sovereign administration of England. Not until Rufus fell grievously ill at Gloucester, in 1193, did he consent to name Anselm to the primacy of England—an office more ancient and revered than that of the Crown itself.

But, with the recovery of health, the King recovered his old habits of blasphemy and extortion. "God shall never see me a good man," he said; "I have suffered too much at his hands." He set about undoing his good works as far as practicable. He could not, and would not, undo his personal investiture of Anselm with the staff of office, for that act the King regarded as a matter of honor. On the very day, however, of Anselm's enthronement, Randolf Flambard brought a suit against the Archbishop, and from that time onward the latter's course was continually beset, by order of the King, with snares and difficulties. Now extortionate demands for money were made from Anselm in order to aid the King in war; now the King denied Anselm's spiritual authority, and refused to allow him to hold a synod or to undertake a moral reformation of the kingdom; and persistently the tyrant declined to fill the vacant abbeys and churches. But the greatest grievance to Anselm was that the King would not allow him to recognize the Pope and go to Rome for the *pallium*. Even the Conqueror had allowed the latter privilege to Lanfranc.

Anselm, as Abbot of Bec, had already acknowledged Pope Urban II. in preference to Clement, but Anselm, as Archbishop of Canterbury, found himself in a very embarrassing position; for, although personally pledged to Urban, he could not officially recognize him without the consent of the King of England, which consent Rufus steadfastly withheld, not because he favored Clement, but because he hated all papal authority and wished to have no representative of it in England. Anselm held that recognition of the Pope was not inconsistent with loyalty to his sovereign, and proposed to submit the question to the Witan of the nation. The wise men of the realm accordingly assembled, but the servile bishops, ignoring the main question as to whether the Archbishop did not owe a duty to the Church as well as to his King, treated Anselm as though he were upon trial for treason; and William of Saint-Calais, who, as Bishop of Durham, had himself once insisted upon the right of appeal to Rome, was now foremost in demanding that the ring and staff should be taken from Anselm, and that the latter be driven forth from the kingdom if he would not immediately recognize the superior authority of the King. But the lay nobles of the realm refused to consider such a proposition, likewise the equally shameful suggestion of the King that they withdraw all faith and friendship from the Archbishop. The King and his party were practically defeated when the Witan of Rockingham broke up.

"It was no mean day in English history when a king, a Norman king, the proudest and fiercest of Norman kings, was taught that there were limits to his will. It is like a foreshadowing of brighter days to come when the Primate of All England, backed by the barons and people of England—for on that day the very strangers and conquerors deserved that name—overcame the Red King and his time-serving bishops. The day of Rockingham has the fullest right to be marked with white in the kalendar in which we enter the day of Runnymede and the day of Lewes."

Some Experiences of a Barrister's Life. By Mr. Serjeant Ballantine. Henry Holt & Co. 1882.

THESE reminiscences are of a very rambling and often disconnected character. They are jotted down, however, in such a way as to disarm criticism. When a lawyer of Mr. Ballantine's distinction sits down at the close of his career to recall the memories of the past, and prefaces his remarks with such a very modest disavowal of any necessary claim upon public attention as is contained in his preface, we feel bound either to listen to him politely or go away; to find fault with him for having nothing of profound importance to tell us, seems a waste of time.

The most valuable part of his book relates to professional matters. His account of the Courvoisier trial will be found of interest by that large body of casuists who are fond of discussing the question of a lawyer's duty when he believes his client to be guilty. Courvoisier, who murdered Lord William Russell, in 1840, was defended by Charles Phillipps. During the trial it was discovered that a considerable quantity of plate which had disappeared from Lord William's house had been deposited by Courvoisier with some people in the neighborhood of Leicester Square. The prisoner, upon learning of the discovery, requested an interview with his counsel, and made a disclosure to him which, as was generally supposed at the time, involved a confession of guilt. Mr. Ballantine states, however, that the admission did not go to this extent, but merely amounted to a confession of facts which furnished "very stringent evidence" of guilt. Under these circumstances, what was Mr. Phillipps to do? Undoubtedly, says the author, something very different from what he did do—which was to communicate to one of the judges engaged in trying the case (Mr. Baron Parke) the

confession of his client, and ask the Judge's advice.

"It is probable that if Baron Parke had not been taken by surprise, he would have declined to express any opinion. I happen, however, to know that, having learned that the prisoner did not intend to relieve his counsel from the defence, the learned Baron said that of course he must go on with it. And, if he gave any advice at all, this was the only advice he could give, and ought to have been patent to the inquirer; and certainly no censure can be too severe upon the conduct of Phillipps, who, when assailed for his management of the case, violated the confidence that his interview with Baron Parke demanded, and endeavored to excuse himself by saying he had acted under the learned Judge's advice."

The author's remarks upon the delicate art of cross-examination contain nothing very new, but they come from him with authority. His first rule—that it is necessary for counsel to form in his own mind an opinion of the facts of the case, and the character and motives of a witness, before asking a question—elementary as it seems, is probably violated in nine out of every ten cross-examinations that take place. If a witness is suspected of an intention to commit perjury, he thinks that what ought to be done is to break him down, not on the main points of the case, with which he has probably made himself thoroughly acquainted, but on collateral circumstances, as to which he is likely to be imperfectly drilled. His own shrewdness in examining and in not examining witnesses is well shown in a little story he tells of an incident in a trial before Chief-Justice Erle. He had put a question to a witness as to what he was doing at a particular time, this being a matter important to the inquiry. He answered: "I was talking to a lady. I will tell you who she was, if you like; you know her very well." Serjeant Ballantine's method of dealing with this reply was to make no observation at the time, but to mention, when addressing the jury, that his experience led him to the conclusion that honest witnesses endeavored to keep themselves to the facts they came to prove, but that lying ones endeavored to distract the attention by something irrelevant. But the fact is, that, taking the story as it is told, the remark was not so much irrelevant as dangerous. If the lady's name had come out, she would have been a witness to prove the time, and if she had not been called by Serjeant Ballantine, the counsel on the other side would have argued to the jury that the omission was probably due to the unfavorable character of her testimony. In other words, the witness may very likely have been telling the truth, and yet, by the method pursued by the wily Serjeant, his alacrity was made to strike the jury as probable evidence of wilful falsehood.

Serjeant Ballantine's reminiscences of Thackeray are worth looking at in connection with the caricature of him in 'Endymion.' He says: "I never thought him an agreeable companion. He was very egotistical, greedy of flattery, and sensitive of criticism to a ridiculous extent. He may have possessed great powers of conversation, but did not exhibit them upon the occasions when I had an opportunity of judging." It should be said, however, that in his estimate of literary men the author is at his weakest. On the other hand, what he has to say about the members of his own profession is often amusing, and sometimes interesting. Of Lord Lyndhurst, he tells the story that when he became Chancellor, upon one occasion he stated the principles which he had adopted in determining the qualifications for a judgeship as follows: "I look out for a gentleman, and if he knows a little law, so much the better"; to which Serjeant Ballantine adds, with perhaps unconscious humor, "Sir William Bolland, who, I believe, was the only one he made, certainly fulfilled the former condition."

The author's vast experience in criminal practice is of course drawn upon liberally. An amusing illustration of the different ways in which expert testimony in poisoning cases may be used is given in an account of a murder trial before Baron Parke. A minute quantity of arsenic was found in the body of the deceased, which the learned advocate accounted for by the usual suggestion that poison had been used carelessly for the destruction of rats. Baron Parke, in summing up, dwelt pointedly on the small amount of poison found, and the jury without hesitation found a verdict in the prisoner's favor.

"Doctor Taylor, the professor of chemistry, and an experienced witness, had proved the presence of arsenic; and, as I imagine, to the great disappointment of my solicitor, who desired a severe cross-examination, I did not ask him a single question. He was sitting on the bench, and near the Judge, who, after he had summed up, and before the verdict was pronounced, remarked to him that he was surprised at the small amount of arsenic found, upon which Taylor said that if he had been asked the question, he should have proved that it indicated, under the circumstances detailed in evidence, that a very large quantity had been taken."

Most of the book is merely gossip of a very light sort. Of Charles Austin, whose great abilities as a lawyer were strictly devoted to money-getting, he mentions the fact that he was in the habit of accepting retainers in cases which he well knew he could not attend to. "Doubtless they were delivered by solicitors who were aware of the risk they ran, and preferred taking it to the chance of his being retained against them. I cannot, however, think the practice was honorable, or one that could be justified on any grounds whatever." Webster, if we remember right, laid himself open to the same charge. Under the code of legal ethics adopted in many quarters, Mr. Austin's example would probably be considered deserving of emulation. Being retained on one side, and then going over to the other for a higher retainer, would probably still be regarded generally by conservative men as of doubtful propriety. Theodore Hook's wonderful improvisations, Mr. Ballantine declares, were not really altogether impromptu; for his friend Hill, of whom no one knew when he came into the world, and the records of whose birth had been "lost in the fire of London," was generally at hand, and he often "might be detected furnishing a cue." Of the Tichborne case, in which he was counsel for the "Claimant," what he has to say is interesting. He thinks that if at the beginning of the proceedings the fact had been brought out that the real Sir Roger had indelible tattoo marks upon one of his arms, the Claimant would necessarily have broken down altogether. The volume also contains a full account of another *cause célèbre* in which Serjeant Ballantine played an important part—the trial of the Gaekwar of Baroda. Serjeant Ballantine's experiences have been those of an expert criminal counsel, and the list of his friends and acquaintances upon which he draws for his reminiscences is a long one. His mind, however, is too little critical to make his descriptions of the men he has known of much value; indeed, like most writers of the class to which he belongs, his best gift is that of narrative. His stories of crime, and of the singular circumstances which so often arise in connection with the prosecution of criminals, are very good.

Homiletics. By James M. Hoppin, Professor in Yale College. Dodd, Mead & Co.

If the quality of preaching does not soon begin to show signs of improvement, it will not be because the literature of the subject has not of late been copious. Very recently we have had Professor Phelps's 'Theory of Preaching,' and his 'Men and Books,' a continuation of the former work; we have also had Mr. Mahaffy's 'Decay of Modern Preaching,' already reviewed in these columns; and now last, but certainly not least in its material bulk, we have Professor Hoppin's 'Homiletics.' It is not entirely new. Much of it has been before the public and in use as a textbook in theological schools for several years, bearing the title 'The Office and Work of the Christian Ministry.' But the present work is much expanded, and it is to be followed by another work on 'Pastoral Theology,' an expansion of those portions of the original work which are not included in the present publication. 'Homiletics' is an octavo volume of 800 pages, handsomely printed. Professor Hoppin apprehends his subject far too solemnly to admit any element of humor into his treatment. He fails to apprehend, too, or to state simply and forcibly the characteristic quality of the various preachers who have done most for the fame of their profession. More than 200 pages are devoted to a history of preaching, and it is evident that Professor Hoppin has not neglected any available source of information; but one feels that the book would have been much more readable if it had been much less learned. It is overburdened with its weight of erudition. It bristles all over with quotations from the Latin and the Greek, and with references to ancient authors.

After the "History of Preaching" comes, in division second, "The Object of Preaching," then, "Preparation for Composing Sermon," and next, "Analysis and Composition of Sermon." The last-named division is exceedingly formal, and suggests a wonder whether any sermons are constructed in our time on this mechanical principle, and if so, what they amount to. In regard to the text, we are told that it should not be from any apocryphal writing, nor, in any case, of doubtful authenticity. As to the proper length of a discourse, the rule of Bishop Alderson, "twenty minutes, with a leaning to the side of mercy," is quoted with approval, and Edward Irving's sermon for the London Missionary Society, which was three hours and a half long, is held up as a fearful warning. Treating of incongruous divisions, a case in point is found in Cox's 'Recollections of Oxford'—a "Long Vacation" Sermon on the Character of Abraham: (1) Abraham as a patriarch; (2) Abraham as the father of the faithful; (3) Abraham as a country gentleman.

The fifth division, on the "Classification of Sermons," is the most practical part of the book. It treats with considerable fulness of the different varieties of preaching—from the manuscript, memoriter, and extempore. The advantages and disadvantages of the different methods are discussed with manifest desire to do ample justice to each. The conclusion to which Professor Hoppin finally comes is much more favorable to extempore preaching than the conclusion of Professor Phelps in his 'Theory of Preaching.' He accepts Coquerel's definition of extempore speaking as that "in which the speaker knows what he has to say, but does not know how he is to say it." "You may do it extempore, for it is nothing but roaring," says *Quince* to *Snug* in the play. Professor Hoppin is painfully aware that there is much extempore preaching which is nothing but roaring. To be truly excellent it requires as much preparation as the written or memoriter sermon. He advises that writing be not wholly given up, and that manuscript and memoriter preaching should be practised as well as extempore, but for the best effect he has no doubt that extempore preaching must be had. No doubt he

is correct, but unless our extempore preaching is going to be very different from what it habitually now is, we should pray for less of it instead of more.

The second part of Professor Hoppin's book is concerned with "Rhetoric Applied to Preaching." A first division treats of the general principles of rhetoric, a second, of invention, a third, of style. In this last there is a good deal of sound advice, especially under the head of "purity." The book is conceived in a very liberal spirit. The strictness of his own beliefs does not prevent the author from being fair toward men who differ from him widely. He speaks of "that giant, Theodore Parker," and gives unstinted praise to the ethical vigor of Channing and Walker and other liberal preachers.

Tarjuma-i-Alif Laila ba-zubân-i-Urdû. Romanized under the superintendence of T. W. H. Tolbort, B.C.S., and edited by Frederic Pincott, Member of the Royal Asiatic Society. London: W. H. Allen & Co. 1882.

INDIA, as a vast and compact aggregate of peoples, dominated by aliens, and holding constant intercourse with each other, naturally came to have its *lingua franca*, the language known as Urdû, or Hindustani. Originated, centuries ago, by the Muhammadan conquerors of the country, the Urdû has, by degrees, been expanded, methodized, and refined, until it has, at last, attained high comparative perfection. Though possessing a literature of no mentionable value, whatever its copiousness, it has the merit of being, for all ordinary purposes but the scientific, a most admirable medium of expression. As its very essence is composite, it is, however, quite probable that it may, in time, be brought to subserve every end of education among the teeming millions of Hindustan. But its potential utility is meanwhile seriously hampered by one circumstance: the character in which it is commonly written is the Arabic; and that character, besides requiring, for the complete preclusion of ambiguity, the incessant employment of diacritical points, is wholly unprovided, as to numerous foreign sounds, with expedients for symbolizing them. Success is, therefore, the just due of the effort, long since initiated, and still hopefully persevered in, to substitute, in Urdû books, the Roman character for the Arabic.

This laudable effort is exemplified in the comely volume of 480 pages, in charmingly legible type, which has been named above. The *Alif Laila* is the well-known 'Arabian Nights,' half of which, judiciously expurgated, is now offered to us, and in a form which leads us to wish for the remainder. The translation, which is made directly from the Arabic, exhibits the Urdû in its latest and highest development; and a very different thing is the Urdû of the present day from that of old-fashioned books like, for instance, the 'Bâgh-o-bahâr,' and the 'Khiradafroz.' Mr. Pincott, besides his critical editorship, has contributed a preface, in which he argues with great cogency for the Romanization of the Urdû. Already we have such a grammar of the language as leaves almost nothing to be desired; and we understand that its author, Mr. John T. Platts, will soon add to it an Urdû dictionary, in which we cannot but anticipate his usual scholarly workmanship. With command of the three helps here enumerated, students of the polite vernacular of India may be congratulated on enjoying advantages for acquiring it very far superior to those which were accessible to their forerunners.

BOOKS OF THE WEEK.

Abel, C. Linguistic Essays. Boston: Houghton, Mifflin & Co. $4.
Aldis, Mary S. The Great Giant Arithmos. Macmillan & Co. 75 cents.
Anecdota Oxoniensia: Texts, Documents, and Extracts, chiefly from Manuscripts in the Bodleian and other Oxford Libraries. Semitic Series, vol. i., part 1. Mediæval and Modern Series, vol. i., part 1. Classical Series, vol. i., part 1. Oxford: Clarendon Press; New York: Macmillan & Co.
Beard, G. M. The Psychology of the Salem Witchcraft Excitement. G. P. Putnam's Sons. $1.

A General Index to the Nation,

From July, 1865, to September, 1880.

Net price (no trade discount), $2 50. Purchasers will please remit with order. Address Publisher of the *Nation*, Box 794, New York, or Q. P. INDEX, Bangor, Maine.

NEW BOOKS.

Henry D. Thoreau.

By Frank B. Sanborn. With fine new steel portrait. 16mo, gilt top, $1 25.

This is the third volume in the series of "American Men of Letters," edited by Charles Dudley Warner. Mr. Sanborn knew Thoreau intimately, and in this book tells the curiously interesting story of his life, describes his uncommon mode of thought, and indicates the deep and wholesome influence his writings have exerted upon English and American literature.

The Bridal March, and Other Stories.

By Björnstjerne Björnson. Authorized translation by Prof. R. B. Anderson. With four illustrations. 16mo, $1.

This is the fifth volume of Björnson's novels, now for the first time presented to American readers in a translation sanctioned by the author. It justifies the statement of a critic, that "Björnson is the prince of story-tellers," and is likely to be very popular summer reading.

Hammersmith: His Harvard Days.

By Mark Sibley Severance. New edition. 12mo, price reduced to $1 50.

A new issue of what the Hartford *Courant* pronounced "the best of college novels." The Boston *Transcript* said of it: "There is adventure enou[gh] to make the record piquant, and love enough to ma[ke] [fasci]nating' and the reader is irresistibly drawn [by] magnetic sympathy."

*** *For sale by all Booksellers. Sent post-paid, on receipt of price, by the publishers,*

HOUGHTON, MIFFLIN & CO., Boston;
11 East Seventeenth Street, New York.

PARLEZ-VOUS FRANÇAIS?
SPRECHEN SIE DEUTSCH?

At your own home you can, by our celebrated

Meisterschaft System,

LEARN TO SPEAK FLUENTLY EITHER

FRENCH OR GERMAN

In 10 Weeks,

FOR THE NOMINAL PRICE OF FIVE DOLLARS.

The celebrated author, DR. ROSENTHAL, of Berlin, is now with us, and will correct all your exercises and explain all difficulties, *free of charge*; so that, in fact, you study under one of the leading linguists of the world—

An Advantage not offered by Any Other System.

Says the *Nation*, May 4, 1882: "This is, without doubt, the best system ever devised for learning to speak a foreign tongue in a short time."

SEND $5 FOR FULL SUBSCRIPTION,

with privilege of having your exercises corrected and questions answered. For 25 cts. we will send a sample lesson of either French or German.

ESTES & LAURIAT, Publishers,
299-305 Washington St., Boston, Mass.

A Series of

TEN GEOLOGICAL PLATES,

27½ x 36 inches, containing Fifteen Diagrams designed for use in Schools and Colleges. Edited by A. S. Packard, Jr., Professor of Geology and Zoölogy, Brown University, and Editor of 'The American Naturalist,' author of 'Zoölogy,' etc.

The diagrams are to be accompanied by a Text-Book, FIRST LESSONS IN GEOLOGY, 128 pages, 8vo, by Prof. Packard.

The series of diagrams are arranged in the form of landscapes, and contain a number of original restorations of American, Silurian, and Devonian animals, especially Carboniferous, Jurassic, and Tertiary Vertebrate animals, by Prof. E. D. Cope, H. F. Osborn, and the Editor; with restorations in the text.

Price for the ten diagrams and book, postage paid, $6. Address all orders to THE PROVIDENCE LITHOGRAPH CO., Providence, R. I.

Invaluable Opportunity

DURING THE SUMMER MONTHS,

AT

MARTHA'S VINEYARD, MASS.,

For all who would learn to actually speak, write, and understand

French, German, Spanish, and Italian.

All instruction under the personal direction of

DR. RICHARD S. ROSENTHAL,

AUTHOR OF THE

Meisterschaft System.

Fluency of Speech Guaranteed.

Says the *Nation*, May 4, 1882: "This is, without doubt, the best system ever devised for learning to speak a foreign tongue in a short time."

The course of regular study begins July 17, and lasts five weeks. Daily lessons. Fee, $15 per course, or $5 per week. Private instruction if desired. Training-Classes for Teachers. Magnificent ocean scenery. Board, from $7 to $10 per week, in hotels or families, procured on application. For further information address

DR. RICHARD S. ROSENTHAL,
Cottage City, Martha's Vineyard, Mass.

JUST PUBLISHED.

An Introductory Geography,

IN READINGS AND RECITATIONS.

By William Swinton. An entirely new work, [full] of new and striking features, with [many] excellent maps and illustrations, and [handsomely] bound in cloth.

*** Single copies will be sent to teachers and educationists for examination on receipt of 50c.

Household Economy.

A Practical Text-Book, giving simple and useful instruction to girls regarding the ordinary routine work of the household. Published under the direction of the Kitchen Garden Association. Cloth, 145 pages.

*** Single copies will be sent to teachers and educationists for examination on receipt of 40c.

Short Sentences in Writing Latin.

Designed for Students in 'Cæsar's Gallic War.' By M. G. Daniell, Master Roxbury Latin School, Boston. Cloth, 50 pages.

*** To teachers and educationists for examination on receipt of 20 cents.

Will Sell on the 27th and 28th of June the Collection of

PREHISTORIC STONE AND FLINT IMPLEMENTS

OF THE LATE

PROF. J. GRIER RALSTON, of Norristown, Pa.

Collection on exhibition at the Auction Room, Monday, June 26.

Collectors may procure catalogues of the Auctioneers, or by addressing W. ELLIOT WOODWARD, Roxbury, Mass.

TELESCOPES OF EXTRA FINE quality, both for Astronomical and Landscape use; Microscopes at greatly reduced prices; Pedometers; Opera, Field, and Marine Glasses of great power and with all the recent improvements in finish, lenses, and weight; Brazilian Pebble Spectacles and Eye-Glasses of finest quality, $4 per pair. Send stamp for 116-page fine Illustrated Catalogue.

BENJ. PIKE'S SON & CO., 928 Broadway, N. Y.

The Nation.

NEW YORK, THURSDAY, JUNE 29, 1882.

The Week.

THE *Herald* has published a facsimile of one of the disgraceful circulars issued by the Republican Congressional Committee to the officers of the Government, calling on them for blackmail in the guise of assessments for campaign purposes. This particular circular actually demands fifteen dollars from a day laborer with a wife and children to support, his wages being two dollars a day; and the *Herald* mentions another case in which three dollars and fifty cents are demanded from an errand-boy aged thirteen. It would be impossible to find in the records of any corrupt monarchy of the eighteenth century a trace of a proceeding so paltry and degrading on the part of persons holding a high, or indeed any, position connected with the Government. The members of Congress who have allowed their names to be put to this circular ought indeed, as the *Herald* says, to be ashamed of themselves, personally as well as officially. There are some things to which an honorable man ought not to stoop to procure money for any object, however sacred or respectable, whether church or party; and extorting small sums of money from poor men by leading them to think their livelihood will be imperilled by their refusal, is one of them. It is, apart altogether from any consideration of its bearing on the purity or efficiency of the public service, a most discreditable business, with which some at least, we feel sure, of the members of the Congressional Committee would not have allowed their names to be connected if they had given the matter any serious attention.

The Boston *Advertiser*, apropos of the same matter, asks very pertinently who authorizes this Congressional Committee to make itself the instrument of this extortion. The Republican National and State Committees are appointed by the party conventions, and are therefore empowered by the party to act in its name and on its behalf in doing whatever needs or ought to be done for the proper conduct of the party canvasses. If the party has a right to levy assessments on the salaries of Government officials for its own purposes, it is through these Committees alone that the extortion should be practised. It is they and they only who speak with the party voice, and hold out the party hat. The Congressional Committee is, on the other hand, a volunteer organization. It creates itself. It is in no sense a representative body. All the authority it possesses is what it possesses in its own right. Toward the campaign fund its members have an inherent right to contribute out of their pockets, each for himself, and to solicit others to contribute as a personal favor to them. But they have no right to demand money from the clerks on behalf of the party, and to enforce the demand with an intimation that it is viewed with favor in high "official quarters"; and still less to fix the amount which each victim should give. In fact, even from the spoilsman's point of view, their performance is a gross piece of usurpation, besides being, from the reformer's point of view, an invitation to commit a misdemeanor.

Government employees can put an end to this usurpation by simply taking no notice of the circular. In complying with its demands, they will not only certainly violate the United States statute, but encourage the formation of volunteer bands of what are called in city politics "strikers," for the purpose of extracting money from them of which no public account is ever rendered. To this last point in particular we beg to direct the attention of all concerned. There is no better way of promoting corruption and fraud than giving money to people in trust without exacting any account from them of the way they spend it. No body of men in the world has virtue enough to withstand temptation of this kind for any great length of time, and volunteer political committees are no exception to the rule. In fact, the inability of all political committees to resist it was plainly intimated by the late President Garfield when he said—

> "I ask these gentlemen what they think of the system of political assessments, . . . of issuing a circular calling for one, two, or three per cent. of the salaries of all the employees, . . . with the distinct understanding that unless they pay, others will be found to fill their places? I call the attention of gentlemen around me to that shameful fact. The practice affords a large so-called electioneering fund which in many cases never gets beyond the shysters and the mere camp-followers of the party."

The proper business of Congressmen is, in short, legislation and stump-speaking. The raising of money from clerks to carry their own elections had better be left to others, if it is to be tolerated at all.

Mr. Jay Hubbell, the Chairman of the Congressional Committee which is engaged in extorting money from poor men in the Government service (and who, by the way, is the same Hubbell who tried to obtain from General Garfield in the last Presidential campaign a direct request to Brady and the Star-route men to contribute handsomely to the campaign fund), has written a letter in answer to the circular of the Civil-Service Reform Association to the officeholders, recently published. He is naturally annoyed by this interference with his operations. Nobody was probably ever yet engaged in getting small sums of money out of poor men, widows, and children by threats, who did not object to the meddling of the bystanders and want them to mind their own business. He challenges Mr. G. W. Curtis, as the President of the Association, to unite with him in requesting the President to ask the opinion of the Attorney-General on the legality of the payments which he is engaged in extorting. He thinks this would be "both more manly and more honorable" than "an attempt to confuse the action or alarm the minds" of his victims. This is decidedly what Mr. Squeers called "richness." The appeal for more manliness and honor from a person engaged in what is essentially blackmail is not bad in itself; but the calling encouragement to the poor people whom he is stripping of their hard earnings at the beginning of the hot weather, with wives and children who need a breath of country air, to hold on to their money, "confusing their action and alarming their minds," is richer still. The course he suggests, however, has already been adopted. The Civil-Service Reform Association has called the attention of the Attorney-General to his performances, and asked him, if he considers their view of the law (which they support with authorities) well grounded, to confuse Mr. Hubbell's action and alarm his mind by proper instructions to the District Attorneys.

Mr. Curtis has answered by a short and severe but much-needed lecture on the honorableness and morality of getting money from poor clerks, laborers, errand-boys, and even women, by a thinly-disguised threat that their means of livelihood will be endangered if they do not pay, and of using for the extortion a self-constituted body which renders no account of the disposition it makes of the funds thus acquired. This lecture will do Mr. Hubbell more good, though it may at first daze him more, than the answer of Messrs. Wheeler and Whitridge, the Civil-Service Reform Association's counsel, for we do not believe that he feels half as strong as a moralist as he does as a lawyer. He must have been conscious when he wrote to Mr. Curtis about honorableness and manliness that he was thereby exposing himself to numerous and unknown perils. A collector of campaign assessments from poor clerks, he must have felt, cannot safely "knock round" as a professor of ethics, and give hints on duty to anybody he happens to meet. He should be sure he knows his man before opening his ethical mouth. There are doubtless many in the Hubbell "crowd" to whom even he can profitably give lessons in social morality, but he ought to confine his instructions to them.

As the assessment circular of the Congressional Committee has been sent into the Navy-yards, and is, we believe, even reaching the laborers for the first time in the history of political corruption, we beg to call the attention of commanding officers and all others whom it may concern to Section 1546 of the United States Revised Statutes:

> SEC. 1546. No officer or employee of the Government shall require or request any workingman in any Navy-yard to contribute or pay any money for political purposes, nor shall any workingman be removed or discharged for political opinion; and any officer or employee of the Government who shall offend against the provisions of this section shall be dismissed from the service of the United States."

The New York banks further augmented their reserve during the week, so that they hold over $9,000,000 lawful money more than is required. This gain was made notwithstanding that the Treasury took in much more money than it paid out. The foreign exchanges ruled against gold exports, but about $1,400,000 was shipped at a loss, for the account, it

was said, of the Italian Government. The serious turn which Egyptian affairs have taken influenced the foreign financial markets, and British Consols declined during the week from 100⅛@¼ to 99⅞@½, on the theory that such complications may result as to lead to a war in which the leading European nations will become involved. The weather throughout the country has been very favorable for the crops, and every interest which depends on the harvests has consequently improved. No important progress toward a settlement of the labor troubles has been made; the strike of the freight-handlers at the railroad stations in this and neighboring cities has caused heavy losses to business men. The railroad managers speak lightly of the matter. All the freight which is delayed until July 1 will go forward under the new schedule of advanced rates, so that however much the business public may lose, the railroads are likely to be gainers even if they grant the demands of the strikers. At the Stock Exchange the tendency of prices was upward, the favorable outlook for the crops more than offsetting other unfavorable considerations.

The bill extending the national-bank charters has passed the Senate, after a somewhat interesting discussion on the silver question, in which Mr. Sherman and Mr. Allison, of Iowa, took part. Mr. Sherman advocated a double standard, but insisted that silver should pass at its market value in gold, which is in fact the only way in which the bimetallic theory can be put in practice, and, we may add, ever has been put in practice. Mr. Allison, on the other hand, believes that the two metals can be made to circulate on equal terms if the Powers will all come to an agreement on the subject, and accounts for the failure of the late attempt to get them to come to an agreement by saying that they were not energetic enough. It is, of course, impossible to refute those who hold that silver and gold can be kept at equal value by international treaty, because the proposition is in the nature of prophecy, and prophecy cannot be refuted. The only way to meet a prophet in discussion is not to believe him. It is certain, however, that the probability of international agreement is now remote, and that in the meantime we must do something to deal with our share of the problem, and whatever is done ought to be done quickly. We are at present neither prepared to act alone, nor to wait for concert of action on the part of other nations.

The trouble which was sure to come from the bill restricting Chinese immigration has already begun to show itself in the protest sent by the Chinese Government to Washington. The objections urged against the bill are the length of the time during which it is to remain in effect—ten years—and the fact that it makes no distinction between skilled and unskilled laborers. The Secretary of the Treasury, in his instructions issued to Collectors of Customs to carry into effect the provisions of the bill, directs particular attention to the fact that by the term "laborer" is meant skilled as well as unskilled laborer. This, the Chinese Government points out, will interfere with the business of Chinese merchants and manufacturers now resident in the United States, and may in some cases actually break it up. Besides this, there are now some sixty thousand Chinese laborers employed in the West Indies, whose contracts expire next year, and who, if they cannot be allowed transit across the United States, will have to go home by way of England, which of course would entail upon them a heavy additional expense. In reply to all this, our Government had practically nothing to say, except that it will refer the matter to Congress, which will probably do nothing at this late day of the session. Of course the popular anti-American feeling excited in China is very intense. Recent despatches from San Francisco give an idea of the stories which are set afloat to inflame it by referring to the "irritation" produced by the publication of a letter, "attributed to Commodore Shufeldt," in which the Empress is accused of "criminality." Under ordinary circumstances, if Commodore Shufeldt had been doing anything of the kind, our Government might be called upon to discipline him, but it would not affect the friendly relations between the two countries. Now, however, it is proposed, or said to be proposed, that "China's assistance in the Corean negotiations" should be summarily withdrawn.

The worst of the matter is that, so far as the Chinese Bill is concerned, the Chinese are right. The bill was passed without any proper inquiry as to how it would affect existing contracts, and this, too, by a country which has a clause in its Constitution preventing the passage of laws by the States impairing contract obligations. Its provisions were subject to an existing treaty relating to a very delicate subject, the right of emigration; and as its progress through Congress was watched with the closest attention by the Chinese Government, there was something very hasty and outrageous in passing the bill without waiting for some expression from China, which was certain to come sooner or later, and did come three weeks after its passage. Now the matter will have to be called to the attention of Congress again, and that body will either refuse to reconsider it, which will be a flagrant act of discourtesy to China, or have to take it all up again and settle the "Chinese question" *de novo*.

The news of Secretary Teller's visit to the Indian school at Carlisle, and of the warm approval he expressed of the methods, as well as the results, of the instruction administered there to Indian children, has gone far to relieve the friends of the Indians of the somewhat hasty apprehension that the new Secretary would treat this class of Indian training-schools with disfavor. We have no doubt it will also turn out that the Secretary has been misunderstood by those who ascribed to him opinions unfavorable to the settlement of Indians in severalty. He may, quite reasonably, consider one Indian tribe less fitted than another for a step so little in accord with their traditional habits, but we are confident that Secretary Teller will not reject the severalty plan whenever an Indian tribe or individual Indians are willing to accept it. The Secretary holds that the gradual dissolution of the tribal relation is a prerequisite to the placing of the Indian upon an equal legal footing with other inhabitants of the country, and it is evident that their settlement in severalty is a prerequisite to the dissolution of tribal relations. The holding of lands in common by Indian tribes is one of the strongest bonds of their tribal cohesion.

There is a refreshing piece of news from the Mescalero Indian Agency in New Mexico. It appears that a band of Apache marauders, after a plundering raid, had taken refuge with a subordinate chief on the Mescalero reservation. The Indian Agent, Mr. Llewellyn, gathered his Indian police force and some friendly chiefs besides, attacked the camp of the marauders, and routed them after a lively fight, in which several of the hostiles were killed, and the Agent himself was shot through the left arm. The Agent presents this as proof of the determination of the Mescaleros to keep order on the reservation. The Indian police, which has frequently been attacked in Congress as a useless institution, has on this occasion once more demonstrated that now and then it can do the service of the Army, especially when the Agent is a courageous and active man. Mr. Llewellyn was formerly in the service of the Department of Justice as a deputy-marshal or detective, and he is said to have done excellent service on the Northwestern frontier in breaking up bands of mail robbers and "road agents," now and then taking a desperate character with his own hands, at the risk of his life.

The dilatoriness and general lack of system in making up, debating, and passing the appropriation bills in the two Houses of Congress has received another striking illustration. Here we are at the very close of the fiscal year, when all the appropriations made at the last session expire, and when the Government will come to a standstill unless sufficient appropriations are made at this session, to take effect on the first of July; and yet several of the most important bills have not even been reported to the Senate, and some of them will be subjected to long, if not thorough, debate before they can go through. To bridge over the period between the end of the present fiscal year and the time when the new appropriations can go into force, Congress will have to resort to the expedient of extending the appropriations of last year for the time being, so that the needs of the Government may be at least temporarily provided for. But this shows again the inconveniences arising from a lack of organic correspondence between Congress and the Executive branch of the Government. If the Executive were authorized or directed to submit to Congress at each session a complete and well-digested budget, the Appropriation Committees would find their work greatly facilitated, and they would be able to make their reports much earlier in the session. And if the two houses then adhered to the rule giving the appropriation bills precedence before other business, such cases as the present would never arise, and Congress

would be at liberty to adjourn the long session much earlier than it does now, and with the public business much better done.

The Chilian Congress was convened on the 1st of this month, and, according to the latest advices from Panama, it is expected to pass a bill for incorporating Arica, Tacna, and Tarapaca with Chili. Novoa, the Chilian Commissioner in Lima, with whom Mr. Trescot carried on his late abortive negotiations, has made a speech, in which he announces that the "spectre of intervention" has disappeared; and that Chili will settle the terms of peace herself. The Peruvians must by this time have abandoned all hope of active interference by the United States, and as the country is practically without any government, and dependent on the Chilian soldiers for the performance of ordinary police duty, it will have to be content with whatever is decided upon by its conquerors. Novoa's announcement that whatever government is "selected" will at once be "recognized," throws a flood of light on the condition of affairs.

President Santa Maria, in his message to the Chilian Congress, refers to our attempts to bring about peace, in terms which are barely civil. He says that Chili accepted our officious services, but this was on receiving an assurance from the American Envoy that no "intention of interference was entertained," and that we only desired to bring "a friendly and officious influence to bear on the question." President Santa Maria is, however, not willing to let us off even with this disavowal. He says interference from any quarter would not only "have been a violation of the eternal principles of international law and justice, but would call forth from all America a protest against the dangers inherent to such an act." Continuing in the same strain, he declares that such interference would have had no effect, and adds, maliciously, that "mediation, in order to be efficacious and beneficial, must be in answer to an invitation proceeding from the belligerents themselves." Of the great Blaine Pan-American Congress he makes no mention whatever, which seems ill-bred, considering that Mr. Blaine had very handsomely offered to pay the hire of the hall in which the meetings were to be held. In fact, it is plain that things in South America are not yet ripe for an American protectorate, although they may be when we have no social or political problems to occupy us at home, and are ready to give our whole minds to the reform of Spanish America.

The Bishop of Melbourne (Australia) has refused to accede to the request of some of his flock to direct a prayer for rain to be used in his diocese, on the plain ground that material phenomena are under the control of law, which will not be changed or interrupted in answer to prayer, and that prayer should be confined to spiritual blessings. We believe this is the first formal recognition by a clergyman of prominence of the soundness of the scientific view of the material universe. A prayer for improvement in the condition of Ireland has been ordered in the English churches by the Archbishop of Canterbury, at least in his own province, which—apropos of the Bishop of Melbourne's action—leads a correspondent of the London *Times* to call attention to the fact that this Irish prayer is to be used between two other prayers in the liturgy—one for the High Court of Parliament, and one for All Conditions of Men, either of which, if effectual, makes the Irish prayer wholly unnecessary, even if it were not objectionable on other grounds, one of which is that it contains unnecessary information about the state of Ireland. He suggests, therefore, that the same end can be attained by simply directing inwardly the thoughts to Ireland when praying for wisdom for the rulers and unity among the ruled. Somewhat the same question came up here during Andrew Johnson's impeachment. Some of the friends of impeachment urged, through the press, that prayers for a verdict of guilty on at least one count should be offered up all over the country, to which it was well objected that the proper prayer for the crisis was that wisdom should be given to the Senate to do justice. There is such a thing as surplusage in prayer.

There has been a great deal of droll as well as horrible news from Ireland during the last year or two, but the news that a number of "Irish noblemen and gentlemen" have formed a joint-stock company for the purpose of counteracting the schemes of the Land League, and occupying and working the farms of evicted tenants, and, we presume, buying up tenants' goods sold at auction for non-payment of rent, is undoubtedly the drollest of any. They are, it is said, offering the shares as a desirable investment. This is a reproduction in modern shape of a process which has been more than once performed on Irish land. A "Company of Adventurers" was formed in England during the Commonwealth, for the purpose of speculating in Irish farms, from which the occupants were to be ejected, and if obstreperous killed, and it had a fair amount of success for those times. But the present proposal looks rather to the production of the state of things which would have been witnessed in France if the Duke of Brunswick's army had succeeded in restoring the King's authority, and putting the seigneurs back in their châteaux. The Irish Company can only succeed by getting its agents guarded constantly by troops and police, or, in other words, can only succeed in a state of war. That commercial men should be invited to take stock in what is in reality a filibustering enterprise, is certainly highly humorous, considering how many tempting fields of speculation are now open to capitalists.

The highly-pacific rôle played by the British fleet at Alexandria, while British subjects were being murdered on shore, seems to have been more than even the most peace-loving Liberals could bear. The wound to national pride, too, has been deepened by a panic in "Egyptians" on the Stock Exchange, and the bondholder is lifting up his voice, and when he is angry he is a great force in politics. Moreover, Egypt is drifting rapidly into complete anarchy, which raises the question of the safety of the Suez Canal. If this has to be guarded by patrols either on land or water, as now appears to be the case, it would be clearly cheapest and safest in the long run, to strike at the root of the trouble by setting up a Government in Cairo competent to maintain order. That Arabi's Government is not capable of doing so is plain enough. The difficulty in dealing with him or his force hitherto, apart from the question of agreement between the Powers, has lain in the fact that the large body of Europeans in the country would be exposed to massacre on the first sign of armed intervention, and Arabi is playing on this fear in order to prevent intervention. But the Europeans are getting out of the country very rapidly, and a very small force will be sufficient to disperse or bring to reason the Egyptian Army. Arabi's performances furnish a new and striking illustration of the tendency of Egypt to fall under the rule of the Army, unless the Prince is a man of the strongest type, like Mehemet Ali and his son Ibrahim. What Arabi and his colonels are trying to set up is really a reproduction of the Mameluke régime, and the temptation to this is constant and peculiarly great, owing to the unequalled industry and patience of the fellaheen and the wonderful fertility of the soil. Military despotism exhausts most other countries rapidly. It has ruined Asia Minor, but the Egyptian peasant always seems to be saying to the man with the sabre: "Be as turbulent, ruffianly, and wasteful as you please; I am sure to have the taxes ready, and the corn, and the wine, and the oil."

Matters are rapidly hurrying on in Egypt to war between Arabi and England, at least, and perhaps both England and France. Troops are being despatched from Malta, Gibraltar, England, and even, it is said, from India; and Sir Evelyn Wood, who distinguished himself in the Zulu campaign, is to take the command of any force that may be landed. In the meantime, Europeans are flying rapidly from the country, the resident consuls are in despair, and Arabi is growing more saucy and warlike, and it is believed will fight. He now declines to continue any attempts to discover and punish the perpetrators of the late massacre, and there is talk of his making some kind of demonstration against the Canal. Unless all the ordinary indications as to the value of troops are at fault, his army is worthless, and will be speedily dispersed by any European force sent against it, but no force can at once prevent pillage and assassination, and there is a fair chance of a renewal of disorders in Alexandria and Cairo. Arabi declares that if he is driven to the wall, he will show by documents that he has been egged on by the Sultan, which is not at all unlikely. The Conference continues to sit and deliberate at Constantinople, but no one knows what conclusion it has reached. The British Envoy is probably demanding European authorization for active operations in Egypt, and the Porte is protesting vigorously that no Conference is needed. In the meantime, the first notes of dissatisfaction with England begin to be heard in the Paris press; and, in fact, the political sky is once more clouded over as it has not been since the last Conference, which preceded the Russo-Turkish war, broke up its sittings.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, June 21, to TUESDAY, June 27, 1882, inclusive.]

DOMESTIC.

CONGRESSMAN HUBBELL, Chairman of the Republican Congressional Committee, sent a letter to Mr. George William Curtis in reply to the Civil-Service Reform Association's circular warning Government employees against paying political assessments, in which he says he is willing to meet Mr. Curtis on the question anywhere and at any time, and to unite with him in requesting the President to ask an opinion of the Attorney-General; and, "if you desire any other form of action in any tribunal which can give an immediate consideration of the point, I will join you in testing the soundness of the circular." Mr. Hubbell concludes by saying: "The law is misstated in your circular, and the alarm which you seek to create is without justification in the law"; that he "disdains to seek shelter behind any cover," and challenges Mr. Curtis to a contest on the question. Messrs. Wheeler and Whitridge, counsel for the Civil-Service Reform Association, at once replied, saying that it would give the Association much satisfaction to have an immediate opportunity of testing the soundness of the circular, and suggesting the United States Circuit Court for the Southern District of New York, which is now in session, as a good place to bring a test case "of any one which you may select of the numerous payments which have been made to you in the district in response to your circular." In regard to asking the opinion of the Attorney-General, Messrs. Whitridge and Wheeler reply that they do not accept the proposition, since it is the official duty of the Attorney-General, upon the reasonable complaint of respectable citizens, to present that complaint in legal form to the court for its decision. "We have no right to ask his opinion. We have a right to ask his official action." Mr. Curtis has also written a reply to Mr. Hubbell, in which he exposes the silliness of the allegations contained in his letter in the sentence, "I invite you to this mode of settlement as both more manly and more honorable than your attempt to confuse the action or alarm the minds of the employees alluded to."

A meeting of the Republican State Convention of Pennsylvania was held at Harrisburg on Wednesday to complete the ticket by the nomination of a Congressman-at-large in the place of Mr. Marshall, who declined the nomination. Marriott Brosius was nominated by a unanimous vote. A resolution was adopted recommending "the Republican State Committee to adopt all honorable means to harmonize the Republican party," but there seems to be less chance than ever of harmony in the party; meanwhile, the Independents are said to be gaining strength daily.

The Vermont Republican State Convention met on Wednesday and nominated John L. Barstow for Governor. The platform tenders to President Arthur assurances of confidence in his Administration; deprecates the "one-term practice which generally prevails in the election of members of the Legislature," and earnestly recommends the voters of the State to choose good men, "and by successive elections retain them in the legislative service as long as may be compatible with the public good"; favors "such additional legislation as the condition and wants of the common schools of the State may require"; and expresses confidence in the present system of taxation. It is a well-known fact that the one-term practice complained of has sprung up since biennial sessions were adopted.

The Maine Democratic State Convention met on Tuesday, and renominated Plaisted for Governor. The platform denounces the purchase of votes by corporations and capitalists, and assessments upon the salaries of Government officers; calls for a reform of the civil service and the tariff; denounces bank notes, and favors the abolition of imprisonment for debt.

The California Democratic State Convention nominated General George Stoneman, of Los Angeles, for Governor on Friday, after balloting for several days. John Daggett was nominated for Lieutenant-Governor, and J. R. Glasscock and C. A. Sumner for Congressmen-at-large. The platform applauds the movements of the workingmen of the East, notably of Pennsylvania, in opposition to moneyed corporations, and to the "monopolists of the Chinese trade."

The Readjuster Democrats of Tennessee held a Convention on Thursday, and nominated General W. D. Bate for Governor. The platform declares the recent settlement of the State debt unwise, because it is not in accord with the views of the people. It also declares that there is a portion of the State debt, known as the State debt proper, with accrued interest, the validity of which has never been disputed by any portion of the party. "We consider it," the platform says, "a valid and sacred obligation of the State, and favor the payment of the same in full; and we tender to our creditors a settlement of the remainder of the State debt by paying one-half the principal and accrued interest by issuing the bonds of the State, bearing interest at the rate of three per cent. per annum." Upon the adoption of this platform the State-Credit Democrats withdrew from the Convention, and decided to call a Convention for July 11, to nominate another candidate for Governor.

At a Cabinet meeting held on Friday night, at which the President submitted the question of the advisability of interfering with Guiteau's sentence, it was decided not to grant a respite. The Attorney-General, to whom all the appeals and petitions presented to the President bearing on the case had been referred, submitted an elaborate report to the Cabinet, reviewing all the points presented in favor of a respite, and recommending that it be not granted, on the ground that the sanity of the prisoner had been fully established at the trial. This report was unanimously approved by the members of the Cabinet, all of whom were present. Guiteau received the news cheerfully, and repeated that he was "God's man, and in God's hands," and that he would die for his inspiration, feeling that God would justify him in the other world.

At a Cabinet meeting on Friday, Secretary Folger reported that 60,000 Chinese laborers, now under contract in Cuba, and desirous of returning to China, have applied for permission to pass through the United States. The question was discussed, and the conclusion reached that under the provisions of the recent Chinese Bill, the permission could not be granted. This forces the Chinese to go home by way of England.

The Navy Department has received advices from Engineer Melville, dated Lena Delta, March 25, in which he gives a detailed account of his operations up to that date, and full particulars of the finding of the remains of De Long and his comrades. De Long's note-book was found beside him. The notes made therein were begun on Saturday, October 1, 1881, and the last entry is dated Sunday, October 30. The record is most pitiful reading, but shows that, under the circumstances, nothing could have been done by Melville, or any one else, to help De Long's company. The last man must have died within a few hours after the last entry was made in the diary, and no relief party which Engineer Melville could have organized could have got to them in time to find any of them alive.

Engineer Melville telegraphs from Yakutsk, under date of April 10, that he has searched in vain for any trace of the second cutter or Lieutenant Chipp's party. He has buried the remains of De Long's party and has secured every paper pertaining to the expedition. He is now on his way to Irkutsk.

Lieutenant Danenhower had an interview with the Secretary of the Navy on Saturday with reference to having the remains of the *Jeannette* crew, found in Siberia, transported to this country for interment. The Secretary has referred the matter to a special committee to report upon the expediency of applying to Congress for assistance in the matter.

According to a special bulletin published by the Census Bureau, the number of males of voting age in the United States in 1880 was 12,830,349, of whom 1,487,344 were colored (blacks, Indians, Chinese, and Japanese). Other bulletins give the number of native-born and foreign residents in the United States, from which it appears that a very small proportion of the inhabitants of the Southern States are foreign-born in comparison with the proportion in any other part of the country. In the four States of Alabama, Mississippi, North Carolina, and Tennessee the percentage of foreign-born is only seven-tenths of one per cent.

The National Board of Health has elected the following officers for the ensuing year: President, Dr. J. L. Cabell, of Virginia; Vice-President, Dr. Stephen Smith, of New York; Secretaries, Dr. Thomas J. Turner and Mr. S. F. Phillips. Dr. J. S. Billings and Dr. P. H. Bailhache were elected to serve on the Executive Committee.

A caucus of the Democratic members of the House of Representatives was held on Thursday night, at which it was decided to vote against Mr. Kelley's Revenue Bill, unless certain amendments thereto were adopted. It was also decided, in case the proposed amendments were rejected, to offer a motion to recommit the bill to the Committee on Ways and Means, with instructions to report a bill abolishing all internal-revenue taxes except those upon whiskey and whiskey-dealers. The bill was passed on Tuesday by a vote of 127 to 80.

The Senate passed the bill enabling national banks to extend their corporate existence, by a vote of 34 to 13, on Thursday. The bill has undergone considerable modification since it came from the House, and three sections, embodying the Sherman three per cent. funding scheme, Mr. Beck's provision punishing the over-certification of checks, and Mr. Allison's gold-certificate proposition, have been added to it.

The Senate Committee on Foreign Affairs has prepared a bill providing for a complete judicial system in China, Japan, and other countries, where the United States by treaty, custom, or otherwise, exercises jurisdiction over its citizens.

A number of the leading Republican members of the House held a conference on Friday to consider the question of adjournment *sine die*. It was decided that the business of the House could be disposed of by the 10th of July, and that there would be no necessity for Congress to remain in session beyond July 15 at the latest.

The strike of the freight-handlers in New York and Jersey City continues. This strike has caused great loss to merchants, especially to those dealing in perishable goods. A number of mercantile firms of New York have signed an address to the general traffic managers of the railroads for the purpose of impressing upon them the necessity "of some action being taken to solve the present difficulty as speedily as possible." On Saturday the situation became serious, as the strikers began to interfere with men who continued to work. A large force of well-armed police was put on duty in Jersey City, and active preparations were made to put down a riot. On Monday, Governor Ludlow, of New Jersey, issued a proclamation calling upon the local authorities to use their power to prevent any disturbances, and adding that the military power of the State would be promptly used to aid the local authorities in their efforts to preserve the public peace and protect property.

Another storm of wind and rain passed over Iowa on Thursday. The damage to property

was very great, and several deaths are reported. On Friday, a tidal wave swept the lake front of Cleveland, Ohio, inflicting damage to property roughly estimated at $30,000.

During a heavy thunderstorm on Thursday at Columbia, S. C., the Confederate monument in the State House grounds was struck by lightning, and the marble statue of a Confederate soldier, which surmounted it, was thrown down and shattered into fragments.

The report of the Board of Visitors to the Naval Academy at Annapolis states that many of the buildings are unsafe, and liable to fall at any time.

Michael Davitt has been addressing large and enthusiastic meetings on the Irish question, in Boston, Philadelphia, New Haven, and other places during the week.

Edmund Benjamin, the coxswain of the Columbia College crew, was drowned while bathing at New London on Friday, and the Harvard-Columbia race, which was to have taken place on Saturday, has been postponed until July 3.

FOREIGN.

The programme of the new Egyptian Ministry includes the maintenance of the new *status quo* and the fulfilment of international obligations. On Friday the London *Standard's* Alexandria correspondent telegraphed that he was informed on the best authority that if France and England interfere actively in Egyptian affairs, Arabi Pasha will blow up the Suez Canal and the railway to Cairo, and oppose the landing of European troops in Alexandria. If beaten, he will retire to the desert, where he is promised the support of 30,000 Bedouins. The Egyptian Ministry, the despatch adds, are prepared to sanction the above policy on patriotic grounds. Dervish Pasha received a telegram from the Sultan instructing him to use his efforts to induce Arabi Pasha to go to Constantinople before the sitting of the European Conference, and stating that the Sultan is satisfied with Arabi's attitude. It is understood that Arabi replied to the invitation to Constantinople by saying that he was willing to go, but that the Army would not let him. Arabi is reported to have said that he would resist to the death every pretence on the part of the enemies of Egypt to interfere with her affairs, and that he cannot regard any settlement as satisfactory until the fleets have withdrawn. The report that he aimed at ruling Egypt without the Khedive he declared to be a base calumny. On Saturday the news came that the exodus of Europeans had begun again, owing to rumors of fresh disturbances. Admiral Seymour, the British commander, says that he can only land 1,000 men in case of a rising. The Khedive has written a letter to Ragheb Pasha, President of the Council, recapitulating the recent events in Egypt, which he describes as deplorable. He points out that foreigners continue to leave Egypt, that commercial affairs are at a standstill, that specie is being hastily withdrawn, that there is a complete absence of credit, and that enormous loss is thus caused to the country. He declares that a strict, searching inquiry must be held to find out the causes which led to the catastrophe in Alexandria, and that it is absolutely necessary that measures be taken for the reëstablishment of friendly relations between the natives and Europeans for the maintenance of order and the resumption of business, on which the prosperity of the country depends. The *Standard's* correspondent at Alexandria considers the Khedive's present position very alarming, and thinks he will be arrested on the first sign of foreign occupation.

On Tuesday it was announced that the British Vice-Consul at Alexandria had resigned. Arabi Pasha has declared that the natives implicated in the massacre at Alexandria on June 11 shall not be punished unless the Europeans who fired on the rioters are also punished.

The Conference of the Powers at Constantinople has been in session. The first sitting lasted several hours. The only differences revealed were with reference to the contingency of a military occupation and to the financial control. In the sitting on Sunday, during the discussion of the rights of the Sultan over Egypt, a tendency was manifested to confirm those rights on a basis precluding the idea of Egypt again becoming a Turkish province. The Porte continues to send circulars to its envoys abroad, declaring that the Conference is inopportune. Arabi states that if the Porte abandons him, he will publish correspondence proving that every step he has taken since September 7 last was instigated by the Porte.

On Thursday M. de Freycinet, in the French Chamber of Deputies, and Sir Charles Dilke in the House of Commons, made similar declarations concerning the basis of the Conference, which was: the reëstablishment of the rights of the Sultan, the maintenance of the rights of the Khedive, the preservation of the liberties of the Egyptians, and the observance of the international engagements of Europe.

There is said to be a growing feeling in England that the Government has acted without foresight or energy on the Egyptian question. A despatch to the New York *Tribune* on Sunday says that no one pretends to know what the Conference will decide, but that, in any event, the English Government will finally insist on Arabi's expulsion. A great meeting is to be held in London on Thursday to press upon the Government the necessity of taking effectual measures for the protection of British life and property in Egypt. Active warlike preparations are being made in England. The Press Association on Tuesday reported that the War Office had issued orders for 20,000 arms and accoutrements to be ready in four days, and it is stated that 1,000 marines will be sent to the Mediterranean to strengthen the British squadron there. The London *Times*, in a leading article on Monday, said: "It may be taken for granted that there is something more than empty sound behind the preparations at the dock-yards." Tuesday's despatches from England indicated increased activity in the War Department. The *Times* says that matters have been so arranged that there will be no difficulty, in case it should be necessary, in despatching 20,000 men to Egypt in a few days.

Clause 11 of the Repression Bill was discussed in the House of Commons on Wednesday. Mr. Gladstone stated that the Government proposed to introduce words limiting the power of police search at night to occasions where there is reasonable suspicion that a secret society is actually holding a meeting. The Irish members accepted this as a reasonable and important concession. This clause was then adopted by a vote of 259 to 45. On the same day, Mr. Trevelyan, in opposing various limitations to the right of search, appealed to the members to expedite the Repression Bill. Every day, he said, gave the Irish Executive fresh reason to regard the position of the country with deep and increasing anxiety, and added seriously to the responsibility of those who prolonged the discussion. On Thursday Sir Charles Dilke, replying to an inquiry, said that he believed there were still some American citizens imprisoned in Ireland. The House, in Committee, then took up clause 12 of the Repression Bill, which provides for the application of the Alien Act to aliens in Ireland. An amendment limiting the duration of the operation of the Alien Act was rejected. Mr. Morgan Lloyd then moved an amendment applying the Alien Act to the whole United Kingdom. This was finally agreed to by a vote of 228 to 51. Friday was spent in discussing various amendments to clause 12, moved by Irish members. These amendments were all opposed by the Government, and were finally withdrawn. During the debate John Bright said it was obvious that the condition of Ireland was made greatly worse by the subscriptions raised in America, and by those persons who came from America to participate in conspiracies. He did not hesitate to say that those subjects of the Queen who had taken part in the Chicago Convention were traitors to the Crown. The object of the clause under discussion was, he said, to prevent conspirators of the very deepest dye from exciting the people to disorder. The clause was finally carried by a vote of 132 to 30. Clause 13, defining the power of justices to summon witnesses, was then passed. Clause 14, for the apprehension of fugitive witnesses, was adopted on Tuesday.

It has been decided that the presentation of the freedom of the city of Dublin to Messrs. Parnell and Dillon shall take place on August 15, the occasion of the opening of the Exhibition and the unveiling of the statue of O'Connell.

On Thursday Mr. Gladstone, replying to a question, said that five weeks ago he made a communication to Sir Stafford Northcote that the Government, to accelerate the settlement of the procedure question, might accept an amendment for clôture by a two-thirds majority, but that now it reserves for itself liberty of action on the subject.

A London despatch on Thursday stated that Henry E. Abbey, the American theatrical manager, had signed a contract with Mrs. Langtry, the actress, for a tour in America, beginning in November next.

The French Senate has rejected the bill for the importation of foreign pork, on the ground that it did not offer sufficient guarantees against trichinosis.

The bill for the sale of a portion of the crown jewels and diamonds has passed the French Chamber of Deputies by a vote of 345 to 90, with an amendment that the proceeds shall be applied to the fund for disabled artisans.

The fact that the Emperor William did not accept the resignation of Herr Bitter as Minister of Finance until Tuesday, is regarded in Berlin as an indication that he does not entirely approve the fiscal policy of Prince Bismarck.

A circular prepared by Count Tolstoi, the new Russian Minister of the Interior, has been published, reasserting that officials who do not prevent outrages against the Jews will be immediately dismissed.

The London *Times's* correspondent at Berlin says it is now stated that General Ignatieff resigned the Russian Ministry of the Interior because he could no longer guarantee the safety of the Emperor. Credibility is lent to this view by the fact that since his resignation the political police have been revived.

At a Cabinet council in Madrid, on Thursday, the Minister of Foreign Affairs announced that Uruguay has refused to recognize the right of Spain to satisfaction for the murder of Spanish subjects in the dominions of the Republic. Four Spanish men-of-war will shortly arrive at Montevideo. The insurrection in Uruguay is spreading.

A monster meeting was held in Lisbon on Sunday, at which the Progressists and Republicans "fraternized." Violent revolutionary speeches were made.

A meeting was held in Rome on Sunday, in the grand hall of the Collegio Romano, to do honor to the memory of Charles Darwin. Professor Moleschott delivered an address, in which he reviewed Darwin's career. He said Italian history was a grand illustration of Darwin's theory of the struggle for existence.

A serious discussion is said to be going on in the Chinese Tsung Li Yamen upon the course to be pursued in regard to America's anti-Chinese action. It is generally thought that China's rights have been ruthlessly disregarded, and that the American Government has made itself liable to retaliatory action if such be deemed expedient.

GUITEAU AND THE "EXPERTS."

THE decision of the President on the application to reprieve Guiteau has been made known, and most properly refuses it, so that it is not worth while to discuss once more the question of his accountability. But the character of the "scientific" movement for his pardon on the ground of insanity deserves more than a passing mention. The "argument" which has been presented to the Attorney-General in support of this movement is enough to make one blush for the sane portion of the American people, who have, of course, to share the shame of the performances of some of their number. What it says is, that though the petition for the pardon on scientific grounds "is only signed by one out of 500 of the physicians of the country," "it is believed that the profession are fairly represented by it and by the explanations which accompany it." "It is believed," also, that "if the petition had been more thoroughly distributed, there is no doubt that thousands of signatures could have been obtained," and, "as it now stands, the signatures represent much of the best expert opinion of the country."

There are about 80,000 physicians and surgeons, good, bad, and indifferent, in the United States. One in 500 makes 160 medical signatures to the petition. That these are selected signatures we infer from the fact that the petition when first started was sent only to those who were known to believe in Guiteau's insanity. That they are representative signatures, in any proper sense of the term, is very unlikely. The assertion that "they represent much of the best expert opinion of the country," is that of the draughtsman of the argument, Mr. Reed, Guiteau's counsel. In fact, the whole superstructure rests on his affirmations. It is he who "believes" the signers of the petition "represent the medical profession, and that they constitute much of the best expert opinion of the country." There is no certainty that anybody else believes it except Guiteau himself. There is no other reason in the world why 160 doctors, selected at haphazard by the prisoner from 80,000, should be erected into a court of appeal to decide the question whether sentence should be executed on a murderer whose trial by the courts of law has lasted one year and been one of the most thorough on record.

We answer to this portion of the argument, and it is a sufficient answer, that "it is believed" that the opinions of these doctors, most of whom never saw Guiteau, are not worth a cent. We know of at least six persons who believe it, and we could, if time were given us, procure the written affirmation of "thousands of others" to the same effect. If the question of Guiteau's guilt has not been settled by the jury, but is still to be settled by a popular or professional vote of any kind, it ought not to be taken in this happy-go-lucky way, but at the polls at a regular election. Tens of thousands of votes in favor both of his innocence and his guilt can be obtained for five dollars apiece, or for a glass of whiskey. Signatures in great numbers in favor of his appointment to a collectorship, or a post-tradership, or even the pastorate of a Stalwart church, could be obtained in the same manner.

The absurdity does not stop here, however, for the argument maintains that Guiteau ought to be reprieved because his counsel did not examine "experts" enough; or, in other words, mismanaged the case. He did examine a great many experts, but unfortunately they testified the wrong way. They nearly all said that Guiteau was sane enough to be hanged. So the President has been gravely asked by a lawyer to suspend the course of justice because a prisoner's counsel did not keep on summoning doctors until he could find a respectable number to testify that his client was insane. If this is good ground for a pardon, however, no assassin ought to be executed until he has searched the medical profession of his country thoroughly, and picked out and produced in court such members of it as think from all they hear that he must have been crazy when he committed his crime.

Dr. Beard appears to play a prominent part in the movement, and we presume it is his connection with it which causes the appeal to be made "in the name of Science," but not, we are told, in the name of "Psychology," which "does not plead for Guiteau." Nobody has more respect for experts than we have, but they are fast becoming a great burden to the community, and largely through the habit they are falling into of thinking of themselves and calling themselves "Science," and "Psychology," and "Truth," and other fine names. A man who gives long and close attention to a subject is always entitled to be heard upon it with respect, but then there are subjects on which no expert can become scientific, or anything more than a good judge. There is no such thing as a science of insanity, any more than a science of health. No man can speak with scientific accuracy about the soundness of any mind. All he can say in any given case is: "I have seen a great many undoubtedly insane persons, and judging from these I should call this man insane." No doctor is, therefore, entitled to come forward and say, "Science demands so and so, or thinks so and so, about Guiteau," when what he really means is that G. M. Beard, or F. R. Jones, thinks or demands so and so. It is also very absurd for Mr. Smith or Mr. Brown to call himself "Psychology" in the public prints merely because he has been thinking or reading much about the operations of the human mind. He never can become Psychology by any amount of reading or cogitating, because Psychology is not one of the exact sciences. He might become Astronomy, or Chemistry, or Mathematics, but we observe that the successful cultivators of these sciences never call themselves "Science," or become obstreperous in their demands on the patience and good nature of the Government or the people.

We do not know whether there is any use in calling attention to the growing excesses of the bar all over the country in the defence of criminals, of which this Guiteau case furnishes another illustration, and which is fast making American criminal justice a byword all over the world, and increasing enormously the delays and uncertainty of the law. But the matter is one which calls loudly for some kind of reform. The advocates' duty, even if we accept the widest definition of it ever made, is a professional duty. In defending a prisoner, he remains a lawyer, and is bound to do for him all that a lawyer may properly and honestly do, by way of obtaining a full and fair examination of his case. But of late years the tendency of the counsel is to consider himself the prisoner's agent for facilitating his escape from punishment in any way that may suggest itself; or, if total escape be impossible, the utmost attainable postponement of the sentence. The result is thorough frivolousness in the conduct of the trial—frivolous exceptions, frivolous questions, unnecessary witnesses, endless applications for new trials, for stays of proceedings, for habeas-corpuses and certioraris, no matter how hopeless or absurd. If these fail, he goes to work to get up petitions for pardon, and the opinions of "experts," and articles for crazy and venal newspapers, and all the other machinery of "a movement." It now only remains to add assistance in breaking jail to the list of a criminal lawyer's duties, and then the last shred of the professional character will have disappeared from him; instead of being the prisoner's advocate, he will have become his "pard," occupied in getting him out of trouble by any device that comes to hand.

MR. JUSTIN McCARTHY'S APOLOGY FOR THE LAND LEAGUE.

MR. JUSTIN MCCARTHY, who is better known and, perhaps we may say, more trusted by the English-speaking world than any other member of the Parnellite group in the House of Commons, has written three very interesting letters to the New York *Tribune*, explaining and justifying the course of the Land League in and out of Parliament. He has a singularly modest, candid, persuasive way, which makes agreement with him almost seductive even to the most prejudiced. He has but little difficulty in excusing the action of the Parnellites in resorting to extraordinary modes of obtaining English attention to what they considered Irish grievances. No one who knows anything of the way in which the English mind receives the impact of Irish agitation, will greatly blame them for obstruction under the rules of the House. It was not an Irish device. The English Tories began it. It is, perhaps, in some cases a legitimate weapon of minorities. But Mr. McCarthy fails to excuse the extreme to which it was carried, and the coarse insults to members of the Government with which it was accompanied. Ireland is as much interested as the rest of the world in maintaining popular respect for parliamentary institutions, and for decision by discussion. That respect is the product of many ages of toil and endeavor, and perhaps one of the most valuable acquisitions of modern civilization. That the Parnellites in the struggle of last year did much to weaken or destroy it among their constituents, by the brawls which they got up in the House of Commons, and by finally compelling their expulsion by brute force, there is no

denying. Even Mr. McCarthy's skill in statement cannot put a good face on this.

In his account, too, of the arrest of Mr. Parnell and other Land Leaguers Mr. McCarthy is hardly fair to the Gladstone Cabinet. He describes Mr. Parnell as having made up his mind to give the Land Act a fair trial, at the moment when he was thrown into jail in order that it might have a fair trial. But if this condition of the Parnell mind was known to the initiated, it was not known to the general public. We can testify that in his reported speeches Mr. Parnell began by accepting the Act, and then denounced it as a fraud and subterfuge, and produced as a basis of a "fair rent" the prairie value of the land, which he well knew the Commissioners would not adopt, and began to make preparations for submitting test cases, the object of which, as fairly interpreted by his language, was to prevent the tenants from resorting to the Land Courts, and cause the failure of the whole scheme. This placed Mr. Gladstone between the horns of a cruel dilemma. He had to choose whether he would stand by and see a measure of pacification which he had passed with incredible labor and pains totally nullified, or lock up the chiefs of the League until it got fairly into operation; these chiefs being at the same time his Parliamentary opponents. He chose the latter, and when we say he chose wisely, we by no means excuse the lavish and reckless use of the power of arrest with which Mr. Forster followed it up. Of course the arrests were in a certain sense an act of war, but the war was begun by the Parnellites themselves in the House when they defied the Speaker and resorted to the use of such means as "God and nature had put into their hands."

Mr. McCarthy says nothing to defend the League against accountability for the murders and outrages. To superficial observers who know nothing of the Irish question, this is the most serious omission in his letters. It seems to them very much as the failure of the Northern people to be more impressed by the horrors of war seemed to Englishmen during the Rebellion. But the truth is that the Parnellites in Parliament were no more responsible for the outrages than for the weather. Outrages have been for many generations an expression of Irish discontent. If every Irishman who denounced English rule was to be held responsible for the agrarian crimes committed while he was talking, or soon after, nearly every Irish agitator, from Dean Swift down, would have to be counted a secret sympathizer with murder and mayhem. The Land League and the murders are both symptoms of the same disease. What produced the one produced the other. Doubtless Parnell and his friends might have been more profuse in their condemnation of the crimes, but it was human nature to refuse to be so in the presence of enemies who were fiercely denouncing them as the authors of them, and were using them to show that the production of crime was the only function of the League; the fact being that agrarian crime was a constant Irish phenomenon for nearly two centuries before the League was heard of. Moreover, there is no good reason for believing that the class which commits it would pay the slightest attention to Parnell's reprobation of it. We believe the twenty Molly Maguires who were hanged in Pennsylvania two or three years ago were good Catholics, but the teachings of the Church about assassination had made no impression on them.

SUMMER DINING

To every man compelled to stay in New York during any part of summer, the most serious problem presented by life is undoubtedly where to get a dinner. The class which has this problem presented to it is a large and increasing one, for although families who can afford it go out of town earlier and earlier, and remain out of town later and later, every year, the heads of families who find the means of keeping them out of town for several months have themselves to remain in the city a large part of their time and devote themselves to business. The husband, with his business headquarters in New York and his family established at Newport, Saratoga, Lenox, or some other "resort," is a familiar American type. Moralists may say that this is not the best kind of family life; the husband may himself think, if he be selfish enough to indulge such a thought, that marriage under such circumstances is not all that it might be; but for a very large number of New York husbands no other summer life is at all possible. The married man, thus situated, unless he is very fortunate, finds it out of the question to keep a town cook for himself alone, and he is therefore thrown on his club or on the town for a dinner for many a weary and lonely week during the summer. He is, to all intents and purposes, a bachelor, and helps to swell the large body of bachelors who are perennially in the same plight.

If there is any truth in political economy, the demand for good summer dining-places ought to create a supply. Of course, all the winter places are open, but these are all hot places; and what the summer restaurant-goer wants is a cool place. The clubs are for the most part as hot as any hotel or restaurant dining-room; and we believe there is only one in New York where it is possible to have a dinner *al fresco*. Besides this, everybody does not belong to a club, or want to. Even if membership in them at this time of year does not involve, as the stories of club scandals which get about from time to time give some ground for thinking it does, considerable risk to life and limb, many people care little for club life; and then the occasional reappearance in town of the ladies of the family on shopping excursions of one kind and another makes it desirable that the place should be one to which ladies can be taken.

Now, there is literally no cool summer dining-place of this sort in New York. It is idle to tell the diner that he may go down to Coney Island and dine there in comfort. It is true that he can do so; but he has to make a railroad and steamboat journey to do it, and what he wants is not a journey and a dinner, however good, but a plain dinner without any journey at all. What he wants is a place in the heart of the city where he can get such a dinner as he would have at home, or even a better dinner, to tell the truth, for he is entitled, in view of all the sacrifices he makes for the happiness of his family, to no less, and to have cool evening air blowing about him while he eats it.

Where can fresh air be obtained in such a city as New York? The extraordinary multiplication of what are called "gardens" seems to show that there is a widespread popular belief that fresh air in New York can only be obtained on the level of the ground. The New York garden, one of the advertised attractions of which is always its coolness, is merely a back-yard surrounded with a high boarding or wall. The passion for enclosure is very marked and curious. A garden was constructed by an enterprising hotel proprietor some years ago, and called a "jardin d'été," in which a most excellent dinner could be obtained, but in which the theory that the best air is nearest the ground was pushed to the point of sinking the garden below the level of the street. The result, of course, was the production of a mephitic atmosphere. The idea was carried out still further in Gilmore's Garden. Here, although the owners had an entire block, with which they could do what they pleased, they carefully preserved the walls and roof intact, and thus kept the external air entirely out of the building, and made the promenade inside one of the hottest and most suffocating in the world. This was not a dining-place, but the principle, so far as ventilation is concerned, is precisely the same.

The idea which has led to the development of the New York garden—that to get fresh air you must get as near the ground as possible and surround yourself with a high wall—is clearly a mistaken one. Experience shows that relief can only be obtained by going as high up as possible. To try to persuade people that they can get this by keeping as far down as possible and shutting out even the surrounding air, is a piece of imposture which it is painful to find so long successful. The thing to do is to go up to the roof. This fact has been pointed out over and over again in the interest of the summer restaurant-goer; and the reason why the roof is not utilized for him is hard to see. Any one spending an evening at the recently-opened Metropolitan Alcazar may see how it should, and also how it should not, be done. In this place of amusement an attempt has been made to turn the roof to account as a summer dining-room, but it is only a half-hearted attempt. The place consists of a huge concert-hall, round which, at the elevation of the third story, runs a platform, which may, architecturally, be part of the roof, but bears to the sides of the building the relation of a lofty shelf. This shelf in the evening serves both as a dining-place and a promenade. As it runs round the windows of the concert hall, its atmosphere is a mixture of the cool air surrounding the building and the hot, fetid air coming up from inside. As a restaurant it is, moreover, open to the objection that the tramping up and down of two or three thousand promenaders makes a quiet dinner out of the question. Repose of mind is essential to any real gastronomic enjoyment, and any violent excitement or irritation makes it out of the question. But the arrangement of the dining-shelf at the Alcazar is such as to arouse the guest's worst passions. The promenaders at the Alcazar outnumber the diners ten to one, and have the latter completely at their mercy. Of course, they show none. They crowd in upon the diners, crane their necks over them to see what is going on in the hall below, not infrequently draw chairs up to tables already occupied, and literally and metaphorically "make it hot" for any one who has come to have a quiet dinner and evening *al fresco*.

After dinner there is nothing to do but to suffer in this way at the hands of the promenaders, or to join the promenade and heat one's self by doing so, or to go inside the building, where the atmosphere is like that of a Turkish bath. Notwithstanding all this, the Alcazar shelf is nightly crowded; so great is the longing for a really cool summer dining-place on the roof, that a shelf is welcomed as better than no roof at all, and not even the announcement of the present

management that it will give half a pint of "Bodega sherry" with the dinner can keep people away. If there were any real trouble about getting up to the roof, the long delay in its utilization for the purpose of a summer dining-place could be understood. But there is none. The introduction of elevators has made it possible to have buildings of great height, and to get to the top of them without any exertion, and nothing could show our general devotion to money-getting more discreditably than that elevators have thus far been almost wholly brought into play in places of business or hotels; the use of the elevator in connection with the natural summer dining-room on the roof is still to come. The invention of the elevator, too, has been accompanied by the discovery that electricity can be used for purposes of illumination, and the difference between the electric and all other lights is that it is cool. The final cause of all this is so plain that it is something like impiety to refuse to see it. The climate is warm, and a large part of the population need a cool dining-place. The only place where this can be found is the roof. At the very time when this demand for the roof comes into existence, one invention appears which supplies a means of getting to the roof rapidly and without exertion, and another which gives us what seems like a contradiction in terms, and something almost beyond the power of nature to furnish—a cool yet brilliant light. No one who believes in human progress can doubt, when he looks at the thing in this way, to what it points.

ENGLAND IN THE EGYPTIAN CRISIS.

LONDON, June 15.

SERIOUS as the condition of Ireland still is, and slow as the progress of the repressive legislation regarding her is, the centre of gravity in our political affairs has for the time shifted from Ireland to Egypt. Though decisive events will probably have happened before these lines can reach you, still your readers may naturally wish to know how the Egyptian crisis presents itself to us in England, and in what way it is likely to affect the position of our parties.

The present position is the creation of the Government of Lord Beaconsfield. From the time of Mehemet Ali Pasha onward, the suzerainty of the Sultan over Egypt had become a very vague and shadowy matter, carrying with it no effective control. However, the Turkish Government had by no means lost the hope of recovering its rights, and Sultan Abdul-Aziz intended to do so, but was kept in good humor by Ismaïl Pasha, who spent a good part of the enormous loans which he raised in Europe in bribing the Sultan and his court. When the deposition of Ismaïl was resolved on by the Western Powers, the authority of the Sultan was invoked to effect it, and this at once brought back Turkish claims to the realm of practical politics. Even the Conservative English Government which was then in power did not much like such a recognition of the Sultan's sovereignty, but they thought it a less evil than the direct interference of an English and French army, and therefore accepted it. The Sultan saw how much he had gained, and watched eagerly for the next opportunity of reasserting his rights. He had also become possessed with the idea that he might recover that vast and undefined half-spiritual, half-temporal authority which the office of Khalif carries with it over the Mohammedan world, and fancied that through the use of his Khalifal pretensions he might recover in a new direction more than all the prestige which his defeat by Russia had taken from him. The conquest, for so one may call it, of Tunis by France has lately embittered him against the Western Powers, and made him all the more anxious to tighten his grasp on other Mohammedan lands.

Meanwhile, the financial protectorate of England and France, acting jointly, was going on. Many Englishmen, especially Liberals, regretted its establishment. As it was due to the action of France, and as the action of France was taken in the interest of the holders of Egyptian bonds, it seemed to them tainted in its source. What are these French speculators to us, they said, that we should, for their sakes, involve ourselves in responsibilities in a Mohammedan country, make ourselves parties to a system which squeezes taxes by cruelty out of a wretched peasantry, and enter a partnership with France which is almost sure to end in a quarrel? Far better to have annexed Egypt at once, which Lord Beaconsfield might have done in 1875, when France was in no condition to resist. We should then have become masters of the situation; might have governed Egypt so as to make it pay its way and yet improve the condition of the peasantry; might have had the Suez Canal all to ourselves instead of being merely the holders of some shares in it. It is indeed a little odd that Lord Beaconsfield, who was fond of bold schemes, did not try this one; but probably he feared the vehement opposition which would have proceeded from Mr. Gladstone, and was held back by Lord Derby and other timid or cautious members of his own Cabinet. Anyhow, he was content, conceiving it absolutely necessary not to let France get alone the mastery of Egypt, to act in company with her, and thus he left matters when he resigned office in 1880.

The Government of Mr. Gladstone accepted and maintained the *status quo*. They could not retire from Egypt, because to do so would be to leave France able to work her own will, and would seem to throw the Canal, our route to India through which a vast trade now passes, at France's mercy. Therefore they kept things going, and hoped for the best, endeavoring to maintain a friendly concert with the various French Governments, which unfortunately change so fast as to increase the difficulties of a steady and consistent diplomacy. Last September the revolt of the Colonels seemed for a time to threaten a complete break-up of the system, and ever since it has been clear that our position was extremely precarious. Those who know Egypt have been warning us to prepare for a catastrophe; but unluckily they have not had many useful suggestions to give as to the course we must pursue, and even now, when the storm has broken, it is wonderful how little prepared public opinion is to arrive at definite practical conclusions. There are of course the usual three courses, but none of them is satisfactory. The first is to withdraw altogether from Egypt, and leave her affairs to settle themselves. It is plain, it looks easy, it naturally suggests itself to a transatlantic observer. It is pressed upon us by two sections of politicians, but both are small, and one is insignificant. The party of non-intervention, who desire to see England keep wholly aloof from the internal affairs of all other countries, to have no diplomatic dealings except in matters which obviously affect our direct material interests, and never to draw the sword except in self-defence—this party would of course be glad if we should cut the Egyptian knot by abandoning Egypt altogether. However, it contains few persons of any weight or eminence, and has really no influence in Parliament. The other section can scarcely be called a party, for it consists only of a few writers, mostly Englishmen who have lived in Egypt and become interested in Mohammedanism, who urge that we ought not to interfere with the legitimate development of the country as a people and a state, who declare that a National party has grown up on the banks of the Nile, and that it will work out the happiness and greatness of the nation if left to itself. The answer made to these arguments is that this National party is a dream of enthusiasts, and that there are no materials for self-government in Egypt; while the non-interventionists are reminded that the general sentiment of England would never tolerate a Government which abandoned our highway to the further East.

At the opposite pole from these doctrines stand those who think it would have been better to, so to speak, take the bull by the horns, and, on the first symptoms of revolt against the Khedive and hostility against Europeans, land English and French troops, fortify Alexandria, and march on Cairo. Very few people have as yet ventured to advocate so daring a course. The Liberals don't like it, because it is the maximum of intervention, and because, remembering the issue of the Schleswig-Holstein occupation by Prussia and Austria, they think that England and France would sooner or later come to a quarrel, which would be a serious quarrel, over their prey. The Conservatives have not called for it, partly because they also feel these dangers; partly because they have a lingering sympathy with the Turks, and see that such a course would be strongly resented by the Sultan, whose rights over Egypt they admit. And the gravest objection of all is that such decided action by England and France would probably give grave umbrage to the other four Powers which signed the Treaty of Berlin, and might conceivably lead to a European war. This is a point on which one who does not know the secret diplomatic history of the question can hardly speak; but supposing it not to be a serious danger (and it may not be), the course of events during the last few days has gone far to show that the error of England and France has been not to have shown more audacity, not to have followed up their threats by an immediate display of overwhelming force. And it is quite possible that the Conservative leaders may before long take this line, and place upon this ground those charges which they are sure to bring against Mr. Gladstone's policy. Hitherto they seem to have been waiting to see what turn events will take, fearing to commit themselves prematurely to a view which might be suddenly refuted. This is the fair privilege of an Opposition; what is stranger is that among all our speakers and writers hardly any one has had any definite line of conduct to propose. Everybody is perplexed. Everybody feels that we are in a position theoretically indefensible, and almost sure to involve misfortune. Thus it happens that even the acquiescence of our Government in the action of the Sultan, who has at last found, and is using with true Oriental craft, the opportunity of making his claims effective, has excited less censure than might have been looked for. The Tories, of course, twit Mr. Gladstone with his asking aid from the "unspeakable Turk"; the Liberals see with disgust that the Sultan is likely to strengthen an authority for whose extinction they have been anxiously waiting. But no one has demanded that the Turkish claims should be disregarded and the solution sought by the armies of France and England alone.

It may, however, happen that the danger in which, as the events of June 11 at Alexandria show, the Europeans in Egypt stand, will, after all, compel our forces to land. It is not yet clear, but you will probably know before these lines are in print, how far the massacre of that day was due to distinctly political or religious motives, how far merely an outbreak of that vast population of ruffians who infest Alexandria,

and who would naturally seek an occasion for plunder and violence. But there can be no doubt that Europeans are unpopular in Egypt, and that, on the whole, they deserve to be so. Every country of Western and Southern Europe sends a great many of its least estimable children to make and lose fortunes in half-civilized regions like Egypt and other parts of the East; and Egypt, as the richest district, has had the largest share of this mischievous emigration. We are so much accustomed to dwell on the superiority of our own civilization, and the excellence of our intentions, that we do not quite realize that the impression produced on the Oriental mind may be different. Yet, whatever be the demerits of the Europeans in the Levant, they are entitled to the protection of their Governments; and if this is not speedily given by Turkish troops, there will be a loud call that it should be given by England and France themselves. Y.

LAST DAYS OF THE ITALIAN LIBERATOR.

MILAN, June 7, 1882.

As the cable will have brought you the fatal news, I did not intend to send you a letter until the last sad rites were over, but, owing to various obstacles, these are not yet performed, and certainly to-day there is no chance of their completion. Yet Garibaldi's instructions were very clear. On September 27, 1877, he wrote to Dr. Prandina directing him to perform the operation of cremation, as he had decided on having his body burned. The funeral pyre was to be raised 300 paces to the left of the White House, to the north looking seaward; here acacia, myrtle, cistus, and other aromatic faggots should be piled, the iron bedstead which had served him as a bed and carriage placed on top, and finally, on an open bier, his body, clothed in his red shirt; the ashes should be collected and enclosed in an urn, to be set in a niche in the wall behind the graves of two of his children—Anita, a beautiful young girl of seventeen, daughter of a woman whom he loved in Nice, and Rosa, a baby of eighteen months (born to him after Clelia), who died during the French campaign, and, the parish priest of Maddalena denying her funeral rites, the mother buried her in the island, and Garibaldi, on returning, was so pleased with the idea that he straightway decided on being buried there himself. In a letter to his present wife, written in 1881, he expressly enjoins on her to burn his body, as directed, before announcing his death to any one—a most characteristic injunction—accompanied by the promise to do the same for her should she precede him to the tomb. He assuredly would have kept his promise, nor would any government have dared to interfere with him; but the poor widow, with two young children, alone on the island, could not have taken on her shoulders such a responsibility. She had to wait for Menotti, summoned as soon as danger threatened, and even he arrived too late. Then he resolved to await his brother and sister—Ricciotti from Rome, Teresita and her husband, Canzio, from Genoa—and meanwhile the news had got abroad, and the prefect of Sassari, chief man in the island of Sardinia, stepped in to say that he could not allow any cremation without orders from the Government. Menotti warned him fairly that, at the cost of his life, he would see his father's behest obeyed; and meanwhile from all Italy, as the news sped with lightning rapidity, came a wail of woe, then the passionate entreaty: "Embalm him! Let us see his face once more, or let us at least have his ashes for the Pantheon or the Capitol." Menotti opposed a stern but sad refusal, promising, however, to have the body embalmed so as to be able to defer the cremation ceremony until the representatives of the King, of the two houses of Parliament, of every municipality in Italy, should be able, with the representatives of the press and other thousands of citizens, to reach the island. But when embalming was attempted it was too late, and too late for the erection of the simple funeral pyre as Garibaldi wished it. Such a step being distinctly illegal, it was clear that the Government could not sanction it by being personally present; so Doctor Pini, who superintends the crematory of Milan, erected on the Gorini system, went over last night with Deputy Crispi to prepare all decently and in order.

A special iron coffin has been despatched from Sassari, but as I write comes a telegram from the family: "Friday is the very earliest day that can be fixed for the funeral," and if this state of things augments the grief of all, what must it be for the family, who have to watch day by day and hour by hour "Decay's defacing fingers" gradually effacing the marble calm and luminous seraphic smile which overspread the face as soon as the death agony was over? That, indeed, was terrible to witness—terrible and unexpected. When we first saw Garibaldi after 1876, when he left Rome in tolerable health and could still use his limbs freely, save when periodical attacks prostrated him, we were shocked at the awful change. Still, he bore bravely the agitation of the inaugural ceremony at Milan to the martyrs of Mentana; then, when we were fearing the worst, alighted at Naples, seemed there to take a new lease of life, and performed the wonderful feat of travelling by land from Naples to Reggio; crossed the Faro, then again by land from Messina to Palermo. Though literally but the shadow of himself, his intellect was so clear, his smile so radiant, his interest in his *picciotti* so keen, that one grew to believe with the Neapolitans that he could never die. A somewhat sharp attack, however, at Palermo warned him that if he would breathe his last in his beloved hermitage he must return immediately, and this he did in the same Government frigate, the *Esploratore*, whose officers had borne him so tenderly from Caprera to Naples that he suffered not at all. They were only too proud, and the feat of securing to him a painless voyage from Palermo to Caprera was renewed. Once there he seemed to revive, so much so that toward the end of May Doctors Albanese and Sirletti left Caprera, enjoining solely on his family to prevent his being tired or excited by receiving people.

He led his regular life, getting up early and, when the weather permitted, going down in his little hand-carriage to the sea, always accompanied by his darling Manlio. Despite his age and infirmities (the malady known as deforming anthritis having twisted his poor hands and completely paralyzed his lower limbs), despite even a severe bronchial attack, his voice was still vibrating and sonorous. He would call the peasants from the adjoining fields, give them directions, ask after their families without even appearing weary, so healthy were his lungs to the last. At eleven o'clock he returned to the house to eat, preferring one special dish, which is the favorite dainty of the Neapolitans—a cake made of flour with onions and tomatoes, called "pizze"; then if still hungry he would call for a large piece of meat, have it thrown on to the fire, and, the frizzled part being cut off, would eat it, let the piece frizzle again, and so on till it was finished. The doctor who gives me these details expressing some curiosity, not unmixed with disgust, at this pre-Adamite cookery, Garibaldi answered, "I eat now from choice as I ate perforce during my long journey in South America, where I had neither cooks nor saucepans, and was only too glad to come across a wild buffalo to stave off hunger." The rest of the day he passed sometimes in a spacious room, where he had a window specially made, whence he could see the sea and the Maddalena; at other times in being drawn around the island. On the 24th of May the doctor, who had remained at home with Manlio, who was indisposed, saw that the General, who came in later than usual, was looking very sad and weary. Afterward he learned that he had been to visit the tombs of Anita and Rosa, where he had himself decided to be buried. Unfortunately, there were no signs that cold taken during that pilgrimage had fastened on the bronchial tubes, but it was so; difficulty in breathing and, later, difficulty in swallowing became excessive; and on the very day when letters reached Canzio at Genoa and Menotti at Rome saying that their father was better, came telegrams urging them to hasten if they would see their father yet alive. From that hour paralysis seized on the larynx, and not even a drop of water could the sufferer swallow. Manlio, his "Benjamin," was also ill, and he waited with patient but ever-increasing anxiety for the arrival of his favorite doctor, Albanese. "Is the steamer in sight?" were almost his last words; his very last, the name of the darling of his old age, "Manlio."

At six o'clock the surgeon of the Government steamer *Cariddi*, who was in attendance, pronounced life extinct, but it was a syncope, and the death agony lasted yet three hours. At five minutes to nine on Friday, June 2, the great champion of the oppressed passed away forever. For the first few moments, we are told, the face was awful to look upon, as are ever the faces of those who die by suffocation. Then, when life had relaxed her hold, it settled down peacefully, a halo of intense calm composing every feature. The sailors of the *Cariddi* were allowed to handle the beloved form, dress it in the red shirt and poncho, and lay it on the bed where it still lies—"a marble mask," writes our correspondent, "of what yesterday was Garibaldi." Very, very few have been permitted to enter the illuminated hall. Poor Sgarallino, one of Garibaldi's favorite officers, wounded on the Volturno in 1860, who spent a great deal of his time at Caprera, and had helped the General with hammer and chisel to scoop out an old millstone which was to serve as the basis for the funeral pyre, fainted across the threshold. This grief is but a type of that universally felt. Never could I have imagined such scenes as I have witnessed. It seems as if the pulse of the nation had ceased to beat. All the Government and communal schools are closed, and though some private clerical schools attempted to hold their classes as usual, and the parents also sent their children, a regular rebellion occurred, the young ones refusing to carry on their usual avocations with Garibaldi lying dead. I have witnessed the national mourning for Cavour, Mazzini, Victor Emmanuel—sincere, as far as it went, in all cases, and for Mazzini among many the grief was passionate and deep; but now it seems as if every one had lost his or her nearest and best. Here in Milan it is no exaggeration to say that when, on Sunday, all the associations formed in procession, with banners at the head, all Milan accompanied them to the cemetery as they bore the bust of Garibaldi. And when, for fear of being shut out from the gates, as only the members of the associations were to be admitted, confusion occurred, and worse was threatened, it sufficed that Colonel Bruzzesi, one of Garibaldi's veterans, said, "For Garibaldi's sake, be still," and a hush fell over the crowd that was unbroken until the end of the ceremony.

But I should never end if I were to recount all the manifestations of this intense universal national grief. You know that Parliament at once voted 60,000 francs annual pension—that is, 10,000 francs for each of the five children—Menotti, Ricciotti, Teresita, Clelia, and Manlio—and 10,000 francs for the widow; this because Garibaldi's pension of 50,000 francs a year expired at his death. Enormous sums are already subscribed in each town, city, and village for a monument to Garibaldi to be erected *there*, so that each man, woman, and child can see it beside his own special belfry tower. The King's grief was heartfelt, his letter to Menotti most graceful:

"My father taught me, when a boy, to honor in Garibaldi the virtues of the citizen and soldier. An eye-witness of his glorious deeds, there grew up within me a profound affection mingled with the deepest gratitude and admiration. All this doubles for me the weight of his irreparable loss. I share the supreme grief of the Italian people and of the family, and I beg you to be the interpreter of my condolences, of my participation in the sorrow of the entire nation."

The conduct of France, as a whole, and of the French Chambers especially, has poured a balm into the recent wounds inflicted on Italy by French Chauvinism, but—will you believe it?—the French consul resident in Milan refused to float the national tricolor here where every other nation has floated its flag, veiled in mourning. The workingmen, exasperated already by the ill treatment of their comrades by Frenchmen, were for attacking the consul's office, and were with difficulty restrained by their leaders, all old Garibaldians. These gave the consul twenty-four hours to explain or apologize; then, as he still kept silence, addressed to him a dignified yet indignant letter, denying him the character of a French representative, and a copy of the letter has been sent to Mancini, Minister of Foreign Affairs.

I conclude by sending you what you may have forgotten—a splendid letter written by Garibaldi to friends in the United States, when the question of the *Alabama* was pending between England and America:

"My friends: I have ever held from the first moment that the American question was one of those which interest the entire world, all humanity; and it grieved me to the quick to see that a fraction of the English public was opposed to the reëstablishment of the Union of the great republic. This opposition, as no one can be ignorant, is the result of old rancor lurking still between England and America. It was indeed a sad thing to see thus astray the good sense of that people which was the first to affirm the principle of the emancipation of slaves. One would have expected them unanimously to applaud the Americans of the North, whom Providence has chosen as executors of this sublime idea, but I would fain hope that these lords of the ocean will make up their quarrels and come to terms for the benefit of oppressed humanity. Sons of the same mother, they ought to comprehend that their noble race to-day forms the bulwark of the rights of nations, and that dissensions are expressly sown between them by the upholders of despotism. Despots fear them, knowing that as long as they remain on terms of friendship, it will be impossible for them to carry out their designs, ever fatal to liberty.—Ever yours, G. GARIBALDI, Caprera.
"May, 1865."

P. S.—Just as I was mailing my letter I receive the following telegram from Caprera: "Garibaldi's body is not to be burnt, but the remains will be transported to the Janiculum." Your readers will remember that the Church of San Pietro in Montorio, on the summit of the Janiculum, was the centre of Garibaldi's military operations during the siege of Rome in 1849. The belfry tower was shattered by French bombs. Just below it are buried the remains of Ciceroacchio and other victims shot to death by the Austrians, who captured the thirteen fishing boats in which Garibaldi hoped to reach Venice after his flight from Rome, saying: "Venice is still left to die for." It was then that Anita, the mother of his children, faithful wife, nurse, fellow-soldier, friend, died in his arms. The Austrian soldiery hung, drew, and quartered the peasant who had harbored her in her dying hour. Thence, as soon as the body was buried in the hole dug by Garibaldi himself and one Leggero, he escaped to Chiavari, was imprisoned, and took refuge at Tunis. Driven thence and refused protection at Gibraltar, he received hospitable shelter in New York, and earned his living with a tallow chandler on Staten Island. He returned to fight against the Austrians in 1859.

GARIBALDI AND THE MOVEMENT OF 1848.

LONDON, June 8, 1882.

THIS is not the season for analyzing Garibaldi's character, or for weighing against his greatness faults which in so far as they had a real existence were little else than his virtues looked at from the wrong side. No one who belongs to the generation whose day-dream was the unity of Italy, would care to sit down in cold blood and criticise the hero who has breathed his last at Caprera. It is sufficient for those who feel that the romance of politics is for them buried in Garibaldi's tomb to know that their hero was, whatever his petty foibles, worthy of the admiration which more than thirty years ago he kindled in the hearts of all that was youthful and hopeful and generous and high-minded throughout Europe. The cause for which he fought and suffered, and with which he triumphed, was noble, and he was worthy to be the hero of the cause of Italy. But though this is no opportunity for criticising the defender of Rome and the liberator of Naples, Garibaldi's death affords a fitting occasion for pressing on public attention one or two reflections which belong rather to the field of history than of politics, and which, if in one sense obvious, have nevertheless a certain permanent importance. His death marks the close of an era. A few veterans of the revolutionary struggle still linger on the stage. Kossuth is alive, but the Hungarian patriot is himself a memory of the past, not a living power. Of the men who came to the front in 1848, scarcely one of any eminence is still found among us, and if any statesman or revolutionist of that era yet survives, we feel instinctively that he belongs to a past age. The nationalist movement of 1848, of which the watchwords were nationality and liberty, has run its course. We can regard it with something like historical impartiality, and can draw from its successes no less than from its failures at least four more or less important conclusions.

First. The visionaries or fanatics who, fifty years ago, began to trouble the repose of all sensible and respectable persons with their clamor about the rights of nations and the tyranny of kings, understood or felt the wants of the time far more truly than did even the most moderate and far-seeing of the politicians who honestly denounced the revolutionary movements which disturbed Europe. Any one who thinks it worth while to do so, may denounce the recklessness or the criminality of the men who conspired and plotted against the Emperor of Austria, the King of Naples, the King of France, or the Princes of Germany. The one thing which no sane critic can now venture to assert is, that these conspirators did not understand the tendency of the time. All the main objects of revolutionary effort have now, in fact, been achieved. Italy is independent, France is a Republic, Germany is united, the Constitution of Hungary is restored. For good or for bad, the cause of nationality, and in France at any rate the cause of republicanism, has triumphed. Enthusiasts have turned out—not for the first time—more keen-sighted than men of sound sense and educated judgment. Nor need this excite any surprise. To know the feelings of the world, to enter into the prevailing sentiment of an age, to experience in one's own heart the suffering which harasses or the hope which cheers thousands of one's fellows, is precisely the gift of men and women who are blessed or cursed with a capacity for enthusiasm or faith. No one can now doubt that the passion for Italian unity which devoured Mazzini was shared by all his countrymen high and low. The career of Pio Nono is proof enough that hatred of foreign oppressors had in 1848 entered the Vatican; the whole life both of Charles Albert and of Victor Emmanuel proves that zeal for Italian independence had found a home in the palace of an Italian prince. Nor can any one now hesitate to say that enthusiasm for nationality was not confined to Italy. The soldiers and the statesmen of Germany were compelled at last by the very spirit of the age to adopt that belief in national independence which had been preached for more than half a century by rebels and zealots.

Secondly. The faith or passion which leads men to understand or feel the wants of their age, is no guarantee for their ability to point out or practise the method by which these wants may be satisfied. The revolutionists of 1848 were for the most part the victims of a prevalent delusion fostered by a misreading of the history of the last French Revolution. They all placed unlimited trust in the miraculous effects of insurrection. The "people" rising in their might were, it was supposed, capable of routing the strongest and best disciplined armies. Mazzini to the end of his life, or at any rate till very late in his career, cherished the idea that the war of the peoples could accomplish miracles not to be achieved by the armies of kings. There is the less reason for wondering at the tenacity with which a man of his genius clung to this notion, because it is pretty plain that in 1848, at least, monarchs really shared the belief of rebels. The way in which one crowned head after another yielded during the revolutionary year to the demands of mobs which could have been scattered by a regiment of soldiers, is explainable by nothing but the panic caused by the very idea of insurrection. The basis of fact which gave a certain support to what, after all, must be pronounced a mere delusion, was that occasionally, though by no means so often as is generally supposed, the army "fraternized" with the mob, and further, that trained soldiers are at some disadvantage when called upon to resist citizens in the midst of narrow streets, where military manœuvres are impossible, and where every house may be turned into an improvised fortress. This belief in the transcendent power of insurrection was a delusion which, in one instance after another, proved the ruin of revolutionary efforts. Whenever, during the last thirty-four years, a government has been able to count on the support of a trained army, it has invariably succeeded in putting down every force which enthusiasm or courage could enlist in support of the popular cause. At Paris, at Naples, at Berlin, at Dresden, at Vienna, in every large town throughout Europe, the people have at one time or another come into serious conflict with the army; and on every occasion on which the army stood faithfully by the Government and the Government did not yield to panic, the people have been totally defeated. In February, 1848, Thiers proposed to Louis Philippe to retreat with the army to St. Cloud. If the King had taken the advice of his Minister, he would assuredly have returned in triumph to Paris. The experience of 1871 throws light on the policy which would have saved the

crown in 1848. The essential weakness of mobs is the most important though certainly by no means the most cheering lesson of 1848. That Mazzini never learned it was the secret of at least half his failures.

Thirdly. The Italians, and notably Mazzini, who preached the doctrine of nationality, never in their own minds dissociated the belief in national independence from the belief in personal freedom. Their tendency, indeed, was to believe that republicanism had an essential connection with the belief in national unity. The association between ideas of national independence and individual liberty was in their case perfectly natural, for in the case of Italy the two notions were practically inseparable. The petty princes of the country were tyrants, and their tyranny was supported by the bayonets of Austria. To expel the Austrians was to establish free institutions. Any system of free government was sure, as was seen in the case of Piedmont, to come into collision with the domination of the hated foreigners. The despots, moreover, of the Continent owed their power to treaties which had violated every national sentiment. In this instance, a few revolutionists and kings almost of necessity fell into a common error. The oppressor and the oppressed both believed that aspirations for national independence of necessity involved the desire for republican freedom. We now see that this belief was erroneous. Italy gained her unity under the guidance of an Italian prince, and Germany has been united into an empire under a ruler who in 1848 was prepared to support the authority of the Prussian crown by pouring grapeshot on the mob of Berlin, and through the instrumentality of a Minister who has throughout life been the sworn foe of parliamentary government. The error of conceiving that there was some natural connection between the so-called doctrine of nationality and the dogmas of liberalism or republicanism led, like all errors, to unfortunate results. Mazzini, to whom Italy owed her new birth, was not able to recognize in the country which preferred the monarchy of the House of Savoy to a renovated Roman republic the work of his own labor and self-sacrifice, while Germans have proved far too ready to sacrifice every security for unity on the altar of national liberty. Nor have the practical ill results of a speculative mistake been confined to Italy and to Germany. The sentiment of nationality has in one country after another been substituted for the desire for good government. The nineteenth century has in this, as in other cases, preferred sentiment to reason. Utilitarianism has nowadays a bad name, but the world would gain a great deal if the standard of utility could be once more made among thoughtful politicians the acknowledged test of good government. The notion that a national despotism is better than good government under foreign rule is one which, if pushed to extreme limits, may well become fatal to the liberty and to the progress of mankind.

Fourthly. The revolutions of 1848 bear an unmistakable impress of romance. Whoever reads with intelligence and sympathy the letters of A. H. Clough, the correspondence of George Sand, or the work in which Daniel Stern has left a permanent record of a transitory phase of sentiment, must perceive that even in Paris the tone of the time was one of generous if of childish enthusiasm. The absurdities of the day, the trees of liberty, the processions, the harangues, the general expressions of philanthropy, the rhetoric of Lamartine, the magic influence exercised for a moment by a poet who suddenly found himself the most conspicuous politician in Europe, the advances made by the Church to the democracy, the hopefulness with which democrats welcomed the idea that the Pope might be the restorer of Italian independence and the patron of human liberty, the confidence or simplicity which led statesmen and patriots to believe that the oaths of Ferdinand of Naples could be anything else than the mask of treachery—these and a thousand other signs are all evidences of the spirit of confidence and enthusiasm which for a moment spread from one end of Europe to the other. What lent a peculiar tinge of romance to the nationalist movement was, that, unlike the revolutions of the eighteenth century, it was or appeared to be an effort not only of reformation, but also of restoration. Its leaders, if they looked with hope toward the future, gazed also with reverence and sympathy on the past. To renew in a nobler form the glories of the Holy Roman Empire, to reëstablish and reform the Constitution of Hungary, to make Rome the moral centre of the world, to restore the unity of Italy, were aims which it seemed to the men of 1848 might be accomplished by devotion to the spirit of freedom and of nationality. The notion, in fact, of nationality seemed to its devotees to solve the problems of the age, and to make it for the first time possible for reformers to unite admiration for what was good in the middle ages with adherence to the doctrines of human equality and of universal philanthropy which inspired the true heroes of the great French Revolution. The romance which had been learnt from the pages of Scott and Manzoni might, it seemed, be combined with the democratic creed of the *Contrat Social*.

The romance which colored the whole movement of 1848 had, from the nature of things, more influence in Italy than in any other country of Europe. Misfortune and oppression had robbed Italians neither of their talent nor of their grace. To those who can still recall the time when the "cause of Italy" excited the sympathy and warmed the imagination of every youth who had a heart to feel pity for the victims of oppression, or a brain to imagine the beauty and nobility of Italy when at last restored to her place among the nations, it is impossible not to feel that the Italian exiles and leaders possessed a charm of character and of manner not to be found in the men of other countries. This idea is possibly a mere trick of memory. To the youths of to-day a Bulgarian or an Armenian may, for aught I know, be as interesting as was a Greek or a Pole to the enthusiasts of 1830, or as was an Italian refugee to the generation who came to manhood between 1848 and 1860. However this may be, it is a simple historical fact that the glow of romance which colored all the movements of 1848 shed a special halo of glory round the cause of Italy. Here it was far more easy than elsewhere to blend the romance of mediævalism with the romance of revolutionary republicanism. The history of the land lent itself to republican ideals. To call the movement which ultimately achieved the unity of Italy romantic, will seem to many persons to be equivalent to calling it fantastic or Quixotic. Nothing, however, is further from my intention than to speak in any other language than that of fervent admiration for a cause which has none the less claim on our sympathy and respect because it has now been crowned with success, and stands no longer, I rejoice to think, in want of foreign help or of foreign good-will. The consideration which has led me to dwell on the romantic aspect of the Italian revolution is that persons who have witnessed the triumphs achieved by the policy of Bismarck and the strategy of Moltke are very much prone to underrate the salutary effects of romance and enthusiasm. It is perfectly true that every page in the history of 1848–9 illustrates the dictum, "Enthusiasm runs away." Time after time proof was given that enthusiastic volunteers could not in the long run compete with disciplined soldiers. The force of an insurrection drove Radetsky out of Milan, but in a few months his soldiers brought him back as a conqueror.

This fact and all that it suggests should never be forgotten; the glory of Cavour is, that he learned, and made others learn, the true lessons of Italian defeat. But the admirers of big battalions have a good deal to learn from zealots. Garibaldi would at any time have been defeated by generals of far less competence than officers trained in the school of Moltke. But Garibaldi and the men of whom he is the representative achieved feats which could never have been performed by Bismarck, or by all the collective generalship of Prussia. You must judge of men such as Mazzini or Garibaldi as you would of prophets and apostles. They are the teachers, in different forms, of a new faith. Looked at in this point of view, their very defeats are often triumphs. Garibaldi's entrance into Naples was not his greatest act. If he is to have a tomb, it is quite right that his tomb should be placed on the Janiculum, for the noblest service he ever rendered to his country was the defence of Rome. When the French troops entered the city under Oudinot, France was disgraced and had already merited the *Coup d'état*. As Garibaldi retreated, Italy triumphed, and her cause became for the first time the cause of every man throughout the civilized world who loved justice and freedom. The mere material advantages of European sympathy to Italy cannot be easily overrated. But Garibaldi and the men with whom he was associated achieved far more for Italy than merely enlisting in her favor the sympathy of mankind. They made it impossible that the country should gain unity without gaining liberty.

Cavour's scorn of governing by means of a "state of siege" has become a sort of proverb. The refusal to achieve temporary success by a kind of violence which, even when it answers for the moment, makes success hardly worth attaining, is characteristic of the noblest side of the Italian revolution, and, I may add, of the noblest side of the whole movement of 1848. A great deal of ungenerous and inconsiderate sarcasm is constantly directed against the professors and others who during the revolutionary year sat in the German Parliament at Frankfort. Their weakness, their indecision, their failure, is contrasted by every devotee of force with the strength, the resolution, the success of Bismarck. The contrast is impressive. One fact ought not, however, to be forgotten. The professors or pedants who failed at Frankfort aimed at giving to their country both unity and freedom. The Prussian Minister fixed his eye on a far inferior object. He sought for and attained unity, but he sacrificed without regret the hope of combining union with liberty. The leaders of the Italian revolution were more fortunate or more skilful than either the professors or the generals of Germany. Italy is united and Italy is free. At the present moment Bismarck and Bismarck's system receive the indiscriminate admiration which the world lavished thirteen or fourteen years ago upon the French Emperor and the Imperial régime. It is hardly rash to anticipate that the time will come, and at no distant date, when the world will esteem the imperialism of Germany not much higher than the imperialism of France, or will at any rate perceive how much Germany has lost by the fact that her unity was secured through means fatal to her freedom. Italy, it may well be conceded, has suffered much from want of a general like Moltke, and still more

from want of armies like those which Moltke directed. But the day will assuredly come when acknowledgment must be made that Germany has suffered much from the failure to produce any hero like Garibaldi. Romance and generosity are powers no less than discipline and strategy. A. V. DICEY.

Correspondence.

THE HOMŒOPATHS AND THE REGULARS.

TO THE EDITOR OF THE NATION:

SIR: An editorial in your issue of June 15, headed "Doctor and Patient," is so inaccurate and superficial in some respects that it should not go uncriticised. A constant reader of your journal for fifteen years, I am thoroughly convinced of your earnest desire to give expression only to the best thought and its results upon any and every subject, and I trust that you will allow me to try to show you that in this editorial you have fallen into grave error.

You say: "We have the medical profession thus divided into two bodies, both of which believe equally in the value of professional training and the possibility of treating disease according to rules derived from experience; both of which possess a high degree of skill, training, and education. They differ as to a dogma of the truth of which laymen have hardly any means of judging. . . . He [the layman] does not regard, and never can be brought to regard, a highly educated and trained physician as a 'quack' merely because of a difference between him and his rival around the corner on a recondite matter like that which divides homœopaths from allopaths. The enormous growth of the homœopathic body in the last fifty years shows that the rule does not prevent what the regulars regard as medical error from spreading," etc.

Now, I submit that the difference between scientific medicine and homœopathy is not one of a big *versus* a little dose, of dissimilars *versus* similars. The real and vital difference lies here: the regular school (we repudiate the nickname "allopath," which implies that we also have an infallible theory for the selection of our remedies) starts with no theory with which its practice must be made to accord; avails itself of every honest means, no matter what the source or method of application, which is or may be of service in the relief of human suffering; collects facts, and, making use of theory only in its true sphere, holds itself in readiness to discard any theory the moment the facts belie it. Homœopathy, on the other hand, does start with a theory with which its practice is made to accord, and this cherished theory is one which, during all the years since it was promulgated, the vast majority of physicians the world over have not been able to reconcile with the facts of observation. In short, the position of the regular school is non-dogmatic, broad, and truly scientific; that of homœopathy is dogmatic, narrow, and eminently unscientific.

Next, with regard to the "enormous growth" of homœopathy: it is but lately that one of its journals was lamenting the fact that it is not growing at present. It is true that it has grown in this country—so has Spiritualism, for that matter—but in the land of its birth and in France it is almost extinct, and in England it has made comparatively little headway. If homœopathy is merely another way of arriving at truth, how does it happen that it is unrepresented in the state universities of Germany? Surely no one can accuse the Germans of any lack of intellectual radicalism. I have no hesitation in adducing foreign examples to the *Nation*, which has so often given its readers reason to think that it does "care for abroad," and does believe that even we Americans may learn something from the "effete European despotisms."

You imply that there is nothing to choose between the two schools as regards "skill, training, and education." There are skilful and well-educated homœopaths, and there are, unhappily, unskilful and half-educated members of the regular school; but, if you would give yourself the trouble to investigate the facts, you would find that the average of attainment is decidedly higher in the regular school. What physicians prominent in science have been homœopaths? How large a proportion of the graduates of our leading colleges who study medicine enlists in the homœopathic ranks?

I believe the main reasons for the spread of homœopathy in the United States—the state examination in Canada is so severe that homœopathists religiously avoid that portion of America—are briefly these: First, the superficial character of much of the education in this country (a point on which the *Nation* has often dwelt); secondly, the American doctrine that one man is as good as another, and perhaps a little better (a doctrine which has also incurred your criticism, especially when it is illustrated in appointments to office for which special training is desirable); and, thirdly, the popular sympathy which is always enlisted in behalf of any man or body of men supposed to be persecuted in any way.

A physician who has had any experience knows perfectly well that, in order to succeed in making money by the practice of medicine, only one thing is absolutely necessary—a good knowledge of human nature: so easily can the non-medical public be imposed upon, and so ignorant are even the most enlightened people as to what constitutes evidence in any problem of physical science.

Homœopathy will die in this country just as it has died in Germany, and would die rapidly but for the active opposition of the regular school. Consequently, although I disagree entirely with your premises, I am inclined to think that the action of the New York State Medical Society is wise, and that the best course for all parties concerned is to permit consultations wherever the interests of the patient would seem to be furthered thereby. When Mr. Kelley, of Pennsylvania, or Senator Jones, of Nevada, expounds finance, or when a Western newspaper instructs Mr. Gladstone on the Eastern question, the *Nation* derives much the same kind of amusement from their utterances that those of its readers who love medicine and its progress are afforded by your article on "Doctor and Patient."—Yours truly, S.

BOSTON, June 19, 1882.

TO THE EDITOR OF THE NATION:

SIR: Many constant readers of the *Nation* regret that the article, "Doctor and Patient," in the issue of June 15, presents such a very local view of the question discussed. Thus, the assertion that the homœopaths "constitute an important and growing branch of the medical profession" is true only of certain localities where medical science is not in the most flourishing condition. Homœopathy is decidedly on the wane where scientific development is most active. We must content ourselves, in this note, with a simple reference to the status of homœopathy in Germany and in America in proof of our assertion. No one conversant with German medical literature can deny that it is only the German homœopathic medical journals that are filled with selections from American medical literature, consisting almost wholly of loosely reported cases, while it is just as evident to every reader of English and American medical literature that much of our scientific material is copied from original articles published in German medical journals.

But it is not our purpose in this note to preach against homœopathy; we are contented with the better preaching which the facts are doing for us. We can see and appreciate the sophism of the "regular" who states that "no possible good could result from consultations in which there could by no possibility be an agreement." We recognize the fact that there is a radical difference between homœopath and regular in views as to drug-action only, and that drugging is but an insignificant part of modern therapeutics. We will go further in allowing that "nihilists" among the regulars and the "irregular" majority of the homœopaths may meet with every advantage which a consultation offers; but, after allowing all of this, we insist that there is a true principle of medical regularity which it is beneficial for the profession and the laity to recognize. (In parenthesis, we regret that this principle has been hidden to a great extent under senseless codes, and by laws created by the bigoted and prejudiced "stalwarts" of the regular profession.) This principle, in short, is that of allegiance to science, to truth as a whole. The regular physician must always consider members of an organization supporting any dogma or "pathy" as irregular. There is no need of debating as to the degree of error or of truth embodied in the dogma. If a given dogma were all true, it would not be all of the truth; and history teaches us that allegiance to a part of the truth even is liable to cause a dislike of other parts of the truth, especially if they apparently conflict. This position, then, of allegiance to a dogma is not favorable to that catholic love of, and ardent search for, truth which should characterize the medical man above all others. The foundation of our profession is science; the history of the progress of medicine is the history of the development of science. Humanity, including the laity, and the profession have been blessed together by this progress, so that the principles of a regular hold him to the highest good of every layman or unit of humanity.

This view we believe to be that of those reformers in New York who have repealed a law that interfered with individual rights of opinion. This action was not wild or visionary: it was merely a step toward following the precedent established by the most regular practitioners of Germany, of deciding for themselves with whom they will associate in matters of practice or trade. Their action marks the dawn of true medical liberalism in America. May we not hope that its day will shine upon a more united profession and a solid campaign of the educated physician against the uneducated—of the honest doctor against the quack?

Very respectfully yours,
DAVID HUNT.

BOSTON, MASS., June 17, 1882.

TO THE EDITOR OF THE NATION:

SIR: In the last issue of the *Nation* there was an article upon the late action of the American Medical Association that, in some respects, did great injustice to the medical profession. That this should be so does not so much reflect upon the *Nation* as it indicates the general misapprehension of questions that are of fundamental importance in medicine. In the article the

word "allopathy" occurs as the proper designation of the practice of the great body of the profession. Now, there is no such thing as "allopathy," nor are there "allopaths." These terms, as applied to practice and to medical practitioners, are positive insults, just as much as infidel, atheist, pagan, etc., are when thrown at the leaders of modern thought. They are unwittingly used by the non-medical public; by the pathists of all sects they are deliberately shouted, to cover their own reputations. Worcester's Dictionary aids the imposture by defining "Allopathy" by an alleged quotation from the standard medical authority, Dunglison. The "quotation" is a deliberate falsification, absolutely misstating the authority. The 'British Encyclopædia' gives the following, which expresses the sentiment of the profession throughout civilization:

"Legitimate medicine is catholic and eclectic; it has neither exclusive dogmas nor creeds; it requires its members to seek knowledge from every available source, and apply it in every available mode as may be demanded by the circumstances of the practitioner or the patient; the object of the exercise of the art being the relief or cure of the patient as promptly, safely, and pleasantly as possible, without any formal restriction as to the means or mode."

There is no "pathy" of a certainty. The public will be immensely advantaged when its eyes are opened to this device of sectaries to throw the odium of dogma upon the medical profession.

The *Nation* finds the explanation of the hostility toward homœopaths, who are the most prominent sect, in professional jealousy. This is a common opinion, but none the less erroneous. When the New York State Society was punished by the National Medical Society, it was not because the former had attempted to do away with immaterial differences, but because it had desired to destroy a barrier that the profession had determinedly maintained for the protection of the public. We declare openly and positively that the practice of medicine, according to a dogma, is not only false, but dangerous; that while we freely acknowledge that the utmost of human knowledge is miserably deficient, we also assert that blind adherence to an undemonstrated principle must be disastrous as it is irrational (an assertion that on its face would seem superfluous, but human credulity appears to be unlimited in matters pertaining to medicine). Statutes being unavailing, to afford what protection it can to the public against quacks and sects, the profession has always refused to consult with "irregulars," and thereby remove all distinctions in the public eye. Many have been the covert attempts to break this fundamental and humane rule, but it has been reserved for the New York State Society to make the first open and organized attack upon it. Happily, New York itself promises to repudiate those who have thus betrayed it.

Very respectfully,

CHARLES A. TODD, M.D.,
Sec. Missouri State Medical Association.

ST. LOUIS, June 20, 1882.

[The foregoing three letters largely answer each other. We must, however, point out to "S." that he denies nothing of consequence that we have asserted. He acknowledges that the regulars and homœopaths "differ as to a dogma," but says that the dogma belongs to the homœopaths, and is a poor article. We say nothing to the contrary. To our assertion that homœopathy has grown enormously, he opposes the assertions that one of its journals lately lamented that it was not growing at present; that Spiritualism has grown here, but not in France or England; and that homœopathy is not recognized in German universities. To our remark that both bodies possess a high degree of skill, learning, and education, he answers that if "we would give ourselves the trouble to investigate 'the facts,' we should find that the average attainment was higher in the regular school." We think it is, but how does this conflict with our original statement? And where are "the facts"? Does "S." know where to find them? Has he ever investigated them himself? As to the value of the homœopaths as curers of disease, we take it that the public makes up its mind on this point precisely as it does on the value of the regulars, and there is no use in ascribing their success to popular ignorance or superstition. They are employed by all kinds and conditions of people—more, we think, by the educated than by the ignorant—and in every case the reason why they are employed is that the patient believes they cure disease. If this belief be destroyed, or weakened by experience, he discards them just as he would discard a regular and employ another. This is the hard fact of the matter. No degree or school does much for any doctor. No matter what a doctor calls himself, he gets the practice of people who pay fees solely by persuading them that they get well in his hands, and they cannot be argued out of their belief in him.—ED. NATION.]

POLITICAL ECONOMY AND THE GOULDS.

TO THE EDITOR OF THE NATION:

SIR: Permit me a word in behalf of some of the critics of that method of political economy which, as Mill says, assumes competition to be the exclusive regulator of its subject. Their views, as given in the recent article on the "Political Economy of Seventy-three Million Dollars" in the *Atlantic*, are not quite fairly treated when you translate them into the expression that "Gould's acquisition of his immense wealth is due to political economy, and political economy is all bosh." What they criticise is obviously not the study of the industrial welfare of man in society, but one method of that study; not the political economy of Maine, Laveleye, Cliffe Leslie, and Roscher, but that of Mill, his English followers, and their American imitators—the sect which glorifies self-interest, competition, and an imaginary freedom of contract. One who criticises Mormonism does not thereby declare that "religion is all bosh."

You say also that "Gould is the product of corrupt courts and legislatures, and no economist of any school ever taught that the principle of *laissez-faire* covered the right to bribe judges or gobble railroads, any more than it does the right to rob and murder on the highway." The class of corporation, trust, and stock-jobbers of which Mr. Gould is the most brilliant representative cannot be explained away on the "bad man" theory which the *Nation* has taught us to disbelieve in. Bad men we have with us always; but why have the "bad men" free course? A deeper cause than the depravity of individuals must account for the most dangerous fact of our social condition, the sudden development of a caste of overgrown wealth and power. If the theories of *laissez-faire* and exclusive regulation by competition do not permit these men to rob and murder by retail on the highway, they cause society to leave them to rob and murder by wholesale, by all kinds of "corners" and combinations, and by legal methods of oppressing the people, betraying trusts, and deceiving the community. This class must be controlled, but they cannot be overcome by the political and industrial philosophy under which they have been suffered to grow up.

HENRY D. LLOYD.

CHICAGO, June 24, 1882.

[Who are "Mill's English followers and their American imitators—the sect which glorifies self-interest, competition, and an imaginary freedom of contract"? We know of no such persons or sect. Mill did not do these things himself, and it is therefore not likely that "his followers" do them. A few names of "the followers," and one or two of the "glorifying" passages from Mill, would be useful to Mr. Lloyd at this point. Mr. Lloyd denies our explanation of Gould, that he is "the product of corrupt courts and legislatures," and says that this is the "bad man" theory. But unfortunately it is in no respect distinguishable from Mr. Lloyd's own. He says that Gould is due to "society," which "leaves him to rob and murder by wholesale," besides "betraying trusts and deceiving the community." Of course society in this matter acts through corrupt courts and legislatures. Whenever a man robs and murders with impunity, and betrays trusts, it is because courts and legislatures do not do their duty; society has always prohibited robbery and murder and fraud. As to the cause of the neglect on the part of society, we shall not argue with Mr. Lloyd. If he thinks that it is "the laissez-faire theory" which makes it tolerate wholesale robbery and murder, he is welcome to his opinion. The ultimate cause of all human wickedness is an obscure subject, but it is one which does not concern economists or politicians, and we advise him to let it alone.—ED. NATION.]

LAND QUESTIONS.

TO THE EDITOR OF THE NATION:

SIR: The *Nation* of June 22 has editorially this: "The cause of the land troubles in Ireland has been for three hundred years that the tenure was not Irish but English"—the English system being "large landed proprietors living on rent," and the Irish system "the lands of the tribes held in a sort of commonalty with the chiefs."

Wherefore, unless I quite misunderstand the *Nation*, Mr. Davitt's "new Henry George, or Communistic, idea that the land is a great national domain," and Mr. Parnell's proposition "to lodge the ownership in the farmers"—600,000 of them, according to Mr. McCarthy—must be quite as much opposed to "Irish ideas" as even the present unsatisfactory "English" system.

Whose is the "Irish" idea of going back to the tribal system of "*a sort of commonalty* with the chiefs?" And who may be the chiefs?

I hope I am not unfairly straining the *Nation's* arguments; but I state fairly how they impress me, and respectfully ask for further enlightenment.

ANTI-LANDLORD.

[There is nobody who has "the Irish idea of going back to the system of a sort of commonalty with the chiefs." There are no chiefs. You do quite misunderstand the *Nation*. The "Irish idea," which has survived the tribes, the chiefs, and the commonalty, is that the tenant is part-owner of the soil with the legal owner of the fee, makes the needed improve-

ments in it, and has a right to stay on it as long as he pays a reasonable rent. This has been explained at least one hundred times during the past three years—about one thousand times during the past twenty-five years. The English idea is that the tenant hires a farm as he hires a town house, makes no improvements in it, and has no shred of title to it except what his lease gives. Henry George's idea is that neither landlord nor tenant, chief nor tribe, has any property in the soil whatever; that it all belongs to the state, which is to pay all its expenses by renting it.—Ed. Nation.]

TOMB DISCOVERY NEAR CORINTH.

To the Editor of The Nation:

Sir: I find in the last number of the *Parnassos*, of Athens, the description of an ancient vaulted tomb with painted wall decoration, excavated recently near Corinth. This discovery is of considerable interest, as a tomb decorated in this manner has not, I believe, been discovered before in Greece proper—although, as is well known, tombs of similar character exist in great numbers in the Crimea, and to some extent, at least, in Lycia.

The tomb, according to the detailed report of the Ephor of Antiquities, Mr. P. Stamatakes, lies to the eastward of old Corinth, at the point commonly known as the Great Gate (Μεγάλη Πόρτα). It was found upon the southern slope of a knoll, near its summit, by workmen engaged in building the carriage-road. Unfortunately, these men destroyed most of the vaulted ceiling of the tomb, and three of its sides with the paintings upon them, before their superiors interfered to save what remained—the northern side-wall, and some inconsiderable pieces of the other walls, with a part of the vault. The tomb was in the shape of a parallelogram; its length was 3.52 metres, and its breadth 2.92 metres. The surviving northern wall is 2.60 metres high, and about 65 centimetres thick. The walls of the tomb were built of rough stone and bricks or tiles, laid in mortar. Their inner surface was covered with cement, forming a smooth field for the paintings. Upon the surviving wall this field is divided, by lines, into four horizontal bands or zones, each one, after the first, being a little broader than the one above it. The upper band is divided by vertical lines into squares, in which are painted birds and bunches of grapes. The second zone, of which the decoration is the most elegant of all, presents, apparently, three different scenes, although these are not separated in any way from each other. The principal subject is that in the middle, which represents the funeral banquet—a subject commonly represented upon tombstones and upon ancient vases. About the table are several reclining figures, of which one is perhaps a general, for he wears a helmet. This man reclines supported on his left elbow; his body is naked as far as the middle, below which it is covered with white drapery. Upon the front part of the couch is seated a second figure, unclothed also, and barely distinguishable, but evidently taking no part in the banquet. Other figures can be made out indistinctly; their violent gestures seem to indicate that they are giving expression to grief. On the right-hand side of this scene can be made out with difficulty a large vase or other vessel, beside which are a woman and two men, of whom one rests one foot upon a sort of pedestal or bench. Upon the left-hand side are two other men in vigorous action, but to what end does not appear. All these figures are represented in a row much in the manner of those of a sculptured relief.

The third band contains three small niches, and in the spaces between the niches and at either end are four standing male figures wearing the chlamys. Three of these figures are in better preservation than any of the other paintings. Their height is about 35 centimetres. The drawing is well executed, and the color remains sufficiently fresh. In the fourth and lowest zone are represented various kinds of fruits and flowers in baskets, with birds eating the fruits or drinking water from other vessels.

The floor of the tomb is formed of a plain layer of cement. In the earth which had collected upon it were found abundant remains of human bones. Against the eastern wall of the interior was found the lower part of a sarcophagus of tufa, 2 metres in length, and 67 centimetres in width. Between the sarcophagus and the wall were discovered a number of fragments of a large glass vessel, and of lamps of burnt clay. Against the northern wall were found the remains of a similar sarcophagus. The tomb bears traces of having been rifled—most probably in ancient times, but possibly during the Middle Ages.

Immediately upon the announcement of this discovery, the Council of the Archæological Society despatched to Corinth a painter to make accurate copies of the surviving frescoes. These copies have been made, it is said, with great care and exactness. They will be exhibited in the Museum of Antiquities at Athens. The paintings, according to the *Parnassos*, are characterized in a marked degree by harmony of coloring and excellence of design and execution. No conjecture as to the age of the monument appears in the article from which I quote. I think, however, that until we receive more exact information we can infer safely from the details given of the construction of the tomb and of the system of decoration employed, that it cannot date earlier than the Roman restoration of Corinth in the time of Julius Cæsar.

I am, sir, very respectfully,

Thomas W. Ludlow.

Cottage Lawn, Yonkers, N. Y., June 21, 1882.

Notes.

S. C. Griggs & Co., Chicago, announce for speedy publication 'A System of Mental Philosophy,' by Professor Asa Mahan, ex-President of Oberlin College. It is designed as a text-book. Also, 'A Practical German Grammar,' by Professor W. C. Sawyer, of the St. Lawrence University, Wisconsin; and 'The Development of English Literature and Language,' by Professor A. H. Welsh.

Robert Clarke & Co., Cincinnati, will have ready in July 'Celebrated American Caverns, especially Mammoth, Wyandot, and Luray,' with maps and illustrations, by Horace C. Hovey. An appendix will contain a complete list of the subterranean fauna so far as known.

A. Williams & Co., Boston, have just published a third edition of Chief-Engineer King's 'Warships and Navies of the World'—an unmistakable tribute to the value of this important work. Already beyond the need of praise, it has received additions bringing it down to date, and the illustrations have been both increased and improved.

No. 23 of the Professional Papers of the Corps of Engineers, U. S. A., consists of Lieutenant-Colonel Henry L. Abbot's report on experiments toward a system of submarine mines for harbor defence. Diagrams and instantaneous and other photographs illustrate this work in a way to make it attractive even to the general reader, who is certainly concerned in the result of the experiments.

Among the various topics of the Report of the Chief of Ordnance for the year 1881 are the Spencer line-throwing gun and the Hunt life-saving projectile. On pp. 370-375 is a noticeable list of synonymous terms in English, French, and German relating to filing, file-cutting, files, and rasps. Favorable scientific reviews of Captain Dutton's report on the geology of the high plateaus of Utah are quoted on pp. 173-184.

We have received the twenty-ninth volume of *Lippincott's Magazine*, which calls for no remark unless it be in commendation of the typographical neatness of this periodical, and of the illustrations as compared with those of earlier volumes.

Vol. ii. of the *Dial* (Chicago: Jansen, McClurg & Co.) marks the hold on life and on popular favor which this "monthly index of current literature" has deservedly obtained at the West.

'The Mother's Record' (Boston: D. Lothrop & Co.) is not quite "unique," as the publishers allege. It differs from the 'Mother's Register' (*Livret Maternel*) of Dr. J. B. Fonssagrives in being confined to the first fifteen years of childhood, and in being an unscientific tabulation of "physical, mental, and moral growth." It is useful as far as it goes, and will measurably serve as a help to the physician as well as to the youth who forms the subject of the record, when he endeavors to know himself. The arrangement by years instead of by topics, as weight, growth, teeth, etc., is unfavorable to comparisons and general views. The book is prettily made.

"The Last Years of the Roman Republic" and "University Education in Germany" are bibliographically treated in the June number of the Providence Public Library's *Monthly Reference Lists*.

In emulation of the *Privat-Docent* system of the German universities, the Trustees of Columbia College have established three prize lectureships in the School of Political Science. The designated lecturers must be graduates either from the above School or from the College Law School. They will hold office for three years and be reëligible. For twenty lectures per annum they will receive $500. The appointments are to begin in June, 1883. The expectation is that these lectureships "will tend to raise up a body of trained, educated, and competent instructors," fitted to supply vacancies in faculties of the historical and political sciences.

The second annual announcement of the School of Political Science in the University of Michigan states that the scope of the school will be enlarged during the coming year so as to include instruction in the principles of finance, in the financial history of the United States, in the history of diplomacy, in the history of political ideas, in methods of local government, in theories and methods of taxation, in political ethics, in social science, in the historical development of educational systems, in the economic development of mineral resources, and in public scientific surveys.

Dr. Charles Waldstein, a graduate of Columbia College and native of this city, has just received the honorary degree of Master of Arts from the University of Cambridge, England, where for two years he has been the lecturer on Greek art and archæology, with eminent success.

A Concord (N. H.) magazine with which we tardily make acquaintance, as it is already in its fifth volume, is called the *Granite Monthly*, and is "devoted to Literature, History, and State Progress." Its main feature is a steel portrait of some New Hampshire worthy, accompanied by a biographical sketch; but in other ways, also, it serves as an historical medium, and is interesting if unpretentious reading.

A paper read before the Philadelphia Social

Science Association on June 1, by Mr. Addison B. Burk, has just been published by the Association. It treats of "Apprenticeship as it Was and Is," and is noteworthy for its computation as to the number of mechanics among our country and city population respectively—nearly three to one in favor of the former; and for its revelations as to the greater prevalence of apprenticeships, even of the indentured kind, than is commonly believed. Mr. Burk does not think our modern conditions compatible with a revival of the system, and his paper recommends industrial schools in the place of it.

Students of the perpetual conflict between man and nature will find something to their account in Dr. E. Reyer's paper on changes in the alluvial districts of Venetia and Tuscany in the historic period, printed in No. 98 of the Berlin Geographical Society's *Zeitschrift*, with bibliographical references. Dr. R. Kiepert catalogues and criticises the African cartography of the past year. The principal map of the number defines, on a liberal scale, the military border between Chile and the Argentine Confederation, at the head-waters of the Rivers Colorado and Neuquen, as surveyed by two officers of the latter nation and described in a translation.

Le Livre for June is more than usually rich in full-page illustrations, one of which is from the album of designs by Victor Hugo, recently privately printed by his friends. It represents the wreck in the 'Travailleurs de la Mer,' and, like fifty others of the designs, originally decorated the MS. of this romance. Among the leading articles, Champfleury satirizes the dramatic sins of Charles Nodier. A second instalment of Paul Lacroix's unpublished memoirs continues the account of Balzac, whose egotism is now the theme, and concludes with Balzac's *critique*, or rather *éloge*, of his own 'Physiologie du Mariage,' prepared by him for the *Mercure du XIXe. Siècle*, where it was printed verbatim. *Le Livre* announces that a 'History of the Life and Writings of J. J. Rousseau,' in French, by A. Jansen, is in preparation, and that Ruggero Bonghi is engaged upon an edition of the unpublished works and letters of Manzoni.

The French publishers' *Chronique* records a contract for 10,000 copies of Michelet's 'Histoire de France,' and 'Histoire de la Révolution Française,' with illustrations by Vierge, market value 1,960,000 francs, and, contrasting this with the small number printed of the first editions of these works, draws favorable conclusions as to the present historical taste of the French.

—*Lippincott's* for July opens with an article on "Black-Bass-Fishing in Sungahneetuck," by Mr. Rowland E. Robinson; and it has also an article on "Shark-Fishing off the Florida Coast," where the sport appears to involve considerable risk, and to be certainly productive of much excitement. According to a humorous negro quoted by the writer, Mr. C. F. Holder, a "right smart busniss in sherk-oil" is done along the coast. What use the oil is put to is a secret of the trade; it is one which the Northern invalid who goes to Florida in search of health may be interested in, if the statements of old Alick on the subject are to be credited: "Dis yer sherk-oil goes to Jacksonville, dat's sartin sho', an' dey say dere's a right smart call fo' cod-liber oil on account of dese yer inwalids a-flockin' dere. Jes' where de oil goes, I can't say: you can draw yo' own influences." The stories and poems which fill up the number are not so noticeable as the dastardly attack on the "Mt. Desert girl" in the "Monthly Gossip." The writer of this, who is evidently a woman, declares that in the many studies of the American girl which have been given us of late, one of her most marked traits has been wholly omitted, and that is, her "indifference to the beauty of nature." For instance, at Mt. Desert, where "there is beauty of natural scenery enough to satisfy the most exacting," what do the girls occupy themselves with? They become, it seems, either "piazza girls," or "jolly girls," or "cottage swells"—names sufficiently descriptive to make further definition unnecessary. Of real knowledge of, or interest in, nature, not a trace is to be found. But few have the slightest acquaintance with botany, beyond the names of "a few hot-house and garden flowers"; and the writer gives a shocking instance of this ignorance by telling of an "enthusiastic botanist" who brought to one of the hotels a specimen of the common sun-dew: "The astonishment of the feminine element, old and young, was extreme and unfeigned; they had never heard of insectivorous plants." Many an illusion has been torn from us since the war, but we still clung to the idea that the American girl could tell an insectivorous plant as far as she could see it. The contrary may be true, but should it be told? The reputation of the American girl has stood the test of foreign criticism better, perhaps, than that of any other American institution, and we had rather cherish the pleasing fancy that piazza girls and jolly girls, or even cottage swells, knew as much of botany as they ought to, than to have their ignorance exposed in this rude manner.

—Our degraded fellow-citizens in Alaska, known as the Thlinkits, are described together with their country by Mr. C. E. S. Wood in the July *Century*. They are, in spite of their vices, interesting objects of study: their marriages are determined by the totemic system, and their manufactures exhibit genuine artistic capacity. Rugs of their weaving are occasionally to be met with here at the East, resembling in pattern the chief's cloak pictured on p. 330. Examined closely, the ornamentation here will be seen to be derived from the human face in a manner exactly analogous to that employed by the Peruvians, as evidenced by the mummy-cloths from Ancon. Mr. Benjamin's entertaining paper on "The Evolution of the American Yacht" is complementary to that in the current *Harper's* on the old race of New York shipbuilders. Portraits of Eckford and George Steers may be compared in both magazines. Col. Waring gives a précis, with the aid of cuts, of Stillman's 'Horse in Motion,' and adds some judicious criticism. In regard to the artistic representation of the animal, he concludes that "we must see him on the canvas as we see him in life, not as he is shown when his movements are divided by the five-thousandth part of a second." At the same time, he admits that long familiarity with these instantaneous views has made some of them very satisfactory expressions of motion. Mr. John Burroughs has a long and sympathetic article on Thoreau, of whom a likeness is given. Mr. Burroughs notices that the hermit of Walden Pond, though ever watchful of Nature, possessed but imperfectly the naturalist's vision. "He was looking too intently for a bird behind the bird—for a mythology to shine through his ornithology." The editor and Miss Emma Lazarus have each something to say about Thoreau's greater townsman, just departed; Mr. Kruell, too, speaks forcibly with his graver, following French's bust of Emerson.

—The 'Constitution and Membership' of the National Academy of Sciences, recently issued by the Home Secretary, Washington, shows that there were, at the close of the late meeting, April 21, 1882, ninety-six ordinary members (of whom three, General Barnard, Admiral John Rodgers, and Professor William B. Rogers, have since died), four honorary members, thirty-five deceased members, and twenty-one foreign associates of the Academy (of which latter twelve are deceased). By the original act of incorporation, approved in 1863, the Academy consists of not more than fifty ordinary members, but this act was so amended in 1870 as to remove the limitation of the number of ordinary members. The membership is, however, by the constitution of the Academy, restricted in effect to one hundred. Of the meetings of the Academy, there are two annually: one stated session in Washington, on the third Tuesday of April, and another at such place and time as the Council may determine—usually held in the month of November, in either New York or Philadelphia. It being the duty of the Academy, in compliance with the act of its incorporation, to "investigate, examine, experiment, and report upon any subject of science or art," whenever called upon by any department of the Government, a number of committees have been appointed, those of more general interest at present in force being (1) to confer with the honorable Secretary of the Interior on the subject of reserving portions of the public lands on and near Mount Whitney, California, for scientific purposes; (2) to confer with the Chief Signal Officer on questions of meteorological science and its applications; (3) to report on the Coast Survey Triangulation to connect the Atlantic and Pacific coasts; (4) to coöperate with the National Board of Health. The organization of the Academy is as follows: President, William B. Rogers; Vice-President, O. C. Marsh; Foreign Secretary, Alex. Agassiz; Home Secretary, S. Newcomb; Treasurer, J. H. C. Coffin.

—A correspondent writes us from Ann Arbor as follows, concerning the production, on Saturday evening, June 17, of Terence's "Adelphi" by the students of the University of Michigan:

"'The first Latin play ever given in America,' as the handbills announced it, was listened to by an interested audience, and received almost with enthusiasm. Love of novelty, and local pride, no doubt, partially explain the marked success of the evening; but no competent and impartial judge could fail to recognize the genuine dramatic excellence of the performance. It was given under the supervision of Mr. C. M. Gayley, instructor in Latin in the University, and to him most of the credit it due, aside from the acting itself. He had received suggestions in regard to the scenery, the costumes, etc., from the Head Master of Westminster School, in England, where it has been the custom for many years to give a play of Terence annually. The details, of course, had to be worked out alone, and the great pains taken, even in minute particulars, were rewarded by admirable stage effects. The stage was as faithful a reproduction of the ancient stage as was possible under the circumstances—every one was ready to overlook the two or three intentional anachronisms brought in for the sake of perspicuity; the costumes were accurate in design, worn with ease, and so chosen as to form harmonious effects in color when grouped upon the stage. The greatest surprise for the spectators, however, came from seeing genuine acting. There had been no attempt at *réclame*, and the audience expected generally a cold and probably correct recitation of the Latin, which would be intelligible only by the aid of Colman's rather free translation printed opposite the text in the libretto. Warmth and naturalness of delivery, and a proper attention to stage 'business,' were, on the contrary, the results of the pains taken with the young men. *Demea*, the most difficult and important part, was probably, upon the whole, best given, though *Micio* certainly was not far behind. The scenes between the two brothers in the first and fifth acts—which, taken together, illustrate so well Lessing's requirement that contrast of character in comedy should arise solely from the accentuation of previously existing differences—were admirably given. *Syrus*, the confidential and tricky slave, was probably the most successful part with the audience generally, and certainly there was an abundance of comic force, an endless supply of knavish good spirits and ingenuity. But his 'make-up' was faulty: a slave who could speak of holding *Æschinus* and *Ctesipho* in his arms when babies should not have ap-

peared a handsome youth of nineteen. *Sostrata* did what she had to do excellently, and the buxom matron deservedly won the favor of the audience. Almost the only criticism of the performance was that some parts were overdone. This was certainly true according to our taste nowadays; but it is doubtful if Cicero, who seems to quote with approval a reproach addressed to Calidius, that there was *nulla supplosio pedis* while he was pleading, would have thought this criticism well founded. A juster criticism could perhaps be made of the apparent attempt to reconcile the retention of the Terentian metres with the supposed requirements of a popular audience to-day. The performance will probably be repeated in the autumn, and possibly be given then in Detroit as well as in Ann Arbor."

—One can imagine the surprise of the Hon. Jay Hubbell on taking up the *Strict-Constructionist*, a Boston "Evening Daily devoted to Civil-Service Reform," of which the first number appeared on June 22. There is no association behind it, no syndicate, apparently no capitalist. Of its conductors all that can be learned from its pages is that "every writer engaged on this paper is a Harvard graduate." Concerning its principles there is no mystery or obscurity:

"The business habits of officeholders are of more importance than their opinions are. This doctrine supersedes altogether what the Stalwarts understand by politics, or, rather, what they wish their dupes to understand; and, so far as it prevails, it will take the ground away from under the Machines. Civil-service reform should be advocated by specific measures instead of by high-sounding declarations which do not bind the one who makes them to any efficient action."

Mr. Hubbell will not fail to discover other damnable heresies in this remarkably outspoken sheet. We cite further two or three paragraphs from the negative column entitled "The News":

"Postmaster Pearson, of New York, although his promotion was a flagrant violation of the principles of Civil-Service Corruption, has not yet been removed to make room for a manager of votes."

"The Speaker of the House has not yet done the expelled stenographers the justice of informing the public what was the cause for which he so suddenly took away their employment, and branded them as unfaithful."

"Since the Lamson affair, there has been no fresh interference by our Government with the course of justice in England."

For the rest, the *Strict-Constructionist* is as original in its make-up as it is independent and pithy in the expression of its sentiments.

—The death of Joseph Lemuel Chester in London, on May 26, removed the acknowledged head of English genealogists. It should be a matter of pride that Col. Chester was an American, born April 30, 1821, at Norwich, Conn., and that he was almost as well informed in American family history as he was in English. The first thirty-five years of his life were spent here, and he attained some little reputation as a writer, publishing a volume of poems under the title of 'Greenwood.' Not long before the Rebellion he went to England, desiring to verify the traditional descent of his family, in common with many others in New England, from John Rogers, the protomartyr. Although his researches completely destroyed the fond illusion, he became deeply interested in the subject of the life and work of that great pioneer in religious liberty, and the result was a volume of 452 pages, printed in 1861 by Longmans. The book attracted much attention in England, not only from the interest felt in the subject-matter, but on account of the method of its treatment. Not only was it exhaustive, but the wealth of the manuscript collections preserved in the mother country was shown in a most attractive form. Colonel Chester continued to reside in England, and from the taste of the delights of genealogical study thus received, he became a confirmed and enthusiastic genealogist. He acquired a perfect mastery of the handwriting of the last six centuries, and he devoted his time to an exploration of those vast accumulations of documents still preserved in the State Paper Office, the Universities, the Will Offices, and the church registers. He sought no other pleasures, but wrought on, year after year, giving often sixteen hours a day to his labor. He was a rapid penman, and his elegant chirography brought many welcome bits of information to his correspondents here. Of course, he made many special hunts for the English origin of many of our settlers; but, besides that, he scrupulously and systematically collected every item that affected any of the emigrants to this country in the seventeenth century. His most noted work in this direction was in regard to the Washington family, whereby he destroyed the idle guesses of Sir Isaac Heard, without, to his regret, being able to supply the true pedigree. At one time he examined, copied, and indexed some forty thousand of the matriculations at Oxford; at another he copied, annotated, and published the registers of Westminster Abbey—glorious contributions to the history of the land of his adoption.

—It was not long before Colonel Chester's labor was appreciated. As an American he was allowed privileges, in the way of access to private papers, which an Englishman would not have enjoyed. But beyond that, he carried to his work an enthusiasm and fidelity which had been long wanting in English antiquaries. He relied but little on printed works. He did not copy the fables of successive peerages or county histories, but sought the facts from contemporary records. He was the acknowledged leader of the new school of investigators, and inspired his followers with his own impatience of error. He was, moreover, imbued with that spirit of order and attention to details which made our best American genealogies the wonder of our English friends. That he did not print more is a great misfortune, especially to his reputation; but his great collections, carefully arranged and indexed as he kept them, will be a lasting monument to him. Colonel Chester was naturally a member of many historical societies, both here and abroad, and at least one college had honored him with a degree. He was a model correspondent—prompt, intelligent, and sympathetic. It is to be regretted that no statement can easily be made of the amount of valuable antiquarian results thus communicated by him to his friends throughout the country. He married, in 1839, Catherine H. H. Shepherd, and had one son and three daughters. We are under the impression that he lost some portion of his family before his own decease; but the survivors can feel assured that his name will be long remembered, and will always stand high on the roll of earnest and successful students. He was an honor to his country, and we vainly look for his successor.

—Since the law against the Socialists came into force in Germany over 700 Social-Democratic publications have been prohibited. Their names were published, as the law requires, in the *Reichs-Anzeiger*; but as the publication was spread over a considerable time, it was very difficult for an officer of the Government to ascertain whether any given Socialist tract which he found circulating in his district had been forbidden or not. The President of the Department of Police has therefore caused an alphabetical index to be made reaching to March 1. This new *Index librorum prohibitorum* is to be distributed to all Police, Custom-house, Revenue, and Post-office employees, and will probably prove as effectual in extirpating Social-Democratic doctrines as the *Index* of the Romish Church has been in suppressing Protestantism and other heresy.

—Of writing many (lists of) books there is no end. Even the no doubt important, but to the vast majority of mankind entirely uninteresting, subject of notaryship has not only its bibliography but bibliographies. The first of these, by Korndörffer, a librarian, appeared in 1875 in a Dutch periodical, *Regt en Wet;* it enumerated 724 works. The next year another librarian, Torres-Campos, wrote his 'Estudios de Bibliografia Española y Extrangera del Derecho y del Notariato.' Finally, Dr. Vladimir Pappafava, in his 'Delle Opere che Illustrarono il Notariato,' published at Zora in Dalmatia, has collected more than 500 titles in Italian, French, Spanish, Dutch, Russian, and other languages, with occasional notes. Perhaps, after all, the notarial art is not a less suitable stimulus to the industry of the book-recorder than the civil law, fossil insects, Italian geology, the evolutionary theory, electricity, angling, perfumery, free-masonry, copyright, shorthand, the pamphlets of the French romantic school, microscopic editions, and lost books, all of which have been issued in the last nine months, to say nothing of the numerous personal bibliographies—Mai, Browning, Dickens, Thackeray, Tennyson, Carlyle, Ruskin, and the many shorter lists that have not attained an independent existence, but have appeared within the covers of some periodical like the *Literary World*, the *Library Journal*, *Il Bibliofilo*, the *Neuer Anzeiger*, or in the columns of a journal or the pages of a book devoted to the subject of which the bibliography treated. The materials for the "universal bibliography," of which certain English scholars are continually and unavailingly talking, are accumulating. Has any library had the thought of getting together all these fugitive subject-bibliographies, and so making a universal bibliography, for its own use, at least? We doubt it. There is no trace of any such idea in the list of bibliographies lately issued by the British Museum. If the best library in the world has not done it, it is not likely that any other has. And yet it would require only a little money, and some watchfulness.

—Financial success did not attend Director Neumann's first experiments with Wagner's Tetralogy in London. He made the mistake of charging too high admission prices—almost double the amount asked at the Italian Operas, which have always been famous for their exorbitance. That this was the principal reason is proved by the fact that when, at the end of the regular cycles, extra performances were given of the "Walküre" and "Götterdämmerung" at reduced prices the house was crowded to the roof. Richter, who directed another series, including Wagner's early operas as well as the "Meistersinger," "Tristan and Isolde," Weber's "Euryanthe," and Beethoven's "Fidelio," for which he charged more moderate prices, has, on the contrary, been very successful. All the critics, even the most hostile, bestow the most unqualified praise on "Die Meistersinger," which the *Athenæum* thinks will ultimately prove the most popular of all his works. Even the *Telegraph* admits that "there is hardly a dull bar in the opera." The choruses are the most difficult ones ever written in an opera, but they were superbly sung by the Hamburg choristers, showing Londoners, by their own admission, for the first time what good operatic chorus singing is. The *Academy* says: "The score is anything but noisy; it is full of the most delicate effects, rich combinations, marked and wonderful contrasts. Wagner shows at times in his orchestration the grace of a Mozart, the grandeur of a Beethoven, and the ingenuity of a Berlioz." *Truth* says: "I have nothing but praise

for 'Meistersinger.' Wagner was quite right—it was bound to take the English people." The *World* remarks: "At every new performance the audience leaves delighted, and, the natural consequence being that they send other audiences in, the future of German opera in this country seems to have a much more brilliant chance than it ever had before. To the English public the 'Meistersinger' is a revelation: . . . music sometimes for forty minutes without brass—full of melody, chorus, and concerted music—music not only learned and a most interesting study of counterpoint, handled with an ease delightful to behold, but music amusing to make you roar. The whole house burst out laughing at that mock serenade and at the competition of the singers." The *St. James's Gazette* says: "Wagner is master of every mood. He was already known by his critical writings as a keen satirist; and his mediæval comic opera shows him to be as rich in the humor of every-day life as in the more spiritual qualities to which the beauty of his music is chiefly due." This list might be indefinitely extended. It shows that if an attempt is to be made in this country to produce an example of Wagner's latest and best style, it should be "Die Meistersinger."

—Joseph Joachim Raff, whose death was announced by cable on Monday, was born at Lachen, on the Lake of Zürich, on May 27, 1822. His early years were a continual struggle against poverty, which compelled him to abandon his studies and devote himself to teaching, without, however, neglecting music. Through the medium of some MS. compositions he became acquainted with Mendelssohn, who recommended him to the publishing house of Breitkopf & Härtel. In 1846 Mendelssohn invited him to come to Leipzig and become his pupil. The proposal was accepted, but before it could be carried out Mendelssohn died. The same ill luck attended him later when Liszt, who had already done him other favors, gave him a letter to the publisher Marchetti in Vienna. While en route for that city Raff heard of Marchetti's death, which induced him to remain in Stuttgart, where he devoted himself to composition and practice on the piano and violin, with the object of becoming a virtuoso. His efforts to secure a public performance of his works failed, owing to the hostility of the conservative Lindpainter, who was then in power in that city. Finally Hans von Bülow came to his rescue and paved the way for the popularity which his works at present enjoy. Raff's merits were at once recognized by Schumann, who had "discovered" so many composers and heralded them as rising stars. At a later date Raff was a contributor to the journal founded by Schumann, the *Neue Zeitschrift für Musik*. In a brochure on the "Wagner question" he came forward as an enthusiastic advocate of the new tendencies in music, the strong influence of which on his own compositions is everywhere apparent. He wrote three operas, one of which, "König Alfred," is still occasionally performed at Stuttgart, although none of them has ever obtained a general success. Of his ten symphonies several are well known in this country, especially the third ("Im Walde") and the fifth ("Lenore"). His list of works is of formidable length, embracing over 200 compositions in almost every branch of his art, but including also many paraphrases of other composers' works. Among the orchestral composers of the day Raff might be ranked as the sixth after Wagner, Rubinstein, Liszt, Saint-Saëns, and Brahms. Some of his works are, in melodic and harmonic invention, of first-class merit, but the form of his longer compositions is often as clumsy, unpolished, and unsymmetrical as the style of Kant and Jean Paul, and many of his movements are flimsy and vulgar. The first and the slow movements of his complicated compositions are almost invariably the best. Over-productiveness, diffuseness, and lack of self-criticism were the three faults which prevented Raff from taking the highest rank among composers. At the time of his death he was director of the Frankfort Conservatory of Music.

PERRY'S HISTORY OF GREEK AND ROMAN SCULPTURE.

Greek and Roman Sculpture: A Popular Introduction to the History of Greek and Roman Sculpture. By Walter Copland Perry. With 268 illustrations on wood. London and New York: Macmillan & Co. 1882. Square 8vo, pp. xxx.-700.

THIS is a useful book, which supplies a need that has been distinctly felt. The progress of knowledge in respect to antiquity during the last fifty years has hardly been more rapid or more interesting in any branch of archæology than in that of ancient art. Not only has the knowledge of facts been immensely extended and increased, but the illustration afforded by the fine arts of the life and thought of the ancient world has become so vivid, precise, and comprehensive as to compel the recognition of the importance of their history to the proper understanding of the nature and development of the civilization of the Old World. It is, indeed, only of late that their full significance as the most intimate and trustworthy expressions of human character and dispositions has become apparent to students of history. The fact is not even yet admitted by such thinkers as are attached to traditional modes of investigation. English students especially have been slow in acknowledging the just claims of the arts as not only great social powers, but still more as the means by which the securest judgment could be formed concerning the moral and social conditions of a race. Mill was perhaps the only great English thinker of the last generation who fully comprehended their importance. Grote could write his 'History of Greece' and pay but the scantiest attention to the most brilliant manifestation of Greek genius. And the recognition that the arts hold an equally important place with philosophy and science as agents of civilization, and that Greek history in particular cannot be correctly apprehended or interpreted without a knowledge of Greek art, is still so imperfect that Mr. Perry himself, though he writes the 'History of Greek Sculpture,' fails to grasp this conception vigorously, and fails, consequently, to secure for his work its highest interest as a record of the productions in which the sentiment and emotions of the noblest race of men the world has seen found one of their most beautiful and most instructive expressions. He treats his subject for the most part with little reference to the course of events of general history; and though it is impossible to overlook the relation between the incidents of Greek history in the fifth century B.C. and the splendor of the arts, he does not exhibit their mutual dependence in such a way as to bring out its real nature.

This is the main defect of a book otherwise distinguished by ample acquaintance with the subject, by good judgment, by sensible criticism, and a clear and unpretending style. As a compend of correct information concerning the sculptors and the sculpture of Greece and Rome, it deserves very hearty praise. The contrast between it and Mr. A. S. Murray's pretentious and inaccurate 'History of Greek Sculpture' is striking. The student who desires to know what is known about the topic can have no better book of reference. It is an excellent hand-book, opening the way to the study of the more elaborate and original works of German investigators, such as Brunn, Overbeck, and Michaelis.

Although Mr. Perry's remarks are generally judicious, he occasionally lays himself open to adverse criticism. What he says, for example (pp. 442–43), in speaking of Praxiteles as the sculptor of women, concerning the position and character of Athenian women, shows that he, student as he is of ancient sculpture, has missed the instruction which it affords in respect to this very matter. He fails, like most writers upon the subject, to make the discrimination of time which is essential in judging of the place held by woman and the character achieved by her at Athens. In a sentence that displays a curious confusion he says: "The aristocratic bearing of many female statues proves the reality of the high position of women at an early period, and these have their parallels in the Calypsos and Circes of poetry. A great change for the worse, therefore, and one for which it is difficult to account, must have taken place between the heroic and historic ages." Now, Mr. Perry certainly cannot mean that these statues which prove the reality of the high position of women were works of the heroic age, nor can he suppose that the Calypsos and Circes of poetry are types of women of high character. He is plainly writing without thought. The first statue of a woman in which individual characteristics were sharply defined—the first, at least, concerning which we have direct testimony—was the so-called Sosandra of Calamis, which stood on the Acropolis at Athens, and of which Lucian has described the delightful traits. His ideal figure, created of every statue's best, was to have the modesty of Sosandra, her grave and hidden smile, her orderly and becoming dress. These few words tell much. But it was for Phidias, in the generation after Calamis, to give to us innumerable portraits of the maidens and matrons of Athens which afford testimony absolutely incontrovertible to the grace, the charm, the dignity, the elevation of Athenian women, while he set these women in such position as to show their equality with the men who represented the highest development the race has attained. Even if this convincing testimony were wanting, it would be absurd to believe that the women of Athens were morally far inferior to the men. It is contrary to nature that there should be a wide moral disparity between men and women of one generation. The men who made Athens the mother and gracious nurse of the arts, "the most shining city of all upon which Zeus looks," came of no inferior mothers, and were wedded to no unloved or unworthy wives. In the Pan-Athenaic procession those mothers and wives appear before us in their living forms—forms and features the evidence of character which has impressed its image on those "faultless productions," as Shelley calls them, "whose very fragments are the despair of modern art, and has propagated impulses which cannot cease to ennoble and delight mankind until the extinction of the race." Sophocles, and even Euripides, but confirm the evidence of Phidias. Is the character of Antigone drawn from a low source? or that of Alcestis?

It may be said that these are all ideal representations; but how often must it be repeated that all true ideals are drawn from nature, and only through their accordance with nature possess their life and exert their influence? Beauty, nobility, excellence of whatever sort, must be realized in life before it can be expressed in art. The position of woman declined with the decline of Athens. Her character sank as the character of the men of Athens grew lower and lower. The figures of Praxiteles are not of the same virtue as those of Phidias. But even in the

period of decline Niobe and her daughters show us how much loftiness and loveliness were still retained by the women of Greece.

Mr. Perry's book contains an excellent account of the recent discoveries at Olympia and Pergamon; and the information on these and other subjects is well up to date. In a new edition, which must speedily be called for, the remarkable additions which have been made to our knowledge of archaic sculpture by the expedition to Assos of the Archæological Institute of America will demand notice. A careful revision of some minor details is requisite. On page 312, for "Lapith" read Athenian; page 346, note 1, the citation ascribed to Pausanias should be ascribed to Strabo viii., 372; page 356, note 5, the reference to Plutarch should be not to *Quæst Conviv.*, but to *de Profect. in Virt.* 17; page 493, for 375,000 l. read 305,500 l.; page 511, line 2, for "cella" read opisthodomos; page 516, line 8, for "beginning" read end; page 567, for "Aule Metelli" read Aulus Metellus. There are too many such small errors, and especially in the changing of Olympiads into the years B.C. to which they correspond the mistakes are numerous and annoying.

PULSZKY'S MEMOIRS.

Életem és korom [My Life and My Time]. By Francis Pulszky. Vol. iii. Buda-Pesth. (German ed., Presburg.) 1882.

THIRTY years ago, on April 27, 1852, the defeated chief of the Hungarian revolution, Louis Kossuth, made what may be called a triumphal entry into Boston. It was a grand day for all New England, and a bright day in the checkered life of the now octogenarian exile, the fiftieth anniversary of whose birth it happened to be. Most noticeable among his Hungarian companions were Francis Pulszky, in this country as well as in England called by courtesy Count Pulszky, and his wife. The latter was already at that time known as an English authoress, having published in London 'Memoirs of an Hungarian Lady' and 'Tales and Traditions of Hungary.' Her husband was no less proficient in English, and his free conversation in that language was admired even by those who had listened to the addresses of the ex-Governor of Hungary. An object of still greater admiration was the vast store of his encyclopædic knowledge. History, languages, ethnology, and archæology were his favorite studies. He and his gifted wife had an ample share in the ovations bestowed on Kossuth throughout his American tour. On his return from New England to New York, he found, among other papers received by mail, a number of the official gazette of Vienna, which contained the sentence passed on him, *in contumaciam*, by the military tribunal of Austria, for acts committed in furtherance of the cause of the Hungarian revolution in the two preceding years. He had been condemned to the gallows, and his estates confiscated. Returning to England, where he coöperated with Kossuth in all his endeavors in the Hungarian cause, he sustained himself and his family by diligent contributions, political and literary, to the British and foreign press, including the New York *Tribune*, for which, for a number of years, he wrote a weekly letter on "The State of Europe," remarkable for accurate information on affairs in the eastern parts of that continent.

During this period the Pulszkys were in constant friendly or political communication with Mazzini, Louis Blanc, Ruge, and other leading exiles from all parts of Europe, but at the same time also enjoyed an extensive intercourse with the higher classes of London society, noble or learned, such as the British metropolis rarely accords to foreigners. Kossuth's attempt to revive Hungarian independence by an alliance with Napoleon III. and Cavour in 1859 caused Pulszky to follow the ex-Governor to Italy, which, after the collapse of their hopes by the peace of Villafranca, became the home of both —Kossuth to this day residing in Turin. Pulszky, however, after partaking in Garibaldi's venture of 1862, which caused him to be arrested in Naples, turned toward less revolutionary paths, entered into an understanding with Hungary's great parliamentarian, Deák, and in 1866 was allowed by the Austrian Government to go to Buda, where his wife and daughter were lying sick, having gone there for the recovery of the family's estates. On his arrival he found both dead, and not many days later one of his sons followed them to the grave. The bereaved exile now remained in his fatherland, and the re-establishment of the Hungarian constitution in the following year restored him to ease and honors. He became again a member of the Hungarian Diet, in 1869 director of the National Museum at Pesth, and in 1872 superintendent-general of the public libraries and galleries of the kingdom, which latter two positions he still holds. In 1879 he began the publication, in Magyar and German, of his memoirs, the third part of which is now before us. His tour through the United States he had previously described, jointly with his wife, in 'White, Red, and Black' (3 vols., London, 1852).

Patriotic, liberal, and learned, Pulszky has nevertheless been an easy-going revolutionist, politician, and writer. His memoirs are much more remarkable for breadth and correctness than for keenness of observation or depth of reflection. He talks pleasantly on a great variety of things seen in his country and abroad, on a vast number of persons eminent in modern history and literature with whom he has come in contact, and he adds interesting lines to the already extant pictures of those things and men. But he shuns the labor of analysis, is too kindly disposed to indulge in piquant revelations of foibles or hidden springs of action, is too thankful for humane attentions experienced in exile life to attempt incisive delineations of foreign manners, and altogether too much bent on imparting plain, sound information to his countrymen not to make his narratives occasionally commonplace. On the other hand, he is never dull, he passes rapidly from topic to topic, and his anecdotes are often both amusing and characteristic. American readers not sufficiently versed in Hungarian history to be interested in the minor details of its later periods, will find the third volume, which is devoted to the author's days of exile in England and America, and forms a separate whole, well worth reading. The chapters descriptive of men and things in the former country are much richer, because based on much longer experience and wider associations, than those filled with reminiscences of the United States; but the latter sections are specially interesting as combining impressions received by a liberal although charitably disposed foreigner in the palmy days of pro-slavery reaction, with reflections matured after the downfall of the slave system and a wonderful expansion of the Union's power among the nations of the earth.

Some of Pulszky's remarks appear almost naïve in their (so to say) antediluvian coloring; others serve to complete, however slightly, our knowledge of the conditions and men of that time. It is interesting, for instance, to read how both Seward and Sumner advised Kossuth never to touch the question of slavery in his speeches, in the North or South alike; how an unfavorable current set in against Kossuth's republican agitation, chiefly in Democratic quarters, on receipt of the news of Louis Napoleon's successful *coup d'état*, because of speculations unfavorable to England based upon that event; how in Boston, in spite of the fierce divisions created by the slavery agitation between its leading families, all shades of opinion vied with each other in honoring the eloquent Hungarian chief, while of all the cities of the South, New Orleans alone had the political courage to invite him as its guest; with what noble oratory Winthrop combated the Magyar's pleading for American intervention in behalf of the downtrodden nations of Europe; or how—some years later, in London—the subsequently notorious Saunders, American consul, tried to bring about an understanding between "the leader of the American Democracy," James Buchanan, then United States Minister at the Court of St. James, and the leaders of the European democracy, by a *soirée* given in honor of the ambassador, who was soon to become President. This *soirée* was a curious gathering: near the hostess, at the table, sat Buchanan, near him Kossuth, and opposite them Ledru-Rollin and Mazzini; elsewhere Hertzen, Orsini, Garibaldi, Pulszky, Sickles and his wife, the host, and others of less fame or notoriety.

The style of the author in the original Hungarian, which we have before us, is not free from Germanisms; the numerous misspellings, chiefly of American names—some of them as bad as "Delavare," "Sparcks," and even "*Jova*" (for *Iowa*)—we are loath to ascribe to slips of a memory of the once famous retentiveness of which these very volumes still afford ample evidence.

The Graphic Arts: A Treatise on the Varieties of Drawing, Painting, and Engraving in comparison with each other and with Nature. By Philip Gilbert Hamerton. Boston: Roberts Bros. 1882.

IN the two representative arts, painting and sculpture, there are many varieties of artistic aim, and a great variety of processes, but, correctly speaking, there is but one art in each. Painting is the art of representing the forms and colors of things on flat surfaces, and sculpture is the art of producing forms in solid substance. The employment of different materials in painting—as water-color on wet plaster, water-color on paper, oil-color on canvas, etc.—or the employment of different materials, or of different methods in drawing (which is only a part of painting), does not constitute so many different and separate arts: these various methods and the use of various materials are simply different processes of one art. The varieties of purpose in drawing, even, to which the various processes lend themselves—as the securing of simple proportion in line, of finished contours, or of outline and solid form—do not make so many distinct arts of drawing. All possible varieties of aim and of process in drawing do but concern themselves with the elements of form. Good drawing, according to the conditions of material and purpose the normal conventions of which an accomplished draughtsman instinctively feels and obeys, is the one quality with which a draughtsman should be concerned. If a man can draw, all the minor technical matters pertaining to the different materials and aims will take sufficient care of themselves.

Mr. Hamerton, in the book before us, makes, we think, rather too much account of these minor matters. He does not take a sufficiently comprehensive view, nor consider enough the subject of graphic art in general, to convey an entirely right conception of the normal characteristics of design in the various processes of painting, drawing, and engraving. This ten-

dency to overlook the primarily important qualities of art, and to give undue prominence to mere processes, is characteristic of all Mr. Hamerton's work. It was so in the otherwise delightful book, 'The Painter's Camp'; it was markedly so in his 'Etching and Etchers'; and it is so again in the present book. In consequence of this tendency, he is not so good a guide to students of art as he might otherwise be. He is not discriminating enough in regard to what is essential. This is shown not only by his writing, but also by the illustrations to his books. The work on 'Etching and Etchers' hardly contains a single example of exemplary delineation considered as such. The illustrations to his 'Life of Turner' possess none of the fine characteristics of Turner's drawing; and the illustrations to the English edition of his present book are very ill-chosen from this point of view. Nevertheless, what Mr. Hamerton says of the various graphic processes contains a great deal that is highly interesting and instructive, though the interest and activity which it is calculated to excite will be out of all proportion to the use which most students of art are just now qualified to make of these processes.

In an early part of the book Mr. Hamerton reiterates the doctrine, which he has for some time held and taught—enunciating it most distinctly and fully in his 'Life of Turner'—that the business of an artist is to give æsthetic pleasure without necessary regard for truth to nature. He teaches that an artist may utterly violate all laws of truth with impunity. We hold this to be a very mistaken view of the matter. We agree with the proposition that it is an artist's business to give æsthetic pleasure; and we go so far, also, as to hold that if he does not give æsthetic pleasure, a man is not entitled to rank as an artist at all. But we entirely dissent from the doctrine that any æsthetic pleasure which does violence to nature can be worthy pleasure, or that any form of representative art which is not truthful can be good art. The limitations, or conventions, to which all art is more or less subject, are by no means of the nature of untruths. Against the idea that art should concern itself simply with physical facts Mr. Hamerton has very justly contended; but we think he has been led too far, and that his present doctrine is calculated to cut the arts adrift from their proper moorings quite as effectually as ever the narrowest pre-Raphaelite doctrines did. He says: "Poetic art is strangely independent both of science and of veracity" ('Life of Turner,' p. 319). In contrast to this, we may quote an admirable passage from the introduction to the 'History of Greek and Roman Sculpture' reviewed above. Mr. Perry says:

"There can be nothing arbitrary or irregular in true art. It can only affect us, it can only do its work, so long as it remains in alliance with nature and acts in strict conformity with her laws. But the artist is by no means limited to a mere reproduction of what he sees around him. Working on the lines which external nature has laid down, he transcends her bounds and passes into the ideal; he becomes, as it were, a creator, and his work is a new creature, not exactly corresponding to anything in external nature, yet not unnatural."

In the course of the work, Mr. Hamerton says many good things. Thus, speaking of the value of drawing in education (p. 47):

"Practical art has one distinct advantage over all purely intellectual pursuits, which is, that it does not educate the mind only, but also the eye and the hand. I am well aware that a foolish prejudice, which, if it is dying out, is dying too slowly, considers this training of eye and hand a mark of degradation, because the skilful use of these physical organs assimilates the artist to the artisan. Some people—but not the wisest—are as proud of having idle and useless hands as Chinese ladies are of their useless feet. With these all reasoning would be a waste of time, but to others who have no such prejudice I may offer a few remarks in favor of this ocular and manual education. Let it not be supposed that the education which we gain from the graphic arts is by any means limited in its effects to the actual practice of those arts themselves. The eye which is trained by drawing discerns form everywhere and in everything; the hand which is skilled to use pencil or brush will be generally superior in delicacy and accuracy of touch to the hand which has never been taught. The question, therefore, is not simply whether we care to be skilful in drawing, but whether we prefer a keen eye to a comparatively blind one, and a ready hand to a clumsy one."

On pages 333 and 334 are some good remarks on what the author calls the over-ripeness of some forms of modern art. He says:

"The over-ripeness of art is indicated by the excessive predominance of fragmentary appearances in the mind of the artist, when a glance of light upon a leaf or a twig and a bit of broken dark shadow seem to him more important than the growth of the tree; when the sparkle of a jewel attracts his attention more than the shape of the arm that wears it; when the texture of a cow's horns and that of the hair between them is the subject of greater painstaking than the arrangement of a group of cattle. Finally, this over-ripeness leads to a kind of dexterous sketching, generally done with the palette-knife, which jumps from sparkle to sparkle, from spot to spot of shadow, like a wren in a hedge, without caring in the least about modelling a form, or about painting anything steadily and seriously with the brush. The French Salon of 1881 abounded in work of this flickering kind, and it appears to be the final development of French painting. There are still, of course, many exceptions—men like Landelle and Bouguereau, who do not allow themselves to be disturbed by the prevailing fashion; but Landelle is considered out of date by the new school, and Bouguereau a Philistine who paints for grocers. They are both a little primitive in paying more attention to line and less to texture than the best men of the present, but then they really do draw and paint; they use the brush, and can follow a line or model a limb, which, if the present tendency works to its ultimate results, nobody will be able to do in the next generation. In landscape this tendency may be less offensive, but even here it is unpleasant to see that plastering with the palette-knife has replaced fair painting with the brush."

Montesquieu's Considerations on the Causes of the Grandeur and Decadence of the Romans. A new translation, together with an introduction, critical and illustrative notes, and an analytical index. By Jehu Baker. Being incidentally a rational discussion of the phenomena and tendencies of history in general. 12mo, pp. 526. D. Appleton & Co. 1882.

Mr. Baker has made a mistake in translating the title of Montesquieu's book. The French *Grandeur* is not "Grandeur" but "Greatness," and although this is a matter of slight importance in the title, the error is repeated on p. 182 with a real loss of sense. Montesquieu, in this important chapter (Chap. IX.), undertakes to point out "two causes of the ruin of Rome," and these two are given in the translation as "the grandeur of empire" and "the grandeur of the city." But this conveys a total misconception of the argument. It is the *extent* of the empire, and the *size* of the city, to which the inherited institutions of the Romans were no longer adequate, that are discussed in this chapter. The civic institutions of Rome were not equal to the government of a great empire: only the principle of representaton could have remedied this defect. Further, even these civic institutions broke down in their immediate exercise in the city itself, because the governing body was no longer a manageable, homogeneous body, but a great mob of varying elements.

In general Mr. Baker's translation is not only correct, but remarkably free from idiotisms. It is hard to see any difference in style between his translation and his original work, which makes up nearly half the volume. The author shows moreover a good, accurate knowledge of the history and antiquities of Rome, so that we are really puzzled by two or three expressions which are hard to reconcile with his usually accurate scholarship. "A troop of seditious persons were called by the name of *comices*" (p. 184). What are "comices"? The word is neither Latin nor English, but the French for *comitia* (elective assembly). Again (p. 198), we twice have mention of "the law *curiate*." This, too, wholly unmeaning here, is a French word lugged into English; the *lex curiata de imperio* is meant. It might be called "curiate law," but certainly not "law *curiate*," as if *curiate* were a proper name. A similar blunder is "*Conjuratione de Catiline*" (p. 209), a phrase which is neither English, French, Latin, nor Italian. Montesquieu wrote *Conjuration*, and his phrase, instead of being translated, is copied with an error added. On p. 169, *Cœritium* stands as *cœrtium*; and on p. 208 *Sulpicius* as *Sulpitius*—Montesquieu's own mistake. These would be serious faults if they were characteristic of the book; as it is, they are blemishes upon a really good work—the author evidently nodded at these points.

Montesquieu's observations upon Roman history have so far become a commonplace of historical science, that it is difficult to judge them fairly in the light of the more advanced knowledge of the present day. But in general it may be said that the points in which most change has been made by Niebuhr and his successors are such as to make very little difference with Montesquieu's discussions. He speaks of the power of the state as exercised by its lawful heads; while the structure of the government, the details of the Constitution, the internal history even, hardly concern him in treating of the establishment of the imperial dominion of Rome. Again, when he comes to speak of internal relations—for example, in the contests of plebeians and patricians, and in the decay and overthrow of the Republic—he confines himself for the most part to large political causes, and pays little attention to social causes. Here is the defect in the ninth chapter and those which go with it. The two causes of ruin mentioned above are purely political; an even more powerful cause, the most fundamental of all, he hardly touches upon, and even Mr. Baker passes it over in equal silence—the collapse of free society. Free institutions fell because free society had dissolved, and the cause of this was slavery. Free society cannot exist without free industry, and free labor can no more exist side by side with slave labor than good money can circulate along with bad money. *Latifundia perdidere Italiam*, not, as Pliny supposed, because they were large estates, but because they were given over to slave labor. The freeholds of the Italian peasantry were absorbed in great plantations, and the peasants themselves either rushed to Rome to swell the number of the proletariat there, leaving their places to be taken by slaves, or were themselves converted into serfs. This most important revolution is hardly noticed by either Montesquieu or his translator.

If the earlier chapters of Montesquieu's work hardly miss the results of the investigations of the nineteenth century, this want is felt more seriously in the closing chapters, upon the fall of the Empire. His observations are good so far as they go, but his point of view was very incomplete. The relation of the barbarians to the Empire is far better understood now than at that time: here, therefore, his political style of treatment fails to find a complete solution for the problem. M. Fustel de Coulanges's 'Institutions,' if somewhat one-sided, and itself incomplete, affords, nevertheless, just what earlier writers were not in a condition to give, and is by far the best single account of this great revolution. In conclusion, we will say again that Mr.

Baker has done very well the task which he proposed to himself, but that it was somewhat more narrow than we should have desired. His author's work should have been supplemented. Adopting in the main that author's point of view, he has added much material, all of which is good, and much of it excellent, without on the whole bringing Montesquieu's analysis up to the standard of present scholarship.

Myth and Science. Tito Vignoli. [International Scientific Series.] D. Appleton & Co. 1882. Pp. 327.

MYTH, according to the peculiar sense in which it is used in this volume, begins in animism, and culminates in the "entification of sensations and ideas." A number of facts are collected to show that animals are animistic, differing, however, from man only in the fact that, with the former, the illusions do not outlast the sensations, while in the latter they occasion fetishes, which are gradually organized into mythologies and theologies, only to be subtilized into more subjective myths, called ideas, will, etc., in systems like those of Hegel and Schopenhauer. Not only do we speak of "wild ground," "a threatening sky," "the thirsty earth," the "foot of a mountain," "the arm of the sea," a "conflict of ideas," but speech, music, weight, color, love, number, and even equality, identity, etc., are either incarnated, personified, or, in a word, entified by a spontaneous instinct psychologically identical with that by which a child grasps at a soft or flexible thing as if it were hard or rigid, or at a sunbeam as if it were palpable. A number of curious hypnogogic illusions to which the author is subject are given to show that dreams also are included under his law of the entification of images, as is also the artistic faculty. Although the function of science is the dissolution of myth, the former will long continue to be the unconscious victim of illusion, so far as the entification of its fundamental ideas is concerned.

The great fault of this book is its size. The author writes in a prolix and cumbrous style, exceedingly like that of Comte; pays ceremonious respects to many writers, especially to Herbert Spencer, the "modern Aristotle"; quotes himself for eighteen pages at one time; repeats facts by the score from Tylor and Gubernatis; and takes up much space with résumés of what he has done, and with plans for future chapters. In one-third the room the matter would have seemed more valuable.

The Old Régime—Court, Salons, and Theatres. By Catherine Charlotte, Lady Jackson. Henry Holt & Co. 1882. Pp. 546.

THE reign of Louis XV., like that of Charles II. of England, is infamous for debauchery in society and ignominy in public affairs. A picture of such a court is not a pleasant subject to contemplate, and one is ready to ask, To what purpose rake in these records of shame and preserve the memory of what had best be forgotten? When we remember, on the other hand, that the age of Louis XV. was also that of three men who exercised a wonderful influence upon the human mind—Voltaire, Rousseau, and Diderot—we must admit that it is worth while to acquaint ourselves with the society in which these men played a part. The sketch of this society given by Lady Jackson is vivid and entertaining, and—for so foul a period—unobjectionable in tone. There is another point of view in which we may recognize a high value in the book. Louis XV. is called (p. 520) "this worthless king"; and no doubt there is no king in history whom this epithet better describes. But somehow it is impossible to turn over these pages without a certain sympathy for this worthless creature, and a recognition of the pathos in his fate. He was a beautiful child, a remarkably handsome man; and he reached the age of twenty-four without reproach. Not kingly, he had no liking for the cares of state—he was fond of gardening and of hunting, and showed absolutely no inclination for the vices which surrounded him. He was, so to speak, forced into vice, deliberately and of set purpose. Once corrupted, he plunged deeper and deeper into the mire of debauchery, until he became the wreck that we all know. He would have been an estimable country gentleman; if let alone, he would have been a tolerable king; it was his fate to be the victim of the reaction from the sanctimonious hypocrisy of his predecessor's court, while his peaceful tastes and the loss of prestige of his reign served as a contrast to the splendid and unscrupulous ambition of Louis XIV.

Charlemagne. By the Rev. Edward L. Cutts, B.A. [The Home Library.] With map. London. 1882. 12mo, pp. 345.

THE Society for Promoting Christian Knowledge is doing a very good work in the series of handy volumes upon various subjects published under its auspices. The "Home Library" forms one of these series. Mr. Cutts's 'Charlemagne' is not so much a life of Charlemagne as a history of the Frank nation and empire, with the great Emperor as its chief feature. Less than half the book is devoted to him; the first half of the volume describes the fortunes of the Franks from their first appearance in history down to the time of Charlemagne. It is written in a pleasant style, and appears to be the result of conscientious preparation. The relation of Church and State at this important epoch is handled in a very fair spirit. The least satisfactory part of the book is that which treats of constitutional matters—we should rather say which does not treat of them, for they are entirely neglected. It would be a mistake, in a book designed for general readers, to enter into such points with any fulness; still, these formed so important a portion of the activity of Charles the Great, and they are so essential to any understanding of the times, that they ought to have received some attention. St. Columbanus is said (p. 513) to have been born in 543, and to have crossed over to Gaul in 585, at the age of thirty—not a very exact bit of calculating. On page 163 Carinthia is spelt Corinthia.

Stories from the State Papers. By Alexander Charles Ewald, F. S. A. [of the Record Office.] Boston: Houghton, Mifflin & Co. 1882. 8vo, pp. 360.

MR. EWALD'S interesting volume is for the most part confined to the history of the sixteenth and seventeenth centuries, none of the stories belonging to a later period, and only one to an earlier one. The first paper, "The Youth of Henry the Fifth," shows, from the evidence of contemporary documents, that there is no foundation for the tradition as to this king's youth with which we are all familiar from Shakspere; that, on the other hand, he was trusted and employed by his father in important concerns. It is noted incidentally that the wish ascribed to Henry IV., that some fairy had exchanged Prince Henry for the infant son of the Earl of Northumberland in their cradles—"then would I have his Harry and he mine"—is a ludicrously impossible one, Hotspur being only six months younger than Bolingbroke himself.

The stories here related are fifteen in number, ranging from so familiar a subject as "The Invincible Armada" to "The Sweating Sickness" and "The Lancashire Witches." In "A Perished Kernel" we are interested to find the case of the Earl of Somerset and Sir Thomas Overbury related—which has recently been treated by Mr. Spedding in his (and Mr. Gairdner's) 'Studies in English History' (see the *Nation*, April 27). Mr. Ewald holds the common view that Somerset knew some discreditable secret about King James, which he threatened to divulge. He does not, however, answer, or even notice, the arguments, which appear to us conclusive, that Mr. Spedding brings up in favor of the King. His suggestion that "the King had given instructions, independently of and unknown to Lady Somerset, to make an end of Overbury," seems to us puerile. And when he proceeds to pronounce such a crime not unlikely on the part of James I., he runs counter to the judgment of the best-informed students of this period, which is, on the whole, more favorable to the ability and character of James than that of former historians.

As a companion to English history, this book will be welcomed; especially as illustrating by striking and lucid examples the degree in which fresh light has been thrown upon old subjects by the exploration of the state papers.

BOOKS OF THE WEEK.
